Here you give the supervisor your assignment card, enter your starting time on your form 2311, and go through the same procedure until you finish the assignment or lunch time arrives. In this operation, on many occasions, you are required to collect the mail you are to work. You must first stop and have an employee measure your mail and supply you with the slip for your production credit. You must then weigh the mail and enter the weight on the proper WPS sheet. Then you pocket the credit slip and go to work.

At lunch time you check out on your performance card, check with the supervisor, pick up your assignment card, proceed to the time card rack where you exchange your assignment card for your time card, ring out on the time clock, hand your time card to the timekeeper who replaces it in the time card rack. After lunch you go through the same operations, being greeted by the same signs, etc., until the end of the day.

This, Mr. Congressman, is the regimentation with which a postal clerk must contend from day to day. Can you blame employees for leaving?

I realize this is a long letter, in fact far too long. It is, however, a serious situation. Regardless of sugar-coated phrases and promises it is definitely intended to increase production. If not, they certainly would not go to the terrific expenses involved. I would estimate it takes some 25 or more employees out of useful production to compile and prepare the records. Further, all the forms required are costly to print and obtain. As you walk up the aisles you can sense the tension. People who used to be friendly barely give you the time of day as you go by. Employees complain of the kind of mail they work, the type of case they work at, and the idea that the other fellow gets the breaks or cheats. The supervisor, instead of supervising, spends most of his time checking slips, cards, and answering questions, further damaging operation efficiency. It is a crime being perpetrated on thousands of hardworking, loyal employees who are well aware at the close of the day they have performed an honest day's work. It takes us back beyond the so-called dark ages and is something which I seriously doubt Congress would permit in outside industry.

I urge that you add this to your other projects and help enact legislation which would forever forbid such systems in the Government service. If I can be of assistance in any way, please advise me.

Very truly yours,

CARL SETJE.

Pot Calling Kettle Black

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

[From the Journal and Guide, Feb. 6, 1960]

POT CALLING KETTLE BLACK

Representative GRAHAM BARDEN of North Carolina, who is chairman of the House Committee on Education and Labor, has announced that he will not be a candidate to succeed himself when his present term expires.

Under the seniority rule in Congress, the next committee member in line for the chairmanship is Representative ADAM CLAYTON POWELL of New York.

Congressional comments and editorials in some of the Nation's leading newspapers have raised various objections to Mr. POWELL.

One of these is that he is a "racist", and that he is not otherwise qualified for the chairmanship. He is accused of a bad attendance record.

One newspaper stakes frankly that Mr. BARDEN, the outgoing chairman, "was not over-qualified for the chairmanship which his long years in the House handed him." But, it says, "yet he stands tall in the saddle when compared to his prospective successor, ADAM POWELL."

Our definition of a racist is a man who wants all of his rights for himself but wants to deny the same rights to the Negro or other groups. That trait distinguishes the very people who are trying now to make a case for excluding Mr. POWELL from the chairmanship.

Mr. POWELL has contended for civil, educational and economic rights for members of his race, but he has not at any time asked that people of any other race be denied these rights.

The approved "racist" seems to come within the category of those who want rights for themselves but would deny them to Mr. POWELL.

Unfortunately, Mr. POWELL is under the shadow of a Federal court trial in March for an alleged income tax violation. Whether he is guilty of this offense we will leave to the courts to decide. But, in passing, we want to say this: It is on the record of the southern Members of Congress and many of the Nation's press members to label any Negro who asks for his legal rights a "racist".

Some of the criticisms raised against Mr. POWELL are stupid and vicious.

We were sorry to see such an able editor as Mr. Ralph McGill join in destroying public confidence in Mr. POWELL before he had been given the chance to show what he could do as chairman of the committee.

Shrimp Is the No. 1 U.S. Seafood Industry

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. WILLIS. Mr. Speaker, on August 24, 1959, I introduced a bill to amend the Tariff Act of 1930 to provide for the establishment of country-by-country quotas for the importation of shrimps and shrimp products, to impose a duty on all unprocessed shrimp imported in excess of the applicable quota, and to impose a duty on processed shrimp and prohibit its importation in excess of the applicable quota.

Identical bills were presented on the same date by a large group of Members from the States of Florida, Louisiana, Texas, South Carolina, Georgia, Mississippi, North Carolina, Alabama, Indiana, Iowa, Maine, and Washington. We were all gratified to have as an original sponsor our colleague from Florida, the Honorable SIDNEY HERLONG, a distinguished member of the House Committee on Ways and Means, to which this legislation, including his own bill, H.R. 8769, has been referred.

This united movement was brought about by the united and unselfish action of every segment of the shrimp industry.

These bills were introduced during the closing days of the last session and we are confident that numerous other Members will introduce similar measures shortly because this is not anyone's pet project. It is the carefully considered proposal of the entire shrimp industry. It has the overwhelming support of producers, processors, canners, and breeders from the gulf coastal, south Atlantic and northwestern areas. It is sponsored by the National Shrimp Congress, Texas Shrimp Association, Southeastern Fisheries Association, Gulf Shrimp Canners Association, and other groups.

I am encouraged to know that the Louisiana Shrimp Association has taken a leading part in the movement. At a meeting recently held in my congressional district, Mr. James H. Summersgill, president of the association; Mr. Jack Lewis, president and general manager of the Twin City Cooperative; Mr. Sebastian Cardinal, secretary of St. Mary Fishermen's Cooperative; Mayor C. R. Brownell, of Morgan City; and other

outstanding public spirited citizens in attendance stressed the common theme that if the shrimp industry is to survive every segment of it must work together to fight the import menace and the threat of possible exhaustion and thus the preservation and wholesome development of this valuable natural resource.

The National Shrimp Congress, Inc., with headquarters in Tallahassee, Fla., issued a statement proving with facts and figures that shrimp is the No. 1 U.S. seafood industry, listing the numerous other related industries having a vital interest in a thriving and profitable shrimp industry, describing the valuable contribution made by shrimp processors to the general industry, illustrating the problems that are common to producers and processors, pointing out the serious threat of shrimp imports, and explaining the need for and objectives of the proposed legislation. This statement, which I now make part of my remarks, is the result of long research and rather exhaustive studies and represents the combined thinking of leaders in every facet of the shrimp industry:

SHRIMP IS THE NO. 1 U.S. SEAFOOD INDUSTRY

The various fishing industries of the United States represent a large capital investment in vessels and shore equipment and provide employment, directly or indirectly, for thousands of Americans. The shrimp industry is the largest of the seafood industries. Principal domestic production comes from the Gulf and South Atlantic States, with significantly developing production in the far Western States of Washington, Oregon, California, and Alaska. Of the 12 producing States, the largest producer is Texas, followed closely by Florida and Louisiana

It was estimated by the Bureau of Commercial Fisheries that in 1956 there were about 7,533 vessels engaged in shrimp fishing in the South Atlantic and Gulf areas alone. This included 3,715 vessels and 3,818 motorboats. Construction of the larger vessels continued on a heavy scale through 1958, increasing the heavy investment of shrimp producers. It is estimated that today there are approximately 5,000 of these larger craft, mostly of wood construction, with a few of steel construction. A modern and well-equipped shrimp trawler costs approximately $50,000. This represents, in the larger craft, a replacement value of $250 million.

RELATED INDUSTRIES

Partially or heavily dependent upon shrimp production are a number of other important domestic industries. These include:

(1) Manufacture of engines, propellers, pumps and accessories.

(2) Manufacture of electronic equipment, radios and depth recorders.

(3) Ice plants and refrigeration equipment.

(4) Fuel and oil suppliers.

(5) Ship, chandlery: anchors, ropes, cable, nets and marine supplies.

(6) Trucking and transportation.

(7) Ship construction.

(8) Marine railways doing hull repairs and overhauling.

(9) Marine insurance

(10) Box factories.

(11) Repair shops: engines, electronics, rigging, salvage, etc.

The annual operating cost of one of the typical 65-foot shrimp trawlers furnishes related supply industries approximately $10,000 per year, or a total for the large vessel fleet of $50 million.

SHRIMP PROCESSORS

About half of the domestic shrimp catch goes to domestic processors who prepare shrimp for market in packaged consumer form, canned, cooked and peeled, cooked and breaded, uncooked breaded and in other specialty packs. Processors have played a major role in developing the U.S. shrimp market. Besides their heavy investment in plant equipment they have spent and are spending millions of dollars in advertising and promotion to create an expanded market. They maintain high standards of quality control and pay U.S. scale wages to their American employees. They cannot compete with low labor foreign packers. Since the best quality of processed shrimp comes from using the fresh, rather than the frozen kind, the reduction of the domestic supply would normally lead processors to establish processing plants in other countries, thus reducing the demand for the fresh domestic supply and reducing or eliminating their American employees.

PROBLEMS ARE COMMON TO PRODUCERS AND PROCESSORS

The unprecedented influx of foreign shrimp from new countries has caused a market glut which hurts producers and processors alike. Some of the product comes from areas with little or no quality control and indifferent sanitary inspection. American processors have an inspection service approved by government, assuring quality, sanitation, and good packing methods. The import glut drives prices of raw shrimp below the level at which the American producer can compete. It makes the processor insecure. He cannot depend upon a steady supply of fresh domestic shrimp which makes the best consumer pack. He may be driven competitively to produce an inferior pack which will inevitably damage his reputation which has been built up at heavy advertising cost. The housewife may have a bargain day, but will turn from the inferior product. Against the direct competition of processed items, the domestic processor is helpless because foreign wage scales in some shrimp producing countries are from 9 to 30 cents a day.

The producer today can scarcely pay his present operating costs, much less the deficit he has incurred during the past 15 months because of excessive imports. He is heavily in debt to suppliers, his insurance payments are lagging, and the banks and financial institutions which carry boat paper have had to make adjustments on monthly mortgage payments to carry the producer along. The waterfront is uneasy. No one wants to foreclose a shrimp vessel lien because under Admiralty law the effect is like going through bankruptcy; after preferred liens are paid the lesser ones get so much on the dollar—if there are dollars left. There is no market for shrimp vessels sold under foreclosure, so millions of dollars hang in the balance, hopefully praying for better domestic production and slightly higher prices for shrimp—and for relief from heavy imports.

THE IMPORT PROBLEM

The consumer demand for shrimp in the United States cannot be met entirely with domestic production. Some imports are required to meet the demand and to maintain an orderly market which will not permit the price of raw shrimp to go too high. Up through the year 1957 this delicate balance was fairly well maintained. The principal imports came from well-established fisheries in Mexico, Panama, and Ecuador, where modern shrimp trawlers are used, and where costs of production (production plus freight) compare favorably with the United States. Shrimp are found in many parts of the world, equatorial to arctic. Countries which had been indifferent producers now eyed the U.S. shrimp market and tooled up for heavy production which would increase the flow of U.S. dollars to them.

Fifty or more countries now export shrimp to the United States. Imports in 1951 were 41.8 million pounds, and came from only 18 countries. In 1958 imports were 85.4 million and the market glut commenced. In 1959 imports were approximately 100 million pounds and accurate fishery information exists to show that some of the latecomers have plans for subsidized and private production of substantially larger amounts.

With all facts available and a valuable U.S. fishery facing ruin, all segments of the domestic shrimp industry met to study the situation and to attempt to evolve a solution. They did not want to go to government for dole or subsidy. Preliminary talks with responsible Government officials indicated that normally bankruptcy must come first, then assistance would be forthcoming. But the industry bill, H.R. 8769 looks for preventive medicine now rather than surgery later. This bill has the overwhelming approval and support of all segments of the domestic industry and is a fair approach to the problem, nationally and internationally. It provides for an increasing supply of imports, based upon historic quotas. It would help to stabilize the foreign producer as well as the domestic producer, because it would provide an orderly and stable market in the United States, the chief consumer of shrimp.

THE INDUSTRY SHRIMP BILL

Philosophy: An ounce of prevention is worth a pound of cure. Actual calamity is in sight. Domestic shrimp industry represents investment of over $1 billion.

Facts of case: The United States is the most important world market for shrimp. Domestic production is about 60 percent of U.S. consumption. U.S. production relatively static, consumption slowly increasing, market can absorb perhaps additional 10 million pounds annually (if sales pushed) without serious problems, increase will have to come from abroad. U.S. market built up by expensive sales promotion principally financed by United States and Mexico, largest importer. Same factors ruin domestic producers ruin Mexico and Panama, perhaps others.

Foreign trade aspect: Nearly 50 countries export shrimp to the United States. This is good—should continue. U.S. dollars in foreign countries help them and increase purchasing power for U.S. commodities. Unrestricted imports make widely fluctuating market which will wreck both United States and foreign producer. (Example: Mexico—$30 million shrimp exports per year.)

Cure: A formula which encourages foreign imports but stabilizes them on a per-country basis so each country may intelligently plan its own development of shrimp industry for its own food consumption plus an assured dollar export credit.

Formula: (A) Use historic basis for calculating base: (1) Average of last 5 years, or (2) 1958 imports (or January–August 1959 plus 50 percent), whichever highest.

(B) Countries exporting over 5 million pounds, 5 percent annual increase; countries exporting 1-5 million pounds, 10 percent annual increase; countries exporting less than 1 million pounds, 25 percent annual increase; new countries, provisional quota, 100,000 pounds.

(C) Run geometric increases for 5 years, through 1964. Each country will have had opportunity to build up its industry substantially. Then apply global quota in 1965, with guarantee to each foreign country that in 1965 its basic quota will not be less than 1959–64 average, and in no case less than actual imports in year 1964.

(D) Over quota on unprocessed shrimp, 50 percent ad valorem duty; processed shrimp, 25 percent ad valorem duty; no im-

ports over quota. Separate quotas for processed and unprocessed shrimp.

Summation: A benefit to underprivileged countries by stabilizing importing market and distributing benefits impartially. Still tough on domestic producers, who must primarily bear cost of developing market for increased U.S. consumption, but possibly save them from extinction.

Cost to Government: Little strain on Treasury (Customs). Estimated that some unprocessed shrimp will come through in excess of quota, paying duty. Receipts there and from duty on processed shrimp should exceed administrative costs.

Effect on consumer and U.S. producer: Will result in lower market price than past 5-year average. Part of reason for high market was uncertainty of production. U.S. producer can live with somewhat lower prices, provided stable market available for product. Inefficient producer will properly go out of business. Probably tough 3 years ahead due to large stocks foreign shrimp now in freezer storage.

Support: Overwhelming support from producers, processors, canners, breaders, gulf coast, South Atlantic, Northwest, though some fear too liberal as to imports. Supported by National Shrimp Congress, Texas Shrimp Association, Southeastern Fisheries Association, Gulf Shrimp Canners Association, Louisiana Shrimp Association, etc.

Mr. Speaker, I suppose it would be too much to expect that everyone will agree with every statement made by the National Shrimp Congress, Inc., but I urge my colleagues in the House to give careful thought to their considered views on this vital and necessary legislation.

Now, Mr. Speaker, we all realize that quota legislation presents far-reaching domestic and foreign problems and has a long row to hoe before adoption by the Congress. I submit, however, that we have ample precedent for the approach submitted by the shrimp industry. For example, this proposal follows the general pattern of the Sugar Act. Let me illustrate.

There are two cane sugar producing States and some 19 or 20 beet sugar producing States. There are as many or more States with shrimp along their coasts.

Sugar is a very important domestic industry. So is shrimp.

Nevertheless, we produce less sugar than we consume. The same is true with shrimp.

Many foreign countries have always wanted a share in our domestic sugar market. That has always been the case in connection with our domestic shrimp market. With respect to shrimp, however, our Government has unfortunately encouraged foreign competition. Thus, through our various foreign-aid programs, our Government has made it possible for foreign producers to build larger and larger shrimp fleets and place them in a position to demand a higher and higher share of our domestic shrimp market. It is no wonder then that imports in 1951 were 41.8 million pounds and came from only 18 countries, while in 1958 imports were 85.4 million pounds and came from over 50 countries. In a very real sense, therefore, our domestic shrimp industry is the victim of our official foreign policy and has a right to expect corrective legislation.

The Sugar Act was first adopted in 1934 and has come up for review before the Congress and reenacted with comparatively minor modifications a number of times since 1934. Over the years, the Sugar Act has been recognized as a valuable instrument of foreign policy. I am confident that it will be renewed this year.

The underlying philosophy of the Sugar Act is to provide fair treatment to and protect both the domestic producers and consumers of sugar and at the same time to fairly allocate the difference between our domestic production and consumption to foreign producers. That is the underlying philosophy of the proposal of the domestic shrimp industry.

The Sugar Act is not a perfect piece of legislation and much is left to be desired in its administration. I doubt that the pending proposal will prove to be a perfect solution of the manifold problems of the shrimp industry.

Still, with all of its faults, I think responsible people will acknowledge that the domestic sugar industry could not live without the Sugar Act. And I am convinced that responsible people must acknowledge that the domestic shrimp industry cannot live very long without some form of quota legislation and that the present proposal is definitely one in the right direction.

A Report on an Investigation of Federal Civilian Personnel Problems in the Far East

---

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 11, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of submittal and the text of my report to the chairman of the House Committee on Post Office and Civil Service, the Honorable TOM MURRAY, on Federal civilian personnel activities in the Far East, with its appendix. I think it will prove interesting to many of my colleagues and to a large portion of the other readers of the CONGRESSIONAL RECORD.

HOUSE OF REPRESENTATIVES,
POST OFFICE AND CIVIL SERVICE COMMITTEE,
February 9, 1960.

Hon. TOM MURRAY,
Chairman, Post Office and Civil Service Committee, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: There is submitted herewith a report of my investigation of Federal civilian personnel matters in Japan, Okinawa, and Taiwan during the period November 5 to November 15, 1959, inclusive, in accordance with your letter to the Secretary of Defense dated September 4, 1959. The report contains recommendations and findings developed during the course of the investigation.

Except for deep concern about the form of the rotation policy which employees have been hearing about in the Far East and with respect to housing, no general employee complaints were heard. Morale and conditions of work seemed excellent. It is my impression that, on the whole, civilian personnel in these areas are doing a first-rate job and are enjoying their work overseas. Most of them appeared to be fully aware of the importance of their roles in maintaining our strength in the face of the threatening challenges of international communism.

It is my hope that our committee will take such steps as are necessary to provide a continuing forum, as a matter of policy, for these oversea employees, as well as employees here in the United States, so that the committee may be more fully informed with respect to oversea personnel administration and the employees may be assured of all due and appropriate consideration for their problems.

Thank you very much, Mr. Chairman, for this opportunity to learn more about personnel problems of the Federal Government. This experience has given me a new and deep appreciation of the general responsibilities resting on you, as our chairman, and on each member of our great committee.

With best wishes.

Sincerely,

CHARLES O. PORTER,
Member of Congress.

FEDERAL CIVILIAN PERSONNEL ACTIVITIES IN THE FAR EAST

This report sets forth, in summary form, recommendations for strengthening Federal civilian personnel administration in the Far East and findings developed in an investigation of personnel matters in Japan, Okinawa, and Taiwan, conducted by Representative CHARLES O. PORTER, a member of the Committee on Post Office and Civil Service of the House of Representatives, during the period November 5 to November 15, 1959, inclusive, under authority of a letter from the chairman of the committee to the Secretary of Defense dated September 4, 1959. Mr. PORTER is the first member of the committee personally to investigate personnel matters in the Far East.

RECOMMENDATIONS

1. Reemployment legislation: That prompt and favorable consideration be given by the committee to the official request of the Department of Defense for legislation to grant reemployment rights to employees of that Department who are assigned overseas.

2. Housing: That the appropriate executive agencies investigate oversea housing policies and conditions for Federal civilian employees and make recommendations for appropriate changes in policy and legislation including, but not restricted to, the following:

(a) Cutting off further shipments of household goods overseas and having basic needs furnished by Government.

(b) Establishing a program to purchase housing for civilian employees off as well as on bases.

(c) Coordination and reviews of existing restrictions by commanding officers overseas with respect to areas and price range.

(d) Giving civilian employees housing allowances under a system identical to those given their military counterparts.

3. Competitive status: That the U.S. Civil Service Commission and the Department of Defense join in devising improved procedures so that certain nonstatus employees in oversea areas may have better opportunities for achieving competitive status.

4. Coordination: That regulations having to do with identical activities be issued by the Department of Defense rather than in three somewhat different versions by the Army, the Navy, and the Air Force, as in the case of the recent teacher pay adjustment legislation.

5. Duty limit on gifts: That section 321 of the Tariff Act of 1930, as amended, be amended to increase the limit on duty-free

goods from $10 to $50 but only with respect to Federal civilian employees assigned overseas.

DISCUSSION OF RECOMMENDATIONS

1. Reemployment legislation: Over one-half of the U.S. civilian employees now in Japan have been out of the United States for more than 5 years. Almost one-half have spent more than 5 years in Japan. Here are the figures:

Department	Total in Japan	More than 5 years in Japan
Air Force	1,774	524
Army	1,465	850
Navy	752	306
Total	3,991	1,680

Rotation of personnel is, of course, the rule for military and Foreign Service personnel. It should also be the rule for other Federal civilian personnel. A person overseas too long tends to get stale. Most of them want to come home. Some who do not want to come home should be required to do so.

Oversea employees are roughly divided into three groups approximately equal in number: schoolteachers, clerical and junior administrative personnel, and senior administrative and technical personnel. The need for rotation is almost entirely with respect to the last category.

Reemployment legislation by itself will not accomplish rotation. It will make assignment of our best personnel to oversea posts easier. The resultant vacancies will help make places here in the United States for those overseas now.

The chief difficulty now is that an employee overseas has no assurance that he can find a comparable job if he decides to go home. The Army operates an interchange service. It lists employment information about persons who want assignments in the United States. The system has been a failure. Commanding officers prefer to transfer or promote from their own personnel rather than take a chance on someone from overseas and having to wait for him.

Reemployment of oversea employees who do not now have reemployment rights will have to be accomplished by executive, not legislative, action. We cannot create jobs, nor should we attempt to require by legislative action the arbitrary return of oversea employees for stateside employment. We can and should urge that the Department of Defense take stern measures to see that qualified employees from oversea assignments are permitted to fill vacancies here in the United States.

Administrative action can be effective. For example, the Air Materiel Command of the Air Force is now in the process of returning upward of 50 high-grade (GS-9 to 14) employees who have been overseas for more than 5 years to positions in the States at not less than their current grades. This is purely a voluntary program and is being conducted successfully because the command headquarters here in the States has put itself actively behind the program and is taking immediate and direct interest by requiring stateside field installations to place qualified oversea employees in appropriate vacancies.

It is believed that the proposed reemployment legislation is a far better approach to the rotation problem than, for example, action taken by the Army recently to restrict promotion opportunities for employees with 5 or more years of continuous service overseas. The Air Force was considering a similar policy but has since rejected it. The Army has also eliminated it. It is plain that the military departments are deeply concerned with what is known by some persons overseas as the "homesteader" or "rice paddy daddy" problem.

This problem was discussed, during the investigation, with commanding officers, personnel specialists, and more than 300 civilian employees. The overwhelming concensus is in favor of the proposed legislation and policies to establish a system of rotation. They believe such a system would benefit both the employees themselves and the Government. The greatest fear of the employees is that arbitrary action may be taken against them simply because they have been overseas for a long time.

The legislation in question is part of the Department of Defense legislative program for 1959. The proposed bill was discussed with a member of the committee staff and Department of Defense personnel officers in December 1959. According to the staff member's estimate, technical work on its provisions could be completed in one staff session. It is hoped that such a session can be arranged at an early time and that the committee chairman may consider introducing the bill as revised.

On the basis of the facts developed in this investigation, it is important that hearings on this bill, when introduced, be scheduled as soon as possible. It is essential that both oversea and stateside employees understand the intention of the legislation and that they have ample occasion to express themselves as to details. Morale is particularly important and precarious in oversea areas.

Additional information in more detail with respect to length of service overseas is appended and further data will be furnished from Japan shortly for committee consideration.

2. Housing: The amount and quality of housing were constantly deplored in interviews with employees. Apparently military personnel feel the same way. In the Tokyo area there is a shortage of available privately owned housing. What is available and adequate is costly.

Under existing regulations most of the available Government family type housing is allotted to military personnel, which means that civilian employees must largely turn to the local economy. Various regulations govern the cost and quality of the housing they can rent. It is felt that the Department of Defense could, after a proper study, do a better job of administration with respect to civilian housing.

For example, under current policies within the Tokyo area each military installation is assigned a particular geographic area in the vicinity. Employees must have the rent they pay approved within the areas assigned to the installations in which they live. It was learned that in some areas housing was going begging and in other areas there were serious shortages. An overall joint military committee or other board should be established to set standards and to coordinate housing policies for the entire Tokyo section.

Of course it is realized that the rollback of our forces in Japan has been relatively recent and drastic. The concentration of forces in the Tokyo area has caused these problems. They should be studied and met as promptly as possible.

The shipment of household goods is expensive and, it appears, unnecessary, particularly if a rotation program goes into effect. Plenty of good basic furniture is available overseas. It is suggested that storage costs in the United States for a period of 3 years would normally be considerably less than shipping charges figured for one round trip.

Purchase of housing for civilians, and perhaps also construction of new housing for purchase, may well save a substantial amount of money. This would also give a stability to the housing arrangements not present with some rentals.

It may be that a more satisfactory way all around for providing housing would be to give civilians a set amount for housing just as is done for the military where Government housing is not available. The Air Force officially favors this change of policy. It would save the headaches of keeping complex accounts and of trying to evaluate living quarters. Any savings on quality would mean extra cost to the recipient. It is understood, however, that in many cases, particularly in those areas where there is a large concentration of employees, current allowances for private rental housing are not sufficient to meet actual costs.

This is by no means a comprehensive study of the housing situation in Japan, Okinawa, and Taiwan. No such project was attempted. Certainly enough was said about the situation to warrant the conclusion that the appropriate agencies should conduct a thorough investigation and include exploration of the suggestions listed herein.

These figures, supplied by the American Embassy in Tokyo on November 10, 1959, will provide an idea of the magnitude of the expenditures for housing.

Fiscal year	Number of families	Quarters allowances
1958	14,645	$18,452,700
1959	13,428	16,919,280
1960	12,127	15,317,820

3. Competitive status: The competitive service was extended to oversea areas in 1955. Since that time, in a number of instances, employees in certain jobs have been converted from appropriate civil service registers to competitive status. In other instances, some of which were brought to light during the investigation, no such conversion was possible. The reason for this was either that under current procedures they had not as yet come within the reach of civil service registers or that there were no appropriate civil service registers under which they could apply for examinations. Such a situation should be corrected. The result now is that individuals feel they are being treated unfairly and the Government often fails to make the best use of abilities and training.

4. Coordination: A plea for coordination would seem to have a basis in fact where the activity is not affected by functional differences. Teachers who are teaching service families' children should not be under different regulations depending on their departments. Many teachers were interviewed during the investigation. Their chief concern was with the interpretations to be made of the Pay Adjustment Act (Public Law 86-91). Teachers are in close touch with their colleagues working in other installations. They see no reason why the governing regulations for all teachers overseas should not be identical. Their view seems justified.

5. Duty limit on gifts: In 1942 Congress enacted a law allowing servicemen to send home duty-free gifts worth less than $50. Several civilian employees expressed the opinion that this is discriminatory inasmuch as their limit, as for other nonservice citizens abroad, is $10. It would appear that the same reasons which prompted Congress to increase the limit for servicemen abroad apply with equal force for Federal civilian employees assigned overseas.

PROCEDURES AND COMMENTS

Circumstances prevented Hon. Robert J. Corbett, of the committee, from participating in the investigation as planned and as authorized by the chairman. The Department of Defense, upon request, assigned Mr. Joseph P. Hochreiter, Deputy Director for Civilian Personnel, Air Force, who recently returned to Washington after 2 years as Director of Air Force Civilian Personnel in

Europe, to assist in the investigation. Mr. Hochreiter attended briefings with commanding officers, personnel officer interviews, and meetings with civilian employees. His assistance was extremely valuable. He was able to settle many problems on the spot.

Ten separate installations were visited, eight of which were in Japan and two in Okinawa. On Taiwan, because of a shortage of time and because is was Sunday, arrangement were made to meet the personnel officers and civilian employees at the hotel headquarters for the investigation.

Schedules for visits to all installations were arranged in advance, including an announcement to be made to all civilian employees at each installation that any complaints or comments could be presented in personal interviews. This procedure was most constructive. About 150 employees were interviewed and conferences were held with at least 150 other employees at general meetings, luncheons and one dinner. Also, a final interview session was arranged at a civilian-noncommissioned officers' club in Tokyo for those employees who were missed earlier in the week.

Both military and civilian cooperation was of a very high order. Without it the very heavy investigative schedule never could have been fulfilled. Mr. John T. McConathy, director of civilian personnel, Fifth Air Force (Japan), acted as the theater coordinator and was extremely helpful. Although by mutual agreement he did not sit in on the interviews, he was always nearby for consultation. In many instances, problems brought out by the investigation were settled immediately with his assistance.

Because of traffic conditions in the Tokyo area, helicopters were used for travel whenever the weather permitted, thus saving considerable time. The usual procedure, in accordance with committee policy, was to pay respects to the installation commander, ask him and his personnel officer about civilian employee morale and related problems, and then proceed to interview the employees who had gathered in response to the advance announcement. When there was time, civilian employees were visited on their jobs and a number of informal conversations were held with employees.

APPENDIX

LENGTH OF CONTINUOUS SERVICE AND OTHER STATISTICS FOR U.S. CITIZEN CIVILIAN EMPLOYEES OF U.S. AIR FORCE IN JAPAN AND KOREA, AT GRADES GS–7 AND ABOVE (DECEMBER 1959)

1. Length of service: Total number of employees, 503. Of total, number of employees with continuous service of: up to 5 years, 132 (26 percent of total); 5 to 10 years, 182 (36 percent of total); over 10 years, 189 (38 percent of total).

Over-10-year category, includes 6 with over 14 years' continuous service; 74 with over 13 years of continuous service; 49 with over 12 years of continuous service; 36 with over 11 years continuous service; and 24 with over 10 years of continuous service.

2. Reemployment rights to positions in United States: Of total of 503 employees, 23, or 5 percent, have reemployment rights to positions in the United States.

3. Tour in United States since first oversea assignment: Of total of 503 employees, 19, or 4 percent, have served in a civilian position in the United States since their first assignments overseas.

4. Marital status: Of total of 503 employees, 361, or 72 percent, are married.

5. Occupancy of Government family type quarters: Of total of 503 employees, 97, or 19 percent, occupy Government quaters; in actuality this means 97, or 30 percent, out of 381 (married) occupy such quarters, since only married employees are eligible for family-type quarters In addition, these 97 employees would be those among the GS–12 and higher category, since under current policy civilians below GS–12 are not eligible for family-type quarters.

NOTE.—While the above covers only Air Force employment, it is considered that Army and Navy statistics covering the same factors would be quite comparable.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D.D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Schoeppel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Aiken, Capehart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Long of Hawaii, Dworshak, Kuchel, Goldwater, Allott, Martin, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Dirksen, Hruska, Keating, and Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Dirksen, Case of New Jersey, Javits, Prouty, and Brunsdale.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Fong, and Brunsdale.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Keating, and Brunsdale.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, 3013 Q St.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS
JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

The Farm Challenge

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 15, 1960

Mr. McCARTHY. Mr. President, in the budget message sent to the Congress this year by the President, he retreated from the administration's previous stand that REA borrowers be forced into the private money market. However, the President reiterated his request for an increase in REA interest rates. The February 1960 issue of Rural Electrification magazine contains an editorial which sets forth a number of questions that should be answered before any consideration is given to this budget message proposal. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

The senior Senator from Minnesota [HUBERT H. HUMPHREY] ably recounted the history of the congressional struggle against the administration's plans to weaken the rural electric cooperatives during the past few years in a speech he made last summer at the annual meeting of Pierce-Pepin Electric Cooperative at Ellsworth, Wis. Because of the timely nature of this speech in regard to the administration's proposals concerning the REA loan rates, I ask unanimously consent that this speech be printed in entirety in the Appendix of the RECORD.

There being no objection, the editorial and address were ordered to be printed in the RECORD, as follows:

LEAVING THE QUESTIONS UNANSWERED

Growing opposition in Congress to the President's proposal to eliminate the interest rate ceiling on Government borrowings, along with sweeping criticism outside Congress of the whole tight-money high-interest policies, is of considerable importance. Home Builders Association delegates, for instance, have assailed the policy for having obviously failed to curb inflation, for boosting interest rates beyond the legal limits of usury, and having forced a return to financing methods proved unsound 30 years ago.

It is against this background that President Eisenhower's proposal for raising REA interest rates appears ill timed and certainly unsympathetic toward REA borrowers' future financial burdens.

First of all, taking the proposal for boosting REA interest rates alone, the President wants to peg future loans at what is a modern-time maximum rate by using the market yield on long-term issues as a measure. If the ceiling on long-term issues is lifted, as Ike also proposes, REA borrowers would be burdened for 35 years with even higher rates than that.

Despite the reduced estimate of administrative charges he proposes borrowers pay on future loans, a restudy shows that this plus pegging to recent Government interest rates would force REA borrowers to pay over 4½ percent.

What about the effect of this 125-percent increase in rural electrics' interest rates? Nobody yet claims there has been a definitive study of the impact this would have on REA borrowers.

Now REA Administrator Hamil says borrowers' feasibility is beyond question, and adds that the interest rate adjustment Ike proposes would not work a hardship on borrowers generally.

It must be obvious that feasibility is relative to the type of load and area a rural electric system is bound and limited to serve. It's equally obvious that feasibility is affected by interest rates and other costs.

The administrator's apparent qualification, that there would be no hardship effect for some borrowers, raises again the question as to which other ones should be let go by the wayside. Also what happens to the quality of service other systems will be able to afford, if all of their future borrowing must be at rates of possibly far more than at 4½ percent? Getting a little more specific, what about the generation and transmission program, the security of present loans to marginal borrowers, some not meeting the REA debt services earned ratio, and what about the whole rural telephone program? Is Secretary of Agriculture Ezra Benson's philosophy toward marginal farm operators to be applied toward rural electric service? Are families living in sparse, low-income rural areas to have the alternative of paying exorbitant electric rates or simply doing without electric service?

And finally turning to the matters of fixing REA borrowers' administrative costs, when is the Department of Commerce and when are other agencies of the Government going to start operating on that principle too? What has happened to the administration officials who protested that they would not do this to REA until it were applied to other Government agencies?

There's not much new in the budget message proposals this year. And the old questions are still unanswered.

THE FARM CHALLENGE

(By Senator HUBERT H. HUMPHREY, Democrat, Minnesota, at annual meeting of Pierce-Pepin Electric Cooperative, Ellsworth, Wis., Saturday afternoon, June 13, 1959)

There is no gathering of any kind which gives me more pleasure than a meeting of the members of a cooperative, folks joined in a common endeavor to make life better for everybody. So I am glad to be here and happy for the opportunity to greet you, to wish you good fortune in the continued health and strength of the Pierce-Pepin Electric cooperative, and to discuss ideas with you on present farm problems and prospects ahead.

And it is also a source of real pleasure to be here today with my good friend, cooperator and fellow legislator, your outstanding Congressman—LESTER JOHNSON.

LESTER JOHNSON actually started the Wisconsin Democratic revival back in 1953 when he won this congressional seat in a special election. Things have been looking up for the Democrats ever since, not only in Wisconsin, but all over the country.

But LESTER'S victory meant more than a new era for Democrats. It also meant a great deal to all farmers, Democrats and Republicans alike. He has become a real champion of agriculture in the House of Representatives, has been a great help—and privilege—for me to have such an able partner on legislation of importance to Wisconsin and Minnesota dairy farmers as the Humphrey-Johnson dairy bill and the Johnson-Humphrey Milk Sanitation Act establishing national standards under the Public Health Service.

He has arranged for hearings on poultry and egg problems in the House next week, and I am working in the same direction in the Senate.

You are fortunate in Wisconsin in having other good friends of agriculture—such as my good friend Senator BILL PROXMIRE, and your capable Governor Gaylord Nelson. BILL PROXMIRE can always be counted upon to stand solidly with friends of agriculture. He is an effective member of our Senate committee.

While I am mentioning Wisconsin names, I cannot overlook another young man who has made a great and continuing contribution in your behalf. He is Bob Lewis, one-time editor of the Wisconsin REA News, the boy from the Wisconsin family farm who has never forgotten his first loyalties. His father, George Lewis, pioneered the REA cooperative movement in Wisconsin, and Bob has carried on in the same tradition of service. He was formerly administrative assistant to Senator PROXMIRE. I am so pleased that Governor Nelson has Bob as his right-hand farm adviser—his agricultural coordinator. Bob Lewis is a man who knows what he is fighting for.

In all fairness, I might add that agriculture welcomes and recognizes friends from either major political party. We who put the welfare of farm people above partisanship appreciate the consistent support of Republicans such as Senator MILT YOUNG of North Dakota and your own Senator ALEXANDER WILEY, who have refused to go along with this GOP administration's wreck-the-farmer policies.

THE DEMOCRATIC CONGRESS FIGHTS FOR REA

After 10 years of fighting battles for farmers in Washington, I know something about who you can count upon and who you cannot. The sure test of faithful performance is a consistent record of support for agriculture throughout the years.

What really counts, is having people in public office who really care—and who really understand your problems, and want to do something about them.

That certainly goes for the REA, as well as general farm legislation.

I believe in all kinds of cooperatives, but I have a special place in my heart for the rural electric cooperatives. You have not only brought light and power to the rural areas of America, you have also strengthened the entire farm cooperative movement by teaching more farmers the value of working together to help themselves.

Our rural electric co-ops have developed strong and courageous leadership because of the very necessity to resist continuing attacks upon your great program. If there is a single destructive trick that foes of your organizations have not used or tried to use in the last 6 or 7 years, I cannot name it. I know—because I have been in the thick of your battles, shoulder to shoulder with men like Clyde Ellis of the National Rural Electric Cooperative Association.

Perhaps it appears that we have just lost a round in our most recent REA fight—the attempt to override the President's veto on the Humphrey-Price bill. But let me tell you something; it was a mighty hollow victory for foes of REA, when two-thirds of the Senate voted in your behalf, and we only missed by four votes having a similar two-thirds vote in the House.

I am proud of that fight, and my own part in it—with your backing. When we found out 2 years ago that the Secretary of Agriculture was attempting to take over the loanmaking authority of the REA Administrator, I insisted that Secretary Benson come before our Senate Committee on Government Operations to explain what he was up to.

I acted in good faith, because Secretary Benson had promised in 1953 not to change the operational pattern of REA if he were given authority over its functions under the President's reorganizational plan.

You may recall that Ezra "took a walk," and refused to appear—even though my official authority as chairman of the Subcommittee on Government Reorganization called for acting as a watchdog over his administration of the authority given him.

Secretary Benson virtually hid out until Congress adjourned. So when Congress returned, my first act was introduction of legislation restricting his authority and returning it to the REA Administrator where it belonged.

This time Secretary Benson could not escape coming before our committee—and he was unable to convince a majority of the committee he had acted in good faith. The result was the enactment of the Humphrey-Price bill by both Houses of Congress.

Yet, it was vetoed, despite the expressed intent of Congress as to how the program should operate. And the Republican Administration, from the White House down, exerted every pressure in the world to sustain that veto.

We lost by just four votes. And, I don't think I have to remind you, four Republican votes in Wisconsin for REA could have turned the tide in your favor.

More was involved than just this simple REA organization act. If we could have broken the back of government by veto, it would have opened the door to great strides forward in giving farmers other help they have been asking for: a better farm program, seeing that farmers have a chance to earn a decent farm income while at the same time cutting down the tremendous losses of the Commodity Credit Corporation.

Yes, if four Republican Congressmen from Wisconsin had voted differently, our immediate legislative future for agriculture would have looked a great deal brighter.

Yet even in supposed defeat we have served notice on REA-wreckers that a vast majority of this Congress is not about to let this great program be crippled. And—we have put the brakes to efforts of this Administration to hike your interest rates on REA loans. That alone was worth the effort.

THE DEMOCRATIC CONGRESS SUPPORTS IMPROVED FARM LAWS

Now, I want to talk to you today about more than just the great REA program.

You are farm people. The purpose of your REA cooperative is to better enable you to do a good job as farmers. Farming is your business. Yet it is even more—it is your way of life.

I am sure that uppermost in your minds is the future of American agriculture—and the extent to which your Government is going to help you, or neglect you, in your struggle for economic justice—in a time of serious economic distress.

As a member of the Senate Committee on Agriculture and Forestry, as a longtime friend of American agriculture—your problems are of grave concern to me.

They should be of serious concern to all citizens, urban or rural—for we all have a stake in what happens to agriculture.

The Democratic Party has received a powerful mandate from the farm people of America to right the tragic wrongs that have been done to American agriculture under the Republican Administration in Washington.

Remember, it is the Republican program that is such a mess today—as much as they would like to duck responsibility.

It is the Republican program, and it has been Republican bungling that has made such a costly mess of it—without producing any effective results for farm people.

It is high time for some changes to be made.

But it is only fair to warn you that the Congress is working under extremely serious and inescapable limitations. We cannot do everything you wish we would do. We cannot do everything we want to do.

First, we are working under the limits imposed by the President's veto power. I think it is only fair and accurate to expect that the President will veto any bill we might pass which will do anything substantial to raise farm prices.

This means that Congress is limited in what it can do for farmers to what can be passed by a two-thirds vote—over a Presidential veto.

Secondly, Congress is limited in what it can do for farmers by the veto power which is held by the Secretary of Agriculture.

You have seen how good farm programs can be ruined by unsympathetic administration. The power of the Secretary of Agriculture to negate the intent and spirit of Congress is great.

The Secretary's power to veto by administrative action limits the good that Congress can do for farmers to those things that are so simple, so direct, that the results can come through to the farm in spite of all the foot-dragging and hostility that it will encounter as it passes through the Department of Agriculture's hands.

Despite these severe handicaps, at least some of us in the Democratic Congress are determined to develop a workable program that will help the farmers of America.

You can mark it down as absolutely certain that the Democratic Congress will not let the administration "pull down the temple" of agricultural programs completely in its final hours, as it has seemed determined to do.

The Democratic Congress will never, never, never give Ezra Taft Benson the zero-parity floor he has asked for. We will not give him the marketplace no-parity gimmick he has asked for either.

The Democratic Congress will not allow the administration to get away with putting a penalty tax on the refunds that your cooperatives pay to their patrons.

The Democratic Congress will not let the administration jack up REA interest rates, nor throw the REA co-ops to the "wolves" of Wall Street.

You can count on that. You can bank on it. You can bet your economic lives on it—and that is exactly what the stakes are in agricultural policy today. For while the administration has a powerful veto weapon to use against Congress when it tries to help the farmer, we have a veto power of our own when it comes to acting on the administration's plans to harm the farmers. And we will use it. We will not give up a single inch.

This tragic era for agriculture—the dark era of Ezra—has had a good and constructive result along with all the misery and waste. So it seems to me, at any rate.

It has made us grow up and come of age in our thinking about farm policy.

We now realize that the real argument in farm policy should not be over methods and details. The real argument is over basic objectives.

THE FAMILY FARM'S FUTURE IS AT STAKE

Are you for a program to help the family farm? Or are you against the family farm? That, my friends, is the real issue, the real dividing line, in farm policy debate today.

Almost any farmer in America can think up the general outline of a farm plan that will work—if there is a will to make it work.

Methods are important. Details are important. Some will work better than others. Some well-intentioned ideas might not work at all. We need highly skilled technical experts and conscientious administration to carry out our farm programs. But our trouble is not for lack of ideas and conscientious, skilled people to put them into effect. The Department of Agriculture is overflowing with fine, dedicated career public servants—who could make a farm program work and work well, if they were given a chance.

Regrettably, the public attitude toward agriculture has been so deliberately distorted that we need to mobilize better understanding on the part of all American people as the first step toward the new and better farm program some of us are seeking.

America's farm policies need to be reexamined and clarified in terms of objectives sought in the Nation's interest—not just in terms of political slogans or cliches designed to turn city resident against farm resident, and even farmer against farmer.

Before we can enact any effective new farm legislation, we need to make clear what our purposes and objectives are.

That's what some of us are trying to do in Congress now, while we are working on new and better legislation.

All the legislative history behind the development of farm programs in America confirms that our objective and purpose has been to assure the American people of a continued abundance of food and fiber, to offer America's farmers an opportunity to achieve economic equality with other segments of our economy, and to preserve and protect America's traditional pattern of family-owned, family-operated farms as the type of agriculture best adapted to our democratic way of life.

In more recent years there has been added a new objective in the interest of the entire Nation—the purpose of using our abundance as a fuseful and effective humanitarian arm of better international relations.

Repeatedly, the Congress of the United States has restated its intent to uphold these objectives, in one way or another.

But these objectives are being challenged. We have heard our blessings of abundance criticized as a curse.

We have heard that even 90 percent of equality—let alone full equality—is more than farmers are entitled to in our economy.

We have heard disturbing yet increasing talk of encouraging a complete change in our historic pattern of farming, to put more emphasis on bigness and efficiency, less on human values and problems of rural living. We have heard less concern about perpetuating our family farming pattern, and more and more about giving way to the pressure of mass operations.

Serious questions of public policy are involved, if we are to cross that line.

It is not a change of direction toward which we should be allowed to drift or be pushed, without fully knowing the consequences.

The most damaging product of the age of Ezra is the dangerous erosion of America's will to do justice for her farm people.

For the first time in the history of our Nation, a cancer of doubt has arisen in the public consciousness as to the merit of our

family farming system—the most efficient agricultural production system in the world.

The swift rise of vertical integration provides the mechanism whereby big concentrated business and financial interests can extend their domination over agriculture. This will leave the farm family on the farm. But it will take away its economic independence. The farmer will be told what to grow and where to sell, and the absentee-corporation farm director will control what the farmer gets for his efforts. This is but corporate collectivism, with private agricultural commissions.

This ominous forecast for American agriculture holds a powerful, fascinating allure for all too many people in our country today. Its allure has been heightened immeasurably by the discouraging, demoralizing shambles that the Republican administration has made of our farm programs. There is a growing sentiment in our country for just giving up on the farm problem.

This sentiment is strong among those who do not understand the tremendous values and strengths in our family farming system, nor the unusual problems which farm families must face. There are millions and millions of citizens in our population who are far removed from the soil. Their number is increasing year by year. Domination of agriculture by centralized corporate power appeals to many of them as an easy way out of the farm problem.

And it appeals even more strongly to those who simply do not care about what happens to farm people.

But I am one of the people who care, and so is LESTER JOHNSON here, and so is Senator PROXMIRE. And I believe that there are many more elected representatives like us in the Congress of the United States.

WE NEED A NEW AND BETTER FARM PROGRAM

Rather than stumble and drift along blindly because of a vacuum of sound farm policy leadership from the present administration, farm people and city people alike need to do some soul searching, and some honest appraisal of what we really want—and the alternatives we face. Perhaps I can be helpful in that direction today, by outlining to you my own guidelines for trying to develop a new and better farm program.

We need an agricultural stabilization program far less costly to the American taxpayers than the present inexcusable mess—yet one that is far more effective in its protection of family farmers and their contribution to the American economy.

We can, and must, have both.

We need an agricultural stabilization program that provides more equality of opportunity for agriculture to keep pace with the rest of our expanding economy in terms of income, yet one that does not make the farmer dependent on the Government for that income.

We need a program that recognizes the need for and encourages farmers to help themselves through cooperative action for bargaining power in the marketplace and for whatever production adjustments that may be necessary to make the best use of our human, soil, and water resources.

We need a program that recognizes and is tailored to the vast technological changes, yet does so without sacrificing the human and social values of our traditional American pattern of family owner-operated farms.

We need a program that recognizes the farmer's stewardship responsibility for conserving productivity of our land for the sake of future generations, yet recognizes too that the entire Nation shares that same responsibility—and must share in the cost of seeing that it is properly done.

We need a program that really does something about surpluses—making use of what we have, and adjusting production to keep from building up more beyond the level of possible need.

Above all, we need a national food policy closely meshed with our farm policy, so that we can better gear our productive resources to the needs of humanity at home and abroad—instead of producing for Government storage bins.

If the choice facing us rests between abundance and scarcity, consumers and farmers alike have a vital stake in abundance—wisely used. Farm abundance has done more to check inflation and the increase in the cost of living than any other single factor in our economy.

Until we as a nation face up to our social responsibility of deciding what we are going to do about the areas of hardship and suffering in our own midst—and to what extent we are willing to share our potential abundance with hungry peoples of the world as a force for freedom—until these questions are resolved, it appears morally wrong to insist that American agriculture drastically curb its output below levels for which human need exists.

Society must recognize that in the long run, it pays the price one way or another.

Is it not cheaper, and far better, to enlist our food abundance in waging peace, than to be faced with enlisting our sons and mobilizing our economy for war?

Is it not cheaper, and far better, to invest some of our abundance in raising the living standards of low-income groups in our country, rather than turning to a scarcity philosophy that can only force upon food costs to all segments of our society.

American agriculture is offered no alternative other than following the pattern of monopoly industry, in cutting back its production to the point where it can receive more income for less output—it will be consumers of the Nation who will pay the bill.

Farmers would like to produce in abundance, if that abundance is wisely used, and they can receive a fair return for their investment, their managerial skill, and their labor.

Yet there is no reason why farmers alone should subsidize other segments of our society already receiving a greater proportionate share of our national income, nor any reason why farmers alone should bear the costs of producing to meet the needs of underdeveloped areas of the world, in the interests of America's foreign policy.

If consumers want the price protection of always having a little more than enough to eat, if the Nation wants the valuable asset of abundance in a world of need, then the public must recognize that there is a public interest stake in Government providing a climate of conditions in which farmers can survive economically.

You cannot do it by writing off farm people as second-class citizens, who are not to share in the general prosperity and progress of the Nation.

You cannot do it by throwing farmers on the mercy of the free market for what they sell, when the costs of what they buy are bolstered and supported by all kinds of built-in protectors.

Food is basic to national life.

Price protection, farm credit, conservation assistance—all such farm programs are but means to an end, not the end itself.

There is no simple answer to achieving these objectives, no one panacea for the entire farm problem. Neither can any one bill meet all the problems we face.

But reasonable men should be able to agree on combining an entire kit of economic and program tools in order that each commodity may be handled in the manner best suited to its unique needs.

We need more adequate credit designed to family farm requirements. We need better conservation programs. We need more research directed into utilization of our abundance. We need a food stamp program to increase consumption among our aged, our handicapped, our dependent children and our unemployed. We need greatly expanded uses of our food internationally under a "Food for Peace" program.

Yet with all of this, we need the Government's cooperation with farmers toward more adequate income protection and production adjustment. We can do it through combined use of income equalization payments to producers, through marketing orders and agreements, through orderly marketing loans and direct purchases, through marketing quotas, through payments in kind in some instances, through greater rural development aid and through Government sanction of farmers banding together to help themselves when they develop and accept programs to do so by majority vote of producers.

Far from regimentation, such a program offers the real freedom farmers need—freedom from poverty, freedom from economic domination, and freedom of choice as to the alternatives they prefer in seeking to avoid the hardship of the wildly fluctuating free markets over which they now have no control.

These are not pie-in-the-sky proposals. They are sound and practical and should be achieved, if American agriculture mobilizes its forces and carries its true story to the rest of the American people.

THE FARMER'S BILL OF RIGHTS

And with such a program, I am sure, we can at long last secure for all agriculture assurances which I have termed my "Farmer's Bill of Rights," as standards from which farmers should never retreat.

They include:

1. The right to full equality of economic opportunity.

2. The right for improved standards of rural living.

3. The right of reasonable protection against natural hazards.

4. The right to extend agricultural free enterprise through cooperative action.

5. The right to public cooperation and assistance in conserving and saving the soil.

6. The right to preserve the social and human values of family farming.

7. The right to decent land tenure which encourages the desirable goal of farm ownership.

8. The right to a democratic voice in his own farm program.

9. The right to benefits of an expanding world trade.

10. The right to a long-term program of food reserves to protect consumers against costly scarcity.

11. The right to assurance that land reclamation development will result in establishment of new family farms, not factories in the field.

12. The right to the entire Nation's support for use of food and fiber as a force for freedom throughout the world.

These, I believe, are the basic rights of American agriculture.

They are not new rights. They are not rights of special privilege, gained through misuse or abuse of tremendous power over the lifelines of the Nation's food supply.

Rather, they are rights of historic precedent, earned by the great and continuing contribution of agriculture to America life—the fulfillment of the Nation's needs in peace or war, in good times or bad, at personal profit or loss.

They need to be restated now only as a guiding beacon of light, cast upon the darkness of present confusion over America's farm policy.

They must be just as zealously guarded against forces which seek to destroy them, as we guard other historic rights, privileges, and responsibilities of freedom in our democracy.

One Exception to the Lag

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. CANNON. Mr. Speaker, belatedly the Navy is at last asking for crash production of nuclear-powered missile-firing submarines.

In this connection, it might be well to note the progress being made by the Navy with funds already available for the nuclear-submarine program.

With that in view, I am including in the RECORD a statement by Vice Adm. Hyman G. Rickover, the father of the nuclear submarine, as reported by the Associated Press in yesterday's metropolitan papers:

RICKOVER SEES PERIL TO A-SUB LEAD

Vice Adm. Hyman G. Rickover says he fears the United States may lose its lead over Russia in nuclear submarines because of meddling by Pentagon high ups in the work of his team of naval atomic experts.

"We must maintain our lead in atomic submarines and nuclear propulsion," Rickover said.

"If we don't, we will give up 10 years of advantage, and that is what I'm afraid is going to happen to us because of the vast amount of interference to which my organization is subjected."

Rickover, sometimes called the father of the atomic submarine, appeared recently before the Senate Space Committee and Preparedness Subcommittee. His testimony, given in secret, was made public yesterday, after being screened for security reasons.

Asked about the overall contest between Russia and this country, Rickover replied:

"I am frightened by what appears to be a tendency in some quarters to prefer letting this country sink to second place," he said. "We cannot afford to be second in anything that affects our security. We must lead, or we must have parity at a minimum. If we don't have parity we will lose our freedom."

Rickover said he has to transfer younger naval officers who work with him or they would not qualify for promotions under the Navy rotation system.

Asked why they were denied promotions under him, he replied:

"Well, they are not liked. They rub people the wrong way. They are not courteous in situations that demand courtesy.

"They are more interested in getting the job done than in apple polishing, and the routine people whose toes are stepped on take it out on them."

Rickover pictured himself and his top atomic technicians as "subject to daily and constant petty harassments * * * by petty minds who are placed in positions of authority."

He said the naval atomic experts must spend so much time writing reports and explaining matters to a constantly changing group of superiors that it is almost impossible to get on with the job.

In the 12 years since he began design and construction of the world's first atomic submarine, the *Nautilus*, Rickover said, he has been under 48 different bosses.

CALLS PENTAGON "BIG JUNGLE"

Rickover said "the Pentagon today is a big jungle * * * no one could possibly control that outfit with its large number of people."

He said—as he has before—that "it would help to arbitrarily reduce the number of people in the Pentagon by 20 or 30 percent." There are 30,000 or so military and civilian personnel in the mammoth Defense Department headquarters here.

The World Is in Motion

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Monday, February 15, 1960

Mr. JAVITS. Mr. President, the Congress and people of the United States will have to come to grips with the direction in which Europe—free Europe—will move during the next few months in this the first year of the new decade. More specifically, we shall be called upon to decide whether this Nation will join Canada in entering membership of a new Organization for Atlantic Economic Cooperation, the OAEC, which was proposed by Under Secretary of State Douglas Dillon last January 12 in Paris. The OAEC, plans for which are being worked out in conference by a special committee, is designed to take the place of the OEEC which, with its 18 member countries, is in danger of an open economic division between the members of two blocs relative to trade and tariff policy. A lucid analysis of the divisive effects of a split between the Common Market (he Inner Six), the Free Trade Area (the Outer Seven), appears in the Christian Science Monitor for February 10. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, Feb. 10, 1960]

THE PROBLEM: WHICH WAY TO UNITED EUROPE?

When the European Free Trade Association was formed last fall, one observer remarked jokingly: "One can hardly see Europe for the mass of European organizations."

There is, indeed, a multitude of associations, communities, and commissions of all sorts that bewilders the layman and sometimes even stumps the expert.

It all began while World War II was still being fought—not to mention the plan for a united Europe worked out in the 14th century by Pierre Dubois, or Count Richard Coudenhove-Kalergi's Pan-Europe Movement of 1922, or French Foreign Minister Aristide Briand's unification efforts of 1930.

But during the last war some of the European statesmen became convinced that only new and closer forms of cooperation would make it possible to forestall recurrence of such catastrophic adventures as Hitler's attempt to impose a new order on the Old Continent. While some of those plans were based on the assumption of continuing friendly cooperation between East and West, and some centered on rearranging relations between the Balkan States, others envisioned an at least partial merger of the smaller Western European States.

BENELUX LONE WAR SURVIVOR

Of all those plans only the Benelux project survived the war. It provided for a customs union between Belgium, the Netherlands, and Luxembourg. Benelux was founded in 1947 and started operating on, first, a moderate scale in 1948. In the past 12 years the scale of operations has been gradually widened though by no means all of the problems posed by competing industries and agricultures of the three member states have been solved.

Broader European organizations came into being between 1947 and 1950, sparked by the Marshall plan of 1947 and the outbreak of the Korean war in 1950.

An offspring of the Marshall plan was the Organization for European Economic Cooperation (OEEC), comprising 18 Western European States as regular members and the United States and Canada as permanent observers.

Of the other organizations the most important ones are the 15-member Council of Europe, with its seat in Strasbourg; the 6-member European Coal and Steel Community (ECSC), with headquarters in Luxembourg; the North Atlantic Treaty Organization (NATO), with its seat in Paris, the 6-member European Economic Community, better known as the Common Market, with its seat in Brussels; and as the most recent one, the 7-member European Free Trade Association (EFTA) which held its founding meeting in Stockholm last November.

All these are, so to say, official organizations in which the governments are holding the membership cards. In addition there are many unofficial associations, such as the European Movement, the roof organization of the six most prominent groups advocating European unification; the European Parliamentarian Union; and the European Academy, a nonpartisan association of politicians and representatives of all sciences.

EDUCATED YOUTH FAVOR UNITY

How deep into the masses the roots of all these organizations have penetrated is difficult to say. The conclusion drawn from admittedly superficial observations suggests that there is among the educated youth of most Western European countries a definite feeling in favor of a unified Europe—or, at least, of formation of some larger multinational units—but that most of the people have given little, if any, thought to the question.

An interviewer traveling from France through Italy, West Germany, Austria, and Greece to Turkey cannot expect to find many people who would be able to tell the difference between the Common Market, the OEEC, and the EFTA, even though their countries belong to either one or two of them.

The main difference between the Common Market and the EFTA may seem to be one of customs policy. The Common Market foresees not only the complete abolishment of customs barriers among its six members—France, Italy, West Germany, and the Benelux countries—but also enforcing of identical custom tariffs against nonmembers.

This provision is bound to have unsettling effects on the trade prospects of nonmembers. A typical example is provided by Portugal, leading world exporter of cork.

AUSTRIAN TILE THREATENED

West Germany, which in 1958 bought 45,702 tons of cork and cork products from Portugal, had no customs duty on the raw material and a duty of only 4 to 7 percent on cork stoppers. However, the Common Market members, Italy and France, both of which are minor cork producers, had a high tariff on imports. From now on, a tariff lower than the Italian and French ones but much higher (15 to 19 percent) than the West German one will be obligatory for all Common Market members. What will happen is that the price of cork products in most of the Common Market countries will rise but also that Portuguese exports will shrink.

A similar blow threatens Austrian manufacturers of so-called hard-fiber tile—a building material—for which Italy offered an excellent market. Until the end of 1958,

Italy levied on all imports of hard-fiber tile, regardless of the country of origin, a duty of 25 percent. Since the beginning of 1959 the duty for imports from Common Market members has been reduced to 18 percent, putting the former Austrian suppliers at a severe disadvantage and forcing them to look for customers elsewhere.

Neither Austria nor Portugal are in the fortunate position of a number of American firms which, in anticipation of tariff increases, have established branch factories in Common Market countries which are to enable them, as it were, to continue selling their cakes and eating them, too.

WORLD MOVEMENT ILLUSTRATED

In contrast to the Common Market, the EFTA—composed of Britain, Sweden, Norway, Denmark, Switzerland, Austria, and Portugal—while also aiming at gradual abolishment of mutual customs barriers between its members, allows each of them to set its tariffs for imports from nonmembers at whatever level it considers necessary.

But the main difference between the two organizations is more fundamental than the contrast between tariff rigidity on one side and flexibility on the other.

The Common Market has an unmistakable supranational tendency, something which the EFTA shuns. Among the provisions of the Common Market statute are the lifting of restrictions on the movement of services, labor, capital, and business enterprises; the coordination of monetary and fiscal policies; the establishment of a common agricultural policy; and a far-ranging equalization and standardization of social institutions and programs.

This is an undertaking of near-revolutionary implications, opening the road to a merger of governments as an ultimate step. The (American) Committee for Economic Development, in its report of last year, "The European Common Market and Its Meaning for the United States," did not overstate in declaring: "The chief lesson of the Common Market may be that it shows us once more, and dramatically, that the world is in motion—on the economic front as on others."

Yet, combined with its supranational tendency, which many consider to be desirable, the Common Market has some undesirable features built in. One of them is an inclination toward self-sufficiency as a goal with economic as well as political motivations.

This has become apparent in the Common-Market proposals for formulating a joint agricultural policy. The Frankfurter Allgemeine Zeitung wrote about the draft a few weeks ago that it shows the unbridgeable gap between the existing policies of the member countries and the intention of the Common Market Commission to set up a far-reaching protectionism.

Another of the less desirable features of the Common Market is the possibility—one could almost say probability—that France and West Germany will enter into a struggle for its domination. It goes without saying that any deterioration of good-neighborly French-German relations would weaken the West's position toward the East.

The political implications of the Common Market are seldom mentioned by the member nations. But they are clearly felt by the Benelux countries and lately by Italy, too, while the West Germans have become most outspoken critics of the organization's disrupting effect on Western European trade as a whole.

REVERSAL OF TREND URGED

In a full-page article of last December 5, the Frankfurter Allgemeine Zeitung came out in favor of reversing the isolationist tendency of the Common Market and called for gradual lowering of customs duties all over Europe and allowing the individual states to set their own custom tariffs vis-a-vis non-European countries.

The paper warned that failure to find a pan-European solution will lead to an economic partition of [Western] Europe that can never be undone.

Similar thoughts must have occurred to the authorities in Washington, and that is why Under Secretary of State Douglas Dillon last January 12 in Paris, unveiled a plan for establishment of an Organization for Atlantic Economic Cooperation (OAEC) to include in addition to the 18 OEEC countries the United States and Canada as full members. Details of the plan, its scope, mode of operation, and rights and duties of its members are now being worked out by a special committee.

Since congressional approval is needed for United States membership in the projected OAEC, Congress will be faced with the momentous decision to choose—or influence—the direction in which Western Europe will develop.

Communist Countries Are Spending Vast Sums To Prove Americans Are Cultureless Barbarians—U.S. Arts Council Needed

---

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 11, 1960

Mr. McDOWELL. Mr. Speaker, a distinguished citizens of Delaware, Samuel E. Homsey, has written me to say that Communist countries are spending vast sums on propaganda to prove that Americans are cultureless barbarians.

Mr. Homsey, a leading member of the American Institute of Architects, testified for that organization in support of a bill sponsored by our colleague, the gentleman from New Jersey [Mr. THOMPSON], and cosponsored by others including myself, to establish a Federal Advisory Council on the Arts. This legislation was recommended to the Congress by President Eisenhower in his 1955 message on the state of the Union.

Mr. Homsey writes that—

I feel that this legislation to establish a Federal Advisory Council on the Arts is of prime importance at the very time when the Communist countries are spending many dollars on propaganda to prove that Americans are cultureless barbarians. If Congress fails to enact this legislation they will be playing into the Communist hands to prove the point.

The Soviet Union gives very large sums to the fine arts and sends its leading artists abroad. This is the most effective cultural propaganda the U.S.S.R. engages in, and it is often contrasted with the lack of financial support for the arts by the United States, even by our best friends.

Some time since, the New York Times commented editorially that—

Practically every other civilized country (and some not so civilized) has recognized that the Government has a proper interest in promoting the arts, and in promoting them with cash. It would be a mark of maturity and enlightenment if we were to do the same.

The Nation's Capital, as a study made at my request by the Library of Congress proved, does less than any other major U.S. city for the fine arts.

In a recent statement Senator HUBERT H. HUMPHREY declared:

Washington must have a cultural status at least equal to its position as the political, military, and economic center of the free world.

It lacks such a commanding cultural status at this time. In fact, the New York Times recently compared Washington unfavorably with the provincial city of Tiflis, U.S.S.R.

I have introduced legislation for the purpose of depositing in a special fund 1 mill out of each $1 of tax revenue of the government of the District of Columbia to be used by the National Symphony Orchestra, the Corcoran Gallery of Art, the Washington Opera Society, and other nonprofit art programs of the District of Columbia.

Commissioner David B. Karrick of the District of Columbia has written that—

I strongly endorse funds for the National Symphony Orchestra with which I am thoroughly familiar, having served on its board for many years before becoming a Commissioner. I know its needs and appreciate its high standards. I would perhaps likewise approve funds for the Corcoran Gallery, if I were more familiar with its resources and needs.

More recently Commissioner Karrick declared—

The expenditure by the municipal government is small. This is irrelevant.

I include as part of my remarks Mr. Homsey's letter as well as several other views on the subject I have been discussing:

WILMINGTON, DEL., *February 3, 1960.*

The Honorable HARRIS B. McDOWELL, Jr.,
House of Representatives,
Washington, D.C.

DEAR MR. McDOWELL: Your letter of January 18 containing the material on the Federal Advisory Council on the Arts was delayed because of incorrect address.

We both appreciate your strong support of H.R. 2569. In 1955 I was appointed one of three architects to represent the American Institute of Architects on the Committee on Government and Art and I attended numerous meetings and have kept in touch on the activities of this committee. I believe that in 1951 President Truman authorized the Commission of Fine Arts in Washington to undertake a study of governmental activities along the lines set forth in numerous statements.

The American Institute of Architects supports wholeheartedly the establishment of a Federal Advisory Council on the Arts.

I disagree with some who have opposed the bill and the work of the Committee on Government and Arts. They have seemingly read into the bills or proposals numerous undercurrents and offcolor fictions.

Mrs. Homsey and I feel that this legislation to establish a Federal Advisory Council on the Arts is of prime importance at the very time when the Communist countries are spending many dollars on propaganda to prove that Americans are cultureless barbarians. If Congress fails to enact this legislation they will be playing into the Communist hands to prove the point. We are grateful for your interest and we speak on behalf of many enlightened citizens.

Sincerely yours,

SAMUEL E. HOMSEY.

[From the Washington Post, Nov. 9, 1959]

ANEMIC MUSE

Representative HARRIS B. MCDOWELL, JR., has a point in his comment that Washington, as a political entity, "does less than any other major U.S. city for the fine arts." Comparisons are treacherous, especially between cities with markedly different traditions. Nonetheless, a survey made by the Library of Congress at the request of Mr. MCDOWELL gives support to his assertion.

Of the 38 other cities surveyed, most spend considerably more than Washington for civic cultural activities—and the sample ranges from New York (which spends about $2.6 million annually) to Scranton, Pa. (which has averaged about $28,740 per year for the past decade). The amount in Washington's budget allotted for civic cultural events is the comparatively anemic sum of $16,000—of which about $10,000 helps support the Watergate concerts.

Of course, Federal and private contributions help close the gap. The National Gallery of Arts, as its name implies, is supported by all the people. Private support makes possible many concerts, including the Budapest Quartet series at the Library of Congress.

Nine of the cities surveyed help support the community orchestra whereas the District government contributes nothing to the National Symphony. In times past, the District Commissioners have asked Congress to authorize a contribution, and perhaps Mr. MCDOWELL's prodding will help win more support for this minimal civic obligation in a world capital. Certainly there are many competing claims on the local budget which must be taken into account, but there is no justification for the District contributing less to the fine arts than Evansville, Ind. (population, 135,000).

[From the Washington Post, Jan. 3, 1960]

MUSE IN A MIRE?

New Yorkers never tire of chiding Washington for its neglect of the fine arts. "In Culture, Is Washington a Hick Town?" asks an article in the New York Times magazine by Music Critic Howard Taubman. On the whole, Mr. Taubman concludes that it is. It is tempting to brush away criticisms like this as the gibes of a provincial who is obviously envious of Washington's physical felicities. But the sad fact is that the Capital is laggard in its provisions for the arts, and its backwardness invites criticism, however annoying, from the mandarins of New York.

Compared with other world capitals, Washington is poorly served in the realm of the performing arts—even, as Mr. Taubman notes, in comparison with a smaller capital like Brussels. More damaging is the contrast between Washington and other American cities. Cleveland or Boston, for example, provide a fuller cultural life than does the Nation's Capital.

There are reasons for this contrast. More than in other cities, politics predominates locally, and this tends to crowd out the arts in a city overdedicated to government. Lack of home rule helps to stifle civic initiative and community enterprise here. More than other cities, Washington is populated by transients who donate their efforts (and endowments) elsewhere. But even when these limitations are acknowledged, Washington can and should do more to provide a better balanced cultural program worthy of a capital and more representative of the Nation.

Various community efforts—the National Symphony, the Opera Society, the Washington Ballet, and the Arena Stage—offer convincing evidence that the Capital basically is neither indifferent nor apathetic. The lack of adequate facilities, however, severely handicaps the growth of these still youthful enterprises. That is what makes so important the ultimate success of the proposed National Cultural Center.

THE DISTRICT OF COLUMBIA,
Washington, January 22, 1960.

Hon. FRANK THOMPSON, Jr.,
Member of Congress,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. THOMPSON: I have under study your memorandum slip of January 5 suggesting that I send my comments on your proposals for cultural activity in Washington.

Although my letter is brief, my consideration of the suggestions has been lengthy.

First, I believe that an International Olympiad of Arts and Sciences, held biennially, would be admirable, although I have reservations on the use of the word "Olympiad," which, to me, suggests athletic games.

Second, I would favor an appropriate memorial in Washington to President Woodrow Wilson and to President James Madison, but I do not understand your expression "living memorial." If it means scholarships, grants for research, study, and travel, it would be essential to assure that such grants were not given to unworthy applicants because of political and other pressure. This can be arranged. It would not be, however, unsatisfactory to erect appropriate memorials to these two statesmen.

Third, I thoroughly approve of strengthening any group fighting to prevent the road-builders from converting Washington into an overgrown, hyperthyroid, cloverleaf for the benefit of those living outside its limits.

Fourth, I strongly endorse funds for the National Symphony Orchestra, with which I am thoroughly familiar, having served on its board for many years before becoming a Commissioner. I know its needs and appreciate its high standards. I would perhaps likewise approve funds for the Corcoran Gallery, if I were more familiar with its resources and needs.

Trusting that these brief but carefully considered suggestions may be of assistance to you, I am, with cordial regards,

Very sincerely yours,

DAVID B. KARRICK,
Commissioner.

WWDC RADIO REPORT TO THE PEOPLE, FEBRUARY 6, 1960, BY COMMISSIONER DAVID B. KARRICK, WASHINGTON, D.C.

Three weeks ago I was asked on this program whether I considered Washington a hick town, this question being directed toward the cultural opportunities in Washington. I answered emphatically in the negative, though without adequate background then to support my conclusion.

Let us look at the matter for a moment more specifically, to outline these cultural opportunities in Washington, and the advantage that Washingtonians take of them.

First, the National Symphony Orchestra, under the brilliant leadership of Howard Mitchell, gives about 60 local concerts a season, bringing guest artists and conductors from all parts of the United States and from foreign countries. About 3,000 season tickets are sold for each night with the attendance varying above or below this, according to the fame of the soloist, with slightly smaller attendance without one. There are always adequate seats at these concerts.

And in addition to the performances of our own National Symphony, there are concerts by visiting orchestras—the Boston Symphony, the Philadelphia Symphony, and other leading American and foreign orchestras visit us periodically.

In addition to the symphony concerts, there is chamber music at the Library of Congress, the finest in the world, with the best groups of America and Europe, all of which play to a capacity audience.

There are concerts every Sunday, September through June, at the National Gallery with a capacity attendance. Also the Phillips Gallery has from five to eight concerts a month. The seating capacity is limited but there are amplifiers in other rooms, with the audience sitting on the stairs when no seats are available.

The Washington Opera Society, far from making a good beginning, as was mentioned in a recent press article, is a successful operation which gives about three performances a year at the Lisner Auditorium.

These performances are well attended. In addition, we are promised this year three performances of American operas by the New York City Center Opera, for those whose tastes run more to contemporary composers.

But I have saved for the last of the musical opportunities of Washington the magnificent performances of great choral and oratorio works at the Cathedral where, under the skillful leadership of Paul Calloway, the great organ, the National Symphony, and the Choral Society of Washington, sometimes aided by the Cathedral Choirs, perform music unequaled anywhere else in the country.

All of the foregoing indicates two things; that there is an abundance of music available in Washington, and that Washingtonians attend.

Mr. Patrick Hayes, the impressario, says that Washington is an excellent ballet city, with a combination of resident and visiting companies. The Washington Ballet Guild, a local organization, gives four or five productions a year, one or two with the National Symphony.

This year, also, we shall have the New York City Ballet, the Ballet Russe de Monte Carlo, the Chicago Opera Ballet from our country, and the Royal Danish Ballet and the Royal Ballet of England (formerly Sadlers-Wells) from Europe, each to give several performances in the Capitol Theater with an expected attendance of 90 percent.

Then, too, consider the beauties of Washington's architecture, which are dismissed in a recent newspaper article as consisting of building after building. Anyone who can so casually dismiss the Lincoln Memorial, the Jefferson Memorial, the Archives Building, the Library of Congress, the Cathedral on Mount Saint Albans, that perfection of English Gothic architecture, the Shrine of the Immaculate Conception, and the Mosque on Massachusetts Avenue, is so obviously unable to discriminate and appreciate architectural beauty that little can be said to convince him.

For pictures we have first of all the National Gallery with one of the finest collections in the world, in a building which even empty is sufficiently beautiful to justify a visit.

Then there are the Freer Gallery, the Corcoran Gallery and the Phillips Gallery. Surely with these four institutions there is an abundant opportunity to view paintings and sculpture, and for those who wish to study, there are the excellent lectures at the National, Corcoran, and Phillips Galleries.

And any discussion of cultural opportunities of Washington must include the Smithsonian, with its great treasures of art and interest.

On drama we are admittedly weak with only the National Theater and the Arena Stage offering different types of professional performances, but there are the amateur groups, such as the Howard Players, the Kensington Players of Montgomery County, Georgetown University's Masque and Bal, the Maryland University dramatic group, and the excellent musical and dramatic works offered by the Speech and Drama Department of the Catholic University under the able guidance of Father Hartke.

In continuation of points of dramatic interest, the Folger Shakespeare Library is unique in the world, for in all probability nowhere else outside of Stratford-on-Avon, if there, is there as fine a collection of Shakespearean and works on the Elizabethan Theater. Furthermore, those who wish to add to their study of classical drama a more

intimate knowledge of the world's greatest poetry, may do so.

It has been impossible to mention all of our cultural outlets in a brief talk. Admittedly we do not have everything, but we have such an abundance of cultural opportunity and such good attendance, that it is ridiculous to contend that we are not a cultural city.

A part of this contention seems to be based upon the fact that the expenditure by the municipal government is small.

This is irrelevant.

The opportunities are here, Washingtonians enjoy them. And if visitors do not, that does not justify deprecating Washington's cultural standards.

A Call to Disarmament by Clement Davies

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. PORTER. Mr. Speaker, Clement Davies, longtime leader of the Liberal Party in Great Britain, member of Parliament, and president of the World Parliament Association, is among the most effective leaders for world disarmament and the rule of law. His letter in the London Times for Thursday, December 31, deserves the attention of all Americans who search for practicable ways in which to make our peace less precarious.

Under a previous consent, I include herewith the text of the letter:

A REMARKABLE YEAR

Sir, before the year 1959 closes should not attention be called to the fact that it may take its place as one of the most remarkable years in the history of man?

From time immemorial man has resorted to arms and though treaties innumerable have been made they have been, almost invariably, broken. Though men realized the need for and the value of the establishment of the rule of law within the confines of their own tribe or nation or territory, they have been unwilling to extend the application of the rule of law as between nations.

This century has witnessed the greatest and most destructive wars in all history, yet it is in this century that the first real world efforts have been made to abolish war and establish permanent peace. The Hague conferences, the League of Nations, and the Charter of the United Nations have failed to achieve what was and is so ardently desired by all peoples. The arms race is increasing and the threat to mankind is more menacing.

The Hague conferences, the League, and the United Nations Charter have failed largely because no country has been prepared to relinquish its independent sovereignty although it has become obvious that national sovereignty is today largely a myth, for no country can act on its own with complete disregard for the views and actions of others. All efforts at partial disarmament have failed: they have failed because fear dominates all our thoughts and fear is born of mistrust. That is the position today. Yet in this year of 1959, for the first time, there has been throughout the world a demand for complete disarmament under proper and complete control and that disputes should be settled by reason and not by force; in short, the rule of law should be established throughout the whole world. For the first time—

1. The three strongest powers, Britain, the United States, and Russia, declared to the world before the United Nations Assembly that they favored complete disarmament covering both the conventional as well as unconventional weapons.

2. The 82 nations through their representatives at the United Nations Assembly declared unanimously that the most important question of the day was complete world disarmament.

3. At the NATO Parliamentarians Conference held in November at Washington the parliamentary representatives of the 15 NATO countries voted unanimously—

(a) That a fair and permanent peace among all nations will not be achieved and maintained until there is among all nations, except for the maintenance of internal law and order, disarmament of all weapons, conventional as well as unconventional.

(b) That such disarmament should be carried through and under thorough and complete international control and inspection.

(c) That the nations of the world would agree to settle their dispute by reason and not by force and submit them to international judicial decision.

(d) That the nations of the world would establish, in order to prevent breaches of the law and to assure that such decisions are obeyed, a sufficient and effective international police force.

Of course, there is a vast amount to be done before this great objective—namely, a fair and permanent peace—can be achieved, but, surely, it is right to record that 1959 was the first year when this objective was declared as the universal desire and that to achieve it there must be universal complete disarmament under effective control.

I am, sir, your obedient servant,
CLEMENT DAVIES,
President of the World Parliament Association.
HOUSE OF COMMONS, *December 29.*

Dr. Hector Garcia, Distinguished Texan and Founder of the American GI Forum, Endorses Padre Island National Seashore Recreation Area

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, February 15, 1960

Mr. YARBOROUGH. Mr. President, thousands of Texans and many residents of many other States have announced their support of the plan to create a national seashore recreation area on Padre Island. But of all these, none of the endorsements of this project have been more colorfully stated or given me greater personal pleasure than that of Dr. Hector Garcia of Corpus Christi, Tex. There are several reasons for my gratification of Dr. Garcia's support on this undertaking. But I believe the most important to me is that I pesonally know from experience that in him, and in the remarkable national veterans group which he founded, we have an exceptionally capable and courageous ally. It has been my great honor and privilege to have him fighting shoulder to shoulder along with me in all of my battles for good government in Texas. He and his GI Forum members are the kind of men who will be where they say they will be, and take a stand for the right when you need them to take one. The National GI Forum is a great national patriotic organization of military service veterans of Latin origin. Dr. Garcia is an oversea American Army surgeon of World War II, with an impressive record of leadership in Texas and the Nation.

Dr. Garcia's counsel and leadership in behalf of the Padre Island National Seashore project will be a real boost to our cause. I ask unanimous consent to have printed in the Appendix of the RECORD the exceptionally clear and historically outstanding statement by Dr. Garcia, entitled "A Picturesque History of 'The White Island."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

A PICTURESQUE HISTORY OF "THE WHITE ISLAND"

(Statement by Dr. Hector P. Garcia of Corpus Christi, Tex., before the Senate Interior and Insular Affairs Committee favoring the proposal to establish a national shoreline park on Padre Island, Monday, December 14, 1959)

Senator FRANK MOSS, chairman of the Senate Committee on Interior and Insular Affairs Subcommittee and other members of this committee, my name is Dr. Hector P. Garcia. I am a resident of Corpus Christi and an American citizen, and property owner on Padre Island. I am a physician by profession and have the honor of being the founder of the American GI Forum of the United States. I am representing the American GI Forum of the United States, a veterans organization composed primarily of American veterans of Mexican origin with groups in 23 States and in the District of Columbia.

I wish to thank you gentlemen for your visit to our Texas shore and personally wish to thank you for permitting me to present my reasons why the American GI Forum favors the establishment of Padre Island as a national shoreline park.

The historical background of Padre Island is abounding with all of the excitement and adventure of the greatest of romantic novels. Padre Island is surrounded by centuries of mystery on its shores. Padre Island still has the promise and allure of hidden Spanish treasures, but more than that Padre Island is the longest island in the United States which still preserves its natural beauty as God created it.

Padre Island, an island along the Texas Gulf of Mexico coast, is approximately 120 miles long and was named after Padre Balli, a Spanish priest who found shelter and refuge from the Mexican Revolution in the early 19th century. It has been said that Padre Island has the longest and most versatile solid sand beach in the whole world.

The history of Padre Island from recorded history begins in June 1519, barely 27 years after the discovery of America when the Spanish admiral, Alonso Alvarez de Pineda, was sent by the Governor of Jamacia, Francisco de Garay, to look for a sea passage to the Orient. With four small vessels Alonso Alvarez de Pineda explored and carefully mapped the entire coast of the State of Texas and explored the Gulf of Mexico from Florida to Yucatan, and on June 24, 1519, entered the bay of where we are now meeting and named it the "La Bahia del Cuerpo de Christi" honoring the Roman Catholic feast day of Corpus Christi. De Pineda was the

first white man to see the beautiful romantic sandy island which today we call Padre Island.

In 1520, Governor Garay sent an expedition under Diego de Camargo to colonize the Rio de las Palmas which is the Rio Grande River. A fort was built there and this gives claim to one of the oldest settlements of the United States. This fort at the Rio de las Palmas was probably close to the south tip of Padre Island. Again, in 1523, Governor Garay in person led an expedition into the present Texas coast.

Nuno de Guzman, Governor of the Province of Panuco and Victoria Garayana wherein Padre Island was located, sent his cousin Sancho de Caniedo to take possession of the Rio de las Palmas, the territory wherein Padre Island was located.

On April 15, 1528, Panfilo de Narvaez started on his expedition from Tampa Bay. With him was his Treasurer Alvar Nunez Cabeza de Vaca. On November 6, 1958, Cabeza de Vaca became shipwrecked in Galveston Island with several of his shipmates and lived amongst the Indians for several years. Cabeza de Vaca became the first European to live on Padre Island. Cabeza de Vaca lived amongst this Texas coast until he escaped and traveled on foot reaching Culiacan, Sinaloa Mexico on May 18, 1536. The greatest Odyssey of living man happened among this island whose natural beauty we are trying to preserve.

In the month of January, year of 1553, a shipment of gold, the largest ever to leave Mexico with 1,000 passengers sailed from Veracruz. However, the ships were overcome by a hurricane and 300 living survivors out of the 1,000 were shipwrecked on Padre Island about halfway between Corpus Christi and Brazos Pass. Of all the 300 men, women, and children only 3 lived through the ordeal by the fierce Carancahuas and their long arrows. One survivor stayed with the treasure ships for 1 whole year. In 1554 Captain Angel de Villagrana was said to have recovered some of the gold. But even today the gold and silver of the Spanish galleons are awaiting someone who may be lucky to find the treasure.

And of course we still remember Robert Cavalier, Sieur de la Salle who entered Padre Island through Matagorda Bay and established the first French settlement protected by the sand dunes of Padre Island at Fort St. Louis at the Bahia del Espiritu Santo. From 1684 to 1689 the French had a claim to Texas and Padre Island also.

The Lafitte brothers (Pierre and Jean), pirates by trade, staked their hideout and headquarters along the Padre Island shores also. They left it, it is rumored, about 1821. But it is also said that they left a fortune in gold and silver in Corpus Christi pass near the Oso Creek and another valuable treasure at the mouth of the Nueces River as it flows into the Bay of Corpus Christi.

The brief sketch of Padre Island history will prove the value of the island as a national shoreline park by keeping the heritage that is so American. But there are many other reasons why we must preserve this beautiful island as it is today for the benefit of all that want to come and enjoy it.

The island is not only rich in beaches, shells, dunes, but it is the habitation for many thousands of wild animals, specially geese and ducks. It is a paradise for fishermen and a beautiful place for camping. On the south end of the island along the mainland we already have a Laguna Atascosa National Wildlife Refuge, and on the other end of the island we have the Aransas National Wildlife Refuge.

We are a veterans' family organization and we feel that Padre Island should be preserved as a national shoreline park because:

First, we feel that as veterans we want all the natural beauty of our country preserved for the benefit of all its citizens. This can be done only by maintaining Padre Island as national shoreline park. We are not in favor of its beauty being marred by man-made buildings, obstacles, and fences which would not only destroy its beauty but in time would become dilapidated, worn-out, and then Padre Island would be another slum in this area. We do not want its beauty and its length blocked by big hotels and buildings which in time would take the best of the beach and leave a small beach corner for the poor people who could not afford to pay for expensive suites or cottages.

We feel, as veterans, that Padre Island as a national shoreline park would be within the means of all our citizens, poor and rich alike. We are worried that many of our poor people in this area of Texas would not be able to visit a modernized, developed, manmade Padre island beach.

We had a convention of the American GI forum here 2 years ago. We had people from California, Colorado, New Mexico, Ohio, Michigan, Illinois, Nebraska, Kansas, Utah, Arizona, Oklahoma, Missouri, Indiana, Minnesota, and many other States. We had many attractions but their greatest thrill was their visit to this primitive, enchanting, mystifying island which, by the oldtime Spaniards, was called La Isla Blanca (the White Island).

But perhaps no one can explain the beauty and the fascination of the island as well as Frank Goodwyn and perhaps the real and important reasons why Padre Island should be a national shoreline park are quoted in his book, "The Lone Star Land," by Frank Goodwyn. To quote Mr. Goodwyn:

"The camp meeting spirit is also apparent in the recreational activities of the Texas people. The 40-odd public parks under State control are equipped more for camping and picnicking than for the combination of landscape and night club which characterizes the world's famous playgrounds elsewhere. A salient example of how the State's natural recreational assets are affected by its religious principles is the way a primitive retreat in the shadow of the southern gulf coast's booming industries has been used by Texans.

"Fronting the Gulf of Mexico with 116 miles of almost solid hard sand beach, the longest in the world, Padre Island is an exposed sandbar. The wind has done the same thing to its sand that it does to the gulf water: rolled it up in waves. The sand waves are desert dunes moving much more slowly than those of the gulf, but always moving just the same, being swept sometimes gently, sometimes severely, sometimes brutally by the everlasting trade winds. The sand is fine-grained and pure. Under the midday sun it sparkles, but in contrast to the foam caps and the clouds, it is a creamy yellow which becomes first golden then gray as the sun sinks.

"Arid and wild, Padre Island is never the same from one day to the next. Every wave, every gust of wind, gives it new contours, new esthetic effects. Sometimes its low spots are covered by water so that it becomes two islands, or three, or four. Then a fresh breeze will blow the water away and the island will become whole again. Sometimes a cluster of rough grasses will anchor the sand of a dune for awhile, and then free dunes will bend around it or bank up against the grass until they cover it. There is no certainty here, no security, no hope or permanence. All is changing and unpredictable. The only thing you can count on is that there will be more change, more sun, more wind, and more violence.

"But the island's very aridity, poverty, and primitive insecurity give it a value all of its own for Corpus Christi and the Rio Grande Valley. Two new causeways, one at each end of the island, make it possible for citizens to go there any time they wish. Travelers and natives can revert to the semi-savagery there. A working girl, having slaved for weeks in the service of civilization can bare her body to the lashing of the briny waves and the reviving ultraviolet of the sun. Under the velvet of freshly created clouds, glittering like the sea foam in the sunshine or tinted with amber and silver by the moon, she can become a cave, woman again for a day, or an evening, or at night. She can live for a few hours as Eve lived before the serpent tempted her with the knowledge of good and evil. Workingmen can take their wives and children to go temporarily wild in the sand and the sun.

"Many attempts have been made to tame and develop Padre Island to plant civilized settlements there. All have failed. If you set out domestic trees or palms there, the sand will starve their roots, the sun will suck out their sap, and the wind will blow them down. Hotels have been built between the gulf shore and the dunes of Padre. The breakers have risen without warning to crash against their walls and their joints have swollen. Their rafters have expanded and cracked in the damp air. Their roofs have caved in. They have been condemned."

Speaking of tourists, Mr. Frank Goodwyn continues:

"But most of those who come to Texas prefer the comparatively sinless and more invigorating pursuits of swimming, fishing, and camping under God's wide open sky. Padre Island, with its beaches facing both the gulf's great breakers on the east and the smooth water of the Laguna Madre Bay on the west, with its 272 different kinds of fish, with its continuous resistance to all efforts at permanent development, with its stiff winds from the Gulf Stream and its stiff laws from the State capital suits them fine."

The American GI Forum, its members, and their families and especially their children go on record wholeheartedly and enthusiastically endorsing Padre Island as National Shoreline Park. Not only are we speaking of the American GI Forum of Corpus Christi or Texas but we are speaking of the American GI Forum veterans of 23 States. We, as veterans feel that one of the things we fought for and some of our relatives died for was to preserve the natural beauty of our country and make available all of its beauty and grandeur equally to all members of this great democracy.

For many hundreds of thousands of poor citizens in this area, Padre Island is the only recreational area available to them and for many migrant workers the only vacation that they and their children have is their sojourn to the beautiful "Isla Blanca". To some of these Mexican children the only gems and jewels in their life will be the beautiful shells they will find in this, our natural land. Help us preserve this island for all the world to see and enjoy, as God created it for all of its children.

Counterattack

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. KILBURN. Mr. Speaker, I insert the following editorial from the Washington Evening Star of Friday, February 12, 1960, feeling that it expresses the opinion of the vast majority of people in this country. The Democrats can shout all they want to about national security but near-

ly every thinking person in this country has absolute trust in the President. They know that he is probably the best man we have to maintain our national security. I hope every Member of the House will read the enclosed editorial and take it to heart:

COUNTERATTACK

The President has hit back hard and effectively at those critics who have questioned the good faith of his administration and who charge that our national security is being sacrificed on the altar of a balanced budget. Mr. Eisenhower made these points:

1. He is primarily concerned with the real needs of the Nation, not a balanced budget.

2. He wants the country to be strong and safe.

3. He has been in the military service a long time, and he has listened to all the arguments, pro and con, with respect to our defense needs.

4. He has done the best he can, and has based his decisions on one and only one consideration—what is best for America.

5. Finally, he is not running for any office. In other words, selfish political considerations do not enter into his judgments.

This may not silence the critics of the President and his program. But it will blunt the cutting edge of their weapons. For it is obvious that Mr. Eisenhower is telling the truth, and the great majority of the people will believe that he is telling the truth. He may be mistaken, of course, in some of his judgments, but the burden of proving this rests with the critics, and they have not proved it. Nor do we see how it is going to be possible for them to do so. If they continue with their headlong attacks on the Eisenhower program two results, we think, are predictable: The critics will end up with a king-sized headache, and the people are going to get tired of listening to them.

Address by Senator Richard B. Russell, of Georgia, Before Joint Session of the General Assembly of Georgia

EXTENSION OF REMARKS

OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, February 15, 1960

Mr. STENNIS. Mr. President, recently the Senator from Georgia [Mr. RUSSELL] addressed the legislature of his own State at Atlanta. I have in my hand excerpts of remarks the Senator made at that time.

Mr. President, I ask unanimous consent that the excerpts of remarks be printed in the Appendix of the RECORD. I wish to observe that they contain many notable, sound constitutional thoughts and principles applicable today as they were applicable in all decades before and, furthermore, that they are full of commonsense and practical values, which certainly need to be applied and reapplied in our public affairs.

I do not think any person in the Nation is better qualified—and few are as well qualified—to express himself on these major matters than the Senator from Georgia [Mr. RUSSELL].

Mr. President, I think the address represents American Government at one of its pinnacles, in that an experienced Senator, who is also a former Governor, returned to the State legislature of his home State to make a report, discussing the far-reaching problems of the day as well as constitutional principles. I commend to the membership of the Senate and to the American people a careful reading of these fine remarks.

There being no objection, the excerpts of remarks were ordered to be printed in the RECORD, as follows:

EXCERPTS OF REMARKS PREPARED FOR DELIVERY BY SENATOR RICHARD B. RUSSELL BEFORE A JOINT SESSION OF THE GENERAL ASSEMBLY OF GEORGIA AT THE STATE CAPITOL, ATLANTA, FEBRUARY 8, 1960

A great national debate is now raging over the adequacy of the American Defense Establishment to meet the threat of Soviet aggression.

Some of the highest officials of our Government have reiterated time and again that our defense is completely adequate. It is asserted that there is no real missile lag and that all is well on every front.

It has always been my view that partisanship has no place whatever in the defense of the United States. Bombs from enemy planes or missiles will not make any distinction between Democrats and Republicans if the ultimate tragedy of all-out war cannot be avoided.

I do not believe that our defenses are as weak as some of the administration's critics charge, but I am equally convinced that the policy of the present national administration involves an unnecessary gamble with world peace and our national security.

Our only real deterrent to the therat of atomic attack is our Strategic Air Command and man-operated bombers. The greatest industrial Nation on earth continues to endure the shame and humiliation of repeatedly taking second place to the Russians in all phases of the contest for priority in space.

I am, by nature, an optimist. However, I cannot accept the rosy picture of some officials of our Department of Defense. It is impossible for me to feel comfortable with the assurances of even the highest officials while the Russians continue to present frightening evidence of their great lead in the rocket and space race. The fact that they are testfiring missiles of almost pinpoint accuracy a distance of 8,000 miles into our Pacific backyard underscores in red the continuing Communist threat to world peace and the security of our country.

At every dramatic evidence of Soviet missile achievement, some official arises and attempts to dismiss it with a wave of the hand. That any person of normal intelligence should fail to be impressed with the gravity of the Russian threat in this area is incomprehensible to me.

I applaud and support the aim of this administration to achieve a balanced budget. I insist, however, that first things come first and that a balanced budget must not be achieved at the expense of our military muscle.

In maintaining our Nation's defenses, nothing should be left to chance. It will be the last folly we are permitted to commit if we let down our guard against the ever-present possibility of Communist attack. Future generations of Americans, serving as Soviet slaves will forever curse us if we fail to take every necessary step to insure our national safety and security.

Despite Khrushchev's beguiling words and friendly smiles, he has yet to prove his sincerity by agreeing to an enforcible plan for world disarmament. Unless and until he does so, the one last hope of mankind rests squarely upon the maintenance of American military might.

Head-in-the-sand complacency is no substitute for missile equality. The American way of life is too valuable to be jeopardized by pennywise, pound-foolish economies in the most vital activity of our Government. There are many areas of national spending that can be reduced or eliminated without impairing the defense effort or materially injuring the country.

My mind completely rejects the argument that a multibillion-dollar foreign aid program can serve as a substitute for superiority in intercontinental ballistic missiles in saving the free world.

If, beginning in 1953, we had diverted only a billion dollars a year from foreign aid to missile development, the United States would today be preeminent in the rocket race. Had we exercised this minimum degree of prudence, there would be no cause for fright over the spectacular Soviet successes in space. We would have been spared the humiliation and loss of prestige of our secondary role.

I can understand how the foreign countries of the earth can clamor for American dollars, but I am constantly amazed that those in charge of our Government are willing to gamble our destiny on a national program geared to preeminence in gifts to foreign powers at any cost, even the acceptance of a secondary position in missiles that can carry hydrogen bombs 10 times faster than the speed of sound.

I must also confess a degree of incredulity over some of the rose-colored and politically flavored reports one hears these days about the state of the American economy.

It is true—as widely proclaimed—that the economy generally has climbed to new heights of prosperity. In spite of the steel strike, 1959 turned out to be a banner business year and the outlook for 1960 is even brighter.

But it is also true—though not so loudly proclaimed—that 1959 was one of the most disastrous years for our farmers since before World War II. The Department of Agriculture itself forecasts a further drop in net farm income during the present year.

Obviously, all the talk of recordbreaking prosperity dose not include the farmer. He is not even receiving a token—much less a fair share—of our unprecedented prosperity and wealth. The farmer is rapidly becoming the forgotten man of the American economy.

An administration that has spent billions in foreign aid, much of it to develop and build foreign competition with American agriculture, still clings to the position that the American farmer must go it alone.

Benson's approach to the farm problem has been to lower price supports and prices in an effort to reduce surplus production. Actually, his program has served only to depres farm income and increase our agricultural surpluses.

Though he poses as an advocate of economy who will "get the Government out of agriculture," Benson has spent more money during his 7 years in office than all his predecessors put together since the Department of Agriculture was created in 1862.

Even the Russians have demonstrated the appalling fallacy of the Benson approach. Khrushchev has applied the Benson plan in reverse by decreasing farm prices in order to encourage his farmers to produce more to overcome Soviet shortages.

The President's only prescription for curing the farm problem is another dose of "old Doc Benson's" magical cure-all—further reduction in price supports. This peculiar prescription is far more likely to kill than cure the patient.

There is little chance of reaching a workable solution to the crisis confronting American agriculture so long as Benson continues

to preside over the Nation's farm program. He has persuaded the President to veto every effort by Congress to relieve the farm crisis.

I am extremely hopeful that his regime will come to a long-overdue end after the November election regardless of who is elected President. Any change in the Secretary of Agriculture is bound to be for the better. This is one of the few bright spots I see ahead for us in the forthcoming presidential campaign.

There are other phases of the economy that take on a somewhat less rosy color when viewed objectively and from a nonpolitical perspective.

One of these is the specter of runaway inflation that continues to haunt the stability of the economy and the soundness of the dollar. It is a thief that is robbing us of the fruits of our labor today and cheating us of our hopes of comfort and security tomorrow.

In the past deficit spending by the Federal Government has been a major factor contributing to the inflationary spiral. But a determined effort by responsible members of both parties to curb the wild socialistic schemes of the Federal spenders has resulted in the prospects of a balanced budget this year and next.

Big Government spending, of course, is not the only cause of inflation. Labor-management contracts that result in increased wage benefits and higher industrial prices—all dutifully paid for by the helpless consumer—push the inflationary spiral higher and higher.

The steel settlement, in which the Vice President played such a prominent role, seems certain to add to the inflation pressures. Although we may be spared the cost of Mr. NIXON'S settlement until after the November election, steel prices are certain to be raised eventually to cover the liberal wage concessions.

His handling of the steel strike deprived the Nation of its best chance in 20 years to prevent the labor and industrial giants from conducting their power struggles at the Nation's expense. Had NIXON not exerted so much pressure to force an agreement on inflationary terms, I believe Congress would have enacted effective legislation to protect the public interest from similar situations in the future. He certainly has laid himself open to the charge that his efforts were politically motivated.

Whether or not the charge is true, I devoutly hope the Nation will be spared Mr. NIXON'S excursions into the field of labor mediation in the future. I doubt that the country can stand many more of his settlements.

This is destined to be a fateful year for Georgia and the South. Our enemies are marshaling their forces against us at every turn. In many respects, 1960 may be one of the most momentous and crucial years for the South since 1860.

The insidious campaign to harass the southern people and to destroy the southern way of life is being pressed against us from all sides.

Those of us in Congress who cling to such fundamental beliefs as constitutional government and States rights have felt the full brunt of this vicious attack for years. But the battle extends far beyond the confines of the Federal Congress in Washington. It has fanned out into our own State and into every county and community in this State.

The people of Georgia—and you, their elected representatives and spokesmen—have come face-to-face with the devious drive to uproot our traditions and to destroy our institutions.

I have always had an abiding faith in the strength, courage, and determination of Georgia's General Assembly and Governor to defend our State against all its enemies—foreign and domestic.

Let me assure you of this: I stand shoulder-to-shoulder with the members of this general assembly and with the Governor in this battle to protect the sovereign State of Georgia and to preserve the way of life of our people.

The battle that lies ahead will be hard—both for you here and for Senator TALMADGE and myself in Washington. The situation confronting our people and our State will demand the best of each of us.

In frankness, I must say that we face great odds in Congress against the conglomeration of miscalled civil rights legislation that has been introduced to punish and harass the South.

Since this is a presidential election year, there will be greater pressure than ever to make the South the Nation's political football. The NAACP, the ADA, and similar rag-tag, leftwing groups are pulling the strings on their puppet politicians and demanding passage of the most extreme and vicious legislation.

A stable of presidential and vice-presidential hopefuls—wearing both party labels—are eagerly dancing to the tune of the pressure groups in hope of currying favor with the minority bloc vote.

Congress has been deluged with all manner of proposals under the catch-all banner of civil rights. More are being introduced every day. As soon as one of the moguls of the NAACP or the ADA thinks up a new scheme, there is a stampede among the radicals for the dubious honor of sponsoring it. It often happens that the same bill is introduced several times by different sponsors.

The current fad in civil rights circles is some form of legislation to place under Federal control and operation the election machinery that belongs to State and local government.

This shows a startling lack of originality on the part of those who scheme up these civil rights proposals. Federal control of elections got a pretty good tryout—and became a national disgrace—during the first reconstruction. Under those earlier laws, local elections were taken over in the North as well as the South and a presidential election was stolen.

The sponsors of these iniquitious proposals can't decide on the best way to go about federalizing the elective process. One group, including Senator JAVITS, wants to do it through a system of Federal registrars. The Attorney General, on the other hand, proposes to put voting referees in charge of southern ballot boxes.

These proposals, though differing in approach, have the same end result. They would put the counting of the votes under the direction of Federal bureaucrats.

Their passage, in effect, would be a declaration that all State and local governments are bankrupt and should be placed in the hands of a Federal receiver. Sooner or later, all the elections would be decided in Washington. If that tragic day ever comes, we will have traded our birthright of constitutional government for a Federal dictatorship.

The proposals to federalize the election process should be opposed by thinking people in all parts of the country. True, these bills are aimed at the people of the South today. Tomorrow, another section of the country might find itself the victim of the onrushing Federal juggernaut.

These vicious schemes must be fought—and will be fought—to the end.

I pledge to you that I will oppose them to the limit of my endurance and to the extent of my ability.

We will leave no stone unturned—no rule of the Senate unused—in this battle to protect States rights and constitutional government.

I confess I do not know how much longer the South must serve as the doormat for the ambitious leaders of both national parties.

Certainly there is no comfort for us in the ranks of the Republican Party. The heir apparent to the GOP crown already has taken his stand with the NACP. He is, in fact, one of their most prominent honorary members.

Our own party has virtually deserted us. The proud democracy of Jefferson and Jackson has become the captive of a leftwing element that is barely Democratic even in name, but which is trying to recast the party in its image.

Many of this gang of phony liberals and party wreckers have publicly advocated driving the South from the house of our fathers.

The South is entitled to better treatment from the party that it has nurtured, supported and revered for almost as long as it has the Constitution. We are entitled to the measure of respect and influence within the party that our years of loyalty have earned.

No section of the country can rival the South's long record of Democratic loyalty. But party loyalty is a two-way street. Those who kick the South in the teeth at every opportunity must not expect us to keep turning the other cheek forever.

The South has no intention of abandoning is loyalty to the Democratic principles that it has ever held. But it owes no loyalty to self-styled Democrats who flout and despise the true Democratic faith.

The patron saints of the democracy—giants like Jefferson, Madison, and Jackson—built the party upon the solid rock of the Constitution.

That is where the South stands today. Others may seek to subvert that fundamental premise of the Democratic Party, but the South will keep the faith.

We have taken our stand on the Constitution of the United States. And there we propose to remain.

Invoke the Monroe Doctrine

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. HALEY. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD at this time a very pertinent editorial which appeared in the February 7, 1960, issue of the Sarasota News, one of the leading daily newspapers in my congressional district. The editor is only one of the many Americans who are concerned about our foreign policies. I hope my colleagues will give serious thought to his remarks.

The editorial entitled, "Invoke the Monroe Doctrine," follows:

INVOKE THE MONROE DOCTRINE

Soviet Deputy Mikoyan is in Cuba, and the Monroe Doctrine gets another kick in the teeth. It has been nicely timed to stir up more reaction that will follow President Eisenhower wherever he sets down his jet liner in South America. Our Nation is so weak and appeasing that nothing has been done to counteract this sly aggression by the Soviet Union.

If President Eisenhower really wants to go down in history as a real President, strong and aggressive, this is the time for him to invoke the Monroe Doctrine. Now.

The Russians have no right to meddle in the affairs of the North and South Hemispheres, now or tomorrow.

The planned trip of the President of the United States to South America can well turn out to be another form of appeasement and there will be a further loss of face by this Nation in the eyes of its weaker but antagonistic neighbors. To date, we have only one friend south of the border, and that is the Republic of Mexico. The South American situation is about to blow up in our faces and in the meantime, we sit and try to feed the baby a candy bar when he is about to spit in our face.

The damage in Cuba cannot be undone because we are weak in our foreign policy, definitely without direction and playing a situation by ear—and a deaf ear at that—when we should be clubbing Castro and his Communists over the head with the butt end of a marine's automatic rifle.

The Republican administration better take heed between now and the first week of November because if they flub this one, they will have nothing to talk about. The people are getting fed up with his phony talk of peace at any price by both political parties. We have lost the friendship of Cuba by both factions, due to our lack of positive approach. The Cuban Communists hate us, and those who hoped for relief will now turn leftist in despair, just as we have forsaken countries of Europe behind the Iron Curtain.

Please, Washington, wake up before it is too late. Do something before our backyard is covered with termites—Communist termites.

There Are Real Opportunities for Business and Industry To Thrive in West Virginia

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, February 15, 1960

Mr. RANDOLPH. Mr. President, both Senators from West Virginia have spoken in this Chamber concerning an article in the February 6, 1960, issue of the Saturday Evening Post by Roul Tunley entitled "The Strange Case of West Virginia."

Lest there be misunderstanding created by this story, West Virginia, in spite of its unemployment percentage and distress in some of its labor surplus areas, is attractive to business and industry.

Since the Post article and our remarks in the RECORD, my attention has been directed to reactions from heads of firms doing business in West Virginia.

From F. J. French, president of the General Chemical Division, Allied Chemical Corp., New York, N.Y., I received a thoughtful letter, one paragraph of which I quote as follows:

I was very much interested in the remarks made by you in the Senate on February 1 with respect to the Saturday Evening Post article by Roul Tunley. My company's opinion with respect to the opportunities for industry to thrive in West Virginia is best illustrated by the fact that our hydrobuoric acid plant at Nitro, put into operation as a new plant only 14 months ago, is now in the process of being substantially expanded.

Mr. President, from the February 10, 1960 issues of the morning Charleston Gazette and the afternoon Charleston Mail, both published at Charleston, W. Va., I ask unanimous consent to have inserted in the Appendix of the RECORD, an open letter to the people of West Virginia by Stanley L. Evans, chairman of the board of the Evans Grocery Co., with main offices at Gallipolis, Ohio, which is a tribute to the ability of West Virginians to defeat adversity, and a statement of faith in our State.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AN OPEN LETTER TO THE PEOPLE OF WEST VIRGINIA

DEAR FRIENDS AND NEIGHBORS OF WEST VIRGINIA: The recent article published in a national magazine has given rise to much controversy about the economic future of the State of West Virginia. Evans supermarkets is a West Virginia corporation vitally concerned with your State.

In 1929 Evans supermarkets became a West Virginia corporation when we built our first store in your State. That year was a time of great national economic depression. There were those who doubted our belief in West Virginia, but our confidence remained unshaken. Thirty years later we can look at 11 supermarkets and know the rewards of serving your State.

In those years our organization has followed the growth and development of a great State. We have experienced proof of a higher living standard by the changed eating habits of our customers. The per capita consumption of U.S. choice beef is above the national average. Your acceptance of national brand food shows an increasing awareness of quality food.

West Virginia has pioneered again in the automation of the coal industry. In pioneering, we are all faced with immediate problems today that other States and other industries will feel in the coming years. But your State is deep within these industrial and economic problems now. There is a parallel between this time and 31 years ago when Evans built its first store in West Virginia. Evans supermarkets maintains a firm faith in your State today, as in yesteryear.

Since 1955 Evans has organized and effected building of the only shopping centers in southern West Virginia; Gateway at St. Albans and Eastern Heights near Huntington, completed late last year at the cost of over $1½ million. This year Evans will build two new supermarkets at Smithers and Kanawha City, investing an additional one-half million dollars. This is our faith in West Virginia.

Our business is feeding millions of West Virginians who are responsible for our success. We are proud to be a West Virginia corporation serving fine people and a great State.

Sincerely,

STANLEY L. EVANS,
Chairman of the Board, the Evans Groeery Co.

Years Not All

EXTENSION OF REMARKS

OF

HON. CHARLES E. GOODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. GOODELL. Mr. Speaker, we in New York State are proud of our stalwart colleague, JOHN TABER. Although he represents the 36th District, he has become so identified with New York State that we all feel we can lay some claim to him. His integrity, his courage, and his innate ability to adhere to the straight line of principle, have provided a worthy example for younger Members of Congress. Recently JOHN TABER announced that he would run for reelection this fall. We in the 43d District of western New York congratulate the counties of Cayuga, Chenango, Courtland, Ontario, Schuyler, Seneca, Tompkins, and Yates on their further recognition of distinguished and able representation.

As an illustration of the strong bond of affection and respect felt by the people of upstate New York for JOHN TABER, I include the following editorial from the February 11 issue of one of the leading newspapers in my district, the Salamanca Republican-Press:

Representative JOHN TABER, of Auburn, has become nationally known as an advocate of economy in the Federal Government. As ranking minority member of the powerful House Appropriations Committee, he has had much to do with keeping Uncle Sam's expenditures down. The fact that he is to seek election to his 20th term in Congress, and that he has been assured the support of the GOP chairman in his eight-county district, therefore is of more local interest.

As Mr. TABER will be 80 this spring, his candidacy runs counter to views expressed the other day by Prof. Ronald Turnbridge, British expert on old age. He says all political leaders should be retired in their early fifties. Application of that rule would make quite a hole in the ranks of the world's leaders, past and present. President Eisenhower and President de Gaulle are both 69, Harold Macmillan, the British Premier, and Nikita Khrushchev of Soviet Russia are 66. West Germany's Konrad Adenauer and Korea's Syngman Rhee would have been out long ago, both being past 80. The ranks of our would-be Presidents also would be diminished. Senator Lyndon Johnson is 51; Senator Stuart Symington is 58; Adlai Stevenson is 59. We could still choose among Senators KENNEDY, who is 42, and HUBERT HUMPHREY, 48, and Vice President NIXON, who is 47.

Turnbridge's dictum recalls the joking remark attributed to a famous Canadian physician, Sir William Osler, that everybody should be chloroformed at 40. Turnbridge himself cannot be putting in a claim for a political career. He is 53.

Mr. TABER has knowledge and experience of great value to the Nation.

A Friendly Climate for International Investment

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, February 15, 1960

Mr. JAVITS. Mr. President, the importance to our economy of encouraging private investment abroad cannot be too strongly emphasized. The protection of our international investors against expropriation in violation of international law should be the immediate concern of legislators. The revocation of the Connally reservation governing U.S. par-

ticipation in the International Court of Justice at The Hague, will be a significant factor in creating such a climate. I ask unanimous consent to have printed in the Appendix of the RECORD a statement by H. Struve Hensel, chairman of the Council for Private International Development, and a dispatch in the Christian Science Monitor of February 6, 1960, by Neal Stanford, on the same problem.

There being no objection, the statement and article were ordered to be printed in the RECORD, as follows:

HENSEL URGES SENATE TO REMOVE CONNALLY RESTRICTION ON U.S. PARTICIPATION IN WORLD COURT

H. Struve Hensel, chairman of the Council for Private International Development, today urged the U.S. Senate to remove the Connally reservation, which governs U.S. participation in the International Court of Justice at The Hague, and thus serve notice to the world that we are sincere in our advocacy of the rule of law.

"Adequate protection of private property," said Mr. Hensel, former Assistant Secretary of Defense, "is possible only when the rule of law—as distinguished from brute and other kinds of force—is established." He added, "There is no rule of law when either or both parties to a dispute can refuse to submit the question to judicial determination.

"And that is the precise result of the Connally reservation which makes it possible for the United States to refuse to submit matters to the International Court whenever we feel the matter should be handled domestically. How can we expect to lead others when we hang back?"

Mr. Hensel explained that the council was organized as a study, planning, and advocate group to improve the climate, both domestic and foreign, for private international investments of all types. He said that the interest of the council in removal of the Connally six-word restriction stems from the fact that international agreements for the protection of private investments, which are an objective of the council, can have no meaning unless disputes arising under such agreements can be brought before an arbitral tribunal that has power under international law to render decisions.

"I believe it is the concensus in America," Mr. Hensel said, that peace, security, and progress in the world can only be attained and ensured by fruitful cooperation among all peoples on a basis of international law and mutual confidence.

"Private investment can be induced to move into foreign countries only if there can be created in such countries a favorable protective climate for investment and the rights to profit therefrom. A protective climate can be assured only through observance of the rules of law and the enforcement of those laws by an international tribunal.

"The International Court of Justice at The Hague is such an international tribunal. Unfortunately, the United States has taken the stand that it will be subject to the Court only on its own terms—that it be its own judge of the cases that can be brought against it in the Court.

"As a result of the Connally reservation, nine other countries were persuaded to insist upon somewhat similar reservations. Furthermore, if the United States makes a claim against another nation, that nation, by the doctrine of reciprocity, may refuse jurisdiction of the Court just because the United States has reserved such right. Our reservation has hurt our own cause and is a real obstacle to the establishment of a rule of law in which we honestly believe.

"It is interesting to note that Britain, France, and India recently have repealed their self-judging reservation."

COURT OPERATIONS LIMITED

Mr. Hensel explained that, since the International Court, an arm of the United Nations, operates within narrow limitations, the Connally reservation was entirely unnecessary. The Court can consider only the cases which the parties submit to it, and matters especially provided for in the United Nations charter or in treaties. In all cases, disputants have resort to the United Nations Security Council in the event another party fails to abide by the Court's decision. The United States has veto power in the Security Council.

"Therefore, our country has ample protection against improbable actions by the Court which might relate to purely domestic matters, said Mr. Hensel.

"The United States, so heavily involved in international trade and investment, can only gain through international observance of rules of law, but rules of law are effective only when enforceable. Expropriation, confiscation, discriminations and other perverse acts against private foreign investments can be minimized only when all nations observe the rules of law and participate in the means for their enforcement.

The Council for Private International Development includes among the members of its planning committee: Former Secretary of Interior Oscar L. Chapman; Judge Homer Ferguson, former U.S. Senator from Michigan; Prof. Arthur Larson, director of the World Rule of Law Center at Duke University, and special consultant to President Eisenhower; Hon. John Slezak, chairman of the Kable Printing Co., Mount Morris, Ill., former Undersecretary of the Army; David D. Ryus, general manager, Time-Life International; and other prominent Americans.

[From the Christian Science Monitor, Feb. 6, 1960]

REVOKING SIX LITTLE WORDS

(By Neal Stanford)

The Senate, from all appearances, is preparing to reverse itself on a major piece of international legislation. Time and events and experience are the explanation.

The issue is the 1946 Senate reservation to U.S. adherence to the then new International Court of Justice. By that reservation the United States kept the right to determine what was a purely domestic matter—and therefore outside the Court's jurisdiction.

The reservation, known as the Connally amendment (after Senator Tom Connally, Democrat, of Texas, then chairman of the Senate Foreign Relations Committee) contained only six little words. But those six were enough to allow American acceptance of compulsory jurisdiction of the Court to apply only when the United States wanted it to.

The six words were tied onto an article of the resolution stating that the Court's authority did not apply "to matters • • • essentially within the domestic jurisdiction of the United States (and here come the six words) as determined by the United States." This self-judging reservation, in effect if not intent, quite obviously nullified the major purpose of the resolution to accept compulsory jurisdiction of the Court.

Now President Eisenhower has come out for abolition of the Connally amendment, and Senator HUBERT HUMPHREY, Democrat, of Minnesota has a resolution before the Senate (S. Res. 94) aimed at its repeal.

It should be noted that at the time support of a self-judging clause was bipartisan. In fact, the first Senator to suggest such a reservation was former Senator Warren Austin, Republican, of Vermont. He made such a proposal before the Senate Foreign Relations Committee. But the committee threw it out and called for favorable Senate action without any self-judging reservation. It was on the Senate floor that Senator Connally offered the amendment eventually incorporated in the resolution.

The arguments that won Senate support of the amendment stressed concern that the Court might take a dangerously broad view of what was an international question and thus interfere with U.S. policy on such things as immigration, tariffs, and matters relating to the Panama Canal.

As might have been expected, once the United States had written a self-judging amendment into its acceptance of the court's compulsory jurisdiction, other nations followed suit. Mexico, France, Liberia, the Union of South Africa, India, Pakistan, the Sudan, and even the United Kingdom took similar action.

However, attitudes toward such an amendment have gradually changed. India, France, the United Kingdom have dropped their self-judging reservations. Even as far back as 1946 and 1947 the American Bar Association passed resolutions calling for elimination of the proviso reserving to the United States the unilateral right of determination as to what constitutes a matter essentially within its domestic jurisdiction.

Time and events and experience more and more suggest that the self-judging amendment is actually disadvantageous to the United States—according to Secretary of State Christian Herter who the other day opened the hearings on the Hill on deleting those "six little words" inserted by ex-Senator Connally.

For one thing, experience has shown that such a reservation can seriously limit a country's ability to take other nations into court. This was proved in the Norwegian loans case involving France where Norway claimed on the basis of reciprocity the right to decide whether France's claims against it were domestic or not. The court upheld Norway's right to invoke its adversary's self-judging reservation.

After 14 years' experience the Senate is now apparently preparing to accept the view that the court does not have jurisdiction over domestic matters and no Connally amendment is needed to make that clear.

The court is composed of 15 judges from 15 nations—elected for 9-year terms by the United Nations General Assembly and the Security Council. Sitting on the court today is an American judge, Green Haywood Hackworth. Only two of the 15 are from Communist countries, the U.S.S.R. and Poland.

Its jurisdiction is narrow—limited to cases which the parties submit to it and matters especially provided for in the U.N. Charter or in treaties. Its statute on compulsory jurisdiction covers only legal disputes concerning interpretation of treaties; questions of international law; existence of any fact which, if established, would constitute a breach of international obligation; and the nature or extent of the reparation to be made for the breach of an international obligation.

In other cases both parties to a dispute must agree to let the court handle it. If a party fails to heed a court decision, the other party can take it to the U.N. Security Council—where the United States, as well as the U.S.S.R., has a veto.

Twenty-four Area Redevelopment Groups Are Working at the Community Level To Eliminate Chronic Unemployment in the 20th Congressional District of Pennsylvania

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. VAN ZANDT. Mr. Speaker, during debate concerning area redevelopment legislation the inference has been drawn that the residents of the areas of chronic unemployment in the Nation are doing little to solve their problems.

In the United States there are nearly 1,200 area redevelopment groups representing that many communities in the United States who are toiling daily to rehabilitate their economy by the expansion of existing industries and attracting new ones. These groups have raised millions of dollars to finance their activities through voluntary contributions at the local level. In addition, millions of man-hours have been contributed by individuals who have given freely of their time and effort in traveling for the purpose of making contact with new industries. Some of these groups have enjoyed some success while others have not, yet they are not discouraged and continue their efforts to solve the unemployment problem. These men and women who comprise these community groups are entitled to the commendation of the country as a whole because of their fight to restore the economy of their communities within the framework of the free enterprise system of the American form of Government.

In my congressional district in central Pennsylvania, 24 communities have organized a like number of redevelopment groups and it is a pleasure to list these active organizations and commend them for their labor of love and sacrifice in behalf of those unfortunately unemployed. The list follows:

AREA REDEVELOPMENT GROUPS

Wm. H. Wade, ex vice president, Altoona Enterprises, Inc., Penelec Building, Altoona, Pa.; Paul Walker, Bellwood-Antis Industrial Development Corp., Tipton, Pa.; Martin Burket, Claysburg Fund, Inc., Claysburg Pa.; J. S. Tate, Duncansville Planning Commission, Duncansville, Pa.; J. Howard Reid, Chamber of Commerce, Hollidaysburg, Pa.; Robert L. Hoover, Martinsburg Booster Association, Martinsburg, Pa.; Paul Grannas, Morrisons Cove Industrial Development Corp., Martinsburg, Pa.; Albert Shope, Chamber of Commerce, Tyrone, Pa.; Cecil Walker, Chamber of Commerce, Bellefonte, Pa.; James E. McNeish, Chamber of Commerce, Moshannon Building, Philipsburg, Pa.; Neal Barraclough, Port Matilda Area Development Council, Port Matilda, Pa.; Ronald R. Rumbaugh, State College Area Chamber of Commerce, State College, Pa.; Robert S. Musser, president, Community Development Association, Millheim, Pa.; Andrew Popycock, Jr., Beccaria Industrial Development Commission, Beccaria, Pa.; George Gaylor, Chamber of Commerce, Clearfield, Pa.; Paul W. Winslow, Tri-County Community Development Association, Coalport, Pa.; Frank Hoffman, Clearfield County-Moshannon Valley Industrial Development Corp., Curwensville, Pa.; William F. Schneider, president, DuBois Board of Trade, DuBois Deposit National Bank Building, DuBois, Pa.; Clifford Hubler, Kylertown-Cooper Township, Industrial Development Committee, Kylertown, Pa.; William Strange, Morris Township Industrial and Residential Development Association, Morrisdale, Pa.; Joseph Dixon, Citizens Development Association of Wallaceton Boro, Wallaceton, Pa.; Milton Westover, chairman, Citizens' Committee, Westover, Pa.; Chester Skonier, Industrial Development Committee, Ramey, Pa.; John Redding, Osceola Mills Development Committee, Osceola Mills, Pa.

Mr. Speaker, on February 1 the following report on the current status of area redevelopment legislation in the 86th Congress was sent to each of the area redevelopment groups listed above and is self-explanatory.

The report follows:

CURRENT STATUS OF AREA REDEVELOPMENT LEGISLATION, FEBRUARY 1, 1960

Because of the great interest in the industrial development of this congressional district, the following report reveals the current status of area redevelopment legislation designed to provide aid to the Nation's 144 labor surplus areas commonly described as "pockets of chronic unemployment." These areas include the Altoona labor market of 53,600 persons of which 8.8 percent or 4,700 are unemployed. The Clearfield-DuBois labor market of 35,500 persons is also included of which 13.8 percent or 4,900 are unemployed.

When the 85th Congress approved the first area redevelopment bill in 1958 the vote in the U.S. Senate was 46 to 36; while in the House of Representatives the vote was 176 to 130. When the bill reached the White House it was not acceptable to the President and for that reason, he vetoed it. Since there were not sufficient votes in either branch of Congress to override the veto no effort in that direction was made.

When the 86th Congress convened in January of last year a fresh start was made to try to enact an area redevelopment bill. In this connection, the Douglas-Payne bill was approved by the U.S. Senate last spring by the close vote of 49 to 46. A similar bill was reported out of the House Committee on Banking and Currency which is now bottled up in the House Rules Committee (eight Democrats and four Republicans). Regardless of the pressure that is being applied to the House Rules Committee by a bipartisan group of which I am cochairman, prospects of getting the legislation to the floor of the House are very dim.

The situation is simply this. The administration will not take the Douglas-Payne bill which will cost nearly $400 million on the grounds that it is entirely too high; while on the other hand the sponsors of the Douglas-Payne bill insist that the administration bill which will cost around $60 million is too conservative. When one reviews the votes in the Senate and House on area redevelopment legislation, it is readily apparent that the two-thirds majority necessary to override a veto cannot be secured. This means unless a compromise is worked out there will be no area redevelopment legislation during the 86th Congress.

It is common knowledge that for years I have been sponsoring area redevelopment legislation in Congress the cost of which would be around $150 million or a compromise between the cost of the Douglas-Payne bill and the administration bill. My efforts at the moment are directed toward trying to convince both sides that our only salvation is for the House of Representatives to approve the administration bill since there is overwhelming evidence that passage of a compromise bill is impossible.

With the Senate having passed the Douglas-Payne bill and if the House passes the administration bill, then the legislation would be referred to a conference committee of both Houses comprising five Senators and five House Members. These conferees could then communicate with the President and proceed to work out a compromise that would be acceptable to the White House. My conviction is that unless this procedure is followed the 144 pockets of chronic unemployment in this country will not receive any legislative relief whatsoever from the Congress of the United States.

In conclusion, my activity over the years in behalf of area redevelopment legislation is well known. I have constantly sought to keep such legislation out of the political arena and for that reason, I have strongly supported a bipartisan effort to try to secure enactment of such vital legislation because hunger and poverty arising from unemployment should not be made a political football. Therefore, I sincerely hope that both sides in the controversy over area redevelopment legislation will look facts squarely in the face and resolve to do something practical to solve the situation by enacting a bill which will serve as the starting point of a sound area redevelopment program.

For Rural Libraries

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, February 15, 1960

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the February 12, 1960, issue of the New York Times with reference to S. 2830, the library services extension bill, which I introduced for myself and 53 cosponsors on January 14, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, Feb. 12, 1960]

FOR RURAL LIBRARIES

Public Law 84–597, which expires June 30, 1961, is known as the Library Services Act. It was enacted in 1956 to provide such services to rural areas of the United States. The act authorized $7,500,000 annually for 5 years for grants-in-aid to the States.

Behind these sentences lie 4 years of constructive activity by the State library extension agencies, which by means of State and Federal moneys have brought library services to 30 million Americans in communities of 10,000 or less that never had any library service or enjoyed only inadequate services. The Library Services Act has brought to Alabama, 4 new regional libraries; to Idaho, the first trained administrator for the State library; to Mississippi, a statewide conference on book selection; to Ohio, bookmobile grants to 5 counties; to West Virginia, centralized book-ordering services.

The multiplicity of libraries in the great urban centers dulls the senses to the want of the rural areas. In order to help the rural areas continue their newly established services S. 2830 has been introduced in Congress. This bill is an amendment to the Library Services Act. Its purpose is to ex-

tend for 5 more years the authorization for appropriations in order to continue the services already developed and also to bring them to at least 40 million people who as yet have not received them. Unless S. 2830 is acted on favorably in this Congress there will be no consideration for funds for library services for the 1961–62 fiscal year. It is hoped that this bill, which has the backing of 52 Senators, will find the remaining support necessary for enactment.

Great Decisions and the Crisis of 1960

EXTENSION OF REMARKS
OF
HON. FRANK W. BURKE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. BURKE of Kentucky. Mr. Speaker, on February 9 our distinguished colleague from Connecticut, Hon. CHESTER BOWLES, delivered an important address at the University of Louisville. This address was one in the distinguished lecture series in which the Louisville Courier-Journal, the Louisville Times and their affiliated radio and television stations WHAS and WHAS-TV bring to the university outstanding personages to discuss important matters in fields of their special competence.

Our colleague, the gentleman from Connecticut [Mr. BOWLES] lived up to highest traditions of this series and I include herewith the text of his address:

GREAT DECISIONS AND THE CRISIS OF 1960

(By the Honorable CHESTER BOWLES, Member of Congress, former Governor of Connecticut and former Ambassador to India, the distinguished lecture series, University of Louisville, Ky., February 9, 1960)

It is an honor and pleasure to appear before you tonight.

I am particularly glad to do so in conjunction with the Foreign Policy Association's valuable program, "Great Decisions—1960," which will be holding your attention during the next 8 weeks. For it is about great decisions and their role in shaping 20th century America's relations to the world that I shall speak.

This first year of the 1960's promises to be an eventful one for all of us. It is a year not only of transition into a critical decade, but of feverish political activity and momentous decision.

Between now and July the focus of all Democrats will be on that still nameless man who will be their Presidential nominee. Between July and November, their energies will be given to electing him.

Although the probable Republican nominee is not so nameless, we can expect a similar Republican concentration on the immediate problems of this election year.

History, however, cannot be made to stand still. The forces which shape our destiny move relentlessly on, oblivious to political debates, nominating conventions, and public opinion polls.

Tonight, therefore, I suggest that we look beyond the current political pulling and hauling to consider these forces and our recent record in coping with them.

What will historians say from the perspective of a generation or so hence about America's influence over the course of events in the mid-20th century?

I believe they will agree that we Americans faced at least five decisions in the first 60 years of our century, each of which had a profound effect not only on our lives but on the course of world history. In the first two of these decisions, our response was disastrously wrong; in the second two, it was brilliantly right; and the fifth still hangs in the balance. I shall list them briefly:

First, was our tragic failure in 1919 to join the League of Nations and to throw our power and prestige behind a program to perserve the newly won peace.

Second, was our equally costly failure to understand the revolutionary upheaval in China and its relevance to our future security, following the collapse of the Manchu Empire in 1911.

Third, was our success in meeting the Nazi threat to Western Europe.

Fourth, was our brilliant and decisive response to the challenge posed by the postwar economic and political chaos in Europe.

Fifth, and finally, we now face a deepening crisis in India's economic and political development which may determine, for good or ill, not only the course of events in Asia and Africa, but the future relationship of the whole underdeveloped world to the Atlantic powers, on the one hand, and the Soviet Union and Communist China, on the other.

The adequacy of our response to this fifth challenge is at present uncertain.

Now let us briefly examine our reaction to each of the first four areas of decision in the hope that it may provide us with a fresh perspective in dealing with the fifth.

There is little need for more than a brief reference to the consequences of our failure to join the League of Nations in 1919.

In 1917 the United States had entered World War I as an innocent newcomer to international politics. Fortunately, we entered it under the leadership of a President who realized that the world of 1914 had vanished forever.

Recently, it has been fashionable to dismiss Woodrow Wilson as a visionary. And yet his vision was rooted in a higher realism, a clearer sense of the nature of reality, than almost any of his contempories.

Over and over again Wilson warned us that if we rejected his vision and seceded from the emerging world community, we would not only "break the heart of the world" but that we would pay for our failure in blood.

"There will come, sometime," he warned us, "in the vengeful providence of God, another struggle in which not a few hundred thousand fine men of America will have to die, but as many millions as are necessary to accomplish the final freedom of the people of the world."

But the habits of isolationism were still strong, and its advocates skillful and determined. We had acted generously enough, they said, in sending our boys overseas to "solve Europe's problems."

Now it was time to bring them home, to keep them home, and to accept Mr. Harding's call for a return to normalcy.

And so Woodrow Wilson was repudiated, and his League of Nations was rejected. America, which could have provided the spirit and the sinews necessary for world order, turned its back on the future.

The historical judgment of 2000 A.D. upon America's withdrawal from world responsibility in 1919 will be severe.

Now let us consider the second great area of decision which grew out of the challenge of the Chinese reevolution.

In 1911, after 2,000 years of remarkable continuity, the Chinese Empire came to an end. It collapsed under the combined effects of internal decay and the impact of the West. With it collapsed the ideology of Confucianism which had acted as a social cement for much of China's long history.

Now since the mid-18th century Americans had had a special regard for the Chinese people and many close connections with China. American merchants, missionaries, doctors, and teachers had traveled to China by the thousands. Additional thousands of young Chinese had graduated from American universities.

With our acquisition of the Philippines in 1898 and our "open door" policy, America became a Pacific power with an officially declared interest in the preservation of China's territorial integrity.

We were admirably positioned, therefore, to understand the physical and psychological needs of the emerging new China and to exert a positive and perhaps decisive influence over economic and political developments there.

Yet we were so busy watching the soaring stock market, listening to our new jazz bands, and enjoying the benefits of our booming economy that only a handful of farsighted Americans were even conscious of the challenge.

When in 1920 and 1921 Sun Yat-sen, the leader of the Chinese revolution urgently asked for substantial loans with which to further the unification and economic development of China, we abruptly turned him down.

And so, after a similar turndown in Western Europe, Sun Yat-sen reluctantly turned to Moscow for the help which the Atlantic Nations had denied him.

Although the Bolsheviks were still wrestling with one another over the internal problems generated by their own revolution, they recognized the stakes which were being played for in China and eagerly grasped the opportunity. Had not Lenin himself asserted that the road to Paris runs through Peiping and Calcutta?

By 1923 Soviet technicians, political advisers, and capital began flowing into China.

At the Washington Disarmament Conference the year before, the Harding administration had compounded our failure to help bolster the Chinese economy by agreeing unilaterally to dispense with a major part of our new Navy. By this action we turned over effective military control of the Western Pacific to Japan and opened the door for the series of aggressions which later led to Pearl Harbor.

In 1927, when Sun's successor, Chiang Kai-shek, turned against the Communists and outlined his plans to establish a modernized non-Communist state, we were granted another opportunity to retrieve past mistakes. But once again we were content with a policy of benevolent aloofness.

In 1931 the Japanese Army moved into Manchuria. Firm American action there might still have checked Japanese aggression and given China her chance. But once more the opportunity was lost.

At the League of Nations in Geneva, crisis-weary Britain and France refused to act. And in spite of Secretary of State Stimson's earnest efforts to assert American leadership from Washington, our Government was unwilling to go further than moral lectures and the ineffective doctrine of nonrecognition.

There is no need to dwell on the grim and unhappy story of China since 1931. The 1930's found us caught up in our own problems, unwilling to provoke the naval power of Japan or to give the wobbly Chinese Government the assistance it needed so desperately.

No one knows precisely when we finally lost our capacity to influence events in China.

Some observers assert that as late as 1941 a comprehensive American military, political, and economic effort might have provided an effective democratic alternative to communism. By the end of the war, however, it had become clear that nothing less than massive American military intervention could change the course of events. In view of our

war weariness such drastic action was not even proposed.

So it was that we failed to meet the second great foreign policy challenge of our century. We will live with the consequences of this failure for generations to come.

The third challenge was one which we belatedly but effectively recognized and met.

Franklin Delano Roosevelt had a powerful sense of history. He understood that we had sprung from Europe and were irrevocably a part of Europe. He understood that a Europe under Nazi domination would mean a world in which America's own freedom could not long survive.

Beginning with his "quarantine the aggressor" speech in 1938, Franklin Roosevelt began gradually to move the American people toward a similar understanding.

In early September 1939, when the Nazis moved across the Polish border, our first instinct was withdrawal and isolationism.

Yet the old myths of self-sufficiency were weakening. We had begun belatedly to recognize the interdependence of nations. And so in Britain's darkest and finest hour we came to her support.

In the following years American industry and military power provided the decisive power that crushed the totalitarian forces which American membership in the League of Nations might have kept from exploding into aggression in the first place.

The fourth challenge began to take shape soon after the end of hostilities in Europe.

Western Europe's cities were in ruins from years of bombing and street fighting. Food, fuel, and building materials were inadequate. The entire European economy was on the verge of collapse, with mounting inflation everywhere.

In the meantime a few hundred miles away in East Germany and Poland stood nearly 200 Soviet Army divisions ready and able to roll, almost unopposed, to the English Channel.

The American people had been looking eagerly to a crisis-free future of peace and plenty. We had disbanded our armies, put our ships in mothballs, converted our defense factories to peaceful production, and settled down again to enjoy the world's highest living standard.

Then, suddenly and alarmingly, thoughtful Americans began to sense the new threat to world peace which was rapidly taking shape.

The initial Soviet move was aimed at Greece and Turkey, where the balancing power of British diplomacy and military forces, which had traditionally blocked Russia from the Mediterranean, was no longer effective.

Simultaneously all through Western Europe Communist parties which had been effectively associated with resistance to Nazism were vigorously on the move to sow confusion, to establish united fronts, and ultimately to seize power.

At this critical moment we were fortunate to have in our State Department a man with a deep-seated sense of Europe's past and of our relation to Europe's future. I refer to Dean Acheson, who perhaps more than any other American understood the nature of the challenge and our responsibility to meet it.

We were equally fortunate in having as our Secretary of State in 1947–48 Gen. George Marshall, a towering figure of integrity and intelligence.

In Harry Truman we had a President whose raw courage and unswerving sense of purpose will assure him a privileged position in the history of our times.

And in Congress there were Vandenberg of Michigan, Herter of Massachusetts, Russell of Georgia, Fulbright of Arkansas, and many other men of vision and toughness—Republicans and Democrats alike—who understood what was required of us and who did not hesitate to act.

The men and the crisis came together, and the result was a brilliant creative national effort that checked the Soviet military, political, and economic threat, rebuilt the foundations of a new free Europe, and in all probability saved us from a third world war.

The Truman doctrine for the defense of Greece and Turkey was followed by the Marshall plan for the economic and political recovery of Western Europe, then the North Atlantic Treaty Organization for the military defense of Western Europe, and the dramatic Berlin airlife with which we demonstrated we had the will as well as the resources.

In 1949 through the point 4 proposal of aid to underdeveloped areas, we again broke new ground to create the working framework for a constructive partnership with Asia, Africa, and Latin America.

These were years of brilliant, creative, nonpartisan response to an unprecedented challenge. They were years in which our leaders led, and the American people, aroused and informed, responded with the dedication and intelligence which mark a great Nation.

We come now to the fifth in this series of momentous situations which have tested us Americans in the first 60 years of this century.

This fifth challenge is now only gradually coming to be understood. But unless we muster the determination and the means to cope with it, the price of failure may be even more costly than our failure to understand the challenge posed by the upheaval in China.

In the 19th century and the first decades of the 20th, world peace could be said to rest almost exclusively on the balance of power in Europe. Since the end of the Second World War, this has been fundamentally changed.

Hundreds of millions of Asians and Africans who once responded to orders from London, Paris, and The Hague have become free from colonial control. Inevitably the emergence of these new and underdeveloped nations has given American foreign policy new and far broader dimensions.

The situation has been further compounded by the fact that this revolutionary development has occurred at precisely the time when our modern technology is widening the already highly explosive gap between the rich white minority, most of whom live around the North Atlantic basin, and the poor colored majority, who live largely in the southern hemispheres.

Meantime, moving towards the forefront in world affairs, is the new Chinese giant, intent on overnight industrialization, with 630 million dynamic people, a doctrinaire, aggressive leadership, inadequate natural resources, and a tempting military vacuum rich in much that China needs, just beyond her southeastern borders.

Finally, there is the Soviet Union, with a steel capacity of 60 million tons, an annual rate of industrial growth nearly three times our own, graduating twice as many engineers and scientists, and with enormous military power.

Since her early clumsy efforts in China, the Soviet Union has understood the decisive importance of the underdeveloped areas. In recent years her leaders have developed a new flexibility, new subtlety, and new economic and political skill in dealing with them.

Against this complex background the decisive significance of India comes into clear perspective. Her population is equal to that of Africa and Latin America combined, her resources are substantial, her geographic position strategic, her government democratic and fiercely independent, her future highly uncertain.

The physical and strategic importance of India is further underscored by her immense political importance. Hundreds of millions of Asians and Africans are coming to see that the only practical political and economic alternative to the ruthlessly totalitarian program of Communist China is the pragmatic approach of democratic India.

If India with all her advantages of able leadership, a competent civil service, trained technician, substantial resources, and the great tradition of Gandhi, fails in her attempt to bring widening economic opportunities to her people through democratic means, how could less well endowed new nations hope to succeed?

And if they in their frustration throw in their lot with Communist totalitarianism, what happens to the global balance of power?

But let us also consider the impact on these same nations if India succeeds; if India achieves a satisfactory measure of economic growth and of political stability, if the billion or more people in Asia, Africa, and Latin America see that the people of India have been assured individual freedom, increasing justice, and a sense of personal belonging, as well as more food, clothing, schools, hospitals, and houses—then the cause of orderly growth in the decisive underdeveloped areas through non-Communist means will have won a crucial victory and the outlook for a rational and peaceful world will be greatly improved.

The challenge to American policymakers growing out of this unprecedented combination of forces began to be apparent in the early 1950's. Several of us who were directly exposed to these forces at that time stressed the need for an entirely new American response to what we believed to be the new realities of world power in Asia and Africa.

But in diplomacy, as in other forms of human endeavor, old habits of mind often persist long after their relevance has passed. While the Soviet Union has been learning new tactics and developing new sources of power, the United States has clung on to old responses and old concepts.

Indeed, until recently India's significance has been obscured by official irritation over Indian neutralism, confusion over India's economic prospects, and lack of understanding of the profound consequences of the Asian and African revolution in which India stands as the central force.

In April 1956, India finished a successful first 5-year plan. Her second 5-year plan, scheduled for completion in April 1961, will fall somewhat short of its relatively modest objectives. The bolder third 5-year plan which follows may be politically, as well as economically, decisive—not simply to India but to the long arc of non-Communist, but uncertain, new nations which stretch from Korea to Ghana.

Since 1951 the United States has provided India with considerable capital, many technicians, and large quantities of wheat. If India is to fulfill her minimum political and economic objectives, this program must now be sharply increased.

Our aid must be long term and adequate. It must be given wisely, sensitively, and without political strings. It must be provided not as a substitute for other badly needed grants and loans to smaller nations, but as an additional effort in behalf of nations whose strategic importance is paramount to the future of two whole continents.

Now let us look the situation squarely in the face: No one can be sure that an adequate, well administered American aid program will assure India's success. Nor can we predict that without such aid India and the other new nations will certainly collapse and that communism will become the major force in the underdeveloped continents.

Yet our present capacity to tip the scales on the side of freedom is very substantial indeed. Thus the fifth great foreign policy decision of our century comes into focus.

Are we willing to throw our weight onto the scales on what may be democracy's ultimate test in Asia?

Are American leaders prepared to call once again on the American people for forthright, understanding, creative political and economic action on a question of profound importance to their future?

To an undetermined extent the President's recent trip to Asia appears to have opened the administration's mind to the opportunity and the challenge. Yet now as in the case of the four other critical decisions, timid men in high places are counseling postponement and inaction.

They are saying now, as they said of the Marshall plan, "A major effort in Asia and Africa is a political impossibility in an election year."

"How can we act effectively under a divided Government with the President of one party and the Congress of the other?"

"The American people simply do not understand the needs—and they are tired of crises anyway."

"America cannot afford the money, and even if we could, it would be inflationary."

"Congress will never agree to the necessary long-range planning."

Now these are the selfsame defeatist arguments which in 1947 and 1948 were thrown at the Truman administration and its bipartisan supporters in Congress, when they proposed to rebuild and defend Europe.

To their everlasting honor and glory, these men set aside political advantage to reject these arguments out of hand.

They took their case to the American people, told them what was needed, and won their overwhelming support.

Today our total national output of goods and services is double what it was in those days. There are idle men and idle resources ready to be put to work. The inflationary consequences are immeasurably less. And the total additional cost of a truly adequate economic effort in all of Asia, Africa, and Latin America is only half the cost of the Marshall plan.

In 1947 and 1948 our leaders acted with insight and courage. As a result new life was breathed into Europe, new political and economic foundations were created on the ruins of the old, and 400 million war-weary people were set on the high road to prosperity, freedom, and peace.

In 1960 are we prepared to act in behalf of freedom not only in crucially important India but other parts of Asia, Africa, and Latin America as we did in behalf of Europe in 1947?

Are we ready to recruit the necessary able men and women—regardless of party—as we did in the days of the Marshall plan?

Are we ready to bypass the custodians of the past who seek our aid largely to bolster their own privileged positions and to work with the democratic builders of the future?

I believe the American people are ready to be told the requirements. And once informed of what needs to be done, I believe they will offer their support as they offered it in the years following the war, and that we will then proceed to add one more brilliant chapter to the history of democratic government in America.

I do not say that our failure to act will set the Red army marching through the streets of Washington or even New Delhi.

What I do say—and I say it with profound conviction—is that half-way measures may cause us to lose democracy's last opportunity to influence the course of events in Asia, and ultimately in Africa and Latin America as well.

In this century we have thrown away two similar opportunities to help produce a more secure world. On two equally decisive occasions we acted wisely, boldly, and well.

The fifth great foreign policy decision of our century is now at the top of our national agenda: What do we propose to do about it?

One Man's Opinion

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, February 15, 1960

Mr. MURRAY. Mr. President, a weekly newspaper editor in Plains, Mont., has written a telling commentary on some of the so-called children's television programs. I ask unanimous consent to insert the column in the Appendix of the RECORD. It appeared in the January 21 issue of the Plainsman, and was written by the publisher, Mr. Don Coe.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the Plainsman, Plains, Mont., Jan. 21, 1960]

ONE MAN'S OPINION

Sometimes we wonder if it's worth it—all this argument over what TV system is best for Plains. These fits of depression usually come after watching some of the shows channel 4 sends out over the air. We mention channel 4 because that's the only one we look at. The other channels undoubtedly as bad.

This mood was brought on primarily by a program we were fortunate enough to miss. Mrs. C. rarely watches a show by herself but the kingpin of the family had the set on and when he left it blared away without any watchers although Mrs. C. did hear snatches of the conversation.

Let me tell you about it.

It was a shoot 'em up western and the bad guy had succeeded in alienating the affection of the beautiful blond wife of the good guy. To make a half hour story short, the good guy didn't cotton to the idea and, in effect, told the bad guy to keep his cotton pickin' hands off his blond.

And, as in all westerns, there was some shooting and the good guy got it pretty bad where it hurt most—but he wasn't quite dead.

When the bad guy stepped up to put another bullet into the good guy to finish him off, the blond had a touch of remorse and begged him not to do it. The clincher comes next, when the bad guy, obviously intent on putting the good guy out of his misery, says, and we quote: "It's the Christian thing to do."

That was enough for Mrs. C. who broke race records in turning the thing off, so we really don't know if that Christian act of murder was ever carried out.

This thing confuses us quite a little, because it might be possible these episodes have been going on all the time and as we get older we notice them more. Or, more probable, it could be that script writers are gradually adding a little more of the seamy side to each show in the assumption we'll never notice it.

But when such things as the above take place, and Dobie Gillis' father repeatedly says "I'm going to murder that boy," in a show designed especially for teenagers, it's getting to be more than we can swallow.

And we're not purists, either.

The Municipal Government of Washington, D.C., Starves the Fine Arts at the Very Time the Soviet Union Is Spending Vast Sums To Prove Americans Are Cultureless Barbarians

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. McDOWELL. Mr. Speaker, a distinguished citizen of Delaware, and one of the country's leading architects, Samuel E. Homsey, has written me to say that Communist countries are spending vast sums on propaganda to prove that Americans are cultureless barbarians.

It is important to note, in this connection, that a study made at my request by the Library of Congress shows that the municipal government of Washington, D.C., spends less money on the fine arts than any other major U.S. city. The Board of Commissioners of the District of Columbia seems content to let the Federal Government or private benefactors support the arts. Such a course would be unthinkable in any European capital city or, indeed, even in any large provincial city in Europe or the U.S.S.R.

The Library of Congress reported on the financial support given the fine arts by 38 U.S. cities: Baltimore, for instance, gives $448,588; Philadelphia $789,760; St. Louis, $320,007.53; Los Angeles, $196,998; Kansas City $155,789; San Francisco $817,256; and New York City $4,718,824. The study showed Washington, D.C., which is considerably larger—and richer per capita—than San Francisco, gives only $16,000 to the fine arts. This sum compares favorably only with the $12,500 which Hagerstown, Md., gives to the fine arts.

In a provocative article entitled "In Culture, Is Washington a Hick Town?" by its distingiushed music critic, Howard Taubman, the New York Times said on December 27, 1959, that—

> Compare Washington with a small capital capital like Brussels, which has opera, ballet, orchestra, theaters and a highly cultivated population, and the outcome is to our discredit. Compare Washington with a provincial town like Tifiis, more than a thousand miles from Moscow. The Soviet city beyond the Caucasus has an opera house, a ballet, four professional theaters, several children's theaters and a proud cultural tradition.

I have cosponsored with Senator HUBERT H. HUMPHREY, of Minnesota, a bill to provide that 1 mill out of each $1 of tax revenue of the government of the District of Columbia be set aside in a special fund to defray in part the expenses of the National Symphony Orchestra, the Corcoran Gallery of Art, the Washington Opera Society, and other nonprofit art and cultural programs of the Nation's Capital.

In introducing a companion measure to by bill in the Senate, which has been cosponsored in the House by our able

colleague, the gentleman from New Jersey [Mr. THOMPSON], and others, Senator HUMPHREY said—

Throughout my service in the Senate, I have consistently supported measures to improve the city of Washington and to make it an even more beautiful and pleasant city in which to live. I shall continue to support such programs because I believe it is in the best interest not only of the city of Washington but the United States itself. After all, Washington is a picture window through which the people of other nations look and draw their judgments about America. Washington should represent the artistic and cultural aspirations of the American people. Unfortunately, all too little has been done to promote the arts in the Nation's Capital.

I include as part of my remarks the New York Times article entitled "In Culture, Is Washington a Hick Town?"

IN CULTURE, IS WASHINGTON A HICK TOWN?—AS THE NATION'S CAPITAL AND A WORLD CAPITAL, WITH VISITORS FROM EVERY LAND, IT MUST, IT IS ARGUED, BECOME A SHOWPLACE OF THE BEST WE HAVE TO OFFER

(By Howard Taubman)

WASHINGTON.—The indictment is often made: Washington is a hick town culturally. Residents of the Capital and its environs respond indignantly that this is a canard invented by supercilious New Yorkers and envious foreigners. They marshal evidence and arguments in defense. Their voices rise, their emotions become involved. Are they sensitive about the charge? You bet they are. If they weren't, they add, would Washington have made the cultural advances scored in recent years?

What is the truth? Is Washington a hick town or a world capital when it comes to culture? No one can seriously assert that the city exercises any influence in the arts that compares even remotely with the shadow it casts in politics and economics. No one can dispute the thesis that compared with capitals like London, Paris, and Moscow, the American Capital is a provincial community in the arts.

It is unjust, Washingtonians protest, to equate their city with such capitals as London, Paris, and Moscow, because they are world metropolitan centers comparable with New York. But it is not that easy to clear Washington of cultural responsibility. At home and abroad it bulks as a great international center.

Throughout the year hordes of sightseers invade Washington. They come from every part of the country, in family groups, in fraternal and civic delegations, in school units. They make the stations of the national monuments. They gape at the buildings, for the greater part, so unvaried, ponderous, and official. Nevertheless, they bring respect and affection. They are moved by the city's closeness to the history that is their heritage. They even poke into the museums. Watch them in the National Gallery—groups of plain Americans standing before some of the great masterpieces the Western World has produced. They may not grasp the nuances of achievement, but they are stirred by the works of art. For many it is a first encounter with an original of Raphael or Rembrandt.

As the Nation's Capital, Washington has another mission besides being a tourist center. It is the city to which the diplomats of nations around the globe are sent. It is the city to which heads of foreign states, great and small, come to visit and negotiate, and so do their ministers, parliamentary leaders, military men, and other principal government servants. It is the city which provides foreigners with an official image of the United States.

There is awareness of this truth in the effort of Government leaders, residents of Washington and interested citizens elsewhere to obtain a national culture center for the Capital. Congress has authorized such a development, the architectural plans were made public recently, and a nationwide campaign for $61 million will soon be launched.

Everyone agrees that Washington is no longer a village, set implausibly on a dank flatland beside a tidal river to make sure that local interests would not exert too great a pull on the Federal Government. It has grown not only into the central seat of a world power but also into a big city. Metropolitan Washington, which includes the city proper and the bedroom communities in Maryland and Virginia, has a population of about 2 million and is expanding so rapidly that it is expected almost to double its size within the next two decades. It is big enough to have its own major league baseball and football teams. What has it to show in a cultural balance sheet?

In the plastic and graphic arts it has cause for satisfaction. Its public museums and its privately run galleries provide a lively representation of the classics and the contemporary scene. Institutions like the National Gallery, with its splendid collection; the Corcoran Gallery, the Phillips Gallery and the Institute of Contemporary Art have varied services that cover not only painting and sculpture but also music, lectures, and films.

In music the rating is variable. The National Symphony is a vigorous, ambitious ensemble, not yet first rate but steadily improving. The opera society is capable and aims high as far as it goes, but it is merely a brave beginning. Chamber music is abundant and of high quality, thanks to endowments entrusted to the Library of Congress. There are concerts by touring attractions, programs in the churches and schools, amateur events in town and out in the suburbs.

In the dance there is very little. The Washington Ballet, which was begun a couple of years ago, is still in the formative stages and ventures on an occasional performance. Otherwise, dependence is largely on visiting companies.

In the theater the record is poor. If it were not for the Arena stage, it would be miserable. There is only one other home for professional theater, the National, which plays host to tryouts and road companies. The Arena stage, with its sense of adventure and continuity, has developed a faithful audience and looks at last to be secure. But it has had a struggle, and even today its public represents a tiny fraction of the audience that the National Capital should assure. There are amateur efforts scattered throughout the area, and the work of the colleges, particularly Catholic University, has been unusual in years gone by.

Reading, of course, is one of the prime pursuits in Washington, which is essentially a white-collar city. There is the inevitable concern with studies and reports, and presumably someone reads the CONGRESSIONAL RECORD, though no one has ever accused it of having much literary quality. Books on government and politics and foreign affairs, whether philosophical or gossipy, have a higher currency than in most cities. But genuine literature is a minority preoccupation.

Probably the leading indoor sport is conversation. People don't dine out at glamorous eating places. They meet in social gatherings in the home. Here the life of the mind and spirit is cultivated, if it is cultivated seriously, through books, records, and good talk. There are, of course, many thoughtful, sensitive people in Washington, and their conversation is capable of ranging widely over the gamut of human concerns. In this respect the Capital is like a college town with an impressive intellectual elite. But how often does conversation go beyond the immediate events and personalities of the day's news?

How does Washington compare as a cultural center with other capitals? Let us agree not to judge the city by the criteria of London, Paris, and Moscow, which are their nations' largest urban communities. Let us even skip Rome, which is not Italy's principal economic center but which offers the grandeur of antiquity and the renaissance as well as opera house, ballets, theaters, orchestra, conservatory, and art in abundance.

Compare Washington with a small capital like Brussels, which has opera, ballet, orchestra, theaters and a highly cultivated population, and the outcome is to our discredit. Compare Washington with a provincial town like Tiflis, more than a thousand miles from Moscow. The Soviet city beyond the Caucasus has an opera house, a ballet, four professional theaters, several children's theaters, and a proud cultural tradition.

What is the explanation for Washington's shortcomings? You hear a variety of excuses:

The city is not an industrial center, has no big business and not enough huge fortunes, and these are the sources which nowadays supply the sinews of artistic activity.

The city has a large transient population dependent on the whims of the national electorate every 4 years. As proof of what this means culturally it is pointed out that patronage for plays and concerts in 1953, the changeover year in administrations, dropped sharply.

Like it or not, the city's business, after all, is politics and government, and while its residents embrace a substantial percentage of intelligent, cultivated men and women, they have no choice but to concentrate on affairs of state rather than on artistic trends.

Washington's high society, with honorable exceptions, does not find satisfaction in supporting the arts as extensively as in other great capitals because it is absorbed in a social whirl involving bigwigs in the Government and the diplomatic corps, not forgetting visiting potentates. It has become more glamorous to be a persistently successful hostess than a devoted supporter of the arts.

There is merit in these reasons, though the cause lies deeper. Washington is what it is culturally because it reflects, more truly than it knows or perhaps would like, attitudes prevalent in many parts of the land. But that is not a compelling excuse. For the Capital should set the tone; it should lead. It is not good enough to let Washington off by saying that standards in the things of the mind and spirit are ordinary in many parts of the country.

Granted that the most popular entertainments on television, the successful films and many bestselling books do not meet lofty criteria; granted that in this great prosperous country professional theaters outside of New York are scarce; granted that only a small percentage of our people listen to great music and look at great paintings; granted that the sales figures of the most dazzling bestsellers are a small percentage of the potential reading public, these things do not absolve the Capital City of responsibility; on the contrary, they increase it. Washington should be in the vanguard. It should be a proud national showplace in the arts.

The thousands of American visitors who stream through the city each year should be encouraged not simply to go sightseeing, but to expose themselves to fresh experiences in the arts. The National Symphony, thanks to Mrs. Herbert May, a woman of wealth, devotes a number of weeks in the spring to free concerts for visiting school boys and

girls. But these youngsters should also encounter an eye-opening diversity of theater, opera, and dance. Their fathers, mothers, elder sisters, cousins, and aunts should also find in the Capital a choice and inspiring invitation to cultural adventure.

Thanks to the pressure of the cold war and the competition with the Soviet Union, we have assumed the duty of sending our cultural emissaries abroad to prove that our aspirations touch the mind and spirit as well as the body's comforts. The Congress has appropriated about $2,500,000 each year to help defray the cost of these expeditions of orchestras, soloists, dance troupes, lecturers, and jazz units. And the program has won wide approval.

But think how impressive would be a far-ranging and penetrating cultural life in Washington itself. The Ambassadors and Ministers and their staffs would relish it and report back home accordingly. The foreign visitors, who come in increasing numbers in the era of the jet plane, would not have to be sold a bill of propaganda goods; they could see and hear for themselves.

In the long run, societies and nations are esteemed for their humanity and humanism, not their wealth or might. Their values are revealed most searchingly in the caliber of their learning, science and culture. Washington should be the steadfast showcase of our values. And in the arts this showcase should be large, diverse and vivid. It should embrace what is established and indisputably great, and it should encourage a ferment of new creative ideas. To take the theater as one example: If New York is the sharpest testing ground of commercial productions, why shouldn't Washington set the Nation an example of how exciting a chain of permanent repertory that could be?

But how are such enormous goals to be encompassed?

In the first place, the energy in Washington itself must be released. In a city where policy is made my a few top officials, the habit of initiative has been lulled in many able and imaginative people. The permanent residents, and they are preponderant, must bestir themselves. They must support their institutions and help to create new ones. They should fight hard to prevent the image of the Capital being formed by innocents and know-nothings whom the voters continue to elect and who play a part in making policy for us all.

Seasoned observers in Washington insist that the caliber of our public servants, elected and appointed, has risen markedly. The old Washingtonians and the new who believe in the destiny of the Capital must join hands to promote it.

Secondly, there must be an awareness in the highest echelons of leadership that lipservice in the arts is not enough. The men with informed tastes in the arts in executive, legislative, and judicial positions of importance should propound large-visioned ideals and programs. They must be active and unremitting supporters of all that adorns and ennobles life. When they take action they should be sure that they are acting knowledgeably and wisely.

The National Culture Center, whose noted architect, Edward Durell Stone, recently made public his designs, is a spectacular case in point. The drawings and blueprints suggest that Washington will get another stately mansion, a vast, domed temple devoted to the performing arts. Congress has voted an attractive 10-acre site near the Potomac. There are detailed reports on how the setting will be beautified. One hears that the multipurpose structure will contain an opera house, a concert hall, a theater, auditoriums, a grand salon useful as a ballroom, restaurants, and outdoor terraces.

One discovers that the center will be employed for elaborate state occasions like inaugural balls and the reception of distinguished foreigners. One is cheered by the news that it will become a tourist attraction for Americans not even interested in the arts. One reads that a Cabinet member thinks that the center will give the coup de grace to the scornful criticism "that America is culturally a primitive nation."

Unhappily, there is little or no discussion as to what will be performed or who will perform it in the various performance areas. Presumably the National Symphony and various touring attractions will have a new forum. But there is no mention of anything else that is indigenous to Washington, of anything that has been created out of the Capital's own ingenuity and enthusiasm. The Arena Stage and Opera Society, both homegrown and worthwhile, have scarcely been consulted.

Thirdly, there must be an adequate financial basis for progress. Consider the case of the National Culture Center again. The hope is that it will be financed by contributions from individuals and institutions all over the United States. But will ceaseless money-raising campaigns be required to fill it the year round and year after year with vital presentations? The boxoffice, we know, will not turn the trick. Is the answer some sort of Government subsidy?

Strong men blanch when such a suggestion is made in Washington. But some congressional voices have been raised in favor of a national instrumentality for promoting and aiding the arts. The problems are manifold, and the touchiest would be the danger of political interference. But if the alternative is to let nature take its course, which means a moderate, instead of a brilliant cultural position for the Nation's Capital, possibly enlightened Government help can be worked out by men of good will. There is no hue and cry against a Government subsidy of $44 million for an ocean liner like the *United States*. If the Culture Center needs something more than the Government's moral support, let it be made available.

A New Yorker does not wish to be misunderstood. He does not criticize the National Culture Center because he is jealous that another city may come close to matching the forthcoming Lincoln Center of the Performing Arts. As a loyal American he welcomes Washington's cultural center and hopes that in time it will be duplicated in other cities throughout the land.

However, neither plans for a building nor the grand and beautiful new edifice itself should be the ultimate goal. A cultural center justifies itself by the artistic life it generates. A new cultural center in Washington can be useful and crative, but it must be conceived with a vision of what it will create.

This vision must be part of a larger one that encompasses the noble role the Capital should play in the Nation's cultural life. For all the progress Washington has made in recent years, gigantic strides remain to be taken, and the best efforts of all of the city's elements, including the Government, will be needed to make the capital a proud showplace of a humane people's artistic concerns and achievements.

We Should Promote Demand for Dairy Products Abroad

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, February 15, 1960

Mr. WILEY. Mr. President, we recognize that the world today is becoming a smaller place—because of technological and scientific advances—in which to live.

The interests of nations—economic, political, military, cultural—are becoming more closely interrelated.

We realize, of course, that the nations of the free world, to outstrip the Communist competition, must depend upon healthy economies.

In view of these factors, it is increasingly important, I believe, for more and more of our industries, including agriculture, to attempt to find new markets at home and abroad.

The high costs of labor, operations of dairy and farm equipment, taxes, and other expenses, of course, make it difficult for U.S. dairy products to compete on the world market.

This is one of the underlying reasons why I have, again and again, stressed the need for ever-greater research to provide more new ways of utilizing the components of dairy products for home consumption, as well as for competing in international trade.

During recent years, for example, dairy surpluses have amounted to no more than 5 or 6 percent of the total output of the entire dairy industry. However, these surpluses have had a disproportionately oppressive effect on the dairy economy.

If, through creative research, ways, and means could be developed for disposing of this 5 or 6 percent or more of our output, the economic outlook of the dairy industry would be substantially brightened. New markets would be of tremendous help.

Recently, the Wisconsin Agriculturist and Farmer printed an informative editorial entitled, "We Should Promote Demand for Dairy Products Abroad."

Believing the editorial reflects the need for an effort for the development of international markets for the fine products of the dairy industry, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Wisconsin Agriculturist, Feb. 6, 1960]

WE SHOULD PROMOTE DEMAND FOR DAIRY PRODUCTS ABROAD

During the last few years dairy surpluses have been running no more than 5 to 6 percent. This surplus is that part of our milk production which we cannot sell to private buyers at support price level.

The Government buys these surpluses to maintain milk prices at or near support level.

Most of this surplus milk goes into cheese, butter and dry milk. With stronger cheese prices in our own country, little has been sold to the Government in recent months. Even the purchase of butter has been dwindling.

Today most of our surplus production goes into nonfat dry milk. Turning surplus milk into nonfat dry milk and taking it off the domestic market is now the biggest single factor in supporting milk prices.

In the process of keeping up milk prices the Government has become the Nation's biggest market for nonfat dry milk. Last year the Government purchased around 40 percent of all the nonfat dry milk made.

Nearly 90 percent of the nonfat dry milk the Government buys is either donated or sold to people overseas. If we add to the Government's overseas shipments that sold

for dollars through commercial channels to foreign buyers, we find that 40 percent of all the nonfat dry milk we produce goes overseas.

So far the dairy industry has been little concerned about this important part of its market. We have largely taken the attitude that Government buys the dry milk, let Government worry about selling it overseas.

And yet can we really afford to take this attitude?

Granted that our Government's donation to foreign countries hardly constitutes a market. Many foreign buyers have purchased nonfat dry milk from the U.S. Government because they could get it at bargain-basement prices or pay for it with their own currency.

But if the people of today's poorer countries learn to like our products, they may well buy them tomorrow when they do have the money. Let's take one example.

For sometime our Government has sold the Japanese Government U.S. surplus foods for a Japanese school lunch program. If these Japanese youngsters learn to like our products, there's an excellent chance they may become important purchasers of them in the future.

Japan is well on her way to becoming one of the world's important manufacturing countries. In the future she undoubtedly will have the dollars to buy our farm products if she wishes to.

Well aware of the importance of foreign markets, wheatgrowers now maintain promotion offices in foreign countries. Like dairy surpluses, much of the U.S. wheat going overseas moves through Government programs.

But the wheatgrowers realize that foreign users must like U.S. wheat if they are going to continue to buy it without U.S. Government assistance. The wheatgrowers know that it is important to build future markets now.

Few farm groups have had so much experience in promoting its products on the home front as the dairy industry. We have done an outstanding job teaching consumers the high nutritional value of dairy foods.

It's time we applied this same knowledge to our overseas markets. We can and should build a geninue demand for our products overseas. And nonfat dry milk would be an excellent place to start.

U.S. Spending Peak of $579 Billion During Ike's Terms

EXTENSION OF REMARKS

OF

HON. LEO W. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. O'BRIEN of New York. Mr. Speaker, under leave to extend my remarks, I submit for the RECORD an exhaustive study of Federal spending, written by Mr. Paul Martin, chief of the Washington bureau of Gannett News Service. It appeared in the Albany (N.Y.) Knickerbocker News.

I offer this article for the perusal of the Members because of its intrinsic value and the high journalistic standing of its author. The article follows:

U.S. SPENDING PEAK $579 BILLION DURING IKE'S TERMS—EISENHOWER TAX TAKE TOPS 20 YEARS OF THE NEW DEAL

(By Paul Martin)

(The constantly mounting national debt and current operating costs of Government frequently inspire comparisons of national administrations of the last three decades as to money spent and tax revenue demanded. Not always are comparative figures immediately available for a comprehensive picture, but here they are, broken down into their respective categories by the chief of the Gannett News Service Washington bureau for those who would like to get a good view of the fiscal affairs of Government under Presidents F. D. Roosevelt, Harry Truman, and Dwight D. Eisenhower.)

WASHINGTON.—Since President Eisenhower has submitted his last Federal budget to Congress, it is possible to compare Government spending under the Eisenhower and Truman administrations.

On the assumption that the President's budget estimates will prove to be reasonably accurate for 1960 and 1961, here is what the record shows:

SPENDING

In the 8 fiscal years (1954–61) for which President Eisenhower is responsible, Government spending out of the Treasury general fund will amount to $579.1 billion.

That is 14½ times as much monetary gold as there is in the entire world.

It compares with Government spending of $399.4 billion under former President Truman in his 8 fiscal years (1946–53).

Eisenhower will spend $180 million more in the same period of time than Truman, or 46 percent more.

The spending record for 20 years of the New Deal under Roosevelt and Truman amounted to $755.2 billion, or three-quarters of a trillion dollars.

TAXES

Eisenhower will collect revenue totaling $564.2 billion in his 8-year fiscal regime.

This is 17½ times as much as the total amount of U.S. currency as there is in public circulation today.

It compares with total revenue collections of $372.8 billion during 8 Truman years.

Eisenhower will collect $191.4 billion more taxes than Truman, or a little higher than 50 percent more revenue.

The Eisenhower tax take in 8 years will be more than all of the $536 billion in taxes collected during 20 years of the New Deal.

DEFICITS

President Eisenhower has had four balanced budgets, and four with deficits, for a net deficit of nearly $15 billion during his administration.

Former President Truman had three balanced budgets, and five with deficits, for a net deficit of $26.3 billion during his 8 years.

Despite a solemn pledge to the voters in 1932 to cut Government spending by 25 percent, former President Franklin D. Roosevelt never presented a balanced budget to Congress in his entire 12 years in the White House.

The aggregate deficit for 20 years of the New Deal amounted to $252.3 billion. It accounts for the bulk of the $290 billion national debt today.

Total Government spending in the first 145 years of the United States as a nation amounted to only $113 billion, compared to the astronomical sums which have been collected and spent in the last 28 years.

PUBLIC DEBT

When Harry S. Truman took office as President in 1945, the national debt stood at $258.7 billion.

Interest payments amounted to $3.6 billion a year, and constituted 3.7 percent of all Federal expenditures. Under Truman, interest payments on the public debt rose to $5.9 billion a year.

When Dwight D. Eisenhower became President in 1953, he inherited a $264 billion national debt from the New Deal.

Since then, the public debt has climbed to more than $290 billion. Eisenhower has had to ask Congress on a half-dozen occasions to raise the legal limit on the public debt.

The distressing fact is: These 16 years under Truman and Eisenhower have been the most prosperous America has ever known; yet in net balance there has been no reduction of the national debt.

On the contrary, the debt has gone up under Eisenhower, and interest costs on the debt have risen even faster.

Interest costs have gone up by $3.1 billion, or nearly 50 percent, inside of 8 years. Debt service in the 1961 budget is estimated at $9.6 billion, or 12 percent of all Federal expenditures.

It has cost American taxpayers $61.4 billion to pay for interest costs on the national debt under Eisenhower, compared to interest costs of $44.3 billion under Truman.

PROSPERITY

There are other factors which should be reckoned in the general economic picture. For instance:

U.S. population has increased by 25 million under Eisenhower, compared to 17 million under Truman, creating a larger demand for Government services.

Whereas the gross national product (total output of all goods and services) gained by $39½ billion under Truman, it has jumped by more than $150 billion under Eisenhower.

Personal income has gone up $130 billion under Eisenhower, compared to $102 billion for Truman. There have been substantial gains in both family and per capita income under Eisenhower.

The consumer cost of living as measured by the BLS price index jumped 47 percent in the postwar period under Truman. It has risen less than 10 percent since Eisenhower took office.

In the inflationary period of the Truman regime, the value of the American dollar dropped by 25 cents. It has gone down 4 cents under Eisenhower.

In general, the Eisenhower administration has been a period of greater prosperity, increasing economic stability, and more public confidence in the future.

Nevertheless, it has also been a period of tremendous Government taxing and spending.

CONGRESS

Part of Eisenhower's problem has been the question of "divided Government." For 6 out of his 8 years, the President has had to deal with a Congress ruled by the political opposition. And Congress controls the purse strings of Government.

When Eisenhower took office, with a Congress of his own party in 1953–54, he cut $10.8 billion from the Federal spending budget Truman had proposed for the 1954 fiscal year.

Eisenhower reduced Government spending to a low of $64.6 billion in 1955. Democrats regained control of Congress in that year.

Government spending has been going up ever since, due in part to new programs voted by Congress, due in part to actions taken by the administration.

Chairman HARRY F. BYRD, Democrat, Virginia, of the Senate Finance Committee, claims that 75 percent of the increased spending has been for purely domestic-civilian activities, not related to national defense.

Government spending under Eisenhower reached a peacetime peak of $80.7 billion in the 1959 fiscal year, with a record peacetime deficit of $12.4 billion. The previous peak was a $9.4 billion deficit under Truman in 1953.

Truman's budget ranged from a low $33.8 billion in 1948 to a high of $74.6 billion in 1953. During the Truman administration, Government spending averaged $50 billion a year.

During Eisenhower's 8 years in the White House, Federal spending will average $72 billion annually.

Here are significant areas of public spending:

DEFENSE

A major political controversy today concerns whether President Eisenhower has provided adequately for national defense, particularly in military missiles and space activities.

The record shows that Eisenhower has provided $310.1 billion for the Armed Forces in 8 years, compared to $198.2 billion under Truman in the same period of time.

Under Eisenhower, the Pentagon has gotten $112 billion more in military appropriations, or 57 percent more than Truman provided for national defense.

There was erratic planning in the military budget with great ups and downs under Truman. His military expenditures ranged from $45 billion in 1946 at the end of World War II, to a low of $10.9 billion in 1948, to a new peak of $43.6 billion in 1953, last year of the Korean war.

Under Eisenhower, the military budget has been more consistent. It has ranged from $35.5 billion in 1955 to $41.2 billion this year, averaging around $39 billion a year over his 8-year tenure.

Here's a comparison of the military budgets under Truman and Eisenhower:

[In billions]

Truman:	
1946	$45.0
1947	14.3
1948	10.9
1949	11.9
1950	12.3
1951	20.5
1952	39.7
1953	43.6
Eisenhower:	
1954	40.3
1955	35.5
1956	35.8
1957	36.3
1958	39.1
1959	41.2
1960	40.9
1961	41.0

FOREIGN AID

Amounts indicated for military spending are exclusive of additional sums which the Government has spent on atomic energy, foreign military assistance and other defense-related activities.

The postwar record of the U.S. foreign aid program is nearing the $100 billion mark in sums made available for overseas spending through a variety of devices including loans, grants and other forms of assistance.

By the end of his term, Eisenhower will have spent approximately $2½ billion more on foreign aid than Truman did. The record shows that Truman spent $41.3 billion on foreign aid, compared to $43.8 billion spent or obligated under Eisenhower.

The President is asking Congress for new spending authority of $4.2 billion in 1961, a hike of approximately a billion dollars over last year.

At the end of the last fiscal year, there was a carryover of $12½ billion in unexpended balances or new appropriations for foreign aid.

AGRICULTURE

Perhaps the most distressing financial problem of the Eisenhower administration is the matter of farm subsidies for surplus commodities that the American taxpayers don't want and can't use.

Congress has continued, year after year, what is basically the old triple A New Deal price-support program that was devised during a depression, and has long since outlived its usefulness.

Under present estimates, farm subsidies will cost taxpayers a total of $38 billion under Eisenhower, compared to losses of $16 billion under Truman on the price-support program.

Peak spending under Truman was $6.4 billion during the last fiscal year of the Korean war in 1953. The low was $5.75 million in 1948.

The lowest bill for farm subsidies under Eisenhower was $2.6 billion in 1954. Net expenditures on agriculture have run above $4 billion in every year since, reaching a peak of $6.5 billion in 1959.

Farm spending estimates are $5.1 billion this year, and $5.6 billion for 1961.

Foreign aid expenditures and farm subsidies together account for almost half of the total U.S. national debt today.

Stacy May on East-West Trade

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 4, 1960

Mr. JAVITS. Mr. President, the characteristics of the Soviet economic offensive, in contrast with those of the free world, were delineated by Stacy May of New York, one of our most distinguished economists, in an address delivered at a conference in Washington sponsored by the Committee for a National Trade Policy. Dr. May addressed himself particularly to the question of the free world doing more business with the Soviet bloc. He made the point that a policy of disrupting international trade by dumping goods, especially on unsuspecting newly developing and uncommitted nations, under the auspices of the Soviet-controlled state trading monopolies was a dangerous one.

The way to protect ourselves against damage which more extended trade with the Soviet bloc nations could result in—

Says Dr. May—

is by insisting that Communist bloc nations conform to the same regulatory discipline that we ourselves apply to the trade of free world nations—under GATT antidumping and nondiscriminatory principles.

I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from the text of Dr. May's presentation on January 27, 1960, before the Committee for a National Trade Policy.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EAST-WEST TRADE AND FREE WORLD INTERESTS

(By Stacy May)

There are three separate prongs of a trident thrust that characterizes the Communist bloc economic offensive: (1) the first in importance is without doubt a propaganda and infiltration drive aimed at bringing as much as possible of the world's economy under centralized state controls operating under Communist motivations and ideology. The focus of this drive is directed mainly upon the 1.3 billion inhabitants of the so-called underdeveloped free-world nations, and its principal instrument is the contention that only the Communist system is capable of providing the rapid pace of economic advance that can satisfy the aspirations commonly termed the revolution of rising expectations, (2) the second prong, aimed at the same geographical area, is represented by the Soviet bloc entry into the field of offering development aid and technical assistance to non-Communist nations—a relatively recent drive which may be said to have started about 1954, (3) the third prong is the recently intensified effort of the Soviet block to participate to a greater degree than it has in the recent past in East-West trade.

Soviet development aid preponderantly takes the form of low-interest-rate loans repayable in a manner that closely parallels private transactions in free world trade that normally are not classified as development assistance at all. Thus it would not be inappropriate to compare the total Soviet economic aid commitments to non-Communist nations from 1954 to mid-1959 of $1.6 billion (of which not over one-half had actually been drawn down) with net private capital flows from the United States and Western Europe to underdeveloped areas of about $2.5 billions in 1956 alone, and to say that the assistance component of the Soviet transactions could be measured by the difference between its average 2½ percent interest rate charges and the higher return charged or expected to accure on the Western commercial transactions.

Such an accounting would entirely leave out of consideration of U.S. bilateral aid from World War II to mid-1959 of $19.4 billion, $9.1 billion from other Western industrialized nations, and $3.3 billion of development loans and economic assistance from the IBRD and other United Nations affiliated agencies. In the Western bilateral assistance a very large component represents grant aid upon which there is no interest charge or amortization requirement at all.

Although the Communist bloc comprises something over 33 percent of all the world's peoples, and produces about 25 percent of all its goods and services, the combined international trade of all Communist nations amounts to only about 10 percent of world trade. The preponderant portion of this trade flows between fellow members of the Sino-Soviet bloc. By no definition could they be classified as among the trade-oriented nations.

The weight of their trade in the free world trading system is even less impressive. In 1959 Communist countries supplied only about 3.4 percent of free world imports and took only 3.3 percent of free world exports, both fractionally lower than their percentage position in 1958. This contrasts with a relative position amounting to 6 to 7 percent which the countries now embraced in the bloc accounted for in 1928, 1937, and 1938. The East European satellites conduct about half of the bloc's East-West trade, Communist China about one-sixth, and the dominant U.S.S.R. only about two-sixths.

Upon what evidence, then, is the assumption of an intensified trade drive on the part of the bloc premised? In part, at least, the explanation lies in the very short time perspective upon which most of those who recently have been paying attention to problems in this field operate. East-West trade as a proportion of total free world trade had been declining steadily from a

relative position comparable to current levels in 1947 and 1948 to a scant 2 percent of total free world trade in 1952 and 1953. From that point on, it has been increasing very substantially in absolute magnitudes, and much more modestly in relative terms. By looking only at the year-by-year growth in the value of East-West trade transactions over a 6-year period an impressive and often an alarming case for bloc permeation of free world trade markets could be established.

However, there is much more to the picture than has been set forth above. Upon a selective basis, and reflecting at least to an important degree Communist bloc conceptions of where particular advantages might be served in cold war strategy, trade with particular countries outside their orbit has been built up to proportions that dwarf those pertaining to East-West trade generally. Thus East-West trade for the year 1958 accounted for the following percentages of the total trade of these countries:

	Percent of exports	Percent of imports
1. Egypt	44	29
2. Iceland	35	32
3. Syria	31	12
4. Yugoslavia	29	28
5. Iran	26	9
6. Finland	25	26
7. Turkey	24	18
8. Uruguay	21	5
9. Greece	16	7
10. Austria	14	11
11. Jordan	10	3
12. Malaya-Singapore	10	5
13. Hong Kong	6	31
14. Burma	3	12
15. Afghanistan (1956)	28	36

In each of the above cases the degree of trade dependence upon the bloc is considerable enough to wield some influence, and in most of them a bloc interest in exerting such an influence is not too difficult to conjure up. There does seem to be evidence of an increasing Soviet bloc recognition of the role that trade can play in forwarding its general strategy, and of a readiness to exploit this at least upon a selective basis even in cases where it means importing or exporting limited supplies of commodities where the exchange offers doubtful advantage to the bloc in strictly economic terms.

There are additional signs, however, that can be read as reflecting a clearer interest in promoting exchanges that have a more direct economic motivation. In the early thirties the U.S.S.R. exported considerable quantities of butter that certainly was not in surplus supply to pay for crucially important imports of foreign machinery. More recently short-supply timber has been exported along with tin and aluminum, and the future may well see increased offerings of such items as petroleum, grain and diamonds from U.S.S.R., consumers' durables from the East European satellites and textiles from Red China if chemical manufacturing equipment and other wanted machinery is available from the West. Additionally, an increasing proliferation of Soviet participation in world trade fairs may well be motivated by an interest in increased trade as well as for the general propaganda value of demonstrating industrial progress.

MAJOR DIFFERENCES IN THE TWO TRADING SYSTEMS

No generalized description of any trading system can be drawn without qualifying exceptions, but it is not difficult to distinguish major differences in the dominant patterns of free world and Communist trade.

It may be said of trade between free world nations that, characteristically:

(a) Transactions are conducted by private trader-purchasers seeking the best values in terms of price, quality and service in whatever markets they are offered, and sellers seeking the most profitable outlets for their products wherever such outlets are to be found.

(b) Most transactions are conducted in transferable currencies. The money earned by exports from one country to another may or may not be spent upon the exports of the latter; that will depend upon whether or not it can offer something that is wanted on attractive terms.

(c) The principle of nondiscrimination is generally observed. Each major trading nation within this system, by subscribing to GATT—the General Agreement on Tariffs and Trade—has agreed that the prices and terms governing its trade with one member of the system shall apply to all others equally, with any exceptions to be submitted to GATT for approval.

On the other side, it may be said of trade conducted by Communist bloc countries that, characteristically:

(a) It is handled by state trading monopolies, organized to handle all foreign trading in specified lines and generally responsive to Foreign Department political direction. There is no internal competition with respect to any foreign sale or purchase transaction.

(b) Payments for imports on the Communist side are generally made in nontransferable currencies, that is they must be spent within the Communist country in question for export goods offered by one or another of its state trading monopolies. Often, there is a barter arrangement calling for specific amounts of goods to be exchanged on either side, and most of the bloc trade with free world countries is conducted under bilateral trade and payments agreements negotiated on a government-to-government basis.

(c) By their very nature, these bilateral agreements are custom made, and the prices on both sides of the negotiated exchanges are individually bargained. Therefore, discrimination between customers in these transactions is the rule rather than the exception. When Mr. Khrushchev declares that "It is high time to do away with the bankrupt policy of discrimination in trade * * *" he clearly is thinking of Western controls over strategic trade, or possibly of U.S. restrictions on credits to countries willfully in default of financial obligations to the United States. There is no indication that he is even considering modification of the Soviet trade practices that are inherently discriminatory.

WHICH PATTERN OF TRADE ARRANGEMENTS SHALL GOVERN?

Before we jump to quick conclusions about the advantage to free world countries of expanding importantly their trade with the Communist bloc it is relevant to ask: Under whose terms of reference is such trade to be conducted?

Since in recent years only 2 to 3½ percent of free world trade has been with the bloc, it might be assumed that such East-West trade as exists would be conducted under the established rules of the system predominant in size.

If such an assumption were made, it would be false. Paradoxically, to use the kind of metaphor that spiced so much of Mr. Khrushchev's speech here, the Communist tail in this case has been allowed to wag the free world dog. It is estimated that over 70 percent of all East-West trade transactions in a recent year were conducted between countries in which Communist initiated trade and payments agreements were in force.

When the typical trade transaction is between competing private business entities on one side and monolithic state monopolies on the other, many of the issues that our antitrust law structure was created to resolve are raised in an acute form. I shall not elaborate the point, since the implications will be obvious to this audience.

Let me cite a few examples of "nuisance descriptions" by the Soviet bloc:

1. On the matter of nondiscrimination in export pricing, which is basic to the maintenance of competitive relationships in the free world trading system, a recent study of the Rand Corp. shows:

(a) A wide divergence in prices charged by the U.S.S.R. for wheat shipments in a given period to various West European countries; wheat sales to Norway carried a price tag 25 percent higher than contemporary shipments to Sweden, the United Kingdom and Holland.

(b) Similarly, there was a 25 percent spread between the high and low prices on U.S.S.R. cotton shipments to Finland, France, England, Italy, West Germany and the Netherlands with Finland on the high price end and Holland on the low.

(c) Less drastic but appreciable discrimination appeared in the prices charged Italy and France for Soviet crude oil shipments during 1957.

(d) Quite generally, the Soviet charged its East European satellites more and paid them less for imports and exports respectively than it charged and paid in comparable trade transactions with free European countries. This conclusion was based upon a study of 40 Soviet exports and 20 imports that were traded by the U.S.S.R. with both its satellites and Western Europe during each of 3 recent years.

This last reference may be important chiefly as an example of the cost to any nation of a dominant reliance upon the U.S.S.R. as a trading partner. Alternatively, it may be evidence of Soviet pricing in free world markets at less than economic levels in order to win entry there. In either case it is difficult to see how this record of discriminatory pricing can be reconciled with Mr. Khrushchev's claim of adherence to the principle of nondiscrimination.

2. There is a comparable record that shows persistent violations of the rules against dumping set up through GATT accord.

Under GATT definition, dumping takes place when:

a. The sales price for an exported item is set at a figure lower than that charged for the same item under like circumstances to domestic market buyers.

b. Export sales to a foreign buyer in one country are priced lower than those made to a customer in another country.

c. Export sales are made at a price lower than cost plus a reasonable markup for sales expense and profit.

On each one of these counts it is feasible to document a case demonstrating that dumping is a prevailing characteristic of Communist bloc export practice, or at least of U.S.S.R. practice.

On the first count, a number of studies reveal that U.S.S.R. internal prices on a wide variety of raw and semifabricated materials that are also exported average about double the export price quotations when the latter are transmitted into rubles at the relevant rate of 5 to $1.

The second criterion of whether or not exports are offered to one market at prices lower than those charged to another is merely a restated definition of price discrimination. A number of instances of differential export pricing that amounts to discrimination already have been cited.

On the third test, of whether or not export prices are less than production cost plus reasonable sales cost and profit, the nonavailability of relevant Soviet accounts makes the marshaling of conclusive evidence difficult. But the pattern of certain U.S.S.R. metal offerings on Western markets in recent years presents strong circumstantial evidence of pricing below cost.

Tin offers one example. As of mid-1955 the U.S.S.R. internal price for tin ingot was quoted by official sources at a price some 10 times the wholesale price then prevailing in the U.S. market. Although the U.S.S.R. is a consistent net importer of tin, it exported 10,000 tons in 1957 and 17,000 tons in 1958, at a time when the market was vulnerable, at prices well below world market range and below the price which it was then paying its Chinese supplier.

Needless to say, this brought prompt and vehement charges of dumping from Bolivia, Indonesia, Malaya and Thailand, and after quotas were placed on U.S.S.R. shipments by a number of importing countries, Russia agreed "voluntarily" to limit its 1959 tin exports to 13,500 tons.

Aluminum offers a second example. After an initial earlier fling at aluminum exports, followed by a year's withdrawal, U.S.S.R. intensified an aluminum export drive in 1957, once more at a time when world supply was in overproduction. The effort was focused on the British market, with prices quoted at from 1¼ cents to almost 2 cents under prevailing quotations with a stipulation that these margins would be maintained if the Canadian price were cut. As in the case of tin, U.S.S.R. internal prices for aluminum had been reported previously as considerably higher than world market.

Canada stoutly protested, and in the face of threatened reprisals, the U.S.S.R. agreed to cut its annual shipment rate from 22,000 to 15,000 tons. Again there is a presumptive but unprovable case of a deliberate attempt to disrupt a market. In any event, the form of the bid, with its agreement to cut price by a stipulated margin below any price that Canada might quote, is one that demonstrates a complete divorce between internal cost considerations and price quotation.

Certainly, I have given enough documentation to show that, even at its present small dimension, Communist bloc trade can do considerable mischief to free world markets if they allow it to be conducted on Communist terms. If this trade were to continue growing at the rate of the past 5 years, it might well bulk sufficiently large 10 years hence to become a menace instead of a nuisance. It is the part of wisdom to insist now that East-West trade be conducted according to the rules that the West has established and which it enforces with respect to the trade of one free world nation with another.

HOW TO ENFORCE GATT RULES

At least with respect to the Soviet bloc undermining of free world price structures by dumping, a procedure and an organization for preventing this is at hand in the GATT regulations and the structures of NATO and SEATO.

As I have previously indicated, dumping is forbidden by GATT and definitions of what constitutes dumping are spelled out in objective terms in which the moot question of intent plays no part. If the fact of dumping can be established, a violation is established even if an innocent motivation could be proved.

Under GATT regulations, its 36 members controlling 80 percent of all world trade are authorized to impose antidumping or countervailing duties whenever there is evidence that foreign goods are entering their markets upon a basis that violates GATT principles of commercially tenable pricing. Such duties may be high enough to offset the margin of dumping or subsidizing that is involved. This action may be invoked either to protect the competing business interests of the importing nation or those of other supplying nations with which it deals.

In cases where there is presumptive evidence of dumping without clearly documented evidence, provision is made for requiring a bond or cash deposit equivalent to the amount of the antidumping or countervailing duty assessable, and the burden of documenting the legitimacy of the pricing formula can be placed upon the seller. This formula might be of particular usefulness in dealing with state trading agencies that conduct their businesses without the degree of public accounting normal in Western practice.

Thus a procedure is in existence for insulating the free world trade structure from arbitrary Communist bloc pricing that is alien to our standards and can be harmfully disruptive whatever its motivation. These GATT provisions are, however, permissive rather than obligatory and they have been used only sporadically to date. Further, there is no provision under GATT for concerted rather than individual action.

We do have, however, in NATO and SEATO two groupings of nations specifically designed to promote collective free world security in all its aspects. All but two of the NATO nations (Iceland and Portugal) are members of GATT as well. So are Australia, New Zealand, and Pakistan of the SEATO group. Between them, the GATT affiliated NATO and SEATO members represent about 50 percent of all free world foreign trade. It would be highly appropriate for these organizations to work out a common policy and course of action to be pursued under GATT rules in the interests of economic security.

In addition to the suggested common policies with respect to the enforcement of GATT's antidumping and nondiscriminatory principles, there might well be a common policy of refusing to make sales to Communist bloc countries except upon a transferable currency basis. This is the present U.S. policy, and more recently it has been adopted by the United Kingdom and West Germany as well. If the practice were generalized, it would do much to keep trade with the bloc on the part of weaker free economies from turning into a trap from which there is no escape.

It seems quite clear to me that the answer as to whether or not increased free world-Communist bloc trade is desirable or undesirable turns on the question of whether such trade is conducted under our concept of fair trade practice or theirs.

The fact that their deals are always made through State trading monopolies generally directly responsible to Foreign Office control, while ours are generally made by independent private traders makes it possible for the Communist bloc transactions to serve political rather than economic ends whenever that serves their purposes. They can turn on or off sales to particular countries or in particular commodities at will; their pricing can be economic or be flagrant dumping in any particular case.

We can protect against the most obvious damage that such trading can inflict upon our system by insisting that this minority portion of our trade conforms to the same regulatory discipline that we apply to the intertrade of free world nations.

The particular formulas would need careful working out and could be adjusted to allow reasonable leeway; but I think that the principle I have put forth is one of commonsense, moderation and equity.

With proper safeguards, I believe that genuine benefit could be derived from the increased world trade between countries operating under disparate economic systems. I am convinced that this will only ensue if such trade is operated under rules that are compatible with the free world trading system.

If I may be permitted to paraphrase an old aphorism that was revised by Robert Frost, the poet:

"Good ground rules make good traders."

Farm Retail Price Spreads for Farm Foods

EXTENSION OF REMARKS

OF

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. McINTIRE. Mr. Speaker, it is a fact of economic life that increased efficiency in productivity brings a reward of higher earnings for workers in our American society—for all workers, it seems, but the American farmer.

It is a paradox of our times that for the farmer this rule works in reverse, and as his productive efficiency increases his reward decreases. In effect, the farmer's prices are on an escalator going only one way—downward. This is graphically pointed out in the following editorial which appeared in the February 13 issue of the Packer:

FARM-RETAIL PRICE SPREADS FOR FARM FOODS

Charges for marketing farm-produced foods rose 1 percent from 1958 to 1959. This increase was smaller than it had been for most years since 1947. In 1960, marketing charges probably will show some increase, reports the USDA's Agricultural Marketing Service.

Prices received by farmers for these foods were 7 percent lower in 1959 than in 1958. This decline in the annual average farm value was the first since 1956. Lower prices for hogs, frying chickens, and eggs were largely responsible for the decrease. The relative stability in marketing charges and decline in farm prices reduced the farmer's share of the dollar consumers spent for farm foods to 38 cents in 1959—2 cents lower than in 1958.

Retail prices of farm foods decreased in 1959 for the first time since 1955, but the annual average still was the second highest on record. Retail prices of these foods probably will not change greatly in 1960 as increases in marketing charges will partly offset lower average farm values.

Operating costs of food-marketing firms probably increased slightly in 1959, but the increase apparently was smaller than in most recent years. Hourly earnings of food-marketing employees rose 4 percent, continuing the upward trend, but improvements in output per man-hour offset some of this increase. Prices of goods and services which marketing firms buy rose slightly. Railroad freight rates were about the same as in 1958.

Marketing margins for fruits and vegetables, like those for most other food products, have risen since World War II, but the rate of increase for these products was less than the average for all farm food products in the "market basket." In 1959, marketing margins for all fruits and vegetables averaged 32 percent higher than in 1947–49; retail prices of these products were up 23 percent from 1947–49 and prices farmers received for them were up 11 percent. Much of the increase in marketing margins during this period occurred in 1951, 1952, and 1958. Farmers received 29 cents of the dollar consumers spent for fruits and vegetables in 1959, compared with 33 cents in 1947–49.

The retail cost, farm value, and marketing margin for the fresh fruits and vegetables in the market basket dropped slightly in 1959 from the peak levels reached in 1958. Unfavorable weather late in 1957 and early in 1958 curtailed the supply of some fresh products, and sharp increases in prices and

marketing margins followed. In 1959, prices averaged lower as a result of larger supplies of most products and the decline in prices was accompanied by decreases in marketing margins. Much of the decrease in the farm value and retail cost of the fresh fruits and vegetables group was caused by decreases in prices for oranges from the high levels reached in 1958 when the supply was reduced by unfavorable weather. The marketing margin for oranges also declined slightly.

The moderate 1959 decrease in the annual average marketing margin for the fresh fruits and vegetables group was the first decrease since 1954. Th 1959 average, however, was still 44 percent above the 1947–49 average, and the farm value was up about 6 percent.

Although marketing margins for fresh fruits and vegetables decreased in 1959, the farm value declined more, causing a reduction in the farmer's share of the consumer's dollar. Farmers received 34 percent of the dollar consumers spent for these products in 1959, compared with 35 cents in 1958 and 41 cents in 1947–49.

Unique Development in Indonesia

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, February 15, 1960

Mr. SPARKMAN. Mr. President, recently there came to my attention a most interesting and significant article written by Joe Borkin, an attorney of Washington and formerly an official of the Justice Department, relating to a unique development in Indonesia.

The article was written several months ago, but its meaning, both to Indonesia and the free world is just as important as though Mr. Borkin wrote it yesterday.

An independent and free Indonesia is vital to the welfare of the United States. Thus, we are delighted with the excellent progress reported in the article regarding the establishment of a common language for the several thousand islands that make up that country.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDONESIA LEARNED A NEW TONGUE TO MAKE REVOLUTION POSSIBLE

(By Joseph Borkin)

DJANARTA, August 15.—Perhaps the first country in the world which used language—and an alien language at that—as a weapon of revolution—celebrates the 14th anniversary of its declaration of independence August 17.

It is the Republic of Indonesia and it is no accident that its national motto is "one nation, one people, and one language."

Thirty years ago the 80 million Indonesians scattered over some 3,000 islands in an area of 900,000 square miles spoke 38 basic native languages and 200 dialects. Ninety-three percent of them were illiterate, or nearly so. Dr. Ahmed Surkarno and other early leaders of the revolution decided their movement had little chance under such conditions. They simply couldn't reach the people.

They decided on a heroic solution—they would simply teach a population as large as that of Germany an entirely new language—and teach them to read it as well as speak it.

They chose Malay because its simplicity made it easy to teach, proclaimed it the official language of the revolution in 1928, and named it "Bahasa Indonesia"—or simply "Indonesian."

(Javanese, an indigenous tongue with a rich literature, had also been considered. But even though about half the population spoke it—in contrast to a comparative handful speaking corrupt Malay—its structure was felt to be too complex.)

The revolution's missionaries soon began literally to spread the word through the huge group of islands. It was a slow and discouraging task and by the time the Japanese overran the islands in 1942, one still largely unaccomplished.

Ironically the displacement of Dutch colonsists by Japanese militarists gave the program the impetus that assured its early success.

The Japs intended eventually to establish their own language in Indonesia, but their immediate aim was to eliminate every vestige of things Dutch. As a first step, they replaced Dutch as the official language by Indonesian—a tongue with emotional acceptance because it was the language of independence.

The result was a minor convulsion, since Dutch was an essential element of the Dutch Indies economic, political, and social fabric. Teachers had to learn Indonesian and Indonesian replaced the Dutch language in every school. It became a necessity for government offices and traders.

Laws were now promulgated in Indonesian. Public announcements, official correspondence, credentials, and publications had to be written in the Indonesian language. Like a river with many tributaries, it flowed through the Indonesian population. Bahasa Indonesia became a bar not only against the return of the Dutch colonial aim but also, with poetic justice, against Japanese efforts to foist the Japanese language and culture upon the Indonesians.

ONE HUNDRED MILLION SPEAK IT

The proclamation of independence in 1945 found the new language well on its way. By 1950, when independence was formally achieved, practically every Indonesian spoke Bahasa Indonesia.

Bahasa Indonesia now is taking its place among the languages of the world. The classics of the West are being translated into Indonesian. Cervantes, Steinbeck, Shakespeare, and Hegel, are but a few. Equally significant, some translations from the Indonesian are making their way into English and courses in the language are given in a number of American universities.

It is already one of the liveliest languages of Asia and, including the Malayan Peninsula, is the national tongue of over 100 million people. Neither French nor German can boast this total.

On the Retirement of the Honorable Max L. Green

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. SMITH of California. Mr. Speaker, in March of this year the city of Glendale, Calif., will lose its outstanding postmaster, Max L. Green. He will retire after having completed over 25 years of service. I feel it is entirely fitting, therefore, that I call attention to this fact and make it a matter of public record by expressing herein the thanks and appreciation of the citizens of Glendale for his outstanding service to his community during these many years.

The period in which Postmaster Green has served so well has been a very important one in the history of Glendale. Under his able guidance the post office has grown and improved with the needs of our city so that it has increased its number of employees from 95 in 1935 to 436 at the present time, and receipts in 1959 amounted to $2,846,632 as compared to less than $300,000 in 1934.

We deeply regret his leaving, yet at the same time rejoice with him in the knowledge that he will now have the time to enjoy the pleasures of retirement. We extend to him our very best wishes for his happiness in the future.

American Government and Industry Should Give Special Attention to Plant Locations in Distressed Areas; British Have Such a Program

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, February 15, 1960

Mr. RANDOLPH. Mr. President, I noted in a recent issue of the magazine, Business Week, that British automobile manufacturers plan to increase their 1960 capital outlays 50 percent over 1959's figures.

Another impressive feature of the Business Week item was the revelation that the British Government "has succeeded in persuading several of the biggest companies to build new plants in areas where unemployment is prevalent, not in the crowded London or Midlands region where most auto plants are now situated."

The article reports also that the Ford Motor Co. of England is believed to be planning new plants away from its base in London.

We have heard much talk, Mr. President, from the present national administration concerning the strength of our free enterprise system and the importance of cooperation between industry and government. Of course, I agree there is need for this cooperation. But surely the field of activity in which the British Government has been active and with apparent success, is one in which the President and administration leaders about him might give more meaning to their glittering phrases in general prosperity.

Certainly, this is an administration which should have influence with American business and industrial leaders in persuading them to locate new plants in distressed areas of chronic unemploy-

ment as the British manufacturers are doing in Great Britain.

One would suppose that a predominantly business-minded administration in this country—if it were willing to explore the British method—could accomplish as much with American manufacturers as the British Government has with its industrialists.

I commend the Business Week item from its "Business Abroad" page to the attention of my colleagues and ask unanimous consent that it be printed in the Apendix of the RECORD.

There being no objection, the item was ordered to be printed in the RECORD, as follows:

BRITISH AUTO MAKERS TO BUILD PLANTS IN AREAS WHERE WORKERS ARE IDLE

British automobile manufacturers plan to increase their 1960 capital outlays 50 percent over 1959's figures.

The Government has succeeded in persuading several of the biggest companies to build new plants in areas where unemployment is prevalent, not in the crowded London or midlands region where most auto plants are now situated.

British Motor Corp., the largest auto maker, is expected to put up a tractor plant in Scotland and an auto assembly line in Wales, with Government financial help. In both areas, thousands of coalminers are losing their jobs as the European coal glut forces the pits to close.

Ford of England is also believed to be planning new plants away from its base near London.

The Truth About the Bomarc-B Firing

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. PELLY. Mr. Speaker, the following editorial comment from the Boeing News sets the record straight and shows why sometimes defense contractors feel it necessary to get facts to Members of Congress and the public through the medium of newspaper advertisements:

A week ago last Friday a Bomarc-B missile was fired from Cape Canaveral. As had been the case with news coverage of many missile flights, press stories following this Bomarc firing were almost totally contradictory.

The fact is the flight was a major success from an engineering point of view. In the eyes of both Air Force personnel who monitored it, and the Boeing people who conducted the flight, the new Bomarc passed with flying colors the major obstacle in its entire test program. In this flight, as in previous launches of the B, the new solid rocket boost system performed satisfactorily in all respects.

It was erratic action in the new-type ramjet engines which provide cruise power for the B-missile that had plagued the earlier flight tests. In the most recent flight, the ramjets gave evidence of meeting all requirements. This ability of the ramjets to function properly is considered to be the only major hurdle preventing the new missile from living up to the enviable reliability record already established by earlier Bomarc-A.

Why then reports that the flight was not a success? Following the excellent ramjet performance, there occurred an apparent random failure which affected the missile's guidance equipment and terminated the flight considerably short of its programed course.

Although this equipment had demonstrated almost total reliability in more than 60 prior flights, in this test it failed.

Educational Program for Retired Military Personnel in Rhode Island

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Monday, February 15, 1960

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in Appendix of the RECORD a statement of mine regarding a new educational program instituted in Rhode Island for retired military personnel in the Narragansett Bay area. This statement will give the Members of the Senate a report on this new educational activity in Rhode Island and so I feel sure will be of interest to them. All of those who helped inaugurate this new educational program are to be commended, especially Dr. Michael F. Walsh, Rhode Island's commissioner of education.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Beginning on Monday, January 25, 3 courses in professional education will be offered to approximately 90 members of the military personnel in the Narragansett Bay area of Rhode Island who are anticipating retirement and who are desirous of entering the teaching profession at the completion of their military service. The courses to be offered are educational psychology and principles of guidance. Two of these courses, educational psychology and principles of guidance, will be offered at the naval training station, and one, educational psychology, will be offered at Quonset Point. The courses will run for a period of 16 weeks, each class being of 2½ hours duration, and carrying three academic credits at the Rhode Island College of Education. The purpose is to enable these men to secure enough credits while they are in service so that they would be certified to teach in any State in the Union.

This program is the result of the efforts of Dr. Michael F. Walsh, Rhode Island commissioner of education, who 3 years ago approached Adm. Ralph E. Earle, then commandant of Narragansett Bay, and proposed to him a program that might be established for military personnel who were looking forward to the day of retirement. Admiral Earle encouraged Dr. Walsh to pursue the study. Since that time, a number of conferences were held with the military in the Narragansett Bay area.

In the fall of 1959, during the administration of Adm. Henry E. Crommelin, a meeting was held with Capt. Charles O. Cook, Jr., and Comdr. Roland S. Wilson at the naval training station. The program was thoroughly discussed and it was decided to send out a questionnaire to the officers on the base to determine the number who might be interested in working toward a teaching profession. Thirty officers expressed an interest. These men were invited to a meeting with Captain Cook; Commander Wilson; Dr. Fred Donovan, vice president of the Rhode Island College of Education; Dr. William Flanagan, director of graduate studies, Rhode Island College of Education; and Dr. Walsh. Plans were established for registration, screening candidates, and determination of subject matter. It was decided to begin with professional courses and to follow these with courses in methods of teaching science, math, languages, and also courses in administration and finance. The courses will be credited by the Rhode Island College of Education which will become Rhode Island College in July 1960. This college has the responsibility for teach education in the State.

Dr. Walsh believes that these programs will serve a twofold purpose. In the first place, it will create an interest among naval personnel to enter the teaching profession and at the same time provide an additional source of supply to school administrators who are in search of qualified people to enter their classrooms. Secondly, and as equally important, it will provide an excellent opportunity among the military personnel for a second vocation. Many of these men will be retiring at a comparatively young age and will be in search of some type of occupation to interest them in their leisure hours. The field of education is a most desirable one for such an outlet.

Dr. Walsh presented the programs to the Veterans' Affairs Committee in Washington and expressed the thought that the GI bill of rights might be amended to make it possible for military personnel either to use their GI money for this purpose or to be allowed to draw from it as a loan to defray expenses for the course. This matter is still being studied.

The development of these courses has been made possible through the interest of the State department of education; the Rhode Island College of Education; Adm. Ralph E. Earle and Adm. Henry E. Crommelin, both commandants of Narragansett Bay, now retired; Adm. Benjamin E. Moore, the present commandant of Narragansett Bay; his aide, Capt. Charles O. Cook, Jr.; and Comdr. Roland S. Wilson.

Mr. Lincoln's Birthday

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am happy—as a Representative of Mr. Lincoln's own Illinois—to include a moving editorial published on February 14, 1960, in the New York Times. These words, briefly spoken, do more than recall a stirring period in the history of the United States; they serve as a clarion call to all of us in these troubled times to let the life of Mr. Lincoln—his compassion, his humanity, and his dedication—be the motivation of our current thought and action:

MR. LINCOLN'S BIRTHDAY

President Lincoln was 56 years old on this day 95 years ago. He had had a busy 2 weeks. He had been down to Hampton Roads for a fruitless conference with three Confederate commissioners, one of whom, Alexander H. Stephens, Vice President of the Confederacy, was an old and once valued friend. Mr. Lincoln had held Cabinet meet-

ings on February 4, on the evening of February 5, on February 7, and on February 10. Failing in his attempt to get a bloodless agreement with the dying Confederacy, he had tried to persuade his Cabinet to accept a plan to pay the rebellious States $400 million for their slaves if they ended their resistance by April 1. The Cabinet would have none of this plan. Mr. Lincoln filed it for future reference, sighing perhaps as he thought of the lives that would be lost because the war must continue.

It was clear enough to him, however, that the Union arms were about to prevail. General Grant during the week preceding Mr. Lincoln's 56th birthday, had pinned Robert E. Lee down in front of Richmond, and General Sherman, having marched from Atlanta to the sea, was coming north to deal in North Carolina with the army of Gen. Joseph E. Johnston. The old Confedcrate stronghold of Charleston, S.C., was in Union hands, the Shenandoah Valley had been devastated, there would be no more Gettysburgs. Nevertheless, men were dying and women were weeping. Lincoln's late pictures, at the end of that winter and the beginning of that spring, showed his face drawn, haggard, and lined with pain.

Mr. Lincoln worked on his birthday, which fell on Sunday in 1865. He commuted what he thought was the death sentence of a Confederate spy who had been arrested in Cincinnati. He endorsed the appointment of Daniel M. Taylor as a West Point cadet. He issued passes for two women who wanted to cross Grant's lines. It cannot positively be said that the Lincoln family and friends did not celebrate that birthday of 1865, but it is hard to find a record of any celebration.

Mr. Lincoln was given to dreams and forebodings. A little later that year he was to dream of going into the East Room of the White House and of finding a coffin and being told by one of the guards: "This is the President; he was killed by an assassin." He had another dream of being on a ship moving at a funeral pace to some unknown destination. But he could not have been entirely unhappy on that birthday in 1865. The end of slaughter was in sight. The time for compassion and forgiveness was close at hand.

On that Sunday, February 12, 1865, Lincoln had only 56 days to wait until that Palm Sunday when General Lee and General Grant met at Appomattox and signed the articles of surrender. He had only 61 more days until that Good Friday evening when John Wilkes Booth blotted out his conscious life forever in the box at Ford's Theater.

History is easy to endure after it is over, but not while it is going on. Beyond all doubt Mr. Lincoln would have asked nothing on his birthday in 1865 except the end of bloodshed and the preservation of the Union. What he got, and never knew about, was immortality. This last conscious birthday of his was the beginning of countless birthdays that will be remembered, and that will serve as an inspiration to these reunited States as long as human life on this continent shall exist.

The Nike-Zeus Dispute

EXTENSION OF REMARKS

OF

HON. ERWIN MITCHELL

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. MITCHELL. Mr. Speaker, the controversy over whether we are making the necessary defense effort continues to rage. What we will do or will not do about the Nike-Zeus weapon system plays a prominent role in this argument. There appeared in the Baltimore Sun of February 1, 1960, an article by Mark S. Watson which I commend to the attention of all Members of this body.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NIKE-ZEUS DISPUTE—ANTI-ICBM MISSILE IMPROVED BUT FUNDS FIGHT IMPERILS IT

(By Mark S. Watson)

WASHINGTON, January 31.—Through the screen of extreme secrecy that is properly thrown about the development of the Nike-Zeus—the Nation's sole existing project for active defense against enemy intercontinental ballistic missiles—the scientists now permit a few cautious peeks.

As a result, certain encouraging developments in that expensive and incomparably important enterprise can be reported:

1. The whole project—missile, radar-detection, appraisal of the fast-coming target, and systems operation alike—has made conspicuous progress in the months that have passed since the Sun made its extensive survey of the Zeus project last spring.

RADAR IMPROVED

2. The power of the radar tubes has been increased. This permits both a longer reach out toward the target's point of origin, and a sharpening of the image of that target.

3. In turn this permits more effective discrimination between a genuine missile nose cone (which protects the warhead and which, hence, must be intercepted) and the decoys that a shrewd enemy would employ to deceive the radar-analysis operators (and on which the defender must not waste his time).

4. Tracking technology, which in this respect is wholly in the laboratory stage, is progressing in the process of linking the tracking-radar to the decoy-discrimination apparatus. This increases measurably the short period of time available for successful interception of an incoming enemy ICBM.

5. The integrating of the immensely complex system of far-out radar with the further-in tracking radar and with the missile control is thereby advanced.

6. The missile itself is improved in two respects since last spring. Thanks to an improved fuel combustion, the propellent system now is assured a still higher thrust, which means, alternatively, greater reach or swifter arrival on target. The airframe has been simplified and strengthened by an almost complete elimination of fins, and provision of vernier rockets to keep the missile on course.

7. The importance of this quickened speed for the missile is very great, chiefly in that with fewer seconds required to get it on target, added seconds are available for the elaborate radar and computing mechanisms to see the enemy ICBM, distinguish the essential nose cone from the deceptive decoy, verify the course and speed the nose cone, and thus guide the Zeus missile toward the actual ICBM's path, and intercept the ICBM.

These improvements constitute a marked advance in a very promising project. That they provide absolute assurance of ultimate success is not true.

No weapon ever provides 100-percent success, and no project with such appalling difficulties as face an anti-ICBM weapon is described as a certainty save by the most reckless prophets. But its promise is better than it was.

How much better is the question. And how much better it must be before it can get from the Defense Department the full-ahead order—and the vast amount of money that an order calls for—is the question that sharply divides scientists and technologists of very great stature.

Specifically, that is the question that determines how much money, and for precisely what purposes, will be channeled into the Zeus project this year. Over one specific item—application of the $137 million that Congress last summer definitely ticketed to the Army for a preproduction engineering item (not a production item)—the division of opinion is very deep.

Numerous Army scientists are firmly in favor of spending the money now, and Army planners as well; the planners for reasons of gravest implication to national safety.

DR. YORK OPPOSED

Dr. Herbert F. York, the Defense Department's powerful chief of research and engineering (he ranks third in the Pentagon hierarchy, subordinate only to the Secretary and Deputy Secretary of Defense) is just as firmly opposed, and accordingly, the President's budget message stated explicitly that the $137 million "will not be used" pending the results of testing.

Debate on his point could be endless. The cost of research development, test and evaluation, is very great but with the new weapons the cost of production is enormous. The financially cautious view is that until testing shows the project to be just about perfect, one must not gamble with any funds except those actually required for development and evaluation.

Others disagree violently, pointing out, first, that no weapon in history has ever proved adequate for 100 percent resistance to any enemy or ever will. Second, that it is unwise to delay the tooling up for production. Hitherto, in most major weapons developments the need of getting a new weapon not only "proved" but also ready to get into service has justified starting the production program while the development is still in process.

MOST OUTLAYS JUSTIFIED

This has led, on occasion, to large defense outlays that certainly were not justified by results. But in countless cases (as with new air weapons in particular) it has led straight to the prime objective—having the Nation's military forces equipped at the earliest practicable date with a usable weapon of enormous value in awing an enemy.

Right there lies the mass of today's controversy. It far overflows the Pentagon and the arms industries, and reaches the Halls of Congress, which last summer on this issue differed profoundly with the White House, and may do so again.

It seems clear that for purely development work the Army's scientists and industrial laboratory associates will have for the present the money needed strictly for that purpose, hence the President's assurance of adequate money for "research."

But whether that is enough to meet the larger situation is the issue. The proponents of Zeus contend that progress to date gives adequate assurance of the new weapons system's enormous usefulness, first as an adequate counter to any enemy ICBM that exists today, second as an all-important operating device upon which to build still more effective anti-ICBM's of the future, to counter the still more efficient ICBM's that must be expected.

That the Zeus, which could be made, tested, and in production by 1963, can indeed cope with such an ICBM as today's Atlas is stated confidently by Army scientists, and does not seem to be doubted by those of the Defense Department.

The Defense Department scientists' anti-spending stand is based, rather, on their

conviction that Zeus, as now designed, will not be able to cope with the improved, decoy-equipped ICBM's that presumably will be in enemy hands by the time Zeus is in American hands, that is, in 1963.

CONSIDERATION IGNORED

And here, it is apparent, the debate moves over into new territory.

The Army's grave warning is that, by delaying the preproduction engineering expenditure, actual production of the missile (when finally ordered) willl be delayed. Specifically, a Zeus, effective against today's ICBM's (and still more sophisticated types up to a point) could be ready in 1963. And that is the very year of the much-discussed missile gap, when defense against enemy ICBM's would seem to be vital.

But the delay imposed last year, and now threatened for another year, means that even the Zeus that now is on the way could not possibly get into production until 1965. (The Army's research chief lately spoke gloomily of the sixties.) And such a delay in defense capability is not lightly dismissed.

Worry on this aspect of the case goes all the way to the top of the Army. The worry is based upon a consideration familiar to all military men, yet strangely ignored in the public debating thus far. To summarize it:

An aggressor, free to plan his strike to suit his own capabilities, surveys his prospective victim with thoroughness, examining all the victim's resources with which the aggressor's tactics must cope. The larger—and more varied—the powers of resistance, the more cautious must the aggressor be, lest he be thwarted in his initial attack and ultimately beaten down.

Hence the insistence by the United States more farsighted military on American possession not only of sufficiently large, but also of sufficiently varied, weapons systems. For example, were this country's powers limited to the Strategic Air Force, powerful as it is, an enemy aggressor would be able to concentrate all his own massive powers against that one force.

NAVY A DETERRENT

But when to SAC the United States adds its widespread naval task forces headed by its efficient aircraft carriers, here is another deterrent, and the enemy must now prepare to cope with two major forces instead of one, and disperse his forces accordingly.

Now add the Navy's missile-launching submarines (both for Regulus and the coming Polaris) and there is another enormous deterrent on which the enemy must calculate. Add the Tactical Air Force (to which aerial refueling has provided a strategic power of its own) and also the medium-range missiles now being deployed with oversea ground forces, and the enemy's planning is still harder. The current addition of American ICBM's provides the newest and toughest task.

Yet if, facing all these retaliatory weapons, an enemy is able to concentrate his first-blast ICBM's on the most important targets, with a fair chance that all his ICBM's will make hits of a sort, his war-planning is so greatly simplified that alarmists have predicted a war might begin and end in a single day.

DEFENSE WEAPON VITAL

On the other hand, if there should be a defense against enemy ICBM's, capable of intercepting a fair proportion of them, no such confident plan of aggression is possible. A substantial defense, in other wards, is a very real deterrent to aggression. It always has been. Even the Air Defense Command's chief, who does not always see eye-to-eye with the Army, has strongly urged a speedup for Zeus as a factor in air defense.

Here then is a fundamental military consideration strangely ignored in the reasoning that creation of such a massive defense can wait for a year or two more, beyond 1963, in order to save $137 million.

The soberest of Army planners warn that it cannot wait; that the much-discussed "missile gap" is due in 1963 and so admitted by the very people who have imposed upon Zeus' development a production delay that will postpone delivery from a possible 1963 to a probable 1965.

This is surely the largest gamble of all. It is true that if the scientists' full hopes are unfounded, the refusal to spend the added $137 million for preproduction engineering will permit saving money.

But it also is true that, if the Army scientists' hopes are largely sustained, one more major deterrent will have been rejected, for reasons of "economy," and in the very year when need for every possible deterrent is most acute.

That is, during the critical 1963–65 season, Russia would be able to plan ruthlessly, knowing that America would not have, during that period, either for American military installations or for American cities, an active defense against Russian ICBM's. If there ever was a gamble, this is it.

The technical anxieties about what a successful anti-ICBM must be capable of doing can be discussed only guardedly. A major cause of worry is the expected enemy device of adding fluff of some sort to the actual missile.

This fluff would, on schedule, be blown off from the incoming ICBM for the specific purpose of deceiving search-radar, which thus would send defending missiles up into space on a false scent, allowing the real enemy missile with its thermonuclear warhead to plunge through on its mission.

Such a possibility has long been recognized—so long that from time to time this country's defense authorities have mentioned publicly development work on "Quail" and other decoys, intended for like purpose. But at the same time the Zeus researchers have been working just as steadily to enable Zeus to counteract these anticipated decoys.

MEASURES LISTED

A few cautious approaches to the problem can be mentioned:

1. The massive, heavy nose cone of the enemy ICBM can be expected to reflect a clear image. Lighter material would have a quite different weight drag, would fall behind the cone in its flight, and thus be recognized as fluff. This has been demonstrated with Atlas itself in the Mariner tests, conducted in clear air. Thicker air provides difficulties.

2. An object speeding in space creates about it an ion sheath, which has characteristics varying with the object surrounded. Swift recognition and analysis of those characteristics should permit Zeus' brain to ignore the harmless objects and concentrate on the nose cone.

3. The amplitude of the signal from space also varies with the placement of observing radars. A vital part of Zeus is its use of more than one radar, providing dual scrutiny.

4. Infrared observation permits its own discrimination between objects covered with ablative material and other objects. It can be doubted that an enemy will spend great effort in coating his fluff with ablative so as to imitate his nose cone precisely. He might more profitably create a second genuine nose cone.

5. Scintillations that radar gets from imitations of the nose cone in varying attitudes provide their own identifying evidence.

CONVINCING DECOY DOUBTED

The Zeus faction of scientists expresses great doubt that for many years to come any nation will develop a decoy that can deceive all the discriminating devices now in existence, plus those that will presumably come along in time.

It is an interesting fact that certain industries that are not in the Zeus group have (for their own purposes), been devising special decoy suggestions that might defeat Zeus.

These have been studied critically, and then methodically cranked into the work of the "counter-counter" inventors of the Zeus group, to the very real advantage of their research on Zeus itself.

There is an undeniable advantage in getting started. Work upon a major project occupies the attention of new technologists and new industries and adds them to the number previously engaged, and thus tends to increase the whole body of national knowledge and skills.

It is well known, too, that a thing-in-being affords special impetus, and work upon it stimulates work on something better. The case of the Air Force Navaho missile comes to mind. That once-promising venture never came to reality, and the $800 million that its development cost has inaccurately been termed "waste."

Quite to the contrary. The work on Navaho's engine actually permitted a leap forward in producing the engines for Thor, Jupiter and Atlas. Similarly the work on Navaho's guidance system was transferred to the Hound Dog missile, advancing by perhaps years the readiness of that vitally important air-to-ground missile, and also of its successor now under development.

Moreover, all this expedited development and preproduction engineering permit a leap forward not only in production but also in the training of personnel, which is almost equally important. The more good men are set up in enterprise, the better the progress in general improvement.

Atlas itself was a "crash" program, and a very expensive one, and properly so because of the urgent need for an ICBM that would work even after a fashion. Its start was lugubrious with a long series of initial testing failures. With faults corrected, Atlas now has taken its place as an apparently reliable weapon—and America's only ICBM in readiness. Reliance on it is so great today that the "waste" of its development is forgotten.

DESPAIR CONDEMNED

One cannot listen to counsels of despair—"There is no possible way to intercept an ICBM"—without amazement over such helplessness in high places. To think that the newest offensive weapon is the ultimate weapon, with nothing to overcome it ever, is to ignore both history and horsesense.

The offensive and the defensive are historically in eternal competition, with each type of weapon hailed as "supreme" until its counterweapon appears. A decade ago there was no way to halt a mach 2 airplane, but there is today. That is why the Air Force is hoping for its mach 3 B–70. A look back in 1945 is profitable.

The United States' World War II antiaircraft artillery (the twin 40 mm. and 90 mm.) could get an enemy plane of that day only by luck and massing of fire, so the expenditure of shells to bag a single plane was enormous. But the post-1945 Skysweeper (with automatic tracking and computer) was some 20 times as good, and was successful.

PLANES FLEW HIGHER

Then newer planes regained superiority by acquiring both higher speed and greater altitude—only, in turn, to be vulnerable to the new Nike-Ajax when it came into being.

Still newer planes came, and in turn the best of them now can be winged by Ajax's successor, Nike Hercules, which can shoot still higher and use atomic warheads to supplement its other powers. By one method of calculation Hercules is about 400 times as effective as anything of 15 years ago—keeping well ahead of the airplane it guards against.

Now comes the ballistic missile, which defies anything now in existence, and thus

regains the lead for the offensive over the defensive. Yet ahead is Zeus, which, still 3 years or more distant (its components are due for testing both in the Southwest and in the Pacific during the next 2 years) assuredly will be able to handle today's type of ICBM. The need will be for a Zeus II to handle a better ICBM.

Kaiser Aluminum Plant at Ravenswood, W. Va., Celebrates Fifth Anniversary

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. HECHLER. Mr. Speaker, 5 years ago today, February 15, 1955, ground was broken at Ravenwood, W. Va., for the mighty plant of the Kaiser Aluminum & Chemical Corp.

This giant metal-producing facility employs 2,800 persons with an annual payroll of over $19 million.

Recently, an itinerant writer for the Saturday Evening Post tried to throw a few rocks at West Virginia in a badly distorted article which misled the Post editors to print that West Virginia is a dying State. The establishment and growth of the Kaiser plant, along with scores of other rapidly expanding industries in the Ohio and Kanawha River valleys, indicate that instead of "dying," West Virginia is on the threshhold of tremendous industrial expansion.

Mr. Speaker, in the 1,000-mile stretch of the great Ohio Valley from Pittsburgh to the Mississippi, $10 billion has been spent in industrial expansion during the past decade. Industry during this period has spent $800 million in the State of West Virginia.

Why does any industry decide to establish in West Virginia? Specifically, why did Kaiser decide to locate this vast installation in West Virginia? The Kaiser officials have given the answers to these questions publicly.

Within 500 miles of the Ohio Valley live half the people of the United States. Within 500 miles of Ravenswood lies 70 percent of the total aluminum-consuming market in the United States. Therefore, Kaiser has found, and other industries will also find, that West Virginia is located in a unique geographical position where she has access to raw materials, and proximity to a tremendous market.

The other favorable factors cited by the Kaiser Corp. in selecting West Virginia are the following:

First. Availability of inexpensive power in proximity to fuel sources.

Second. Availability of labor on both a qualitative and quantitative basis.

Third. Diversified types of transportation.

Fourth. Availability of easily developed sites.

Mr. Speaker, on several occasions I have had an opportunity to tour the great Ravenswood plant, to watch the operations in some detail, and to talk with the workers. I can subscribe to the statements of the Kaiser officials that West Virginia labor has proved to be adaptable, conscientious, and highly productive. According to a statement by one former Kaiser official, H. B. Benedict:

Adaptability of the labor force met our most optimistic expectations. We have been highly delighted with the efficiency and ability of our 90 percent West Virginian work force to learn the relatively complex skills of our operations. After more than 2 years of operations of portions of our plant, production superintendents report the recently trained mill and equipment operators—most of whom had never seen the inside of an aluminum fabricating facility—within months ran the costly equipment with the skill of 10-year men.

Whenever I go through the Ravenswood plant, I always ask to see 25-year-old Billy Ray Ward of Haven Heights, New Haven, W. Va., who runs the giant 168-inch hot rolling mill with cool efficiency. Billy Ray is typical of the thousands of eager and able West Virginians who have been trained to perform complex work with dependability and thoroughness.

Everybody recognizes that West Virginia has an unemployment problem. We cannot blink at the fact that our unemployment rate is the highest in the Nation. Yet, for purposes of industrial expansion, this can be turned into an asset, because it means that any industry has a large labor supply on which to draw.

Mr. Speaker, these are some of the reasons which I believe, contrary to the statements in the Saturday Evening Post, that on this fifth anniversary of the Kaiser ground breaking, West Virginia faces a prosperous and expanding industrial future.

At this point I ask to include a news article and also an editorial from the Ravenswood News, February 11, 1960:

KA MARKS FIFTH YEAR IN COUNTY

Kaiser Aluminum & Chemical Corp.'s giant metal-producing facility in Ravenswood marks 5 in the valley Monday with no ceremony, but with vigor and enthusiasm for the future.

Carl Sullivan, works public relations manager, said no official ceremonies are planned, although the plant has drawn both national and international attention to the valley and West Virginia. Virtually an around-the-clock operation, Sullivan said, "The works plans to mark this one with activity and productivity, proud of our growth and facing the future with vigor and enthusiasm."

Monday is the occasion of the fifth anniversary of groundbreaking for the works' fabrication plant. In the 5 years since that event, the once fertile farming acres now comprising the plant site have grown into the Nation's largest and most modern fully integrated aluminum-producing facility, giving Kaiser a bold entry into the eastern market and focusing national attention on the valley's industrial potential.

Actually two plants in one, the Ravenswood works' machines, methods, and men have drawn experts and officials from most of America and many of the industrial or soon-to-be industrial nations of the world for on-the-spot inspection of ultramodern aluminum production techniques and equipment almost since startup. Now, 5 years later, the same sort or drive is continuing, Sullivan said, with no effort being spared to keep the Ravenswood works a pacesetter for the industry. He cited recent additions such as the new 2-Hi bright strip mill putting Kaiser squarely in the standard bright strip market and the recently installed 30-million-pound plate stretcher providing stress-relieved aluminum plate in a size previously unobtainable, as cases in point.

Kaiser came to the valley seeking dependable power supplies, available labor, and strategic location to market—and found it. The first major aluminum producer to locate in the area, Kaiser has molded around these requisites an industrial giant geared to meet the growing demands of American industry and the American consumer for increasing amounts of aluminum.

Today, the works' two plants, the reduction plant and the fabrication plant, produce both primary aluminum and aluminum sheet, plate, and foil, with a rated yearly capacity of 145,000 tons, of primary aluminum annually, and near limitless capability in rolling and finishing operations.

Now employing some 2,800 persons with an average payroll in excess of $1,500,000 monthly, the Ravenswood Works passes its first 5, as Sullivan puts it, "Going strong and confident of significant and steady progress in both the industry and the valley."

BEST WISHES

Monday, Kaiser Aluminum will celebrate the fifth anniversary of its arrival in Jackson County. On February 15, 1955, ground was broken for the mammoth aluminum plant which now employs more than 2,800 workers.

We're not unaware of the problems which have faced Ravenswood and Jackson County because of the plant and the consequent influx of workers: problems of adequate housing, expanded school facilities, more retail establishments, better facilities by utilities, more recreational outlets. There have been problems, many of them, and will continue to be problems for some time to come.

But the blessings have been great. The plant has provided employment for many of our citizens, created jobs for people providing goods and services to the aluminum workers; encouraged growth of facilities within the county; enabled our youngsters to set their sights higher. The plant offers hope that county youth may obtain gainful employment here without leaving the borders of West Virginia.

Our sincere best wishes to Kaiser Aluminum personnel upon the fifth anniversary in Jackson County. May your future years here be blessed with continued happiness and prosperity.

The Shoe's on the Other Foot

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. POWELL. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial:

THE SHOE'S ON THE OTHER FOOT

For years labor leader George Meany sat by as boss of the American Federation of Labor and literally watched Negroes go hungry because his AFL craft unions would not permit them to work on union jobs in the building trades.

When A. Philip Randolph pointed out this discrimination against Negroes on the floor

of the AFL–CIO convention, Mr. Meany publicly profaned him and attempted to chastise Mr. Randolph. Meanwhile, the discrimination against the Negro went on.

A few days ago, however, the chairman of the House Committee on Labor and Education announced that he will not seek office again and that on the basis of seniority the chairmanship of that important committee will pass into the hands of Congressman ADAM CLAYTON POWELL.

Mr. POWELL promptly announced that when he becomes chairman of the Committee on Labor and Education he is going to change some things—particularly with regard to the way the interest of the Negro has been treated.

Now comes Mr. Meany to announce that he thinks it is simply "terrible" that Mr. POWELL will be the head of this all-important committee dealing with labor and education.

We'd like to say to Mr. Meany that we don't think it's terrible.

The way we see the shoe simply is now going to be on the other foot.

What's so terrible about that?

Does Mr. Meany think it is terrible that Negro bricklayers can't work on the new House of Representatives office building because his bricklayers local won't let them join?

Did Mr. Meany think it was terrible when the present chairman of the Committee on Labor and Education spent million of dollars to build and improve schools where Negro children were not allowed to study?

Why doesn't Mr. Meany speak out against the Jim Crow unions on New York's waterfront?

Congressman POWELL will change some of these things when he takes over this all-important committee. And the changes he will make will be within the letter of the law as spelled out by the U.S. Supreme Court.

One of the things Mr. POWELL will see to is that no Federal money is provided for education unless it is for the education of all Americans.

Is that being a racist? If it is we need more racism in America.

In attacking ADAM POWELL, George Meany has performed a disservice to the labor movement, a disservice to himself and to his country. He has particularly hurt his country because his open show of bigotry gives aid and comfort to the Communist world which will certainly use it as propaganda fodder.

As to Congressman POWELL—he needs no defense from George Meany. This attack on him simply is further proof that he stands virtually alone among Americans as the Nation's No. 1 fighter for the civil rights of all Americans.

POWELL today, possibly more than any other American, is demanded that this great Nation practice what it is preaching.

There is nothing racist about that.

Omni-Range Station for Great Bend, Kans.

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. BREEDING. Mr. Speaker, in order to promote safety and full utilization of the Great Bend municipal airport in carrying out the economic needs of oil, agriculture, and industry in central Kansas, the Kansas State Legislature has adopted a resolution calling for an airway communication and navigation station to be located in the vicinity of Great Bend. I would like to call the attention of my distinguished colleagues to this resolution. It reads as follows:

"SENATE CONCURRENT RESOLUTION 9

"Concurrent resolution urging and requesting the members of the Kansas delegation in the Congress of the United States to support the location and establishment of an airway communication and navigation station in the vicinity of Great Bend, Kans., and the incorporation of the same as a part of the Federal airways system of the United States of America

"Whereas, the city of Great Bend, Kans., is served by Continental Airlines and is the center of oil, agricultural and industrial activities in central Kansas; and

"Whereas the Great Bend municipal airport which serves these activities is located on the intersection of routes V–132 and V–10N of the Federal airways system; and

"Whereas the traffic generated by this airport warrants a detailed study and investigation as to the feasibility of locating an airway communication and navigation system (Omni) as a part of the Federal airways system; and

"Whereas in order to promote safety and full utilization of the Great Bend municipal airport in carrying out the economic needs of oil, agriculture and industry in central Kansas, an airway communication and navigation station should be located in the vicinity of Great Bend, Kans.: Now, therefore, be it

"Resolved by the Senate of the State of Kansas (the House of Representatives concurring therein), That we respectfully urge and request the members of the Kansas delegation in the Congress of the United States to support the location and establishment of an additional airway communication and navigation station (Omni) in the vicinity of Great Bend, Kans., and the incorporation of the same as a part of the Federal airway system of the United States of America. Be it further

"Resolved, That the secretary of state be directed to transmit a copy of this resolution to each member of the Kansas delegation in the House of Representatives of the United States and the Senate of the United States."

I hereby certify that the above concurrent resolution originated in the senate, and was adopted by that body February 1, 1960.

JOSEPH W. HINKLE, Jr.,
President of the Senate.
RALPH E. ZARKER,
Secretary of the Senate.

Adopted by the house February 5, 1960.

JESS TAYLOR,
Speaker of the House.
A. E. ANDERSON,
Chief Clerk of the House.

Aims and Operations of IDA

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, February 15, 1960

Mr. JAVITS. Mr. President, I should like to call attention to a summary of the purposes and operations of the International Development Association, the proposed new financing institution for the less developed areas to be affiliated with the World Bank, which is now awaiting action by member governments desirous of joining the Association. IDA was conceived as a means of financing development in newly emerging countries, promoting and increasing productivity, and raising living standards. These purposes will be accomplished by providing funds on terms as required by individual development programs, bearing less heavily on the balance of payments than conventional loans. The summary of IDA's aims and operational structure appeared in the Foreign Commerce Weekly, February 8, an official publication of the Department of Commerce. I ask unanimous consent to have this article printed in the appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FUNDS LOANED FOR DEVELOPMENT—NEW AGENCY FORMED WITHIN WORLD BANK

Articles of agreement of the International Development Association, the proposed new financing institution to be affiliated with the World Bank, are now ready for acceptance by prospective member governments.

By authorization of the Bank's executive directors, the text of the articles of agreement, together with a report by the executive directors drawing attention to certain features of the articles, is being transmitted to the Bank's 68 member governments. The next step will be for governments desiring to join IDA to take whatever legislative or other action may be required to accept membership and to subscribe funds. The articles provide that IDA will enter into force when governments whose subscriptions aggregate at least 65 percent of total initial subscriptions have accepted membership. The articles will remain open for signature by original members until December 31, 1960, and the earliest date on which IDA may come into being is September 15, 1960.

A preamble to the articles states the conviction of the signatory governments that mutual cooperation for constructive economic purposes, healthy development of the world economy, and balanced growth of international trade foster peace and world prosperity; that higher standards of living and economic and social progress in the less developed countries are desrable, not only in the interests of those countries but also for the international community as a whole; and that achievement of those objectives would be facilitated by an increase in international flow of capital, public and private, to assist in development of the resources of the less developed countries.

The main features of IDA, as proposed, are as follows:

Purposes: The main purposes of IDA are "* * * to promote economic development and increase productivity and thus to raise standards of living in the less developed areas of the world included within the Association's membership, in particular by providing finance to meet their important development requirements on terms which are more flexible and bear less heavily on the balance of payments than those of conventional loans, thereby furthering the developmental objectives of the International Bank for Reconstruction and Development, hereinafter called 'the Bank' and supplementing its activities."

Membership and initial subscriptions: IDA's membership is to be open to member countries of the Bank. Initial resources proposed for IDA are $1 billion, an amount which will be obtained if all existing member countries of the Bank join IDA and thereby accept the subscriptions assigned them. IDA subscriptions are to be roughly proportionate to subscriptions to

the Bank's capital. Thus the United States would be the largest shareholder, with a subscription of $320.29 million. The United Kingdom would be the next largest, with $131.14 million. Voting rights in IDA, as in the Bank, will be roughly proportionate to subscriptions.

A unique feature of IDA is that member countries are divided into two groups for purposes of subscriptions of funds, as shown in the accompanying table. Subscriptions will be payable over a 5-year period, and the countries of both groups will subscribe 10 percent of their initial subscriptions in gold or freely convertible currencies. Different provisions are made for the two groups, however, for the remaining 90 percent of their initial subscriptions. The first group, the 17 more industrialized member countries of the Bank, will pay their 90 percent in five equal installments in gold or freely convertible currencies, whereas the second group, the 51 less developed countries, will pay their 90 percent in their national currencies, which IDA will not be free to convert into other currencies or to use to finance exports from the country concerned without its consent. The executive directors have expressed the hope that the more developed of the second group of countries will soon be in a position to release from these restrictions at least some part of the 90 percent of their subscriptions.

Operations: The articles are drafted in general terms, giving the Association wide latitude to shape its financing to meet needs as they arise.

IDA is to finance development in the less developed member countries and the less developed dependent and associated territories included within membership of member countries. IDA financing shall be for purposes which, in its opinion, "are of high developmental priority in the light of needs of the area or areas concerned and, except in special circumstances, * * * for specific projects."

In their report transmitted to member countries with the articles of agreement, the executive directors point out that IDA is thereby authorized to finance "any project * * * which will make an important contribution to the development of the area or areas concerned, whether or not the project is revenue-producing or directly productive. Thus projects such as water supply, sanitation, pilot housing, and the like are eligible for financing, although it is expected a large part of the Association's financing is likely to be for projects of the type financed by the Bank." The executive directors state that the words "specific projects" are understood, as they are in the Bank's practice, to include such proposals as railway programs, agricultural credit programs, or groups of related projects forming part of a development program. IDA will not provide financing if it is available from private sources on reasonable terms or could be provided by loans of the type made by the Bank.

IDA will impose no conditions that the proceeds of its financing shall be spent in the territories of any particular member or members; it will in general follow the practice of the Bank in encouraging its borrowers to make use of international competition in the placing of orders for goods and services. IDA will also follow the Bank in disbursing its funds to recipients only to meet expenses in connection with a project as they are actually incurred.

IDA's financing out of initial subscriptions is to take the form of loans. Broad latitude is provided for the loans; the forms and terms shall be such as IDA may deem appropriate. This procedure will permit the Association to provide finance in any of a number of ways, for example, by providing for lenient terms of repayment, such as loans repayable in foreign exchange with long maturities or long periods of grace, or both, or loans repayable wholly or partly in local currency, by lending free of interest or at a low rate of interest, or by some combination of the foregoing.

IDA may provide financing to a member government, to the government of a territory included within IDA's membership, to a political subdivision, to a public or private entity in the territories of a member or members, or to a public international or regional organization. Unlike the Bank, which must obtain a governmental or a comparable guarantee when lending to a borrower other than a member government, it is left to IDA's discretion whether to require such a guarantee. IDA is directed to cooperate with other public international bodies and member countries providing financial and technical assistance to the less developed areas and specifically to enter into formal arrangements with the United Nations.

IDA shall not interfere in the political affairs of member countries or be influenced in its decisions by the political character of the member or members concerned. Only economic considerations are to be relevant to IDA's decisions.

Resources and use of currencies: IDA is to keep the adequacy of its resources under regular review. The first review is expected to take place in the first 5-year period, and subsequent reviews at intervals of approximately 5 years thereafter. General or individual increases in subscriptions may be authorized at any time.

IDA may also enter into arrangements to receive from any member, in addition to its own subscription, supplementary resources in the currency of another member provided the member whose currency is involved does not object. For example, the United States has indicated it might offer to IDA some of its holding of foreign currencies arising through sales of surplus commodities under Public Law 480. The provision of such supplementary resources would not entitle the subscribing member to any additional voting rights.

Organization and management: The structure of IDA is adapted to administration by the Bank. Thus IDA is to have a board of governors, executive directors, and a president, all of whom will be holders of those positions in the Bank, serving ex officio in IDA. The governors may delegate to the executive directors the same broad powers as have been so delegated in the affairs of the Bank. The Bank's officers and staff are to be appointed, to the extent practicable, to serve as such in IDA, which accordingly will have no separate officers or staff, at least initially. Should a different course appear desirable at any time sufficient flexibility is afforded to permit the appointment of officers, other than the president, and staff, who would be concerned solely with IDA's affairs.

Other articles contain detail provisions for such matters as withdrawal or suspension of membership; status, immunities, and privileges; amendments; interpretation and arbitration; and signature and entry into force.

Governor Boss' Opening Address to the Fifth Guam Legislature

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. ASPINALL. Mr. Speaker, among the many pleasant duties and responsibilities which I enjoy as chairman of the Committee on Interior and Insular Affairs are those connected with our offshore territories and flag areas. Last fall, our committee made an extended trip to the Pacific where we visited American Samoa, Guam, and the Trust Territory of the Pacific Islands. On Guam we met in special session with the members of the Guam Legislature at which time we were told of some of the major territorial problems. We were impressed by the capable manner in which the members of the legislature

were coming to grips with their tasks and the fine spirit of cooperation that existed between them and Acting Gov. M. G. Boss. Mr. Speaker, I bring to the attention of our colleagues the opening address Governor Boss presented to the legislature on February 1, 1960. The address, which points out special pressing problems on Guam, is as follows:

ADDRESS OF THE HONORABLE MARCELLUS GRAEME BOSS, ACTING GOVERNOR OF GUAM, TO THE OPENING SESSION OF THE FIFTH GUAM LEGISLATURE, FEBRUARY 1, 1960

Mr. Speaker, members of the Fifth Guam Legislature, distinguished guests, ladies, and gentlemen, it is indeed auspicious and worthy of note that as we assemble for the ensuing legislative session we do so in an atmosphere of good will which pervades the entire Territory. The best of relationship and good feeling presently exists between the several branches of our civil government, the several military commands, the business community and other Federal agencies and departments located here in Guam as well as at the seat of our National Government.

Included in this list is also one foreign government which has recognized Guam by maintaining a consulate here. I refer to our friend and neighbor to the west, the Republic of the Philippines, and its able, amiable, and genial representative, Consul Rizal G. Adorable.

This is so, and as it should be; for Guam has many difficult problems. But even the most difficult problem is more easily resolved if attacked in a climate of good will, sincere cooperation, and friendly good faith. As notable examples of the foregoing, Guam has been signally honored on two recent occasions, first, by a visit by the Honorable Fred A. Seaton, Secretary of the Interior, followed almost immediately by a visitation by six members of the Committee on Interior and Insular Affairs of the U.S. Congress, viz., Hon. WAYNE N. ASPINALL, chairman, Hon. LEO W. O'BRIEN, of New York, subcommittee chairman, Hon. JACK WESTLAND, of Washington, Hon. B. F. SISK, of California, Hon. DON MCGINLEY, of Nebraska, and Hon. DANIEL K. INOUYE, of Hawaii. None of these fine officials has constituents on Guam. Guamanians have no votes to give any of them. Yet all gave freely of their time and energy in a deep and sincere effort to learn our troubles and assist in their solution. We are very appreciative of this, and it is our sincere wish that they do it again, soon and often.

In my opinion, the three most urgent and pressing problems confronting the government and people of Guam, are electric power, reorganization of our government, and the Agana Swamp.

ELECTRIC POWER

It is only natural that daylight savings time is distasteful, irritating, and the subject of much complaint. Frankly, however, I am amazed that there is not much more complaint than there is, and the only explanation for the general acceptance of the inconvenience is an apparent realization by the general public of the crisis that is rapidly approaching in our available electric power. We have almost reached the bottom of our kilowatt barrel; and everybody knows it. All electric power on Guam is generated by the Navy. The prime mission of the Navy is national defense, and not to furnish logistic support to the civil community. Nevertheless the Navy gives us a firm power allocation of 9,450 kilovolt-amperes although we have contributed nothing to the cost of the present generating facilities. Yet, despite daylight savings, we frequently peak almost 12,000 kilovolt-amperes; and our power requirements, as well as those of the military, are steadily rising. Something must be done—and immediately.

Through the cooperation of the legislature in postponing this session, it was possible for me, accompanied by your speaker the Honorable A. B. Won Pat, to attend a series of conferences in Washington, D.C., with officials of the Department of the Interior and the Department of the Navy. There the problem was analyzed and discussed, and alternate proposals for solution agreed upon. The rest is now up to us.

Naturally the permanent solution is construction of additional generating facilities. This will be done; but this takes from 30 to 36 months to achieve. Two alternative proposals have emerged from our recent Washington conference: One is for the Navy to construct a new powerplant with government of Guam contributing to the cost in proportion to its present and projected use of the total power generated—in this instance, roughly one-third.

The alternative proposal is for the government of Guam to build the new plant itself, using the power thus generated to supply our own needs, and selling the excess power to the Navy to supplement its present output. Personally I favor this alternative, for this presents us with a challenge and an ideal opportunity for the government and people of Guam to show ourselves as well as the rest of the world that here is one major problem which we are capable of surmounting and solving on our own. When I left Washington, I had a firm conviction that your speaker concurred; however, I am sure he will report to you himself; and when Mr. Madden, our chief officer of the public utility agency, returns, he will have some firm facts and figures which will be presented to you, first in an informal conference, and then by special message—and together we can then make the decision.

However, even if we should contract immediately for the construction of a new plant, at least 2½ years would elapse before it could be in operation. In the meantime something must be done as a stopgap; otherwise we will run out of kilowatts.

As an interim solution to our immediate problem, the Navy proposes to bring to Guam a so-called mobile unit now located on the west coast, to be installed near the present Piti plant. This unit has a capacity of 10,000 kilovolt amperes, and should take care of all our anticipated needs until well after the completion of the new powerplant; in fact, I am convinced that this should relieve the situation to the extent that, for a reasonable period at least, there is no apparent reason why we cannot dispense with daylight savings time. The Navy cannot do this, however, without our cooperation and participation in financing the project. It is estimated that our share of this cost will not exceed $200,000. I am submitting a bill which will authorize this expenditure, and I sincerely request its immediate passage. Time is important, for in order to get this mobile unit out here installed and in operation by not later than early July, we must notify the Navy on or before the 15th of February that we have the money available to defray our share of the cost.

Also, I am requesting appropriation of an additional $600,000 to our power sinking fund. This would bring this fund up to $2,100,000, which would place us in a much better bargaining position when we commence negotiations for new plant construction.

GOVERNMENT REORGANIZATION

Section 7(c) of the Organic Act of Guam provides:

"The Governor shall, from time to time, examine the organization of the executive branch of the government of Guam, and shall determine and carry out such changes therein as are necessary to promote effective management and to execute faithfully the purposes of this Act and the laws of Guam."

So far as I can learn or observe, it is apparent that no particular effort has been made in the past to comply with this directive by the U.S. Congress. As a result, the executive branch of this government has grown like Jack's Beanstalk; and we now find ourselves confronted with an oversize bureaucracy which could well (and, incidentally, it does) appall even official Washington. To illustrate: The President of the United States manages to get along fairly well with 9 Cabinet Members; the Governor of the Virgin Islands also has 9 (departments); but the Governor of Guam has 15.

I have reliable and authoritative information that the Government of Guam has more employees than the government of the city of Norfolk, Va. with a population of over a quarter of a million.

The prospect of an operational budget aggregating almost $10½ million, is fantastic. Yet that is what we now have, and it is inevitable that the trend will be for more and more.

This leaves too little for necessary and badly needed capital improvement.

We must retrench—and action cannot longer be deferred. While I shall go into this in greater detail in my subsequent budget message, it must be remarked here that in my opinion, no further cuts are possible unless we start to cut out programs and people. To maintain this comparatively huge bureaucracy in the style to which it has become accustomed, takes over 80 percent of all our income from all sources. We must prepare for the time when the U.S. Congress takes a new look at our fiscal structure and dries up some of these sources.

The prospect of saving money through more efficient administration, coupled with more and more insistent demands from official Washington and increasing complaints of those who are footing the bill, all combine to produce the ineluctable resolve that the time has come when the congressional mandate of section 7(c) can no longer be ignored.

This was recognized at the last regular session and a step toward partial solution was taken culminating in the execution of a contract with the firm of John A. Donaho and Associates for a thorough survey and study of our classification and pay scales. This survey is now in progress; but this alone will not suffice.

I urgently recommend appropriation of not to exceed an additional $70,000, together with authorizattion for negotiation and extension of said contract so as to include a comprehensive survey, study and recommendations for complete reorganization of our entire governmental structure. If both surveys are conducted simultaneously, it is believed that the aggregate cost can be materially reduced over the probable cost of separate and piecemeal surveys. A bill for this purpose is being presented for your considerattion; and I sincerely and respectfully urge its favorable consideration and early enactment.

AGANA SWAMP

While the Agana Swamp has always been a nuisance, an eyesore, and an ever-increasing health menace, the principal reason I have listed this as a matter of urgency at this time is, right now, for the first time (and possibly for the last time) we are presented with a practical and practicable means for doing something about it.

This government owns about 48 acres, located on both sides of what is known as the Swamp Road. Adjoining this government-owned land are many small parcels of privately owned land—all forming what is known as the Agana Swamp—all completely worthless and, as I said, an eyesore as well as an ever-increasing health menace. Fed by several large springs in the vicinity below Sinajana, the Agana River courses through

the middle of the swamp, and empties into Agana harbor.

Reclamation of this 48-acre tract of government land would require a dirt and coral fill of three to four feet, or approximately one-half million cubic yards of fill. Ordinarily a project of such magnitude would be economically as well as practically impossible; for overburden in such vast quantity would normally be unavailable, and even if located, could not be moved for much less than $1.50 a yard.

However, in connection with a pending project for lengthening the air strip at the naval air station, the Navy has recently awarded a contract to a private contracting firm for the removal of over 3 million yards of dirt and coral and with the cooperation of the local Navy command (as well as the contracting firm) we have an opportunity to secure all the material we need, as the same is moved by the contractor, haul it to the swamp and fill it in—all at a cost conservatively estimated at 40 cents per yard. Should we take advantage of this opportunity, some private landowners adjoining our Government-owned tracts, have already indicated a desire to participate in the project, and thus render the entire area of worthless wasteland into a valuable tract, which, judged by land values in that civinity, should more than liquidate the entire amount spent under this proposal. Also, any excess fill could be used to complete necessary fill for the Paseo de Susana Park, which still needs approximately 50,000 yards.

I strongly urge favorable consideration and early enactment of a bill appropriating the sum of not to exceed $200,000 for this purpose. And here, again, I respectfully suggest that time is essential, for if we are to take advantage of this opportunity, we must act before the primary dirt-moving operations get underway. Such an opportunity may never come again, and I hope this will receive your favorable consideration; for I am sure I need not elaborate upon the benefits which would ensue the successful accomplishment of this project.

OTHER PROBLEMS

The emphasis placed upon the foregoing subjects is not calculated to belittle the importance of many other problems confronting us, or to ignore that they exist. Many of these will be dealt with in detail by special messages from time to time. A few will receive brief mention here. Some of them must await later sessions; for there is too much to be done for us to hope for immediate successful resolution of all problems.

One distressing problem which is becoming increasingly serious is that of:

JUVENILE DELINQUENCY

I have no intelligent sure-cure remedy to offer; for this cannot be forthcoming until we have facts—many facts. I do feel, however, that something must be wrong, or lacking, in our homes, our schools, our laws, and our courts, which combine to contribute to the production of these tragic consequences.

It is my present intention to set up a special committee to gather these facts, study them, and offer suggestions. Before doing so, however, I prefer to wait a reasonable period in the hope this Legislature may have some suggestions or advice. Naturally I would ask one or more Members of this body to assist in the project.

In the meantime, I strongly recommend that you give serious consideration to enactment of legislation to repeal the ridiculous provisions of our law which presently prohibit disclosure of the names of juvenile offenders.

This would enable the public to know the identity of the offender and—more important—what the court did to him. (Instances of repeated arrests of the same juvenile offenders are far from rare).

Publication of the names of the parents of juvenile offenders would do much to resurrect the long-forgotten institution of parental authority and discipline which, through indifference or neglect, has atrophied almost to the point of extinction.

I sincerely urge adoption of such legislation and further recommend consideration of the advisability of legislation placing a higher and more stringent degree of responsibility upon parents for the wrongful acts and delinquencies of their minor offspring.

STATE OF THE TERRITORY

There is no involuntary unemployment on Guam; at least this is true to the extent that any Guamanian, who is able and willing to work, can find employment.

On the mainland, even in so-called prosperous times, unemployment runs into the millions; while at present here on Guam, there appear to be many more jobs than people to fill them.

This anomalous situation results principally from two things:

1. The recent policy of the Immigration Department for the hurried phase-out of all alien contract labor employed by the civil community.

2. Employment by the government of Guam of all available labor on projects in competition with private enterprise.

I firmly believe it is an obligation of the government of Guam and of the people of Guam, to take all reasonable steps to correct this condition of imbalance. Skilled workmen and mechanics must be trained to replace their alien counterparts in the local business community as they are forced out. To this end, an appropriation was made by this legislature, at its last regular session, to finance the establishment of a vocational or trade school. Despite several delays—some unavoidable, some inexcusable—the work is now progressing and it is expected that classes will start about the middle of this month. A similar program which provides part-time work in on-the-job training for students, is well underway in our high school, and is receiving gratifying support from the local buisnesses.

To fill the void in unskilled and semi-skilled labor, efforts must be continued to transfer excess labor forces from government employment to private employment. This program is well underway, but it must be continued.

Before concluding, it should be noted that administration of our new insurance code is well underway. Like all new programs, there have been some rough spots, but these are being ironed out. It is gratifying to note that a new rate schedule just promulgated by the insurance commissioner provides a 40 percent reduction in rates for typhoon insurance, and a 10 percent reduction in workmen's compensation insurance rates; and I am informed that these reductions were agreed to by the insurance companies affected.

Our proposed budget was delivered to your finance chairman around January 20, and copies should be available to your members now. My budget message will be presented separately; and I hope to get it to you later this week.

In conclusion, please pardon a personal note. While I have always felt that no public official should be given special commendation merely for doing his duty, I would be less than candid if I did not thank you with all my heart for your kind and generous gesture manifested in the adoption of Resolution No. 155. Of course, these expressions are mere words, but they are not empty words; for they are supported by a 26-month background of true friendship, fair dealings, and sincere cooperation on the part of each one of you.

We have not always agreed in the past. We will not always agree in the future. But we know that we can be in honest disagreement, yet retain friendship and mutual respect. We can meet, discuss, disagree, later resolve and agree upon our problems, and still retain and preserve that integrity and independence of our respective branches which is so essential to our American concept of government; for we are partners, working on the same team, for the same goal: the betterment of our land and its people. I thank you, I thank you very much.

California Schoolgirl, Lois Sterk, Writes Essay on "What We Expect of Our Legislative Representatives"

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I am naturally pleased and feel it an honor to present to the attention of your own distinguished self and all the other Members of this great Congress the text of one of the winning essays in the recent essay contest sponsored by the California Real Estate Association in statewide competition.

Miss Lois Sterk resides in the great 23d District which I represent, this my 14th year in Congress. Miss Sterk is now a distinguished student in the State of Michigan but the residence of her parents and herself is Bellflower, Calif. Since the young lady chose the subject of her essay to be "What We Expect of Our Legislative Representatives," together with the fact that she was one of the top contestants, I was pretty sure that all the Members of Congress would be pleased to have this young American's brief observations in support of her chosen essay theme.

I am sure also that you and all the other Members reading same will join with me in congratulating her on her worthy achievement.

The essay follows:

WHAT WE EXPECT OF OUR LEGISLATIVE REPRESENTATIVES

Political knowledge, good judgment, and the ability to present his opinions are not the only requirements a legislative representative must meet. He must have a deep love for his country. His work is often difficult and thankless, and at such times monetary gain and prestige are not enough. More rewarding is the realization that he has a role in the development of America and her affairs. It naturally follows that he will promote her ideals of "One nation, under God, indivisible, with liberty and justice for all." Our fathers, realized, and we and our leaders must also remember, "That nation is blessed whose God is the Lord."

We hear a great deal about campaign promises, but a good Representative forms a platform and tries to carry it out. A Representative acts as a servant of the people, and, as such, must abide by their wishes, as long as these wishes are in accordance with his platform and convictions. It is also necessary that he be able to reach his decisions with good judgment and act accordingly.

A legislator must be an outstanding individual and citizen. As an individual it is necessary that his integrity be above suspicion. His homelife must be a happy one, and he should be able to get along well with other people. As a citizen, he must love America and carefully observe all Federal, State, and district laws. In short, a Representative must be a good example to others.

In order to have good government, we must have good Representatives. But something never to be forgotten is that in the end good government depends on us, the people. It is our obligation to be good citizens, for a government can be no better than the people it represents.

More Economical Processes in Defense Production

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. MINSHALL. Mr. Speaker, an article in the New York Herald Tribune on Sunday, February 7, 1960, points up the continuous efforts of the Supply and Logistics Section of the Department of Defense to encourage development of new and more economical processes in defense production. I am proud that the Cyral Bath Co., located in the 23d District of Ohio, which I represent, is playing an important part in these efforts. The article follows:

SPACE METALS HARD TO HANDLE—PENTAGON SEEKS NEW PROCESSES—ORDINARY TOOLS CANNOT DO JOB

(By Allen M. Smythe)

New processes rather than new machine tools are needed to handle the light heat-resistant exotic metals required for components in the supersonic aircraft, ballistic missiles and spaceships of the future, according to top Pentagon metallurgists. Ordinary machine tools cannot fabricate these new hard metals that are vitally necessary for air vehicles that travel 16,000 miles an hour and which must withstand temperatures in the thousands of degrees.

The new metals now being developed for these space-age weapons and vehicles include titanium, columbium, beryllium, tantalum, molybdenum and zirconium. New processes now being studied by the Pentagon to handle these metals include explosive forming, ultrasonics, electric erosion, ultraspeed grinding, chemical milling, and radial draw forming. Assistant Secretary of Defense E. Perkins McGuire (supply and logistics) has been directing his department to develop and encourage the use of new processes that are both efficient and inexpensive. "We are anxious," said Mr. McGuire, "to use any new process or equipment that will aid production and reduce the costs of modern weapons."

One new process that has been studied for more than a year by defense experts is called explosive forming. Developed by Convair it is used to form titanium and beryllium parts for their new medium bomber, the B–58, which flies at twice the speed of sound. It has limited application but has been used in some special parts that were too hard to be fabricated by modern machine tools.

The Pentagon has recently been studying the use of cold stretch forming. Hard metals that cannot be cut or extruded can be stretched if enough hydraulic power is used. Between the yield point and the breaking point the metal will "flow." If determination is made accurately of a point just above yield point the metal can easily be compressed against a die.

A second seminar using moving picture and technical discussion was held this last week in the Pentagon demonstrating use of radical draw formers. This machine literally stretches rods and sheets around a curve while it is being pressed across its cross section at a point or line which is in tension just above the yield point. Electronic instruments control the pressure to insure the tension is held in narrow limits above the yield point, regardless of variations in the metal.

The machine, made by Cyril Bath Co. of Cleveland, is used to make the titanium nose and other structural parts of the Atlas ICBM missile. It is also being used to make titanium, beryllium and molybdenum parts of the J–93 chemical fueled jet engine. This powerplant is being developed by General Electric for aircraft with speeds above three times that of sound.

The Pentagon meeting was held for metallurgists and production experts of the three armed services. Also attending were representatives from the Atomic Energy Commission, the National Space and Aeronautics Administration and other interested Federal agencies. Although the meeting was unclassified, the press was excluded.

Plywood Imports on the Increase

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. MACK of Washington. Mr. Speaker, recently the management of the Harbor Plywood Mill at Aberdeen, Wash., which employs several hundred workers, announced to its employees that the plant was closing down for 1 week.

Reason given for the closure was that "the industrywide order file for plywood is generally at its lowest point in several years."

A number of other plywood plants in Oregon and Washington have announced similar closedowns. Some plants have closed for an entire week. Others have gone to a 3- and 4-day-a-week operation.

About the same time that the management of plywood plants were announcing curtailment of production due to inadequate orders the Secretary of Commerce reported that plywood imports from low-wage-, low-living-cost foreign nations into the United States increased by a whopping 49 percent during the first 11 months of 1959 over the same period of the previous year.

As more plywood imports have poured into our country from low-wage foreign nations, American mills have been compelled to curtail production and lay off employees thereby reducing the income of these workers.

The Commerce Department reports that 1,200,000,000 feet of plywood were imported into the United States in the first 11 months of 1959. These huge imports have curtailed the income of plywood workers and of the loggers and other suppliers who provide logs and other materials to plywood mills. This also has reduced the profits of plywood mill operators. It has resulted in the loss of individual and corporation income tax revenues to the Federal Government.

The growing menace of growing plywood imports from low-wage nations should suggest to Congress that some restriction on plywood imports through quota limits is urgently needed. The situation in 1960, unless speedily corrected, is likely to be worse for the plywood industry and its workers. The national domestic prosperity should not be permitted to erode because of too heavy uncontrolled imports.

A Woman Holds Key to Guarded Jury Box

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. HUDDLESTON. Mr. Speaker, inspiring to all of us who are interested in and strive for good government on every level are the stories of persons who give freely of their time and energies to their fellow citizens through Government.

Such a citizen is my constituent, Mrs. Fred Batson, of Bessemer, Ala., who is now serving her second year on the Jefferson County jury board and has just been named chairman of the board.

I am pleased to insert in the CONGRESSIONAL RECORD, under leave heretofore granted, the newspaper story on this fine lady's contribution to our local jury system as it appeared in a recent article by Mrs. Alyce B. Walker in the Birmingham News:

A WOMAN HOLDS KEY TO GUARDED JURY BOX

(By Alyce B. Walker)

The name of the chairman of Jefferson County's Jury Board isn't in the county jury box, because the chairman is a chairwoman.

Makes no difference that she, Mrs. Fred Batson, of Bessemer, is an expert on the subject, Alabama women can't serve on juries.

Ours is one of the three remaining States with such a legislative restriction. Yet, strangely, by a 1953 legislative act, women can serve on the three-member Jefferson County Jury Board.

Strangely, too, it's women who are usually hired to make the biennial canvass of the county to gather names of potential jurors—male jurors of course.

RECENT BREAKTHROUGH ON FEDERAL JURIES

This exclusion of women from jury service doesn't apply to Federal courts and in recent months there has been a breakthrough of Alabama women serving on Federal juries.

One of these days we, the women, are going to be required to fulfill this suffrage obligation at local and State levels, too, so I went to headquarters to learn about procedures for becoming a juror.

A conference with Mrs. Batson, Sheriff Holt McDowell and J. F. Chestwood, chief clerk for the jury board, was a real lesson in this aspect of democratic government.

For instance, when I suggested that we photograph Mrs. Batson with the jury box, I didn't know I was proposing a picture that probably has never before been made. That jury box is as guarded as the crown jewels of England.

GUARDED LIKE CROWN JEWELS

It is kept under double lock in a vault in the sheriff's office. Only the jury board chairman and the presiding probate judge have keys to the two locks on the box itself. One of these, on the side of the box, is only unlocked every two years. The other that fastens a small, round opening in the top is unlocked only for the presiding judge to reach in his hand and draw out names when a jury is needed.

The big, dark green iron box with a crank on one side for mixing up the names, is filled the last Tuesday of August every 2 years. At that time, if there are any names left in it, they are torn up and a whole new collection put in.

There are two such boxes in Jefferson County—one for the Birmingham area and the other in the Bessemer Courthouse for that part of the county.

The law requires that the number of names in the box be at least 6 percent of the population, based on the last census. There were 43,000 names in the last Birmingham box, and 8,000 in the Bessemer one.

CARDS CONTAIN NEEDED INFORMATION

Names are printed on small white cards, along with home and business addresses, occupation and precinct number in which the person votes. At least one Christian name must be on the card. Initials are not allowed.

These cards are filled out after the jury board has compiled a jury list from information gathered in the door-to-door canvass of the county. The roll lists only names of males between ages 21 and 65, who are generally reputed to be honest, intelligent and are esteemed in the community for their integrity, good character and sound judgment."

The jury specifically excludes persons known to be habitual drunkards, those afflicted with a permanent disease or physical weakness that renders them unable for service, and anyone who has been convicted of any offense involving moral turpitude.

Also excluded is anyone unable to read English, unless that person, meeting all other requirements, is a freeholder or householder.

SCREENING DONE BY CHIEF CLERK

This screening of jurors is done by the chief clerk of the jury board and his assistants. Every name is checked in a variety of ways. This includes checking against fingerprint records in both the sheriff's office and the city recorder's office.

Mr. Cheatwood estimated about 10 percent of the names submited must be discarded for the aforementioned reasons.

It isn't likely that a person will have to do jury service but every 4 years, for after the cards have been prepared, the jury board sets aside those bearing names of persons who have served as jurors during the preceding 2 years. These names, however, are held in reserve, to be used if the jury box is depleted before expiration of the 2-year refilling date.

When a jury is needed, the presiding judge draws names from the box 2 or 3 weeks in advance so the sheriff's office will have time to find the people. He usually draws more than the necessary 12 names for a panel in case some of them have moved out of the area or have become ineligible for other reasons.

SHERIFF SERVES JURY SUMMONS

The sheriff serves the jury summons either by registered mail or in the hands of one of his representatives.

A receipt of the summons is returned to the sheriff and then only by special permission from the presiding judge can a person be excused from service. If the person is excused for some temporary reason, his name goes back into the box for possible recall.

Sheriff McDowell lauded Jefferson County's jury setup as one of the finest in the country. He cited with pride the reduced number of requests for excused service and particularly commended those employers who make up the difference between the $6 per day jury service fee and their employee's regular salary.

But what about this jury board, presided over by Mrs. Batson, giftshop owner, mother of one son, active worker in her church and Salvation Army auxiliary?

SIMILAR BOARDS IN ALL COUNTIES

There are similar boards in all the State's counties, appointed every 4 years by the incoming Governor. Jefferson County's board, however, differs in that membership is staggered and on a 3-year basis.

The board is required to meet once monthly. The chairman can call other necessary sessions. Members, designated as commissioners, receive $50 monthly. In addition to preparing the jury roll and filling the box, they employ from civil service candidates the necessary clerks to operate the office.

Mrs. Batson became interested in the board through her husband who, as member for three terms and chairman when he died, was responsible for many of the board reforms. Now in her second year, she was last week elected chairman by her cocommissioners, George Clayton and Walter P. Palmer.

The chairman feels very strongly that women should serve on juries—but on a voluntary basis.

In Defense of Reuther: Whoa, Senator Goldwater

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial which appeared in the Detroit News, Saturday, February 13, 1960:

IN DEFENSE OF REUTHER: WHOA, SENATOR GOLDWATER

We do not exactly make a habit of leaping to the defense of Walter P. Reuther, but we find ourselves unable to swallow the accusations made in a planned report from Republican members of the Senate Labor Rackets Committee.

Our Washington correspondent who has an advance copy of the document secs it as an attack upon Senator JOHN F. KENNEDY, the front-running candidate for the Democratic presidential nomination. The trick is to get at KENNEDY by attacking Reuther and the candidate's brother, Robert F. Kennedy, former chief counsel of the Rackets Committee. Guilt by relationship, as it were.

As was to be expected, the GOP approach makes much of the long delayed extradition of UAW muscleman John Gunaca to Wisconsin where he was wanted in connection with Kohler strike violence. We, too, complained about that bit of nonfeasance, attacking it as exemplified subservience by a governor catering to UAW desires. But the new criticism goes far beyond that to call Michigan "a privileged sanctuary for the protection of criminals against extradition and punishment" and to assert that "reasonable people must conclude that the legal and political processes of Michigan no longer are controlled by its citizens."

If reasonable people are able to believe that, the Lord save us from the thoughts of the unreasonable.

The report continues, "* * * that corruption, misappropriation of funds, bribery, extortion and collusion with the underworld exists within the UAW as they do in those other unions whose derelictions have been so widely publicized."

This statement is obvious nonsense.

We don't approve of Walter Reuther's insatiable desire for power. We don't like his social philosophy. We think his free pouring of union funds to control elections both violates the law and threatens our democratic system. Certainly we abhor the UAW assumption that violence is all right if that's what it takes to persuade workingmen that they had best follow UAW policy.

But the UAW is no Teamsters Union and Reuther is not a Jimmy Hoffa. We doubt if any major union has been more free of corruption and collusion with the underworld. We do not believe Senator GOLDWATER, chief of the report's authors, has the facts to prove to prove to the contrary. If he has, he should specify them. If he hasn't, he might better get some blue pencils and edit the bunk from his forthcoming report lest, by violating verity, it convince citizens that all complaints again the UAW are unfounded.

Hangover Haywire Economics

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Elmira (N.Y.) Star Gazette of February 11, 1960. May I also call attention to H.R. 9781 which I have introduced and which would repeal on January 1, 1961, the Agricultural Adjustment Act, as amended.

The editorial follows:

TIME TO HALT FARM GIVEAWAY

President Eisenhower has spoken out on the vexing domestic problem of farm products largely due to economic distortions induced by years of Federal interference.

His message to the Congress combines a review of a costly surplus with a plea for remedial realistic legislative action.

The President is talking about big money—money that comes from the pockets of taxpayers and handed out under a program devised in the lavish giveaway days of the New Deal.

"It defies commonsense," the President said, "to continue to encourage, at a cost of many millions of tax dollars, the building of ever larger excess supplies of products that, as they accumulate, depress farm prices and endanger the future of our farmers."

The wheat situation was the principal target of the President's call for relief.

"Federal funds tied up in wheat," he declared, "approximate $3½ billion. Although this means that well over 30 percent of the total funds invested in inventories and loans of the Commodity Credit Corporation goes for wheat, this crop provides only 6 percent of the cash receipts from sales of farm products. The Government sustains a net cost of more than $1,000 a minute—$1,500,000 every day—the year around to stabilize wheat prices and income."

The figures have been cited many times. In the time it has taken to read this type, 1,000 taxpayer dollars have been shelled out in a fantastic scheme that should have been revised or thrown out many years ago.

Election year is probably the worst possible time for Eisenhower to call for action. Lawmakers don't like to rock the boat. The taxpayer is forgotten—except when his bill is due. Then his pockets are invaded by the tax collector, and money so extracted is spent at the rate of $1,000 a minute to perpetuate one of the New Deal's major contributions to haywire economics.

Establishment of Washington's Western Lands National Monument in West Virginia

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. BAILEY. Mr. Speaker, permit me to direct the attention of our colleagues to the resolution adopted February 5, 1960, by the West Virginia Legislature, urging the passage of legislation to authorize the establishment of Washington's Western Lands National Monument in West Virginia. Passage of this legislation would make possible the preservation in our national park domain of some 35,000 acres of land owned by George Washington along the Ohio and Great Kanawha Rivers.

The resolution follows:

"SENATE CONCURRENT RESOLUTION 8

"Resolution pertaining to Washington's Western Lands National Monument

"Whereas the West Virginia Historical Society, through the efforts of its Washington's Western Lands National Monument Committee, is promoting the establishment of Washington's Western Lands National Monument, which would include the prehistoric and historic sites in the area encompassed by the eight tracts of land owned by George Washington in the Ohio and Great Kanawha River valleys; and

"Where bills on the proposal were introduced in the 1st session of the 86th Congress by U.S. Senators JENNINGS RANDOLPH and ROBERT BYRD in the Senate and by Representative KEN HECHLER in the House, on last June 4 and 5: Therefore be it

"*Resolved by the senate (the house of delegates concurring therein)*, That the Legislature of West Virginia in regular session, 1960, do endorse this project; and that the clerk of the senate be instructed to send a copy of this resolution to West Virginia's congressional delegation, urging the passage of Senate bill 2120 and House bill 7603, 'To authorize the establishment of the Washington's Western Lands National Monument in the State of West Virginia.'"

I hereby certify that the foregoing is a true and correct copy of Senate Concurrent Resolution 8, adopted by the senate on January 26, 1960, and by the house of delegates on February 5, 1960, according to the records in my office.

J. HOWARD MYERS,
Clerk, Senate of West Virginia.

Big Political Stink Bomb

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. LEVERING. Mr. Speaker, I have great confidence in the composite judgment of our people when they have an opportunity to know all sides of an issue. As a lawyer I have never quarreled with the verdict of a jury where the jurors were given all of the facts in the case. I have no fear for the future of our democratic form of government if the people are provided with the facts on all public questions. Mr. Speaker I am also confident that when the American people are fully informed they will not shrink from responsibility but will make every and any sacrifice necessary to meet the challenge. Misinformation, half-truths, and secrecy will certainly destroy democracy.

Mr. Speaker I make this point today in the midst of the "great debate" over our national defense, the most important issue of our time because it involves our very survival. I cannot help but feel it is wrong to stifle debate in this matter with the argument that it might cause a potential enemy to miscalculate. Of course, some details on weapons should not be paraded about, but generally speaking, if there are any soft spots in our defense posture, I am sure our enemies have already learned about it through their own intelligence systems and if an honest debate reveals that we are more powerful than our enemies this will give even greater insurance against enemy miscalculations.

Mr. Speaker under leave to extend my remarks in the RECORD, I include a timely editorial from the February 11 edition of the Mansfield News Journal which appropriately indicates that a calm and intelligent discussion of the facts can remove fog and confusion in the critical area of our defense:

BIG POLITICAL STINK BOMB

The great controversy over U.S. military preparedness continues to rage in the arena of public opinion. The warriors surge back and forth, but they don't seem to get much of anywhere.

The arguments, involving top military figures and even the President, go on and on: there is a serious missile gap, there is no missile gap; the Nation has decisive deterrent force, there is a deterrent gap; we're behind, we're ahead.

The champions of conflicting viewpoints have created such a furor that neither they nor the spectators have any sensible idea what the outcome will be.

The need, quite obviously, is to have the dust cleared away and the uproar quieted so that the public can see who is winning. Unfortunately, it is almost certain that this will not happen. Too many divisive factors—partisan political considerations, interservice rivalries and the like—are at work.

There is no one who can rise above the heat of battle and say definitely, "This is how we stand."

And yet, something approximating such an unbiased voice needs to be heard.

If it is not heard, those who represent the people cannot have a sound basis on which to make decisions that may have a profound effect on national security. The budget will be kicked into a cocked hat. Military progress will become unplanned confusion.

Maj. Gen. John B. Medaris, the recently retired Army missile expert, said in a speech the other day that military and scientific "gobbledygook" has kept the truth about the missile race from the public. He urged that "the cold, stark facts" be presented to the public.

For what it is worth—and in full awareness that such data can be extracted only with great difficulty from the mass of conflicting views—we add our voice to his.

Let's have less ax grinding, and more facts.

The public is already sick of seeing national defense used as a political stink bomb.

Director of Chicago's Largest Vocational High School Fears Shortage of Skilled Mechanics Within a Decade

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent I am extending my remarks to include excerpts from a letter I have received from James W. Crowe, director of the Chicago Vocational High School, which I think should be brought to the attention of my colleagues. Mr. Crowe heads the largest vocational high school in Chicago and is one of the outstanding authorities of the Nation in this field of education. The excerpts from his letter follow:

I might add that I am very much concerned with the current educational trend to heavily emphasize the so-called academic studies, and the gradual curtailment of the vocational and practical arts program. It seems that our educators feel that everybody must learn science, mathematics, and foreign language—apparently on the premise that anybody can become a skilled mechanic. If this trend continues unabated, one of the results, as I see it, will be a drastic shortage of skilled mechanics within a decade.

I might point out that we never read in the paper about the failure of our missiles to go into orbit due to design. The usual reason is "mechanical failure." Just within the past 2 weeks we had one of the rockets perform perfectly, and a week later another one of the same design failed miserably. It appears to be quite obvious what they need is not more theorists and research scientists, but better draftsmen.

In line with this trend, I know that the University of Illinois has made a new requirement that, by 1963, all enrollees in the university must have 2 years of foreign language, and a total of 12½ units of academic

work for admission to the university. This means that either we must accept the fact that CVS graduates cannot enter the University of Illinois or that we must curtail our vocational program and add a foreign language. This requirement of the university is simply another indication of what I mentioned earlier in this letter.

Ruling Against Special Ability

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Detroit Free Press on Saturday, February 13, 1960.

The editorial follows:

DEFENSE THRIFT—RULING AGAINST SPECIAL ABILITY

A more objective view of the Federal Budget Bureau's decision on the use of Government-owned defense plants might be possible if the jobs of thousands of Michigan workers were not at stake.

The ruling, designed to force the use of private plants to produce such things as tanks and other automotive equipment, would add to a private manufacturer's bid the cost differential they enjoy by using Government facilities.

The claim is that those defense contractors who use such Government-owned facilities have an advantage over others who might like to bid on defense contracts.

Michigan installations that could be affected by the order are the Detroit Arsenal in Warren and the Sterling Township missile plant—both operated by the Chrysler Corp.—and the Muskegon Arsenal. The Sterling plant employs 10,000 workers, the arsenal another 400. The Muskegon Arsenal, operated by Continental Motors Corp., has 800 workers.

At stake immediately is an order for 720 M-60 tanks and 212 M-88 tank recovery vehicles.

Such equipment—like most all wheeled vehicles—has been the prime defense product of Michigan since the Detroit area in World War II worked for and earned the informal title of "Arsenal of Democracy."

The production of automotive defense items has been recognized since then as a Michigan specialty, so much so that the Army's Ordnance Tank-Automotive Command, which has charge of wheeled and track vehicles for all branches of the Armed Forces, is based in Detroit.

In addition, the Defense Department since being taken somewhat by surprise by the Korean war, has maintained that key defense plants must be kept operating even in peacetime—particularly those known as GOCO (government owned-contractor operated) plants that produce items not available as regular commercial products. Tanks and heavy ammunition, for instance, would fall in this category, but standard automobiles and trucks would not.

Hence, while there might be some saving by awarding contracts to manufacturers who are willing to invest their own money in plants and equipment to make strictly military items, it very possibly could be offset by the additional cost to the Government if the Michigan plants must be maintained in operating condition by the Armed Forces.

A closer examination of the Budget Bureau's ruling might show that its new policy is pennywise but poundfoolish.

Other than these considerations that stem from Michigan's much respected and traditional role of an experienced and ready hand in the production of military land vehicles, there are the thousands of trained workers who form the backbone of Michigan's know-how in the field.

A very short while ago, Detroit and all of Michigan was of concern to the rest of the country because of the unusually high rate of unemployment. It was urged at the time that defense contracts be channeled into Michigan to relieve the hardship of those without jobs.

Now that Michigan is nearly recovered, it appears paradoxical to put into effect a new ruling that might throw out of work thousands of people trained to preserve one of the most important phases of the Nation's defense structure.

Not only for the jobs at stake, but because of Michigan's continuing contributions to the Nation's military readiness and the need to preserve this area's specialized ability to produce wheeled vehicles for the Armed Forces, the ruling should be reconsidered—not only for Michigan's good, but because the cost in the long run may be greater if the concentration of skills and effort present in this State are scattered by bureaucratic ruling.

North Dakota Needs Highway Post Offices

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. BURDICK. Mr. Speaker, I wish to call the attention of my colleagues to the curtailment of railway mail service in many communities in my State of North Dakota. The following resolution which was passed by the city council, city of Jamestown, indicates a desire for the establishment of a highway postoffice system to provide much needed service to many communities in North Dakota:

Whereas it has been called to the attention of the city council of the city of Jamestown, N. Dak., that curtailment of railway mail service to communities which comprise the trade area of the city of Jamestown is being considered; and

Whereas such curtailment of railway mail service will result in inadequate mail delivery to the communities said trade area because of suggested "closed pouch" mail service; and

Whereas U.S. Port Office Department has inaugurated highway post office service in other communities, which type of service would give even better service than that obtained through railway mail service: Now therefore, be it

Resolved by the city of Jamestown, That the proposed Jamestown to Minot highway post office service be encouraged and established and that the U.S. Postal Department and the congressional representatives of North Dakota be requested to support and consider such a proposal.

Attest:

F. P. GILRONAN,
City Auditor.

Approved:

WM. WESTLEY, *Mayor.*

Grassroots Opinion Opposes Farm Acreage and Price Supports

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. PELLY. Mr. Speaker, since I introduced H.R. 10350 to end the present farm subsidy program I have received strong indication that the American people are fed up with agricultural supports which cost billions of dollars a year and are a failure so that farm income goes down and Government-owned surpluses go up.

Here are some samples of grassroots opinion.

The editor of the American Agricultural News Digest in New York wrote:

I want you to know how heartily I approve of your farm bill calling for repeal of the entire farm program and the restoration of a free economy to farmers.

A wheatgrower from Prosser, Wash., wired:

Congratulations on your stand on farm program.

A businessman from Shelton, Wash., said in a letter:

Commendations on your proposal to repeal price suport subsidies of agricultural products.

From Boston came this message:

Congratulations on honesty over expediency, Congressman.

A housewife in Seattle put it this way:

It was certainly wonderful to read in the Seattle Times of your present endeavors in regard to the discontinuance of price supports to farmers. This issue has been a political football so long that something really needed to be done.

Here are some other comments:

One of my pet peeves is the so-called farm supports and the soil bank. Reduce the scandalous cost of financing this program of paying the farmer and cost of storage.

Where there is starvation, I would say take off all price supports and use the surpluses for that purpose.

Price-support programs were instituted to prevent the sudden collapse of prices as occurred following the First World War; to maintain high-level supports amounts to rank injustice to the rank and file of our citizenery; i.e., tends to maintain a high cost-of-living level, which in turn brings on the constant turmoil for higher wages, and this latter trend will, if not definitely checked, lead to ungovernable inflation.

I think agriculture price supports should be abolished.

Regarding problem of excessive Federal grain storage, farm price supports, etc., I agree with you wholeheartedly.

Agriculture support—silly. Cut 'em out.

I favor reduction of agriculture price supports.

We urban dwellers who are not farmers recognize that the Federal price-support bill

had as its basic motive the gaining of farmers' votes, but resulted in enormous surpluses while consumers are paying increased prices and paying income taxes to pay the farmers.

All price-support subsidies should be repealed.

Price supports should be abolished; it is a detriment to the farmer and the whole Nation.

This farm program is a disgrace to the Nation. Since we spend $1½ million a day for storage, I'm in favor of giving the foodstuffs to needy people overseas.

The farm program is a dismal failure. Every legislator who believes in the American way should support your bill.

I am delighted to read in the morning paper that you introduced a bill to repeal the entire farm-support program.

If we are to continue economic aid, it should be with the surpluses of wheat, cotton, and what have you, thereby reducing cost of storage, etc.

Yes, on reduced farm programs—drastically reduced and reevaluated.

Adam Clayton Powell, Jr., the Angry Voice of Harlem

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the November issue of Esquire magazine:

ADAM CLAYTON POWELL, JR.: THE ANGRY VOICE OF HARLEM

(By Dan Wakefield)

On a humid Sunday afternoon in Harlem, the Reverend Dr. ADAM CLAYTON POWELL, Jr., stood in the pulpit of the Abyssinian Baptist Church—not, at the moment, as his people's minister, but as their congressional Representative—and spoke of the Power Elite, David and Goliath, Tammany Hall, and Jericho. That morning he had appeared in the same pulpit in the flowing black robes of a minister of the Lord, his bearing stern and erect, but now in the afternoon his head was slightly bent and he wore with his three-button dark-blue suit a trace of mortal weariness. His unmistakable dignity was altered, though not in the least diminished, by the change in role and costume. Mixing the troubles of Job with the threats of the Hidden Persuaders, he looked out over the audience with the confident command of a concert conductor, leading the people to a state of passionate acclaim more common to revival meetings than political rallies. At one point he stopped, removed his black-rimmed glasses and leaned forward to explain that the reason he was always especially honored in Washington by the consulates of the new African nations was not because of his personal achievements, but because he represented the people of Harlem.

"Because," he slowly, deeply intoned, "I—am—you."

And the roar came back from the audience: "Yes. Yes."

Yet ADAM POWELL is as different in most respects from his congregation and constituents in Harlem as perhaps could be possible. His skin is light enough to pass for white, his income averages around $40,000 a year, his education includes a B.A. from Colgate, an M.A. from Columbia, and a D.D. from Shaw University; he has traveled from Bandung to Berlin, from Manila to Madrid, and only once since 1950 (because of illness) has he missed attending the Salzburg Music Festival; until recently he propelled himself through the streets of Harlem and Washington in a much-publicized Jaguar or a Nash-Healy sports car. (POWELL says the Jaguar was 8 years old and the Nash-Healy second-hand, and therefore no longer a mark of his affluence—though surely they remain a mark of his taste.) The 336,441 people of New York's 16th Congressional District have returned him to Congress by overwhelming majorities for 8 consecutive terms, and if he is, as charged by his enemies, a "demagogue," then he is quite a different kind from the Huey Long variety, who appears to the masses he directs as a personality with income and intellct no different from their own. The masses who support him do not see their reflected image in ADAM POWELL—but rather the image of what they, even as American Negroes, might become.

In the teeming world of Harlem, the Nation's largest Negro ghetto, the unwritten laws of political life that operate in the rest of the Nation are often reversed. On the national scene, it has become an accepted political cliché that a candidate is cursed by being labeled an egghead, and must show himself to be "just one of the boys." In his second attempt at the presidency Adlai Stevenson constantly fought against his public image as an intellectual and aristocrat, and as part of that effort adopted as his emblem the shoe with the hole in it. ADAM POWELL is as likely to appear in public with a hole in his shoe as is Aristotle Onassis. Whereas Stevenson attempted to bring the language of his speeches down closer to the level of the crowd, POWELL raises the language of his speeches above their heads—and in Harlem they scream for more. When asked once on an interview program what his Harlem constituents felt about his high standard of living, POWELL said: "Well, I wouldn't say they hold it against me; in fact, I think the people of my community love the fact that I live like I do and yet I am with them in their fights. * * *"

Not only his financial independence, but his light-colored skin could allow POWELL to put himself above the battle for Negro rights, and both he and his enemies feel that this is another factor that adds to his appeal. "One of the things that gives me strength," POWELL says, "is that people say, 'Here's a guy who could live white, be white, but he isn't—he's part of our community.' * * *"

Besides the lack of necessity to be "like the crowd," one of the significant facts of political life in Harlem that runs counter to the national mood is the spirit of militancy and noncompromise. POWELL has been both a creator of this spirit and, perhaps more importantly, a product of it. In the midst of the "age of Eisenhower," when leaders of both political parties are noted for their tendency to veer toward the middle of the road, the dirtiest word in the vocabulary of Harlem politics is "moderation." This does not mean that Harlem is, or has ever been, a hotbed of political radicalism in the broad sense; it does not mean that Harlem voters are necessarily opposed to moderation or even conservatism in matters such as foreign aid, atomic testing, government ownership, offshore oil, or natural gas. It means that there is only one real political issue in the community—civil rights—and on that issue there can be no compromise. Muted by the distribution of congressional districts that sliced up Harlem and gave the Negroes of New York City no majority in any district and no representation in Congress until the reapportionment of 1943, Harlem wanted the strongest, the most uncompromising voice it could find when it finally had the chance to make itself heard in Washington. It chose, by a combined total of 78 percent of the vote in all three primaries—Democratic, Republican, and American Labor Party—a 35-year-old minister named ADAM POWELL.

The first political hero born at the Harlem polls could claim, if not for himself at least through his father, the old-time qualifications for American political success that long have been closed by the 20th century to his white contemporaries. POWELL's father—the Reverend Adam Clayton Powell, Sr.—was born in a one-room log cabin in Franklin County, Va., and taught himself how to read by studying the Gospel of St. John one winter by firelight. The family's life was so obscurely rural that he didn't know what town they lived near. He saw a clock for the first time in his life at the age of 10; a train at the age of 11. From such beginnings he raised himself to study at Yale University and eventually take over the pastorship of the Abyssinian Baptist Church, New York's second oldest Baptist congregation and the oldest Negro Baptist congregation in the North. He built it into one of the largest Protestant churches in the world, with more than 10,000 members, and under his leadership it housed itself in the Gothic structure of stone and steel that it now occupies on Harlem's 138th Street, at a cost of $400,000, which the church paid off in 4 years. Samuel Cluff, a veteran deacon of the church, recalled recently of the Rev. Powell, Sr. (who died in 1953): "He was three men in one—a great leader, a great preacher, and a great financier."

ADAM Jr. would never have to worry, as his grandfather once had, over whether the family would be able to pay the $1 monthly rent on a log cabin. He was born in New Haven in 1908 and 6 months later the family moved to New York, where the Reverend Powell, Sr., took over the well-heeled congregation of the Abyssinian Church. ADAM, JR., would never experience the wounds of poverty and slavery; but he learned them as a living part of his heritage, as surely as the son of an aristocrat is taught the meaning and responsibility of his family background. At the age of 10, ADAM POWELL, Jr., climbed on a chair and traced with his hand the letter "P," 9 inches high, which was burned in the back of his grandfather, a branded slave.

POWELL's own personal burdens, as befitting the advance of his family up the scale of American society, were less certain and more complex. His maternal grandfather was white, and his own complexion was light enough to make him slightly suspicious to both Negroes and whites. POWELL likes to tell the story of his first violent encounters with prejudice on the streets of New York:

"When I was about 12 we moved into 136th Street and we were one of the first Negro families there. Well, there were always fights between the Negroes and the Irish—we called 'em 'Micks.' I remember one night my mother sent me out to the bakery and I was stopped by a bunch of Negro kids and they beat me up because they thought I was white. The next night I went out and a gang of Irish kids beat me up because I was a Negro. Later that week, another group of Negroes stopped me and they said, 'What are you?' I said, 'Mixed.' Well, they thought I said 'Mick,' so they beat me up."

Just 10 years later, after POWELL had returned home to Harlem with a B.A. from Colgate to become assistant minister of his father's church, there were few "gangs" of any kind in the neighborhood who would have mistaken his race or his power. In the

fall of 1930, as the great depression hit Harlem like a hurricane, POWELL's father organized a community-relief bureau at the Abyssinian Church and put his son in charge. Young ADAM became the dispenser of some of the few good things in the lives of thousands of Harlem Negroes who needed food, clothes, and shoes. He was a new, bright, and educated face, backed by the most powerful church in the neighborhood, and he soon was looked to for bigger things. That same year a group of doctors who were banned from Harlem Hospital because they were Negroes came to young ADAM to ask for help. The 22-year-old POWELL organized meetings, picketings, delegations to medical and city officials, and culminated the protest with a mass march of 6,000 Negroes on city hall. The board of estimate was in session, and POWELL, as chairman and representative of the throng outside, got a hearing, and stated his demands. The eventual results were not only the granting of practice in Harlem Hospital to the five doctors, but the establishment of an interracial staff.

"All my life" POWELL was later to write of the day at city hall, "I had prepared myself for that opportunity. That day when I saw 6,000 Negroes streaming to city hall by car, bus, subway, and elevated lines I knew we had within our hands a powerful weapon that could shake the earth—a weapon which, if disciplined and mastered, should cut through the false democratic veneer of America into the rotting cancer of racial prejudice and bring to pass every dream of our unlettered, branded grandfathers. We set out to use that weapon. * * *"

Exactly how great POWELL's own part was in using that weapon has since become a matter of controversy between his supporters and his enemies. His detractors charge that the "real work" was done by the many other groups and individuals on the scene at that time of Harlem's first political awakening. It was a time when Harlem was surging with protest, pickets, and action, and POWELL himself admits: "There were others before me and others at the same time—I was not the first one or the only one." But POWELL was the one who organized a neighborhood "coordinating committee" that was, like POWELL himself, in the midst of all the great happenings: the picketing of stores on Harlem's great thoroughfare, 125th Street, that brought the first Negro right to work as well as buy in his own neighborhood; the picketing of neighborhood drugstores that ended with all of the Negro pharmacists in Harlem employed; the first token employment of Negroes by the city light and telephone companies; the first Negroes hired as salesmen in the community for the beverage industries; the first mass rent strikes; the first mass protest meetings. NAACP Executive Secretary Roy Wilkins, who was critical of the flamboyant oratorical style and personal egotism of POWELL's book, "Marching Blacks," nevertheless wrote in his review of it that:

"It is not to be denied that he [POWELL] played a leading role in mobilizing inarticulate sections of the Harlem population during the dark and seemingly pathless days of the great depression. He taught them how to ask and work for what they needed, and what, it may be added, was due them. Now patiently, now in frenzied, near-demagogic speeches, he taught them and he led them. If he asked them in return to send him to the city council and then to Congress they still, in all honesty, have the best of the deal. The new power he has taught them to use is cheap at the price."

The people of Harlem have agreed with that judgment in overwhelming numbers for 18 years, from the time they sent him as the first Negro to sit on the New York City Council in 1941, the first Negro from the East to serve in Congress in 1945, and throughout his latest and bitterest test when they sent him again, overwhelmingly, back to his eighth term in Congress in 1958.

In the spring of 1958 he was dumped by the regular Democratic organization in New York City (Tammany Hall) on grounds that he was a "traitor" to the party because he supported Eisenhower in 1956. Despite his long-tested appeal as a votegetter, the city leaders of the Republican and Liberal parties were just as solidly opposed to giving him their endorsement. In his long career, POWELL has been unswervingly faithful to two beliefs, both of which, in their own way, can be painfully disturbing to political party leaders: the first is Negro rights, and the second is what he calls political independence and the party leaders call disloyalty.

In his early days on the city council, POWELL told an interviewer: "Under Father Abraham, the Negro was blindly Republican, and under Father Franklin, he was blindly Democratic. Those were large mistakes. * * *" The Negro, he said, should never become a "party wheelhorse." POWELL has remained impeccably consistent to that early-stated principle of inconsistency. He has supported whatever party or candidate could help him or his cause at the moment, including the extreme leftist American Labor Party, the Republican Party, and the Democratic Party; he has endorsed politicians ranging from the American Labor Party's Congressman Vito Marcantonio (in his early days in Congress he voted with Marcantonio against such measures as the Marshall plan) to, under the proper conditions, the South's LYNDON JOHNSON.

It was not too surprising that when the Tammany leaders dropped him in the spring of 1958, the city leaders of the Liberal and the Republican Parties—who had also been bruised by his broken-field running—refused to pick him up. As the Negro newspaper, the Baltimore Afro-American, editorialized, "At the moment it looks like everybody is against ADAM but the people."

The people were the Negroes of the largest ghetto in the Nation's "most liberal" city, and the opposition to their chosen representative by the downtown leaders of the city's political parties bitterly emphasized Harlem's separation from the outside world. And it further increased their already heavy resentment to Tammany Hall and its local functionaries who carried out the wishes of the machine above the wishes of the people. As the Reverend James H. Robinson of the Church of the Master, one of POWELL's most outspoken critics in Harlem, wrote at the time of the campaign, "The Democratic leadership both of Harlem and this city seems neither to have fully understood nor accurately gaged the basic political attitudes, unspoken but deep resentments, and desires of the people of Harlem. * * *"

The three main complaints raised against POWELL, not only by Tammany Hall but by almost the entire white liberal leadership of the city, happened to be matters either of little consequence or of great popularity to the majority of the people of Harlem. The first complaint, given as the official reason for his ouster by Tammany Chief Carmine DeSapio, was that POWELL had supported Eisenhower in 1956. To that, Harlemites could only point out that the Dixiecrats who bolted the party were welcomed back and lost no party seniority in Congress because of their defection. The second complaint, which rankled deeply among the white liberals, was POWELL's introduction of the amendment to the Federal school construction bill which would have blocked funds to segregated schools, and thereby further dimmed the hope of the bill's passage. But among the people of his district, that amendment was one of the most popular measures that POWELL has ever introduced. It was backed by the NAACP, hailed by the Negro press, and was one of the main reasons cited by A. Philip Randolph, the only Negro vice president of the AFL–CIO, in his endorsement of POWELL. When Joe Overton, a rising young leader in Harlem and the new president of the Manhattan NAACP, was recently asked what he thought was POWELL's most important achievement in Congress, he answered without a moment's hesitation: "The Powell amendment to the school-construction bill." The final complaint against POWELL raised by outsiders was concerned with his indictment for income tax evasion. But in the long-exploited and economically deprived community of Harlem, the charges of holding back money from the Government caused no great consternation; such troubles failed to impair the image of Joe Louis in Harlem and will hardly impair the image of ADAM POWELL. Some indication of the community feeling can be found in the fact that on the Sunday after the indictment was brought, seven ministers of Harlem churches preached sermons in POWELL's defense.

So the issues of POWELL's dismissal were stated, the lines were drawn, and a Democratic primary in Harlem between two Negro candidates quickly became, in many of its overtones, a racial contest. The most highly publicized and perhaps least meaningful aspect of the racial nature of the campaign was a remark by POWELL made at a rally of his own campaign workers that Carmine DeSapio, head of Tammany, and Hulan Jack, Tammany's principal Negro functionary and the Borough President of Manhattan, had better not walk the streets of Harlem, or "We won't do what the Communists did to the Nixons in South America, but we will make it mighty uncomfortable for them." The NAACP quickly issued a public statement disassociating itself from this type of extreme racialism; POWELL and others of his supporters who had been at the meeting quickly claimed that it was said jokingly and was not meant to be, nor was it, taken seriously by the group that heard it.

Strictly speaking, it was not a "racial" attack at all, in that POWELL made no discrimination in his choice of targets: One was a white man, one a Negro. And in fact one of the main themes of POWELL's campaign, though it received far less publicity, was, as he declaimed at one rally, that the Negro today could not simply base his struggle against any one racial or political or geographic group, but that "the enemies" now were "phony liberals of both races." The deepest racial aspect of the campaign lay not in oratory but in the actual separation of sentiment and alinement for and against POWELL; every major Negro figure in American life, from Philip Randolph to Sugar Ray Robinson, Thurgood Marshall to Martin Luther King, were for him; the liberals of the white community who had most often been the Negroes' allies were almost all against him. "That alliance," wrote Murray Kempton in the liberal New York Post, "can never be the same."

At a rally at the Abyssinian Baptist Church after Tammany Hall had announced that it would run Harlem's city councilman Earl Brown against POWELL in the Democratic primary, Jackie Robinson stood before the packed assembly and expressed the terms in which so many Negroes saw the contest:

"I don't intend to get myself into politics. But I don't believe this is a political issue between Dr. POWELL and Earl Brown. Brown is a fine man and he has done a fine job, but this can't be a battle between Brown and POWELL. This is a chance for Negro America to show its unity."

Tammany's withdrawal of support from a Congressman whose district had shown massive support for him during 17 years of political life was the final affront—not only to Harlem but to Negroes everywhere who felt that political parties had used them, bossed them, and rarely consulted or respected them.

The heat of the campaign was as much stirred by resentment against Tammany as it was by enthusiasm for POWELL. And POWELL himself, with his usual talent for finding and striking the nerve of any public issue, proclaimed:

"The one main issue in this campaign is that the downtown political bosses shall recnize and respect with dignity the responsible will of the people of Harlem."

It was not, as Jackie Robinson said it could not be, a battle between Brown and POWELL. It was a battle between Harlem and Tammany Hall; between Negroes and a white-run political machine that had given them little in return for their vote and was telling them now whom to vote for. Earl Brown, the mild-mannered, talented, and hard-working city councilman whom Tammany pushed into the role of political suicide against POWELL, later reflected on the nature of the battle: "I was an orphan in the whole damn thing."

And POWELL—as usual—was a symbol.

It is POWELL's particular political genius that he has managed to make himself a symbol—not only of the Negroes but more specifically of their protest—and that all of his public actions reinforce that image. There were many others who fought in the economic protests of Harlem in the thirties, but their names are largely forgotten now, and the one name remembered as the champion of those times is ADAM POWELL. He lets no one forget it.

In the spring of 1959 POWELL went to speak at a meeting of local 1199 of the Retail Drug Workers Union, which was fighting to organize the 30,000 workers—mainly Negro and Puerto Rican—of the city's voluntary hospitals, most of whom were averaging less that $40 a week, sometimes for a 6-day week. POWELL had picketed with this union in the thirties when it organized the drug-stores in Harlem, and he told the audience of hospital workers who were fighting for union recognition:

"Tomorrow night at 6:30 when you walk the picket line at Knickerbocker Hospital, I am going to walk it with you—I am an old picket walker too. * * *

"Oh, yes. That's right," rose up with the cheers from the crowd.

When several hundred workers walked back and forth the next night in front of Knickerbocker Hospital, ADAM POWELL walked with them, carrying a sign which said: "A $30 a week wage is a disgrace to our country." When he left, he had to hold up his hands for silence to quell the spontaneous cheer that broke out.

A few hours later POWELL walked into his political club on 145th Street, a large cigar in his mouth, and explained to a few of his workers that when he left the picket lines, "I went down to '21' just to have a drink, but the people I was with made me stay for dinner."

Thus refreshed from the wars of the oppressed with a dinner at "21," ADAM POWELL sat down at the desk in front of the rows of folding chairs and prepared to serve his constituents. A columnist in the Negro paper, the Amsterdam News, had reported that week that POWELL had been absent from these Monday club meetings for the past 4 weeks while busy consulting with Fidel Castro in Cuba.

It is one of the inside Harlem complaints about POWELL that he spends too much time globetrotting to foreign political events instead of taking care of his own district. But his dramatic safaris have bolstered his image as a champion of the colored races everywhere. He has made Harlem conscious of the struggle of colored peoples throughout the world, identified his own career with that larger struggle, and used it as a lever to prod the U.S. Government with the need for solving its own discrimination problems. "Men like Nasser and U Nu don't give a damn about natural gas or rigid price supports," he has said, "but they do care about the way this country treats its black citizens." POWELL has dramatized the U.S. Negroes' connection with the world's colored population by participating in ceremonies of statehood at Ghana, at the founding ceremonies of the West Indies Federation, and, most importantly, at the Bandung Conference of Asian and African nations. The State Department sent no U.S. representative to Bandung, but POWELL went on his own, held a press conference with the Communist reporters and befuddled them by saying that the Negro was making such progress in America that it was now a distinction to be a Negro in the United States. On his return, the House of Representatives passed a special resolution praising him for his action at Bandung. As for his recent attentions to Cuba, POWELL says what happens there is of importance to the people of Harlem because there are thousands of Negroes from the West Indies in Oriente Province, "And besides, I think the people of my district are interested in freedom everywhere."

POWELL is often away on such junkets as the conference with Castro in Havana—but when he is home in Harlem he knows how to make the appearance go the farthest. At most political clubs the leader stations himself in the back room and only grants entry to special cases. When POWELL comes to his club he sits at the front of the room in full view. "I do it on purpose," he says. "It gives the people a better feeling."

POWELL's club is the outgrowth of his battle with Tammany, and the base of operation for carrying out his pledge to destroy Massa Carmine DeSapio's plantation philosophy that fills his log-cabin clubhouses with Yes-suh Uncle Toms. After his victory over Tammany in the primary, POWELL gave his support in the fall to Democrat Averell Harriman in the New York gubernatorial race, in return for reinstatement in the Democratic Party and the hope of preserving his benefits of seniority in Congress. But he reserved the right to war against the Tammany district leaders who had opposed him, and has maintained the club for that purpose.

POWELL's critics claim that before he mobilized the club for the Tammany war he was seen even less by his constituents, and that few people in the district even knew the address of his local congressional office. Even some of his supporters claim that he tries to do too much and does not spend enough time with the more unglamorous and routine work that a Congressman performs by being regularly available to the people of his district. POWELL's concern with "the People" expresses itself in the capital-letter sense of the term. Perhaps the best analysis of his attitude is summed up in a story that he tells about himself:

"A few years ago I took a Rorschach test. The doctor who analyzed it said: 'There's nothing wrong with you, except that you're crazy about people, but unable to love an individual person.' "

Yet POWELL has the ranks behind him, and many of them who are quite aware of his shortcomings forgive him all else for his record on civil rights. The New York Times, which has often been very critical of POWELL, declared once: "Even his most severe critics admit that he has done more to dramatize the civil-rights issue than any other man in modern times."

He has introduced more civil-rights legislation than any other Congressman—a total of 67 bills and 22 amendments on civil-rights issues during his 7 completed terms in Congress. Few of these measures have actually passed, but they have often been later incorporated in party platforms, in omnibus civil-rights bills, and in changes of Government policy. POWELL describes the nature of his record in the House as an unrelenting pressure to keep before Congress the question of civil rights and equality for all American citizens. His critics claim that he relies on nothing but oratory, and doesn't do the hard spadework necessary to bring the issues to passage—but often his oratorical protests alone lead to quick and real accomplishments.

A dramatic example of his successful use of this technique has been chronicled by Robert J. Donovan, the New York Herald Tribune correspondent who was given access to White House files to write his book on the inside story of the early years of the Eisenhower administration. On June 4, 1953, POWELL sent an unexpected telegram to Eisenhower (the unexpected telegram is one of his favorite weapons) saying: "The hour has arrived for you to decisively assert your integrity. . . ." He said that while Ike was proclaiming the principles of nonsegregation in Federal institutions, his subordinates had "virtually countermanded" those principles: schools and other facilities were still segregated on many military bases, and 47 veterans hospitals still practiced segregation. Donovan said Ike was "put out" that POWELL hadn't consulted with him before sending a public telegram, but nevertheless dispatched an aid to confer with him. The aid pledged that action would be taken if POWELL would make a statement that he was satisfied that things would be changed. POWELL did, and things were changed. Donovan says that after this conference, "Segregation was soon abolished on all Navy bases where it was still practiced. Indeed in the months to come the desegregation of all the Armed Forces, which had begun in the Truman administration, was for all practical purposes completed." And the desegregation of the veterans hospitals, which the NAACP had been fighting to accomplish for a number of years, was finally made fact.

POWELL is only one of four Negroes in the present Congress, and although he is undoubtedly the best known, he has neither the longest tenure nor the best reputation as a legislator. WILLIAM DAWSON, a Negro who is the Representative from Chicago's South Side, has served in the House longer than POWELL and has often been called "the most influential Negro in Congress." His approach is almost the opposite of POWELL's—he is known as strictly a party man, and seldom raises his voice in the kind of individual protest that POWELL has made a specialty. The difference in the two men is perhaps best summed up in a remark of Louis Lautier, Washington correspondent for the national Negro press association: "Whenever you talk to DAWSON, it's not supposed to be for publication; when you talk to POWELL, everything's for publication." DAWSON is known as a congressman's congressman and has won respect and influence as a legislator through his hard work in the important routine and the unglamorous toil of committee duties.

POWELL's political nonconformity has earned him the opposition of most of his fellow members on the powerful House Committee on Education and Labor, which is headed by North Carolina's GRAHAM BARDEN. BARDEN and the southern members of the committee have looked upon POWELL with disfavor for the obvious reason of his militant stand on civil rights. His switch to Ike in 1956, plus the Powell amendment to the school-construction bill, alienated him from the liberal members. This twin opposition cost him a subcommittee chairmanship which his seniority (he is the second-ranking member on the committee) entitled him to. When the new Congress convened in February of 1959 the Education and Labor Committee members voted to bypass the seniority rules and let Chairman BARDEN make the assignments—which obviously meant no subcommittee chairmanship for POWELL. When POWELL expressed his surprise that many of

his Democratic colleagues had voted against him on this, Representative JOHN H. DENT, Democrat, of Pennsylvania, snapped back: "You are not nearly as surprised as we Democrats were when you announced that you would support Eisenhower in 1956."

On of the colleagues on the committee who felt that POWELL was treated unfairly pointed out privately that the liberals who were angry with him about the school amendment didn't take into consideration the fact that the man who got the subcommittee chairmanship on labor POWELL was entitled to by seniority was PHIL LANDRUM, Democrat, of Georgia, who was against the entire Federal education bill, and has a stanch antilabor record to boot. This colleague went on to say that many of the committee's members were critical of POWELL because he doesn't come often to hearings, "But there are a lot of people on the committee who don't come any more than he does. I'm sorry that he doesn't do more—he's a brilliant man and a brilliant speaker, and he could do a lot more for his people. But then these are sins of omission or neglect and could be charged against any number of Congressmen. They certainly aren't good reasons for depriving him of a chairmanship. If we have seniority rules we ought to use them."

On POWELL's other committee, the House Committee on the Interior and Insular Affairs, he has a much better relationship with his colleagues, and this year was named as chairman of its Committee on Mines and Mining. "The atmosphere is completely different on that committee," POWELL says. "We get alone fine. I just don't have much to do with the Education and Labor Committee—it's humiliating.

Though DAWSON may be more respected among all his colleagues, it is POWELL who has established himself as the main voice for his people in Washington—not only in behalf of the Negroes of Harlem, but throughout the country. Louise Dargan, POWELL's Washington secretary, says that nearly half of their office mail comes from people outside POWELL's own district—mainly from Negroes in the South. Of the Negroes in Congress, DAWSON no doubt has the most legislative power; he is the workhorse. POWELL—once again—is the symbol.

The POWELL symbol is many sided, and includes not only the aspect of protest for Negro rights, but the possibility of high-style living—financially, educationally, and socially—for a Negro in present-day American society. The motto of the Abyssinian Baptist Church last year was "joyous living," and as a leading practitioner of that creed, its pastor has come under heavy criticism, though mostly from outside his own community. Julian Mayfield, who has written several recent novels about life in Harlem, says: "Anyone who thinks they can hurt POWELL by criticising his trips to Europe and his sports cars is just out of touch with Harlem. The people are proud of that, and anyone who criticized him for it would only drive the people closer to him."

POWELL always answers back frankly in defense of his way of life—in all its aspects—as was illustrated recently on a television interview with the probing TV reporter, Mike Wallace:

Wallace: Newsweek continues to say: "He [POWELL] is and always has been a great one for the ladies." Now that is a Newsweek magazine comment.

POWELL (interrupting): Now, Mike, you are too, aren't you?

Wallace: Indeed, yes.

POWELL: Yes, I thank you.

Wallace: Uh, that is a comment about your style of living?

(Pause.)

POWELL: Yes, go ahead.

Wallace: I'm curious to know your reaction.

POWELL: I have no reaction. I'm a normal human being.

In later recalling that exchange in the interview, POWELL said that after the show Mike Wallace asked him why he got such a grin on his face when he was asked about the ladies. "I told Mike that I was thinking of the time when Hazel (POWELL's wife, the pianist Hazel Scott) was playing in Miami Beach and a reporter went up to her and said there were reports that I was going out with women in New York, and she said, 'Well, what do you think he is, a homosexual?'"

POWELL is still married to Hazel Scott, his second wife, and although she is living in Paris, POWELL has told reporters that they are "on the friendliest terms."

"People criticize me for being a high-liver," POWELL says, "and say that I'm a minister and yet I've been divorced, and that I like my wine and women. Well, take a man like Paul Tillich, who is a capstone of Protestantism. No one condemns Tillich for being a high-liver, but he's been divorced too and there was an article about him in Time that said he fashioned much of his philosophy in drinking sessions. Even said he keeps a bottle of brandy in his desk—Hennessy, they said." POWELL smiled. "Personally, I prefer Cordon Bleu.

"By the way," POWELL asked, "Do you know Tillich's work? My Easter sermon was about his philosophy of religion."

POWELL never hesitates to introduce the most complex intellectual concepts in his sermons, and the congregation is often stirred to revival-meeting fervor by a presentation of the latest ideas in philosophy, sociology, or theology.

Rather than the threat of damnation after death of the hope of eternal reward, POWELL's sermons, like his political speeches, are centered on the promise of fulfillment in the here and now. And also like his political speeches, his sermons preach the doctrine of nonconformity:

"We Americans live a dull life. We punch the clock and we turn on the TV and the hi-fi and that's it. The women's magazines even plan your meals for you now. We have whole lives planned for us—I tell you, break the shackles of routine and dullness and act as an individual. Start daring, start being imaginative. If a thousand people are walking single file, that's the signal to break ranks."

POWELL's own use of that doctrine was explained most revealingly in an interview in his office at the back of the Abyssinian church. Leaning back in the chair behind his desk, POWELL puffed on a cigarillo and answered questions with the carefree frankness and flamboyance he has made his trademark (pausing to say once: "I don't mind being called 'flamboyant'—that's a kind of antichrist term among the cult of mediocrity"). When asked if he still intended to run for mayor of New York, or some other high city office, as he had announced in December of 1958 in the New York Herald Tribune, POWELL said:

"I don't ever intend to run for city office. I say things like that just to keep the boys off balance. Just like when I said recently that I might support LYNDON JOHNSON for President. Most things in politics today, in fact in our whole society, are dull and routine and predictable. As Samuel Hoffenstein once wrote, most people's motto is, 'Come weal or come woe, my status is quo.' It's the cult of mediocrity—you have to shake 'em out of it."

POWELL took a puff on his cigarillo and smiled expansively. "My philosophy is, don't let 'em be at ease in Zion."

The greatest hope for changing the status quo in race relations, POWELL said, lies in the South:

"More and more I'm coming to realize that the northern liberal is increasingly hypocritical and the southern liberal is increasingly honest. Negroes know this; Negroes accept this. I have great hopes for something daring to happen in the South. The day a white stands up in the South who has enough stature and talks the truth, you'll see a new day. The future of the Nation rests on how the Negro and the white in the South move out of their orbit and thrust ahead to a new pinnacle. I believe the future of America resides in the South, in the daring relationship of the whites and Negroes."

As for his own role in the future and its battles, POWELL said:

"I've been in public life for 29 years—that's a long time—and I've just about had it. Integration is almost a fait accompli in the schools. The next fight is in housing, and that will come in the next 5 years. I think the ball is rolling now and I don't think anyone can stop it. There are a few last things I'd like to do, though—for one thing, unite the Negroes and the Puerto Ricans.

"Another thing I'd like to do is see some of the younger fellows raised up into leadership in Harlem; and, also, force the labor movement in New York City to get its perspective again regarding the Negro. The Negro has been pushed aside by the big 'liberal' union."

As POWELL talked of the "few last things" he wanted to do, he hardly looked like a man who had reached the end of his career. He appears much younger than his 50 years, and only the first scattered shots of gray in his black mustache and his thick black hair give any clue of advancing years. Yet he has had a good deal of trouble with his health for a man his age:

"I'm not a particularly well man, you know. I need 10 hours' sleep a night. I've had heart attacks in 1947, 1952, and 1957—not coronaries though, not really serious. The doctors say it's due to overtaxing, overwork."

When the questions were over, POWELL led the way out to the two-tone brown station wagon belonging to the Abyssinian Baptist Church and drove down 125th Street. As we passed the Alhambra Theater, POWELL slowed the car and pointed a finger: "You see that movie? Up until about 15 years ago, Negroes who went there had to sit in the balcony."

The station wagon picked up speed again, gliding past the neon lights of the main drag of Harlem. It is a Harlem that still remembers when its own people had to sit in the balcony in their own neighborhood theater, a Harlem that is tired of humility as well as humiliation, and found in the man behind the wheel of the station wagon a spokesman to shout its pent-up protest to a world that had so long failed to listen.

Anniversary of Birth of Gen. Tadeusz Kosciuszko

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 25, 1960

Mr. DERWINSKI. Mr. Speaker, on February 12 we celebrated the anniversary of the birth of Gen. Tadeusz Kosciuszko, the Polish general and national hero who came to America to fight under George Washington in the Revolutionary War. To the high-school students of history, Tadeusz Kosciuszko is

known as one of the European officers who came to America to fight for the cause of freedom. In his own native land of Poland, he was the military leader leading his countrymen in battles against the powers which were partitioning his country.

Mr. Speaker, today as never before, he remains an example of the courageous, never-ending fight for freedom that has marked the history of the Polish people. At the present time, when Poland is under the domination of the hated Soviet imposed Communist rule, Kosciuszko remains a vivid source of inspiration and a constant source of strength to the people of Poland in their determination to some day enjoy the blessings of freedom.

Criticism's Critics

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. McCORMACK. Mr. Speaker, the editorial "Criticism's Critics," appearing in the Washington Post of February 14, 1960, which I include in my remarks, is sound and timely.

As the editorial states:

The attempts to stigmatize the exercise of criticism are far more frightening than the bogeys of a garrison State which apologists are so fond of making.

It would be a sad day for America if the efforts of some Republicans were successful in silencing voices who do not completely agree with the President on what policies relating to our national defense are for the national interest of our country.

When dedicated Americans are trying to arouse public opinion to the necessity of increasing our national defense, to accuse them of "politics" is not only dangerous, but is a sign of weakness on the part of the administration.

The American people are entitled to all of the facts and information possible, together with information as to the military strength and power of the Soviet Union, in order to form a sound public opinion.

When charging "politics" Republicans should answer the question "Are Generals Taylor, Gavin, and others playing "politics" in their effort to warn and alert our people?"

In the national interest Republicans are playing a dangerous game when they play this type of politics.

The editorial follows:

CRITICISM'S CRITICS

President Eisenhower has always disliked wrangles, and it is hardly surprising that he deplores the controversy aroused by criticism of the defense effort. In this criticism no one has questioned the President's own sincerity in doing what he thinks right. What has been questioned is Mr. Eisenhower's judgment about the measures necessary to maintain American primacy and about the military expenditure the country can stand. In contrast with the proposed $41 billion military budget, the United States in fiscal 1953 sustained a military budget of $51 billion when the gross national product was some $100 billion less than it is today.

The argument frequently advanced by others that such criticism is injuring the country is more serious—and specious. Vice President NIXON—whose condemnation of a "numbers game" in missiles is in interesting contrast, as Senator HUMPHREY has pointed out, to his own performance of a few years ago on loyalty-security cases—has opined that too much talk about the United States becoming a second-class power might cause a potential enemy to miscalculate. Senate Minority Leader DIRKSEN observed after a White House conference the other day that security "should be safeguarded" and that "the comment on the submarines we have compared to the Soviet Union, the number of ships in different categories compared to the Soviet Union, the discussion of bases—I don't think that these things ought to be paraded across the front page."

Such premises seem to us fallacious on two counts. The first is the notion that the Russians are being treated to a lot of information they do not already have. If their intelligence is half as good as there is reason to think that it is, they have a pretty accurate knowledge of what the United States possesses in military capacity.

The second is the implication, connected with the above notion, that such knowledge should be secreted. It may be important to safeguard the details of weapons, but in the broad sense a deterrent is only as good as a potential adversary believes it to be. Most of the criticism of American defenses concerns inadequacies two or three years hence, some of which may yet be remedied. If present military power is as great as defense officials say that it is, then the administration ought to want the Russians to know about it. That is the way to prevent miscalculation.

Some of the criticism may indeed be wrongly based or ill-informed. But for administration spokesmen to imply that criticism of the defense program is therefore destructive—or to insinuate as General Twining did the other day that there is something disloyal in questioning the performance—is to assume a degree of sacrosanctity and infallibility that Americans have not customarily accorded their national leadership.

How, pray tell, are persons who are just as sincere in their concern for the country as the President is in his to attempt to increase the defense effort except through public comment and discussion? The attempts to stigmatize the exercise of criticism are far more frightening than the bogeys of a garrison state which apologists are so fond of invoking.

Anniversary of Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. DERWINSKI. Mr. Speaker, February 12 marked the anniversary of the birth of Abraham Lincoln. Perhaps no other American has represented the principles of truth and honesty more so than Lincoln. Little children in their grammar school classes learn early of the hardships that were Lincoln's and how he fought to educate himself and make of himself a better man.

He exemplified the courage and conviction of somebody who wants to go someplace. He proved that a person can rise even from the very humblest beginning. Sacrifice played a great role in Lincoln's life.

It was 100 years ago that he was elected to the highest office in the land—the President of the United States. Amid dissenters and those who called him a rube from the prairies of Illinois, he rose above these people and served brilliantly and wisely. He never will be forgotten.

At this time, it might be well for all Americans, especially elected officials who are probably more in need of example than anyone else, to read of Lincoln's life which was full of devotion to the people and the task to which they elected him.

Silver and Copper Interplay

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks, I include an article by Herbert Bratter which appeared in the Commercial and Financial Chronicle of December 10, 1959. Mr. Bratter, an expert in the field of money and precious metals, titled his article "Copper Strikes Bring Silver Issues to the Fore Again."

The article follows:

Because the copper strikeshave shut down mines, smelters, and refineries through which U.S. newly mined silver finds its way to the market, the white metal, nowadays used in a growing number of industrial products, has become scarce, the Treasury has been called upon to supply large amounts of silver to industry and mining interests are busy behind the scenes trying to make something out of the situation.

Were it not for Treasury sales of silver to industry, the latter today would have to fill its needs from imported metal. The intensified demand would cause world silver prices to rise. American mining interests would be happy to see that happen. But the sales which the Treasury is making to industry by virtue of powers granted by a 1946 law have the result of keeping the world price of silver from rising. This riles the silver bloc in the Senate. The miners desire a two-step program: (1) Stop Treasury sales to industry, thus making industrial consumers buy their silver on the open market at free market prices; (2) compel the Treasury to issue silver certificates against all the "free silver" it now holds, with the result that it will have to go into the open market and buy whatever silver is needed for subsidiary coinage and pay for it the going market price.

Apart from mining interests here and abroad, developments affecting silver are being watched by manufacturers—the so-called silver users—and by commodity traders. The silver users, who are organized in an association, were behind the 1946 law that first empowered the Treasury to sell silver to industry. They, of course, oppose the proposition that the Treasury cease selling unmonetized silver to industry at 91 cents an ounce so long as silver purchase laws are on

the statute books. What would please silver traders, particularly members of the Commodity Exchange, Inc., would be repeal of the silver transactions tax which was enacted in 1934 as part of the Silver Purchase Act. That 50 percent tax made it impossible to continue trading in silver futures, which is the business of the Commodity Exchange. Prior to 1934, during the period when silver purchases were being advocated in the Congress, the Commodity Exchange provided a futures market where demand and supply could be paired off by producers, users, speculators and governments with demonetized metal to sell.

WHAT THE MINING CONGRESS WANTS

Although mining interests have been subsidized for years they never relax their efforts to go out after more. A resolution passed by the American Mining Congress in September seeks to get the Treasury to stop selling silver to industry at anything less than $1.29 an ounce, as compared with its selling price of 91 cents. If the Treasury acceded, the price of silver all over the world would rise. The resolution asks that this step be taken to preserve "the Treasury's dwindling supply of free silver for future subsidiary coinage requirements."

But the very next sentence in the AMC resolution asks Congress to monetize all presently held "free silver," which means freezing it by issuing silver certificates against it and putting them into circulation. If that were done, the silver would not be used for making subsidiary coins. That is the miners' purpose: to freeze the silver.

At the September meeting an officer of the New Park Mining Co. proposed that the Government pay western miners $1.29 an ounce "to encourage production of additional needed silver" and simultaneously "eliminate a special sales price to selected buyers" in industry. Sales of free silver, he added, "artificially affect the world market price, penalizing the miner." No mention was made of the fact that the world price of silver has been artificially affected for years, due to silver purchase legislation, to the benefit of silver miners and other silver sellers everywhere.

Naturally, the silver users object to any steps which would increase the price of silver. Any increase in the return or price received by U.S. mine producers of silver, they say, would cause the world price of the metal to rise as well. A 10-cent-an-ounce increase, while putting $3,500,000 into the pockets of a few big copper-lead-zinc-silver mining companies, would cost U.S. industrial users $10 million a year. Of the latter sum, $6,500,000 would go to foreign suppliers, including the U.S.S.R. At a time when the Administration is exerting itself to restore balance in our international payments, an unnecessary increase in the price paid for foreign silver makes no sense.

With silver bullion increased 10 cents an ounce, consumers of silverware and other products using silver would find themselves paying still more, allowing for markups. Thus, a proposal which would curtail market supplies and add to the money supply—as the American Mining Congress wants to do—would be doubly inflationary.

Normally, when the price of a commodity is increased, there is a tendency for production of that commodity to increase. But a higher price for silver would not exert a corresponding stimulus to mine production for the simple reason that the bulk of our silver comes as a byproduct of other nonferrous metals. In most such mines the prices of copper, lead, or zinc, are much more important than the price of silver.

INDUSTRIAL USES GROWING

As one close observer puts it, the industrial demand for Treasury silver has been running wild this year. The copper strikes have not only shut off domestic newly mined supplies, but also foreign supplies, since customarily foreign ores and concentrates containing silver are treated in plants in this country.

Several times in recent years the Treasury has felt it desirable to use its legal power to sell surplus silver to industry, but never heretofore on the current scale. Demand for Treasury silver started in March, when nearly 3 million ounces were required. The next 5 months demand fluctuated between 1.6 and 3 million ounces. In September the Treasury authorized sale of 4,500,000 ounces to industry; and in October 6,300,000 ounces.

Time was when the chief uses of silver were for coins, tableware and jewelry. The fast development of photography, including motion pictures, has resulted in an annual consumption of about 30 million ounces of silver by that industry alone. Overall consumption in U.S. arts and industries during recent years has run in the neighborhood of 90 million to 100 million ounces a year, but the proportion going into silverware has been declining, thanks in part to the popularity of stainless steel, while that used by industry has been growing.

Today not a missile goes aloft from Cape Canaveral, not a jetplane from Idlewild that does not contain some silver. A good 25 million or more ounces of silver are used each year in the United States in the form of solders and brazing alloys in refrigerators and air conditioners, electric appliances, aircraft and rockets. About 19 million ounces are estimated to go into electric contacts in appliances and electronic equipment. More than 1 million ounces are said to be consumed in ceramic colors and pigments. About 1½ million cunces are used in making silver-zinc batteries for jet aircraft, missiles, and portable TV's; and silver-cadmium batteries for portable equipment. Also, silver goes into such miscellaneous products as mirrors, pharmaceuticals, dental alloys, plating of fine copper wires, medical and scientific instruments.

In certain high-temperature applications, as in space vehicles, silver is ideal. The importance of the Treasury's surplus, or "free silver" stocks is thus apparent at a time when regular sources are inaccessible.

About two-thirds of silver consumed by U.S. arts and industries today goes into industrial products. Research is finding new uses every year. During World War II new brazing alloys of silver were developed by Handy & Harman. The automobile, the airplane, and the telephone, for example, all call for the use of silver in their structure. And the demand for silver in high temperature applications in guided missiles, jet, and rocket aircraft has soared.

Silver is a noble and versatile metal. It resists corrosion and so is ideal for chemical vessels and the lining of metal cans. Silver nitrate is used in hair dyeing and making indelible inks. Extremely ductile, a gram of silver may be drawn out into a wire 180 meters long. Malleable, silver may be beaten into a leaf 0.00025 millimeters thin. In making phonograph records a thin deposit of silver is employed in making the matrix.

STEADY DEMAND FOR COINS

The quantity of silver consumed in U.S. coinage is large and the need grows both as the population and business increases, but also as coins are worn through circulation or lost. Actual consumption of silver in mint coinage operations varies in accordance with both public needs and the convenience of the mint bureau. From time to time the mints make silver coins for stockpile, as it were, anticipating future needs. During the last 10 fiscal years 383 million ounces of silver have been consumed in the production of U.S. subsidiary silver coins. While this gives an average of 38.3 million ounces a year, the actual figures range from less than 11 million ounces in fiscal year 1950 to 60.4 million in 1954.

Silver used in the manufacture of U.S. subsidiary coins (dimes, quarters, and half dollars)

[In millions of fine ounces]

1950	10.8
1951	30.9
1952	56.3
1953	56.1

1956	17.2
1957	48.0
1958	49.4
1959	36.5
Total	382.6

For many years the Treasury has been able to meet its coinage needs by drawing on free silver in its general fund. It has not had to go out into the open market to buy silver.

UPS AND DOWNS OF TREASURY'S FREE SILVER

The free silver held by the Treasury, that is, the silver bullion not required as backing for outstanding silver certificates, has fluctuated considerably over the postwar years. If the supply of free silver ever should be exhausted and the Treasury should have no way of replenishing the supply, future coinage needs of the U.S. Mints would have to be supplied by purchases on the silver market.

In mid-1945 the stock of free silver in the Treasury was about 696 million ounces. The lend-leasing of silver to allied governments was not yet completed. In July 1946, when the free-silver stock was down to about 216 million ounces, Congress passed the second Green Act, authorizing the Treasury to sell silver bullion to industry. Substantial industry purchases of Treasury free silver have occurred on four main occasions, when market supplies were reduced by strikes or by heavy purchases for coinage by Saudi Arabia and France.

The Treasury provides an unlimited market for newly mined domestic silver and the part thereof which represents seignorage (profit to the Treasury) is added to the free silver stock. However, by the end of 1954, the free silver was down to only 13.7 million ounces. Since then, owing to the return of silver by governments to which it had been lend-leased during the war for coinage purposes, the Treasury's free-silver supply was 194 million ounces on October 22, 1959. Some 24 million ounces of returned lend-lease silver still being processed on September 30 had not yet entered the free silver account.

HOW THE TREASURY MAY REPLENISH ITS FREE SILVER

The additions to the Treasury's free silver stocks arising from the seignorage on newly mined domestic silver turned over to the mints are of course limited. Whenever the price of silver is above the statutory price which the miners may demand of the Treasury, newly mined silver is sold on the open market. The Treasury receives domestic newly mined silver only when the price is not above the statutory price. Small amounts of "silver bullion ordinary," ob-

tained through the refining of newly mined gold, also are added to the free silver account.

There is another way by which the Treasury may add several hundred million ounces of silver to the stock available to it for the coinage of subsidiary cash or for sale to industry. It may tap the huge hoard of silver bullion and standard silver dollars now being held as security for silver certificates. This may be done without new legislation.

More than $2 billion of currency in the form of silver certificates are in circulation, forced on the public by the strategic power of the western silver bloc in the Congress, particularly in the Senate, under the silver legislation of 1878, 1890, 1918, 1933 (Executive proclamation), 1934, 1939, 1946, etc. Earmarked as special security for these silver certificates are 1,741 million ounces of silver. Of this, about 515 million ounces represents silver certificates of $5 and $10 denominations. If all these 5's and 10's were replaced by Federal Reserve notes, the 515 million ounces of silver would be released for transfer into the free silver account. Unfortunately, the Federal Reserve System may not issue Federal Reserve notes in $1 and $2 denominations. It would take only a simple act of Congress to similarly release for use the other 1,227 million ounces of certificate-reserve silver which today lies idle in Government vaults because no one wants to handle it.

There is nothing in the law to prevent the Treasury from withdrawing silver certificates from circulation. The reserve silver released by such withdrawal of course was monetized when the certificates were first issued. On the Treasury books, therefore, it would be entered in the free-silver account at its "monetary value" of $1.29 an ounce. Were the Treasury to sell any such silver to industry at any price less than $1.29 it would be incurring a loss. But the Treasury's subsidiary coinage needs are another matter. The subsidiary coins have a lower silver content than standard silver dollars. The "monetary value" of silver in subsidiary coins is $1.38 an ounce. If the Treasury withdrew silver certificates from circulation and used their silver backing in making 10 cent, 25 cent, and 50 cent coins, it would chalk up a profit, the difference between $1.29 and $1.38 an ounce.

AN UNSUSPECTED WINDFALL COMING

Thirty years ago last July the Government began substituting the present size banknotes for larger size ones. Now, a full generation later, more than $31 million of large-size silver certificates and Treasury notes of 1890 have failed to turn up. Most of them may be considered lost. Yet by law the Treasury is holding for the redemption of these notes some 31 million standard silver dollars containing in the aggregate over 24 million ounces of silver. Legislation has been introduced for the administration which would authorize the Treasury to write off, in effect, the certificates believed to be permanently lost.[1] The Treasury would then be free to issue new certificates against the silver thus freed. If the new certificates are issued in $5 and $10 denominations, the procedure mentioned in the above paragraph would be open to the Treasury.

WARTIME LEND-LEASED SILVER RETURNS

As authorized by the Congress, the U.S. lend-leased nearly 411 million ounces of silver to eight foreign governments for coinage purposes during the fiscal years 1943–46. Having in mind the experience with the Pittman Act of 1918, under which monetary silver was sold to India with the proviso that the United States would replace every ounce of the metal after the war by purchases on the open market, the silver Senators of World War II days insisted that the silver lend-leased be replaced by the recipient countries. Apparently the Senators believed that those countries would have to buy substantial amounts of silver on the market, thus boosting the postwar price of silver.

But it did not work out that way. Rather than buy silver in the market, lend-lease debtor countries decided to call in coins from domestic circulation and thereby accumulate the silver they were obliged to return to the United States. In place of the silver coins so withdrawn those countries issued either silver coins of lower fineness or other types of coins. The return of the lend-lease silver moreover rescued the Treasury from a corner into which the silver mining interests saw the Treasury being driven.

As shown in the table of free-silver stocks accompanying this article, these had shrunk from 219 million ounces in mid-1946 to only 14 million by the end of 1954. With the mint bureau consuming silver for coinage at an average annual rate of 38 million ounces, it would have been only a question of time before the Treasury would have had to go into the open market and buy silver for coinage; or so it seemed to some. With the return of lend-lease silver, by June 1959, the free silver was again up to 212 million ounces. This source of replenishment of Treasury free silver is, however, drawing to an end. Of the 411 million ounces lend-leased, 375 million had been returned by September 30, 1959. Still due are only about 14 million ounces from Pakistan, which, created after the war, assumed part of India's silver debt, and Saudi Arabia, which owes some 21 million ounces. The 35 million ounces still due to be returned by these two countries will be enough to keep us in dimes, quarters, and half dollars for about 1 year.

Lend-lease silver shipments, by countries

[In millions of ounces]

Australia	11.8
Belgium	.3
Ethiopia	5.4
Fiji	.2
India	[1] 226.0
Netherlands	56.7
Saudi Arabia	[2] 22.3
United Kingdom	88.1
Total	410.8

[1] Original loan to India divided for return as follows: India 172.5 million ounces; Pakistan 53.5 million ounces. India's portion has all been returned.

[2] Slightly over 1 million ounces of this were lost in shipment and hence are not due for return. No lend-lease silver has yet been replaced by Saudi Arabia.

DATA SHOW SUBSIDY TO MINING INDUSTRY

At times of shortage in the silver market, when the Treasury feels it necessary to sell silver to industrial users, the domestic mines are able to sell their product in the open market at better than the Treasury's statutory price for newly-mined domestic silver, which is 90½ cents. Whenever the market price is less than that, it is to the mines' advantage to sell to the Treasury. To the extent that the market price is less than the Treasury's buying price, the mines are subsidized. That they have availed themselves of the subsidy is indicated by the figures for Treasury purchases of newly-mined silver. Industrial users also are subsidized when the Treasury sells them silver unobtainable otherwise, or unobtainable at as good a price.

Following are the figures since fiscal year 1950. For convenience of reference, sales by the Treasury to industry are shown in a parallel column. Some of the sales were made to other Government agencies for experimental purposes, the manufacture of medals, etc.

Domestic newly mined silver purchases and sales by the Treasury to industry and other (act of July 31, 1946)

[In millions of fine ounces]

Fiscal year	Purchases	Sales
1950	38.2	
1951	38.1	1.6
1952	38.8	(1)
1953	35.7	
1954	33.7	(2)
1955	34.7	(3)
1956	15.5	10.3
1957	6.6	7.4
1958	26.2	(4)
1959	20.4	11.2
Total	287.7	30.7

[1] 8,543 ounces.
[2] 2,326 ounces.
[3] 2,513 ounces.
[4] 36,455 ounces.

Under the 1946 act almost 10 times as much silver has been bought from domestic mines as has been sold by the Treasury to industrial users and other Government agencies.

Miners complain that Treasury sales to industry "compete with newly mined domestic silver." So they do. It is ironical to hear the miners complain over the subsidizing of silver users with silver the Treasury acquired in subsidizing the mines. Silver which the mines were unwilling to sell to industry because, by a law they had put on the books, they could get a higher price for it from the Treasury they now (later) object to the Treasury's selling to industry at the same price. Silver mining, which has been benefiting from subsidies since 1878, has the nerve to complain that "Treasury sales of silver are interfering with the operation of the laws of supply and demand."

TREASURY SALES TO INDUSTRY

From mid-1954 through October 1959 industrial users of silver have bought about 13.4 million ounces from the Treasury. Monthly sales have ranged from as little as 2,000 ounces to as much as 5.8 million ounces. The latter figure was recorded in the first 23 days of October 1959 and is attributable to the closing of mines, smelters and refineries by strikes. Sales by fiscal years have been as follows in millions of fine ounces:

1954–55	[1]
1955–56	10.3
1956–57	7.5
1957–58	0
1958–59	9.9
1959–60 [2]	13.4

[1] 2,023 ounces.
[2] Through Oct. 23.

Copper strikes caused heavy demand for free silver sales by the Treasury in the summer of 1955 as well as recently. Large demands also occurred in the fall of 1956, due to the delay in the arrival in London of Australian silver because of the closing of the Suez Canal as well as due to strikes.

SILVER IN 5-CENT PIECES MAY BE WORTH EXTRACTING SOMETIME

The ordinary "nickel" coin is made 75 percent of copper and 25 percent of nickel. The wartime shortage of those metals caused the Government to issue 5-cent pieces composed 35 percent of silver, 56 percent of copper and 9 percent of manganese. Nearly 49 million fine ounces of silver were used in making such 5-cent coins from 1943 to 1946. Such coins were issued to a total face value of over $43 million and most of them are still outstanding. These silver-bearing "nickels" are a potential source of new supply for the market. Those now outstanding contain more than 48 million ounces of silver.

Theoretically, when the market price of silver is 88.9 cents an ounce, 20 of the war-

[1] S. 1177, H.R. 5691 and H.R. 6678.

time 5-cent pieces contain $1 worth of silver. The price of silver now is about 91⅜ cents an ounce. This means that 20 of the wartime 5-cent pieces contain about $1.15 worth of silver, plus copper and manganese. Why are the coins then not being withdrawn from circulation and melted down for their metallic content? There is nothing illegal about it. The answer lies in the cost which would be entailed in culling the silver-bearing 5 cent pieces from circulation and shipping them to a processor for refining. It probably would cost more than 15 cents to get the $1.15 worth of silver out of 20 wartime "nickels." The refining cost alone might be 3 cents per ounce of silver recovered, according to one estimate.

But suppose the market price of silver rises a few more cents? The higher the price goes, the closer comes the time when melting the coins will be profitable. The silver-bearing 5-cent pieces are identifiable by a large letter P shown on one side. Machines exist which will separate silver and nickel 5-cent pieces. Several are in use at the mints to help the Government withdraw worn silver "nickels" from circulation. If the price of silver rises enough, we may see schoolboys prospecting for silver in their piggy banks.

Pan American Airways President Receives Defense Transportation Award

EXTENSION OF REMARKS
OF
HON. JAMES C. HEALEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. HEALEY. Mr. Speaker, the National Defense Transportation Association recently presented to Mr. J. T. Trippe, president of Pan America World Airways, an award for his pioneering in air transport and for Pan American's outstanding contributions to the national defense.

In accepting this award, Mr. Trippe sounded a warning that historically the nation which is first in transportation is usually first in world leadership and that as soon as a nation suffered from a second-class transportation system it became a second-rate power.

Under leave to revise and extend my remarks I ask unanimous consent to have printed in the RECORD a newspaper article pointing up the features of Mr. Trippe's talk, written by Gene Shumate and published in the Washington Daily News of February 10, 1960:

Juan Trippe, president and board chairman of Pan American World Airways, Inc., warned yesterday that the Nation that loses the No. 1 place in transportation loses world leadership.

"Historically, this has been the case," he said. And he said America today faces loss of its transportation leads.

HONORED

Mr. Trippe spoke before the National Defense Transportation Association meeting at the Statler-Hilton, where he received an award for pioneering in international aviation.

America started rising to transportation leadership, he said, when the Yankee clippers showed their heels to competition. This was followed by a vast network of railroads, a solid merchant marine, and finally civil aviation.

The danger Mr. Trippe sees to the U.S. position in transportation boils down to this:

THINNER SLICES

The world transportation market is like one big melon. Foreign airlines, for instance, are joining together in smaller administrative units to get a bigger slice.

Europair is forming. It'll be an association of six national airlines of countries in the European common market, joining together to beat American competition.

In recent years, U.S. air carriers have been competing with one another on parallel routes, giving foreign carriers a chance to take advantage of their weakened conditions.

Aeroflot, the Russian airline, is now operating in 16 countries, looking for more, "and will soon be knocking on our door," Mr. Trippe said.

He said what's needed is for transportation regulatory agencies to examine policy to determine if it's wise for American-flag carriers to keep clobbering one another while foreign competition flies away with the passengers.

Council Loses a Minority Voice

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, James R. Frazier, who has announced that he will not be a candidate for reelection to the San Leandro City Council, has been a good member of that council. He did not always agree with the majority members of the council and at times was accused of being an obstructionist but anyone who knew Jim Frazier realized that this was not the reason for the position he took.

He is a conscientious man of strong convictions and is not afraid to stand up for what he believes is right. San Leandro is the better for having had a Jim Frazier on its city council. I know that even those who disagreed with him will admit that he was a fine public official guided only by the dictates of his conscience. I can understand why he wants to leave public office because I know his wife and family and his devotion to them is what prompted his decision.

The following is an editorial that appeared in the San Leandro Morning News on February 9, 1960:

COUNCIL LOSES A MINORITY VOICE

James R. Frazier, often a minority voice on the San Leandro City Council, has decided not to run for reelection.

This saddens us, although we know Frazier has the best of reasons. He wants to spend more time with his family.

It saddens us because he has been a good councilman. More cities could use men like him on their councils.

He is devoted to the idea of protecting the rights of the individual, with decisions based upon the law, not on the judgment of men.

Frazier, who has served as district 4 councilman for the last 6 years, believes the present council is a good one, although possibly balanced too much in one direction.

"And I think the next election (April 12) will make it even more so," he added.

Often a lonely dissenter, Frazier feels that there is a definite cleft in council power. He places Mayor Jack Maltester and Councilmen Valance Gill, William Swift and either Kenneth Cheatham or Robert Taylor on the heavy side, leaving himself and Councilman Alvin Kant in the minority.

He thinks that incumbents Gill and Cheatham will be reelected and that Candidate William Suerstedt will win the district 4 seat. And Suerstedt, he believes, will side with the majority in most controversial issues.

"The votes have been pretty scattered in the last few months," he said, "because there hasn't been any real hot political issue that would show lines of demarcation."

However, he recalls prior commission and board appointments that he opposed because he felt they were political payoffs.

"It was mainly the paying off of political debts that caused the split early after the formation of the present council," he said. "I tried to pick the men on the basis of their qualifications, ability and willingness to serve."

He opposed the appointment of Suerstedt to the planning commission, now admits that Suerstedt is doing a good job.

His philosophy of government? "Basically," he said, "it's to protect the rights of the individual, with decisions based upon the law, not on the judgment of men. I think that many times we've let principle slip by for the sake of expediency."

He mentioned the controversial Parrott Street extension as an example. Frazier thought that the decision to extend Parrott from East 14th Street to Washington Avenue was made for the sake of bringing commercial development, rather than because it was needed to improve traffic circulation.

"We said we needed the street for better circulation," he said, "but emphasis was on getting the commercial development rather than the traffic circulation. Such thinking is wrong where a principle is violated."

Frazier said he once walked out of a closed meeting where the issue was being discussed. "I walked out because they tried to poll the Council," he said.

"If you establish a philosophy, you should live by it," he added. "It's not hard to live up to a principle."

Frazier's biggest accomplishment, he believes, was pushing through the rifle range at the foot of Davis Street. He worked hard over recreation commission opposition to get the range approved for the Optimist Club, which, among other things, conducts gun safety courses for youngsters.

Frazier is not seeking reelection, because he wants to spend more time with his family: wife, Faith, sons, John, 6½, and Carl, 3.

"The work was very enjoyable, but the one danger of public office that you have to be aware of—this way of life actually becoming a way of life. You begin to like being in the public eye. It's hard to shake once you get into it. You lose sight of a lot of other personal things."

James Frazier has served San Leandro well. We hate to see him bow out of city politics.

At important times, he has provided the minority voice that is so essential to the workings of democracy.

A Salute to the Boy Scouts of America

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following editorial from the Rock Hill Herald, Rock Hill, S.C., of February 8, 1960:

A SALUTE TO BOY SCOUTS OF AMERICA

The Boy Scouts of America celebrate their 50th anniversary today.

In the 50 years since the Boy Scouts of America received their incorporation in the District of Columbia in 1910, they have grown to the point where today there are more than 5 million active men and boys in the organization.

Just about everyone knows the contributions the Boy Scouts have made to society. However, we feel that Delmer H. Wilson summed it up extremely well when he addressed the Palmetto Area Council in Rock Hill last month.

Wilson, national director of the division of personnel of Boy Scouts, said:

"Scouting isn't just camping and tying knots. Scouting is taking a young boy in his formative years and teaching him the 15 virtues of the scouting code. We teach them to pack these virtues into their lives so that they can draw on them in later years."

"We're also guiding them into citizenship in their early years. The boys are not just stumbling into citizenship. They're growing into citizenship, not waiting to be good citizens when they're adults. They're becoming good citizens now."

We add our salute to the millions of Boy Scouts of America, past, present, and future. The first 50 years have been well spent in laying a solid foundation for a worthwhile organization.

Telephone Tax

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 25, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the Southwest Messenger Press, a community newspaper in my district, is, I believe, a most thought-provoking commentary on a subject of great concern to us all:

TELEPHONE TAX

What would elimination of the 10 percent Federal excise taxes on phone service and the transportation of persons mean to you? It would mean savings which the taxpayer can actually see and feel, the Taxpayers' Federation of Illinois charged today, and a few examples will illustrate this point.

Using an actual householder's phone bill (January 1960) elimination of the tax would mean a phone bill of $6.30 instead of $6.93—a saving of 63 cents on 1 month's bill. Here is the computation: phone bill, $5.20 plus 10-percent tax thereon of 52 cents; toll calls of $1.10 plus 10 percent thereon of 11 cents—total bill paid of $6.93 (which includes 63 cents Federal tax). Over a year's time, this phone user would be better off to the tune of $7.56.

Again, using an actual example, let us see what the elimination of the 10-percent Federal tax on the transportation of persons would mean to a John Smith. John makes a weekly trip from Springfield to Chicago, and the price of such a round-trip coach ticket is $10.29. If the tax were nonexistent, he would pay $9.35, or 94 cents less. Over a month's period of time, he would have at least $3.76 more in his pocket; and, over the year he would have $48.88 more in his wallet to see an occasional show or bring most welcome presents to his wife and children.

These taxes were emergency measures passed during the war years. The emergency has long since come and gone. It is estimated that these two taxes, if continued, would together produce $450 million in fiscal 1961 revenues.

Repeal, on the other hand, will result directly in lower phone bills and transportation costs, since the savings would be passed directly to the consumer.

The World Court

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. LINDSAY. I am receiving a certain amount of mail on the subject of the President's proposal, which is before the Senate to withdraw the Connally reservation relating to the jurisdiction of the International Court of Justice. I find that there is a great deal of misunderstanding about the original Senate resolution, adopted in 1946, calling for the deposit of a declaration accepting compulsory jurisdiction of the International Court of Justice and also about the Connally amendment itself.

In the February 11 issue of the New York Herald Tribune there appears an excellent column on this subject by Walter Lippmann. It is about as clear a commentary on the subject as I have seen, and I think I have read almost everything that has been written.

Under unanimous consent, I insert Mr. Lippmann's article in the Appendix of the RECORD, as follows:

THE WORLD COURT

(By Walter Lippmann)

The Senate Foreign Relations Committee has been holding hearings on a resolution which, curiously and remarkably enough, was introduced by Senator HUMPHREY and has the ardent support of Vice President NIXON. This, as Mr. K. might say, is an instance where a shrimp has whistled.

The Humphrey resolution has the full backing of the administration and it is likely to command the support of the Democratic leadership There are, to be sure, dissenters who are seriously worried that the acceptance of the resolution will be an abdication of American sovereignty.

But they are a small minority as compared with the huge nonpartisan majority which includes so many of the leading lawyers of the country.

The Humphrey resolution would repeal what is known as the Connally amendment to the original Senate Resolution 196. This resolution, which was adopted in 1946, called for the deposit of a declaration accepting the compulsory jurisdiction of the International Court of Justice. This is the court set up under the Charter of the United Nations. The United States was perhaps its leading advocate.

Before the Connally amendment was adopted the 1946 resolution said that "in relation to any other state accepting the same obligation" the United States accepts the compulsory jurisdiction of the International Court of Justice "in all legal disputes" which come under four classes of cases.

The International Court is to have compulsory jurisdiction in a dispute about (1) the interpretation of a treaty, (2) any question of international law, (3) the existence of any fact which, if established, would constitute a breach of an international obligation, and (4) the nature or extent of the reparation to be made for the breach of an international obligation.

The 1946 Senate resolution says expressly where the compulsory jurisdiction of the Court shall not apply. Of these reservations, the important one is that the Court shall not have jurisdiction in a "dispute with regard to matters which are essentially within the domestic jurisdiction of the United States." The question was then raised in the Senate as to how it was to be decided whether a matter is or is not essentially within the domestic jurisdiction of the United States.

The Senate answered this question in 1946 by accepting the Connally amendment which added six words to the original text. Because of this amendment, the question of whether a matter is essentially within the domestic jurisdiction of the United States is to be "determined by the United States." This is the amendment that both Senator HUMPHREY and Vice President NIXON want to repeal.

As the law stands today, the U.S. Government has the right to exclude the Court whenever it desires to do so, without having to prove or to argue its position when it declares that the case is "domestic." This means that while we have agreed to compulsory jurisdiction in legal disputes, we have in fact reserved the right to stop the Court's proceedings. As a result, no other nation with which we have a dispute can be compelled to come before the Court. What is sauce for the goose is also sauce for the gander. Under the Connally amendment we cannot be sued without our consent. But equally we cannot sue anyone else without his consent.

This reduces the International Court of Justice to a kind of small sideshow. It is no doubt the reason why, despite all the international disputes with which the world is beset, the International Court has so few cases before it.

The question raised in Congress now is whether our Government or the International Court itself shall decide whether a matter is domestic. The dissenters, who believe that the Connally amendment must be retained, argue that the Court might take jurisdiction in a dispute which challenged our tariff laws, our immigration laws, our currency laws, our administration of the Panama Canal. These fears, though understandable, are groundless. If the Court took jurisdiction in domestic matters, it would be violating its own statute which expressly limits its jurisdiction to international legal disputes.

It is conceivable, although it is in the highest degree unlikely, that the Court might violate the law which created it. But if it did that, there would be a remedy. We would have an indubitable grievance and we would be entitled, legally and morally, to challenge the Court by political action in the United Nations.

There is, therefore, no risk which would leave us helpless. On the other hand, the advantages of building up the jurisdiction of the Court are very great. Perhaps the most important of these advantages is one that the Vice President pointed out in an address last April. If the richer nations, like the United States, are to export capital to assist the underdeveloped countries, there must be legal security for the investments they make. To create that security the International Court can have a big part to play.

Indeed, in view of what is happening in this hemisphere to affect American property abroad, we have an interest that every property dispute, as with Castro today, should be decided by a court and not be left to propa-

ganda, agitation, coercion, and force. But if we want to be able to go to court to protect our rights, we must be willing to go to court when someone else has a grievance against us.

A Great Speech

EXTENSION OF REMARKS
OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. GEORGE. Mr. Speaker, while in Kansas City last Thursday it was my extreme good fortune to attend a luncheon meeting during the Corn Belt Livestock Feeders Association's Annual Convention at the President Hotel, which is just across the Kaw River from my home in the great State of Kansas. The principal speaker on that occasion was our distinguished colleague from Nebraska, the Honorable LARRY BROCK.

Possibly because he is a past president of the Corn Belt Livestock Feeders Association, possibly because he knew his subject thoroughly, or possibly because Congressman BROCK delivered his address so well, those who packed the large dining room listened with rapt attention.

The content of that address, however, was of such quality, Mr. Speaker, and the issues were so clearly set forth that every member of the association and each one of the guests sat motionless until the speaker had concluded.

Although it is not possible to set forth the extemporaneous remarks of our colleague which so greatly pleased his audience, I do request, Mr. Speaker, that Congressman BROCK's prepared address be included in the extension of my remarks as I know the Members of both bodies will enjoy reading this splendid speech:

ADDRESS OF CONGRESSMAN LARRY BROCK, DEMOCRAT, NEBRASKA, BEFORE THE CORN BELT LIVESTOCK FEEDERS ASSOCIATION'S ANNUAL CONVENTION, KANSAS CITY, MO., FEBRUARY 11, 1960

Mr. President, members of the association, and friends, your officers were kind enough to extend an invitation to have me address you on this occasion of your annual convention which invitation I deem a distinct privilege, particularly because of my personal activities as a cattle feeder in Nebraska for many years. It gives me the feeling of visiting with my very close folks and associates in the cattle business back home and affords me the opportunity of discussing a subject with which I am not only familiar and intensely interested, but also one that is very close to my heart.

We in the United States, and particularly those located in the Middle West and the Western States, are justly proud of our accomplishments in the excellent breeding and feeding of good cattle. It took many years of hard work and sacrifices to reach the peak we now enjoy, notwithstanding the periodical eras of bad weather, drought, and economic factors which sometimes bring about low prices for cattle. Before getting into the stipulated theme of my subject, let us momentarily dwell on the creation of the cattle business and its rugged progress over the many years.

The Bible tells us that cattle were created before man. They came first with God in his creation of the beasts of the earth. Bossy headed the list of the 6th day's work, while Adam, who was "given dominion over all," came last.

Assuming creation as being 4,000 years before Christ, we find from Moses' history that Abram was an extensive and successful cattle breeder and was, beyond any doubt, the first man to engage in the cattle business.

Geographically, there are five natural grazing grounds for cattle, located in central Asia, South Africa, South America, Australia, and on the Plains of America. The first is the larger in extent than all Europe the second is as great; the third, half as much; the fourth, as large as South America; and the fifth, the boundless plains of the United States, containing over a billion acres.

These pastoral lands of ours have never been understood or appreciated over the many back years. It was, however, freely predicted that one day this Government would derive more taxes from the grazing country than from the best of the agricultural regions.

Yes, the livestock industry has come a long way over the years. In 1869, the whole of the livestock industry in the United States was estimated to be worth $1.5 billion, and there were then about 75 head of cattle to every 100 people. Rapid growth in our population has, of course, changed that ratio over the past 90 years.

The trend of the industry since 1900 has been one of improvement. The breaking up of most of the big cattle companies in the late eighties and the early nineties resulted in a marked temporary reduction in the total number of cattle in the Western States. With the passing of such concerns, however, there soon came into existence many moderate-sized herds, which were better managed and cared for than were the cattle in the so-calle bonanza days.

An educational campaign was waged by the Government to discourage the overgrazing of the public domain. Ranchers saw the wisdom of growing feed and hay, to be fed livestock during the severe winter weather. The need of improved blood was recognized about this time and thousands of purebred beef bulls were purchased in the East and introduced into the range country.

This was the beginning of a new and improved era in the national cattle business. In a few years, the beneficial effects of these radical steps were plain to be seen. Not only were the cattle of the West greatly improved in beef type; not only were the losses of cattle during the severe winter months materially reduced; not only were the ranges growing better instead of worse; but it was also true that the West was actually carrying more cattle than formerly. Smaller, better managed herds resulted in an increase of the total cattle population.

This increase continued steadily from the late nineties until 1907, at which time there were more cattle, other than dairy cows, in the United States than there had ever been before, and the majority of them was found in the States west of the Mississippi River.

The new cattle industry was now really on the move, aided and abetted with the advent of expert advice on the care and treatment of diseases of cattle, the advent of better transportation facilities, better marketing facilities, and the more recent outlook trends as to the favorable periods for buying and selling livestock.

It has been estimated that as of January 1, this year, there were almost 7.5 million head of cattle on feed in 37 States. In 26 States, excluding the Southern States, there were 9 percent more cattle on feed than at the same time last year, breaking all January 1 records for numbers. Sometime next month, we will get more accurate figures as to the present total population of all cattle from the Department of Agriculture.

To illustrate the tremendous growth of the cattle business, it is well to observe the cash receipts report for the sale of cattle and calves in the year 1958. This figure has been estimated to be upward of $7.5 billion, and the figure for 1959, which has not been tabulated as yet, will not be too far away, despite the smallest slaughter in 7 years. The meat processing and packing industry had receipts of some $14.8 billion for the year 1958, and this figure for the year 1959 is estimated now to go over $15 billion. These figures should give you some realistic pictures of the gigantic growth of the livestock business.

Despite the bottom falling out of the price of corn, which incidentally has seriously damaged the hog market, we in the cattle business have been somewhat fortunate to be able to hold on to fairly good market prices thus far. This optimism, however, should not delude us into thinking that the present prices will hold. Rather, prices may tend downward, based on several years of high output and continuing lower prices, but not sufficiently so to cause an acute market break, as occurred in the early fifties.

For the past 50 years, the statistical chart curves of cattle and corn have worked closely together—the cattle price curve following the price of corn. There have been periods of droughts, shortages, etc., and other factors which at times caused cattle prices to average much higher on the statistical charts than did corn, and for these periods their historical relationship was farther apart. It is noted, however, that when these periods of unrest in the cattle industry subsided, the historical ratio of cattle prices to the price of corn was again restored. This formula is holding fairly true at the present time, with $1.04 market corn and $26 prime cattle. It is this historical relationship, plus careful scrutiny of the outlook for cattle, which leads me to predict that, if we hold to $1 corn by next fall we will have $23 cattle.

We in the cattle business, who have worked hard to build up our investments, naturally are greatly concerned with any problems that might threaten the financial security and the progress of the industry. We have several facing us right now but I would put special emphasis on the increased importations of livestock and red meats from foreign countries. Despite many urgent representations to the Secretary of Agriculture, and his numerous promises to alleviate the situation, these imports are continuing to increase on a scale that will eventually threaten the very existence of some portions of the livestock industry.

During the past year, practically since assuming office in the Congress, I have continuously contacted the Secretary of Agriculture imploring him to take some decisive action to impede or halt these foreign meat shipments, particularly when we are in a depressed domestic livestock market. Despite the best of assurances, that were not worth the paper they were written on, nor the verbal utterances, nothing has been done and the imports of livestock and red meats increased during the year 1959, to a point where this influx of foreign meats now equal 9 percent of our domestic production.

During the year 1958, meat imports to the United States amounted to 826 million pounds. This figure represented a 243-percent increase over 1956 imports and a 178-percent increase over 1957 imports. For lamb and mutton, the increase of such imports for 1958 represented over 1,700 percent, as compared to the 1956 figures. The importation of all meats to the United States in the year 1959 amounted to over 1 billion pounds, and there is no letup in sight at the present time.

The dollar value of meats imported to the United States, July 1, 1958, to June 30, 1959, amounted to approximately $275 million. This figure was substantially increased

during the last 6 months of 1959, as departmental figures will show as soon as they are published. To illustrate a point, the dollar value of meat imports in 1956 amounted to only $210 million, and in 1957 the figure was only $287 million, whereas in 1958, for the entire year, the figure climbed to $512 million, clearly showing the upward trend and spiraling of such importations.

Now that we have disposed of the statistical portion of this talk, let us turn again to my representations to the Secretary of Agriculture. Mr. Benson, in reply to my constant appeals to halt meat imports had the audacity to inform me that he had no visible authority to take decisive action or impose quotas on imports. My rebuttal to him referred to section 22, of the Agricultural Adjustment Act, and section 7, of the Trade Agreements Act, which authorize the Secretary of Agriculture and the President to take such action when the necessity arises whereby the importation of any commodity has an adverse effect on the domestic market. Neither the Secretary or the President has recognized this necessity to date, but it did not take the Corn Belt Livestock Feeders Association too long to recognize this necessity. They have filed a protest with the U.S. Tariff Commission, requesting an investigation of present increased importation of sheep and lambs, lamb and mutton into the United States. The Commission has already scheduled hearings on this complaint and the investigation will have full-dress public airing beginning March 23. This is just a beginning and the other segments of the livestock industry in the United States can be guided by the action of the first group.

It is my personal observation that in this fight to control the importation of livestock and red meats, we can expect little, if any help from Secretary Benson, or as long as the present national administration is in power. The only recourse left to save the industry is to appeal to the Tariff Commission or any related agencies with sufficient authorative powers, to investigate the situation and focus public attention on the ultimate destruction of an American made institution, if these conditions are permitted to continue.

Your attention, no doubt, has been focused on the ever-increasing amount of canned meat products showing up on the shelves and counters of grocery stores and supermarkets all over the United States. Many of these canned pork and ham products are imported from Poland, a country which can ill afford to export any meats beyond its borders. Due to Soviet domination, and their greed for American dollars, these exports are literally selling the meat right out of the mouths of a starving people who at best can't produce enough meat for their own country. This is the real crime of our imports from Poland. You can be assured that the Polish farmer is not getting the added income from these exports to the United States. A very close friend of mine faced up squarely to the situation when he said, "I would be ashamed of myself if I ever sat down to eat a Polish ham. I could only visualize hungry Polish children standing with their faces pressed to my dining room window, watching be eat their food."

The importation of canned meat products from South America, Europe, and the low countries are not the only problem facing the domestic industry. Last year, meat exporters from Australia and New Zealand announced that they would lease numerous larger merchant vessels, to add to their then current fleet of vessels importing meat to the United States. This was shortly followed by their announcement to build an additional fleet of larger refrigerated vessels for the same purpose. These proposed additions apparently have not satisfied their appetities for fast movement and quick turnover of profits since a recent announcement from New Zealand stated their meat producer's board has plans to use huge cargo planes to deliver fresh meat to this country in 19 hours. That is faster than some domestic producers can get their product from the range, or the feeder lots, to Omaha or Chicago. If the New Zealand people can get their air project off the ground, it will certainly mean stiffer competition for our domestic producers.

This air travel for imported meats is not exactly new. They have been importing meats from Iceland to the United States for the past year, and are doing very well with it. Their imports are on the increase and they will soon become a real threat to the domestic producers.

Our problems of imports are not wholly confined to the livestock industry. The automible manufacturers in Detroit have been hard hit by the mass importation of small automobiles from various European countries. They literally tore up their projected production sheets and plans for newer models of the lower priced American cars and have gone into production on small scale type of cars to compete with this growing threat to the stability of the industry. The American textile industry, particularly in the New England and Middle Atlantic States, has become stagnated and is fast becoming a lost art in these areas due to the infiux of textile products from foreign countries located throughout the world. Japan and Hong Kong, China, have stepped up their exports in this field, as well as in clothing, toys, and novelties of every description from sports equipment to making the American flag. The lower priced china industry in the United States is losing ground fast to similar industries exporting from Europe, Japan, and Hong Kong, and the recent steel strike materially increased imports of cheap foreign steel.

It is time that a quota system be set up to protect dying American industries. While the United States is still the wealthiest country in all the world, it is no longer the unchallenged leader. Our massive Federal deficits have fostered monetary inflation, and labor and management bargaining have brought on wage-price inflation, resulting in excessive production costs, that have not only priced themselves out of the foreign markets, but in many instances have also priced themselves out of a great portion of the domestic market.

Much of the responsibility for the increased foreign imports rests with our past and present foreign trade agreements. It is about time we took a long look at the adverse effects of our export-import business on American industries before again committing ourselves to further extensions of the foreign trade agreements when they expire, unless some mandatory quota provisions are included therein for the protection of our home industries.

Another serious threat confronting the livestock producers, and the meat packing industry as well, is the entrance of the major chain stores into these industries, which has created new problems arising out of the integration taking place in cattle feeding, processing, and marketing. These major chains have violated their historical agreement with the processing and packing industry, to stay out of each other's field of operations. The purchasing power yielded by these major food chains is slowly but surely destroying the protection once enjoyed by the livestock and agricultural producers, the small business processors and retailers, as well as the American consumer. Livestock and agricultural producers are coming to realize that the increased concentration in food retailing, as practiced by the large chains, means fewer buyers are purchasing a greater share of their products, and their bargaining position is being substantially weakened. The potential of this mass purchasing has enabled them to negotiate contracts that provide very thin profit margins, and without escalator clauses geared to the market. As a consequence, the producer, the processor, and the supplier are constantly in trouble.

Legislation has been introduced to amend the provisions of the 1921 Packers and Stockyards Act to be invoked by the Federal Government agencies to ban current practices of major packers and chainstore operators, which circumvent competitive bidding in terminal markets to buy direct from producers and feedlot operators. The effect of these practices is to force down the market value of livestock, since purchases are not made under the same terms required at a central terminal. Savings in this direct buying formula are not passed on to the consumer but are retained as additional profits by the purchaser, meanwhile the livestock producer is forced to take less for his product.

The House Select Committee on Small Business has undertaken an investigation of these practices, as well as looking into the major food chainstores' absorption of more than 3,000 locally operated food stores within the last 3 or 4 years, also why, over the past 10 years, food chain sales have increased 64 percent more than independent sales. Legislation has recently been introduced to amend section 7, of the Clayton Act, by providing for the strengthening of our antimerger laws, and would help small business where the merger movement is sweeping away competition and creating monopolies.

There is no question that livestock producers and feeders in the Middle West are experiencing daily the adverse effects resulting from the market control owned by the major food chains. It is like an ominous cloud hanging over our heads.

Our Laws Shouldn't Be Aimed at All Sportsmen

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 28, 1960

Mr. METCALF. Mr. Speaker, persistent attempts of a few individuals, seeking laws and regulations to restrict the millions of sportsmen who regularly use firearms for hunting and target, skeet, and trapshooting, is a matter of serious concern.

Their success would seriously curtail a healthful, mind-and-body-building, form of recreation enjoyed by millions of Americans.

Those who urge such suppressive action are apt to base their appeals upon emotion, rather than fact.

This is pointed out in the excellent editorial in the February 13, 1960, issue of the Saturday Evening Post, which places firearms accidents in perspective to accidents resulting from other normal activity. In perspective, firearms cause relatively few accidents; and their recreation use should be encouraged.

The editorial follows:

GUN LAWS SHOULDN'T BE AIMED WILDLY AT ALL SPORTSMEN

There have been wild shots in hunting. Occasionally an inexperienced Nimrod will mistake his father-in-law for a moose, with tragic results. These unfortunate episodes

echo in legislatures—all too often in the form of bills as misdirected as the shots. On the perennial issue of firearms control, State legislators may be swamped by emotional appeals.

Some of these movements spring from genuine and legitimate concern. Frequently, however, they involve widespread repression of American sportsmen because of a few isolated accidents. In other instances campaigns against firearms have resembled arbitrary total disarmament programs. One such, in a large Eastern State, was launched by a seemingly hysterical radio commentator. He whipped up more than 10,000 signatures to petitions for a bill which would have very nearly prohibited peashooters. The bill was killed in committee only when thousands of hunters and target shooters reminded their legislators of their constitutional right to possess firearms.

Much of the immediate problem over firearms arises from the overflow of our large cities, east and west, into what have been traditional hunting areas. Some hunters jeopardize the rights of 15 million decent and thoughtful sportsmen by gunning around the fringes of schools, parks and the playpens of small children. Local measures should be sufficient to cope with the persistent few. Hunting license examinations, similar to driving tests for motorists, could provide an additional means of control.

Any discussion, to be effective, should avoid emotional excesses and statistical misguidance. One figure, widely circulated of late, is that 14,000 Americans were "killed by guns" in a single year. Actually, as Government sources confirm, more than half of those "killed by guns" either committed suicide or were shot down while committing serious crimes. Homicides or deliberate killings by firearms decreased from 6,995 in 1930 to 4,010 in 1957 despite the great population increase. Nor can the decrease be directly attributed to stricter gun regulations. New York State, with one of the earliest and most rigid firearms laws, still reported proportionately more gun slayings than the New England States, New Jersey, Pennsylvania and a dozen others.

As for accidental deaths, 2,369 in 1957 were blamed on guns. The fatality rate from all forms of accidents was 56 per 100,000 persons. Motor vehicles caused 22.7 of these deaths, falls accounted for 12.1, fires and explosions for 3.7, and drowning for 3.1. The rate for fatal firearms accidents was only 1.4, scarcely above the 1.2 deaths from suffocating or choking on food.

No one seriously suggests banning automobiles, stairways, water, matches or eating because they sometimes cause deaths. To attempt to place blanket restrictions on firearms would be equally farfetched.

Ford of Michigan

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to call to the attention of the House the following column by Raymond Moley which appeared in the February 15 issue of Newsweek magazine. I heartily agree with Mr. Moley's sentiments regarding our distinguished colleague, GERALD R. FORD, Jr., of Grand Rapids. Mr. FORD is truly one of the finest young Members of the House and we of the Michigan delegation are very proud of him.

The article follows:

FORD OF MICHIGAN

(By Raymond Moley)

No, this piece is not about the automobile man you hear so much about. Nor is it about my favorite "pea pickin' minnesinger," Ernie. It is about GERALD R. FORD, Jr., who represents the Fifth Michigan District in the U.S. House of Representatives. Watch this Ford. This may be a Ford year in a manner you are not expecting.

From time to time in this space I am inviting readers to consider certain Members of the House who ordinarily are so buried in useful committee work that they are likely to be obscured by the less useful forensics of the Senate. These humble servants are the ones who have guarded the pockets of taxpayers. In the past few years the House has saved us billions of dollars and has killed many a cracked-brain bill passed in the more radical Senate. The House works while the Senate talks. The Senate is more eminent. The House is more practical. It is closer to the people, and the majority of Americans are conservative; they work, save, pay their debts, and keep things going.

How unlike the expectations of the men who made the Constitution in 1787, when people like Hamilton were talking about the passions of the House and the sedative influence of the Senate.

VANDENBERG'S PROTEGE

At the core of the business of the House are a number of seasoned Democratic committee chairmen. Over the years they have mastered the vast affairs of our sprawling Government. They are the patient conservators of our public affairs. Alongside them there has grown up in the past 15 years a fine, vigorous group of young Republican minority Members. They work together, Democrats and Republicans, in our interest, mingling the wisdom of age with the drive of youth. High among these representatives of a genuine Republicanism is GERALD FORD of Michigan.

Forty-seven years ago, as an infant, he was legally adopted by his stepfather, who was a highly respected leader in the civic and political affairs of Grand Rapids. He taught the boy the meaning of civic responsibility and in 1948 he and his friend and fellow townsman, Senator Arthur Vandenberg, encouraged the young lawyer to run for Congress. He won in that Democratic year with a margin of 27,000. His majorities since have ranged from that figure to more than 50,000.

GERALD FORD has attained considerable seniority over the years. He is a member of the House Republican Policy Committee. He is also ranking member of the appropriations subcommittee on defense. This suggests a handy man to have in this campaign on the defense issue.

THE VOTING RECORD

In the ADA record of voting by Members of Congress, FORD agreed with them twice and disagreed seven times. He voted generally conservative in the first session of the 86th Congress—against "backdoor" spending, against the housing bill vetoed by the President, for the Smith bill to protect the right of States to legislate on communism, for the Landrum-Griffin labor bill, for legislation to permit higher interest on long-term bonds, and against the public works pork barrel. In almost all cases he has sustained the President. His diligence is shown by the fact that in 12 years he missed only 47 out of 1,872 rollcalls.

As a candidate he has color and force. He served 47 war months in the Navy with distinction. He was a member of champion football teams at the University of Michigan, all all-America member of the 25-year team selected in 1959, played with the college All Stars against the Chicago Bears in 1935, and while at the Yale Law School was assistant football coach and boxing coach for freshmen.

FORD and Vice President NIXON, born in the same year, have been warm friends since they served in the House together. NIXON is not inclined to place much emphasis upon traditional rules in selecting vice presidential candidates—geographical, religious, or ideological balance. The new concept of the office calls for a young man, sympathetic with the President's policies, capable of representing the President at home and abroad, and young enough to learn the duties and responsibilities of a President. In conjectures about the Republican ticket, it will be well to keep FORD in mind.

Fight the Dark—Light Another Candle for Brotherhood

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. SANTANGELO. Mr. Speaker, on February 14, 1960, I had the distinct privilege and honor to speak before the members of the First Hungarian Reformed Church located at 344 East 69th Street in my congressional district. The leader of the church is Rev. Imre Kovacs, a true descendant of the spirit of that great Hungarian liberator, Louis Kossuth. Inspirational talks were given by Rabbi Joseph Gelberman of the Bal-Sherm Little Temple and by O. D. Dempsey, assistant minister to the Abyssinian Baptist Church, which our colleague, ADAM CLAYTON POWELL, heads. Their words on brotherhood were inspiring and thought provoking. It was a pleasure to participate in this brotherhood rally, and I believe my words on this occasion might prove of interest. They are as follows:

Reverend Kovacs, Rabbi Gelberman, Reverend Dempsey, my good friend James Siket, members of the First Hungarian Reformed Church, and brethren, it is appropriate that on this day of affection and friendship, St. Valentine's Day, that we should speak of brotherhood.

We gather here today to reaffirm our belief in the dignity of man and to protest against the neurotic personalities who seek once again to revive religious hatred, second-class citizenship, and segregation. We believe that we are our brothers' keepers and that Cain shall be unable to destroy his brother Abel.

Many years ago the world thrilled to the words of our Declaration of Independence, "all men are created equal." In that declaration our forefathers declared the dignity of man as a principle and that declaration of of independence changed the course of history for over 180 years. Just as these United States followed this political, religious, and moral principle in its march to greatness so did the liberator of Hungary, Louis Kossuth,

declare the truth that Hungarians want freedom with brotherhood.

In the past 15 years ominous clouds have darkened our views and beclouded our vision. We no longer look to this earth, but are racing to the moon and to the planets beyond. While we preach brotherhood, ambitious men and bolder and more disciplined peoples are developing the means of destruction and annihilation.

Only yesterday a fourth nation, France, dropped an atomic bomb in the Sahara Desert. Its President, Charles de Gaulle, rejoiced because French scientists had demonstrated success in mastering the methods of total destruction. We ended a phase of World War II when our airmen dropped atomic bombs upon Japan and destroyed Hiroshima and Nagasaki. We were the masters of the world without the will or inclination to dominate or rule. Then we developed the hydrogen bomb and became smugly complacent. We dawdled and relaxed, and in October of 1957 we were rudely awakened and shocked when Russia projected a satellite into earth's orbit. As the satellite orbited around the earth, we wondered whether the beep-beep which it emited was a signal of impending doom or a harbinger of a greater and more glorious future. Like the hare which slept until it was too late, we fell asleep and now are trying to overtake the tortoise which is moving with unbelievable speed. Russia has thrust a lunik rocket to the moon and even taken a picture of the dark side of the moon. It has landed an intercontinental ballistic missile within 2 miles from its target after a flight of 7,000 miles. While Russia professes peace, its spokesman, Khrushchev, boasts of its military might and Russia brandishes its arsenal of missiles and destructive weapons. We are trying to keep pace, but our success in that regard is subject to doubts.

We, in turn, have developed our missiles, whose names, Atlas, Thor, Jupiter, bespeak atheistic gods. We have developed the Bomarc missile, and our anti-missile missiles like Nike-Zeus and Nike Hercules. We are racing to compete for we do not believe Russia's profession of peaceful intentions and we enjoy a nightmarish and uneasy peace. We know and the world knows, however, that we have the deterrent capacity to destroy this world and like Samson the power to destroy the temple with all the Philistines within it. It is ironical that man who is trying to conquer outer space cannot control himself upon this earth.

What shall we do? In my view we should instill in our children the eternal truth that we, white or black, Italian or Hungarian, Jew or Gentile, are our brothers' keepers and that we are children of God. We should pray that those who are at the levers of control of government should believe in the dignity of man and in his inherent worth. We must recognize that the world's natural resources were meant for the benefit of all mankind and not for the benefit of a select few of the aggrandizement of power by a state. We must recognize that laboring people should have the right and opportunity to earn a decent wage under healthy conditions. We must recognize that our freedoms should be protected from overzealous prosecutors, ambitious public officials, and bigoted neurotics.

We must hold high the torch of liberty to spread light where there is darkness, to spread understanding where there is hatred, to provide education where there is ignorance. In this way we shall develop the mystic bond of brotherhood which makes all men one, we shall fulfill our mission on earth and earn our eternal reward.

The Port of New York Authority

EXTENSION OF REMARKS
OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. AUCHINCLOSS. Mr. Speaker, at the request of Mr. S. Sloan Colt, chairman of the Port of New York Authority, I am pleased to insert in the Appendix of the RECORD a copy of a letter dated February 3 addressed to the editor of the Asbury Park Press, Asbury Park, N.J., and signed by John J. Clancy, a commissioner of the Port of New York Authority. Mr. Clancy's letter is in reply to the editorials of the Asbury Park Press, which I recently inserted in the RECORD.

The letter follows:

THE PORT OF NEW YORK AUTHORITY,
New York, N.Y., February 3, 1960.

EDITOR, ASBURY PARK SUNDAY PRESS,
Asbury Park, N.J.

DEAR SIR: A copy of the editorial which appeared in the Asbury Park Sunday Press on January 17 has been brought to my attention.

We believe it essential and in the public interest that the citizens of New Jersey and New York have factual information regarding The Port of New York Authority, their joint self-supporting public agency. Established by a port treaty in 1921, the two States assigned to the port authority the responsibility of developing transportation and terminal facilities and of promoting and protecting the commerce and trade moving through the great bi-State Port of New York.

The 12 commissioners of the port authority—6 from each State—are appointed for 6-year terms by the respective Governors, with the consent and approval of the State senate. They serve without compensation. The minutes of the commissioner's regular monthly meetings are sent immediately to each Governor who has the power to veto the board actions of his State's commissioners. Further, all of the port authority's facilities have been developed only after enabling legislation has been adopted by the legislatures and signed by the Governors of the two States. The final authority on what their joint public agency can—and cannot—undertake therefore rests with the Governors and the legislatures of the two States.

In setting up their new agency, the two States gave the port authority neither the power of taxation nor the right to pledge the credit of either State. Its entire program therefore must be carried out on a self-supporting basis, without burden upon the general taxpayers. It obtains all of its revenues from those who use its transportation and terminal facilities. It borrows all of its capital funds for financing new projects from purchases of its revenue bonds on the basis of the port authority's credit, its sound prudent management and ability to meet its financial obligations.

VEHICULAR FACILITIES

Under bi-State legislation adopted in 1931, the two States assigned to the port authority the responsibility for unifying, building, and operating all interstate bridges and tunnels within the New Jersey-New York Port District. The 1931 act requires the port authority to study and recommend the need for new interstate crossings but states that no additional bridges and tunnels can be undertaken without express authorization of the two States.

In every instance in which we have carried out the responsibility given to us by the two States—the construction of the three bridges between New Jersey and Staten Island, the Holland Tunnel, the George Washington Bridge, and the current addition of a lower level, the Lincoln Tunnel and its recently constructed third tube—the Assembly and the State Senate of New Jersey and New York have specifically and in almost every case unanimously adopted the necessary enabling legislation. I might add that our undertaking of these six interstate bridges and tunnels has had the overwhelming support, indeed the urgent insistence, of public officials, the general public, and the press to proceed promptly with these critically needed public vehicular facilities. As a matter of fact, we have often been criticized by these same groups for not building the bridges and tunnels fast enough, and even today there is a vocal demand for more vehicular capacity to satisfy the vehicular-travel demand.

Of course, enabling legislation in New Jersey and New York authorized our construction of the port authority bus terminal, as well as the new bus station at the Manhattan Plaza of the George Washington Bridge. These two terminals are designed to serve in a dignified, convenient, and comfortable manner the mass transit requirements of commuters by bus between northern New Jersey communities and Manhattan. These daily bus commuters number over 60,000 from north Jersey, primarily Bergen, Passaic, Essex, and Hudson Counties, as compared with 68,000 New Jersey rail commuters. At both bus terminals, direct ramps from the trans-Hudson crossings keep all interstate commuter buses off the local New York City streets, thus completely eliminating this former source of traffic congestion and expediting the movement of commuters within the city.

It should, of course, be recognized that our six self-supporting interstate tunnels and bridges are only links in the overall highway system of the New Jersey-New York metropolitan area. Obviously, all of these highways, parkways, turnpikes, and other expressways are financed and built by municipal, county, and States agencies as well as the Federal Government—and not by the port authority. These arterial highways, as for example the Garden State Parkway and Routes 34 and 35 in Monmouth County, were built by State agencies to meet the intra-area needs of the local communities and their citizens as well as to permit people in the other parts of the State and metropolitan region to reach the area served by these routes.

It is evident that the economy, welfare, and growth of the New Jersey shore have benefited from these State of New Jersey arterial highways. Obviously, the same benefits are enjoyed by every area in this great bistate region as a result of the State highways which for the past 40 years have been brought into being by the will of our citizens through their legislature and Governor. Would you prefer that New Jersey withdraw from the automotive age and return alone of all our great States to the economy and inconvenience of the horse-and-buggy days? It is doubtful that with the removal of vehicular conveniences the welfare of the people of New Jersey could be protected with reliance entirely upon rail service.

This relationship of port authority bridges and tunnels to the general highway system is substantiated by the minimal effect of

trans-Hudson traffic on local Manhattan street congestion, despite some popular and perhaps deliberately promoted misconceptions to the contrary. The actual figures on such travel, not only for the vehicles which use our own tunnels and bridges but those which enter Manhattan Island from the other sectors of the region—Westchester, the Bronx, Queens, Brooklyn, etc.—show that only 1 out of 25 cars within the central business district of Manhattan south of 61st Street used the Holland and Lincoln Tunnels. Only 6 out of every 1,000 people entering the area in the peak period on a business day reach the central business district of Manhattan by automobile through the Holland and Lincoln Tunnels. Obviously, even some of these proportionally few persons, such as salesmen, professional people, and others, must use their cars since no conceivable transit system or even car pools fill their requirements in reaching their scattered and usually multiple destinations in the metropolitan region.

Even this minimal effect on local Manhattan streets is now being reduced by new projects such as the trans-Manhattan expressway which the port authority is building at the George Washington Bridge, the Lower Manhattan Crosstown Expressway which is being built by the State of New York, and the Narrows Bridge which is being built by the Triborough Bridge and Tunnel Authority. These new Manhattan north and south bypass routes are of particular importance in removing another source of traffic congestion since more than half of the total trans-Hudson motorists have neither their origin nor destination on Manhattan Island. Significantly, all of these projects are on the Inter-State and Defense Highway System which is being brought into fruition as a result of the President's Federal highway program.

In addition, consideration should be given to the development by the port authority of specific facilities aimed at reducing the number of automobiles which enter Manhattan during the peak hours. These include the Lincoln Tunnel parking lot which the port authority built 5 years ago, about 1 mile west of the New Jersey portal of the Lincoln Tunnel. Prior to 9 a.m. each day, the lot now receives nearly 1,000 cars containing persons, primarily commuters, who complete their journey to Manhattan by means of shuttle bus into the port authority bus terminal in midtown Manhattan. As part of our planning for the second deck of the George Washington Bridge, we are also constructing a 500-car parking lot adjacent to the Bridge Plaza in Fort Lee which will serve uptown Manhattan in a similar manner.

PORT AUTHORITY VIEWS ON TRANSIT

On many occasions the port authority has stated before legislative hearings and at other public meetings, in letters to public officials and commuter groups and individuals and in statements to the press that the mainline commuter railroad services must be maintained between New Jersey communities and the Manhattan business district. Our position has always been that both rail and highway transportation are essential to the welfare of the people of the New Jersey-New York metropolitan region.

It is for this reason that the port authority made available over $800,000 to the Metropolitan Rapid Transit Commission when it was established by the two States in 1954, so that it might undertake its recent comprehensive interstate transit survey. I might note that the commission's recommendation in 1958 of a $600 million bistate transit loop to serve New Jersey rail commuters was rejected by the New Jersey State Legislature.

It is for this reason, too, that the port authority has devoted its attention and study to the rail rapid transit problem for more than 30 years and has repeatedly submitted its findings and conclusions on the subject to the Governors and Legislatures of New Jersey and New York, other public officials, and the press.

Under bistate legislation adopted last year, the port authority is cooperating with the State of New York in administering that State's program of financing the acquisition of new railroad passenger equipment. The State of New York has authorized the advance of $20 million for the purchase and lease of such equipment and also contemplates State guarantees, after a constitutional amendment, for any special bonds issued to finance car purchases. To the extent that New Jersey commuter railroads have any similar requirements, similar port authority action could be authorized in New Jersey under the bistate legislation.

During the almost 40 years of its existence, the port authority has made many studies of the possibility of joint or consolidated rail freight services in the port district. It was this rail freight problem—not rail passengers—which the two States had in mind when they created the port authority in 1921 and approved the 1922 comprehensive plan of rail freight belt lines and unified terminals. The port authority has made many efforts throughout this entire period, but without success, to persuade the railroads to adopt measures which we were confident would reduce their costs and expedite the handling of freight. We stand ready to assist the railroads in this manner today.

Since 1926 the port authority has been almost continuously engaged in various studies of rail transit, diligently seeking a solution of the financial problems involved in the operation and improvement of rail transit and commuter operations within the framework of the port authority's method of financing public projects on a self-supporting basis. We have searched through the years for any plan or type of service or combination of facilities or new technological developments that might afford any basis for the hope of a self-supporting transit operation in the New Jersey-New York area. All studies by the railroads, transit experts, the port authority and many others, however, have demonstrated conclusively that commuter rail transit (which is utilized only on a 20-hour-a-week basis) cannot be operated on a self-supporting basis and that it cannot be financed by revenue bonds based upon the net revenues of rail transit operations. Almost daily accounts of the worsening financial plights of the New Jersey and New York commuter railroads, the New York City Subway System, the railroads and transit systems in this and other metropolitan areas confirm the serious deficit nature of rail commuter services.

In the New Jersey-New York area, the deficit for commuter railroad and subway operations amounts to about $150 million a year. Those who argue that the port authority should assume all over even a portion of the New Jersey commuter railroad deficit must at the same time acknowledge that others would then argue that the bi-State public agency should provide funds to help make up the huge deficits of the New York City Subway System, ferry services and the commuter railroads in New York State.

Some have also suggested that "contributions" be made by the port authority, to the financing of the New Jersey railroads' equipment, trackage, and terminals. Under such reasoning, the State of New York would have an equal right to demand "contributions" for the subway and railroads on the east side of the Hudson. Obviously, the end product of such use of port authority funds, even if it were legal, would be the complete dissipation of revenues pledged to the payment of its operating expenses and for the interest and amortization on its bonds and the destruction of the credit so vital to the revenue bond financing of its essential public facilities.

There is no legerdemain by which transit deficits are going to be eliminated by either private carriers or other agencies. The only answer to the maintenance of essential services must be some measure of public support or financial relief to the private rail carriers or tax support for public transit operators.

It is ironic to suggest that the port authority assume financial responsibility for rail transit. Actually, as we have shown in our reports, the port authority couldn't even finance the rail transit system itself, under the financial limitatitons set by the legislatures of the two States when they established their joint public agency and under the financial and legal commitments to its bondholders. Yet, proponents of such financing would saddle this agency with a load that would pull down the entire terminal and transportation structure now in existence and required in future programs in the interests of the welfare of the people of the two States and the Nation.

The legal impossibility for the port authority to underwrite the New Jersey and New York commuter railroad and subway deficits is not for lack of what may be called charter powers. Technically, under the 1921 Port Treaty, the port authority has the statutory authority—as distinguished from the statutory responsibility—to undertake railroad operation. The legal impossibility results from the absolute incompatibility between such underwriting of deficits and the port authority's duty, as set by the two States, to be self-supporting and to fulfill its contractual commitments to those who lend it the money to carry out its public program.

As my fellow Commissioners and I stated before a hearing of the New Jersey Assembly in November 1958, the port authority does not regard an arterial highway program or the provision of other essential transportation facilities as a substitute or alternative for a program of maintaining and improving rail-passenger facilities between New Jersey and Manhattan and throughout the port district. A sound solution to the problem of maintaining and improving rail facilities cannot, however, be developed through the destruction of the port authority's comprehensive program of providing on a self-supporting basis, the modern port and terminal facilities that are indispensable to the employment and continued economic welfare of the people of northern New Jersey and New York.

Today, these 21 facilities serve all modes of transportation—water, air, vehicular, and rail. They represent a port authority investment of about $1 billion and include the six interstate bridges and tunnels, six marine terminals, four regional airports and a heliport, a union bus terminal, two union motortruck terminals and a union railroad freight terminal. It is of interest that the union bus terminal in mid-Manhattan and the uptown bus station, now under construction at the Manhattan plaza of the George Washington Bridge, will handle 60,000 daily New Jersey bus commuters, or almost as many as the 68,000 daily rail commuters from New Jersey.

As will be noticed, these transportation and terminal facilities form the very foundation of the prosperity—present and future—of the people in this, the world center of all types of transportation and trade. It is significant that the 21 public transportation and terminal facilities of the port authority generated employment for almost 56,000 people who earned about $347 million. The very prosperity of the entire bistate area is dependent to a major extent on the continuance of the ability of the port to handle efficiently, expeditiously, and economically the many millions of tons of waterborne commerce each year. The port jobs alone provide livelihood for at least 430,000 people and furnish the support for one out of every

four people who live in the New Jersey-New York port district. The best interests of the people who live in northern New Jersey and New York City demand that the facilities which serve all modes of transportation must be maintained and expanded to meet the economic welfare and growth of this metropolitan region.

The port authority is cooperating to the best of its ability with the transportation offices recently established by the two States to deal with the transit problem and is assisting them so far as it is feasible for us to do so. We stand ready, as always, to assist in any way possible in the search for solutions to the problem of maintaining essential rail transit services.

JOHN J. CLANCY,
Commissioner,
The Port of New York Authority.

Juvenile Delinquency—National in Scope, Local in Cure with Federal Guidance and Aid

EXTENSION OF REMARKS
OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. SANTANGELO. Mr. Speaker, the Society of Medical Jurisprudence of New York conducted a panel discussion at the Academy of Medicine in New York City on February 8, 1960. Through the invitation of my friend, Edward S. Blackstone, chairman of the committee on program arrangements, I was a happy participant. Judge Phillip B. Thurston, justice of the domestic relations court, also spoke on the subject of juvenile delinquency as seen by a judge of a New York City court, who deals daily with the problem. I discussed the topic from the point of view of Federal and State legislation and what the local community could do to prevent the occurrence of juvenile delinquency and the rehabilitative measures which the community could properly take.

Clifton F. Weidlich, Esq., president of the society, presided. My speech follows:

Mr, Chairman, Judge Thurston, Mr. Weidlich, Mr. Blackstone, members of the Society of Medical Jurisprudence, I desire to speak to you about the broad subject of juvenile delinquency. I wish to talk about the nature, the extent of the problem, its causes, prevention, and control and what the Federal Government is doing in this field.

Juvenile delinquency is a problem of many facets. Everyone sees the problem from his own point of view. Each sees it in terms of his own area of concern. The lawyer certainly views it as a legal problem with consideration of specific violations and the application of appropriate remedies. Doctors view it as a psychiatric and psychological problem. Some recent suggestions indicated that we can predict a juvenile delinquent at the age of six. Certainly many men of religion and public-spirited citizens view it as a moral, religious, and ethical problem involvong the values by which men order their lives and those of their children. Certainly this problem involves a threat to a stable social structure and the failure of individual children and people to adjust to society. A person with a broad view regards it as a problem of personal development that affects not only the delinquent but the church, home, synagogue, schools, and various health services. In any event, whatever the view, it presents a challenge to governments—Federal, State, and local, and to parents, home, and churches. While this problem is national in scope, it certainly can be cured locally with the financial assistance and guidance of Federal and State Governments.

NATURE AND EXTENT OF PROBLEM

In the past it was our custom to consider juvenile delinquency as exclusively a local problem.

Today we recognize that the problem is national in scope and local in cure with Federal and State guidance. Recently I read an editorial in the Daily News which quoted a person saying that children were disrespectful to their elders, belligerent, and were gathering in lawless gangs. That person was Socrates, the famous Greek philosopher whose murmurs were terminated by hemlock.

By a strictly legal definition there are about 2 million children in our Nation today in the age group between 10 and 17 who have a record of one or more adjudications before juvenile courts. These are our legal delinquents.

But these statistics do not include cases of delinquency which are settled by juvenile police squads and other law-enforcement agencies—nor do these statistics include, of course, the undetected youthful violators. We have a statistically unknown degree of delinquency in our Nation.

So in speaking to you tonight about our national problem of juvenile delinquency, I would like to use as my definition of the term those persons under 21 years of age whose conduct includes all unlawful or persistently antisocial behavior.

There have been many words written and spoken about juvenile delinquency and our "lawless" youth. I was happy to see an article in a national magazine (Newsweek) a few weeks ago on our good teenagers—the other 98 percent of our children who are growing up without gangs, guns, and goofballs.The other 2 percent have given us a decade of delinquency. 1958 marked the 10th straight year in which juvenile delinquency increased in our Nation. 1958 was the 10th year in a decade which saw the appearance of children in our juvenile courts increase more than 2½ times.

This tremendous increase in youthful lawlessness and crime has started us all asking ourselves what the causes could be. Just as many words could be bandied about blaming parents, schools, churches, mass media, public and private morals, individual maladjustment and a variety of other causes.

CAUSES OF JUVENILE DELINQUENCY

My own conclusions about these causes, conclusions which I have reached after a considerable study of the problem, particularly while I was with the New York Temporary Commission on Youth and Delinquency, are that there are three major causes for this youthful violence and delinquency.

The first, and to my mind, the basic cause for this ever increasing rate of juvenile crime and delinquency is a breakdown in respect for authority, both for the State and for the family.

Secondly, there is a breakdown in the family because of increasing divorces, the absence of parents from the home and its corollary, a lack of love and affection. We find also, of course, in certain instances that the "smother love" of the overly protective parent brings about juvenile delinquency.

Thirdly, the youth of our country have a feeling of frustration, of not being wanted. This feeling gives rise to a rebellion within them, so that they are truly rebels without causes. They experience a feeling of not being wanted in the home, in the school group or in the community. They struggle for recognition and desire to be recognized in some form or another.

Recently, I read an article which outlines 12 simple ways to develop a delinquent. As a parent, which of them have you done?

First, they said to begin with infancy by giving the child everything he wants. In this way he will grow up believing that the world owes him a living. Second, when he picks up bad words or dirty words, just laugh at him. That will make him think he is cute. Third, never give him any spiritual training until he is 21 and then let him decide for himself. Fourth, praise him in the presence of all the neighbors. Show him how much smarter he is than the neighbor's children. Fifth, avoid as you would the plague the use of the words "wrong" or "don't." He may develop a guilt complex. Sixth, pick up everything after him—his books, his clothes, his shoes, so that he will know how to throw burdens on others. Seventh, let him read anything he wants. Have no concern whatsoever as to what goes in his mind. Eighth, quarrel with your husband or your wife frequently in the presence of your children. He will know what parents think of each other when the fire of love is burning low. Ninth, give him all the spending money he wants. Never let him earn anything on his own. Tenth, satisfy every craving of the child, gratifying every sensual desire. Eleventh, take his part against the police, the teachers, the neighbors; they are all prejudiced against your child. When your child comes home from school with low marks tell him that his teacher is prejudiced against Puerto Ricans, Negroes, Italians, or any other minority. When your child complains that the cop on the beat told him to break it up and move along, tell him that the cop is a crook and on the payroll of the local bookmaker. Twelfth, and finally, in your program be sure that when he finally gets into real trouble always defend him yourself and say, "He is a good boy, his companions led him astray."

FEDERAL ACTION

It is in the area of research that the Federal Government has given us so much needed leadership and assistance. Some of our Federal agencies and our Congress are devoting time, taxes, and toil also to help us find the most effective vaccine to inoculate our children against juvenile delinquency back in our communities where our children are—in our homes, schools, churches and all our communities' institutions.

It is particularly fitting, it seems to me, that much of this research and technical assistance to States in the field of delinquency has centered in our U.S. Department of Health, Education, and Welfare. For juvenile delinquency affects our children's health, education, and welfare as much as the food they eat, the water they drink, or the books they read.

Recognizing that this menace had reached national proportions, the Children's Bureau, which is concerned with the health and well-being of all our children, delinquent and nondelinquent, established a Division of Juvenile Delinquency Services, in 1955. This Division gives technical assistance and consultation to juvenile courts in many of our States on such matters as detention care, courtroom procedure, and court-community agency relationships.

We have about 3,000 juvenile courts throughout our country and yet service in many of these courts has not, for the most part, been able to keep up with developments either in the volume of services needed or in the application of up-to-date methods and principles for dealing with children and youth. The Division, though it does provide

consultation and technical assistance to many of our courts, is not adequately staffed to meet all requests in this field to develop guides and standards which are so greatly needed.

This Division of Juvenile Delinquency Services also offers technical assistance to States and communities in the training of personnel. It is alarming, I think, that about half of the counties in our country have no probation services at all for youth. In the other half where some probation services exist, we find that only about 1 out of 10 of the probation officers have had any specialized training for their jobs. We are also told that about 4 out of 10 of our 2,000 local probation officers who work exclusively with children do not have a college degree and are not eligible for advanced training. And our detention homes and public training schools are also for the most part staffed with unskilled, untrained people

It is in this area that the Division of Juvenile Delinquency Services tries to help us on a national level by offering as many services as possible to help local agencies to expand their inservice training for these people working directly with our kids and to help in getting more trained people into the field.

This Division also collects and analyzes our statistics on juvenile delinquency, does research toward establishing goals and guides for our local institutions which handle delinquents, and encourages and gives consultation to communities in their search for improved methods of combating delinquency. Certainly you and I know that more consultation with States and community institutions and more correlation of all our delinquency data is not going to cure delinquency. But the guides, the packaged knowledge and the exchange of experience we can get in this way can be invaluable if it is properly used.

The Federal Government also conducts a program of research, training and consultation in the mental health aspects of delinquency. In this area we are looking for immediate aids for our national problem of delinquency and we are also looking for aids of a more basic nature which will help us to increase our knowledge about juvenile delinquency—that is useful, everyday knowledge that we can put into practice for a long term cure. It's this kind of research that is badly needed. And again, it's this kind of research which costs us the most precious time. We here in the local communities are so busy trying to put out the fire that we haven't too much time left over to shop around for a better fire truck.

During 1959, the National Institute of Mental Health made 84 grants to institutions and individuals for research in juvenile delinquency. These 84 grants cost $1,113,000—a lot of money. But compared to the cost of public services for delinquents—that is our courts, police, detention facilities and institutional care—which is conservatively estimated to cost $200 million, the cost spent in research for more effective treatment, prevention and rehabilitation of our delinquents is small indeed.

This research sponsored by the National Institute of Mental Health is destined not only to help us save in the money costs of juvenile delinquency, but it will help us save other costs which count most, that is the cost of family distress, loss of productive years, personal unhappiness, and human life. These costs cannot be measured.

Specifically, some of the grants made by the National Institute of Mental Health in 1959 were for 14 studies in treatment methods; 15 grants for general theory and personality studies; 7 studies of delinquency and the schools; 14 studies in family structure and attitudes; and 4 studies in drugs and delinquency. These studies deal with some of our most basic problems in the treatment and rehabilitation of juvenile delinquency.

One of these research projects which the National Institute of Mental Health conducted during 1959 was centered in New York University and the Lower East Side Neighborhood Association. Another project sponsored by a grant from the National Institute of Mental Health is one in Quincy, Mass., known as the South Shore Courts Clinic project.

They hope that findings from this research project will give us some treatment classification procedures that can be used by some of our untrained or partially trained people in the field.

The appropriate committee of the U.S. Congress has not been indifferent to this national menace, either. Since 1953, a special subcommittee of the Judiciary Committee in our Senate has been studying juvenile delinquency. Just last fall they were here in New York to hold hearings on juvenile gangs, a problem of serious concern to you and me. This same subcommittee has held similar hearings throughout our country and has collected and disseminated valuable knowledge about the prevention and treatment of juvenile delinquency.

Last fall a subcommittee of the Committee on Education and Labor of the U.S. House of Representatives held hearings on this national problem in relation to Federal legislation in this field. These hearings on juvenile delinquency at the community level have not only been useful in stimulating local concern but they have also been informative to the House of Congress as to what the Federal Government can and should do in this field. They have helped us all by alerting us to the Nation's concern with juvenile delinquency and even its international implications. The boy of today is no different from the boy of yesteryear. The Greek philosopher Socrates told us youth gangs were prevalent in ancient Greece. The only difference, in my opinion, between the gangs of today and those of yesteryear is the use of instruments of destruction. A prankster today would not be considered a Huckleberry Finn, but a young man crossing interstate lines may be violating Federal law.

I believe that where a weapon is used, punishment should be swift and heavy.

Many of the crimes committed by juveniles today involve violation of Federal law. The theft of an automobile if involved in interstate transportation of the vehicle would bring a young man or woman into Federal court. Matters relating to runaway children and narcotics could also bring a child into a Federal court.

The U.S. Congress has recently passed some legislation, however, which related directly to some of these legal matters. During the 85th Congress, H.R. 12650, which prohibits the interstate traffic of switchblade knives became law—Public Law 85-623. During the same Congress we enacted Public Law 85-796, a measure which has resulted in the prosecution and arrest of pornographers who were unreachable. The most important feature of this law is that it allows prosecution at the point of delivery as well as at the point of deposit of obscene matters sent through the mail.

During this same Congress, we passed another law, Public Law 85-752, which contained a section which raised the age limit from 22 to 26 for those youths covered by the Federal Youth Corrections Act. This is a rehabilitative approach to the offender rather than a punitive one. I regret that the State of New York has postponed the effective date of Youth Act which extends secrecy to cases involving youths of 19 and 20. This postponement in my opinion is shortsighted and unwise.

During the 86th Congress, several bills relating to juvenile delinquency have been introduced by both Houses. None have become law.

Among the measures introduced were bills in both Houses which would provide for Federal assistance projects which will demonstrate or develop techniques and practices leading to a solution of our national juvenile delinquency control problems.

Other bills in both Houses were introduced to provide assistance to and cooperation with States and institutions of higher learning for the training of qualified personnel for work in various fields involving the prevention, treatment, and control of juvenile delinquency.

Two of our most urgent problems are personnel and practicable controls.

We, here in New York, have seen the benefit of our youth camps. One bill was introduced in the Senate last session and some 13 similar bills were introduced in the House to apply this basic principle on a national level. The intent of all these bills is to set up a Youth Conservation Corps whereby young men, usually between the ages of 16 and 21 could participate in planned conservation projects on public land. These boys would be aware that they were doing something necessary and worthwhile in the conservation of State resources. Those in favor of this measure have pointed out that the same sense of satisfaction and resulting change in attitude is frequently not found in training schools where work is designed to help the boys keep busy, and has no other meaning—and the boys know it.

We talk a great deal about rehabilitating the juvenile delinquent and the youthful offender, but we do very little about it actually. Governments have a Dr. Jekyll-Mr. Hyde complex, a helpful aspect and a harmful attitude. We little realize that when a boy gets into trouble he is actually condemned to menial employment and to second-rate citizenship.

Almost every agency of government interposes its strength to keep this child from becoming a useful citizen and losing himself in the anonymity of everyday life. A boy, after making a mistake, may receive the blessing of our youthful offender law, gets a break and, being released resolves to walk the straight and narrow path. He applies for a job—civil service closes its doors to him. He cannot become a police officer because the police department under the leadership of its police commissioner not only refuses appointments to boys who have made one mistake, but also extends the principle of refusing appointment to a boy whose father has been a convict. The boy cannot even get a job cleaning the streets because civil service will not approve or certify him as qualified. He cannot get a liquor license because the ABC and the State liquor board will refuse him a license. He cannot even become a barber because that requires a license. If his crime has been a serious one, the docks and waterfront are closed to him. The State civil service also closes its doors. He can't get a Government clerical job—the Post Office Department will not even let him carry letters. The electricians and plumbers reject him, as a license is required. If he wants to drive a truck, he needs a driver's license and perhaps he cannot even get a driver's license. If he wants to be a grocer, he finds himself handicapped, because he might need a beer license and can't get it. Where is he to turn?

If he tries to enter the Armed Forces, he may be rejected. With respect to the situation in the Armed Forces and the discharges which servicemen receive which are "less than honorable," I believe the situation is worse than it is in civilian life. Any boy who receives a discharge less-than-honorable finds that he has forfeited almost all of his civil rights either in government or in private industry. Many young men have come to me crying for the opportunity to ob-

tain employment, but are prohibited from doing so because they have received a general, undesirable, bad conduct, or dishonorable discharge. Only an enlightened public can solve this problem for it is certain that government agencies will not accept a boy who has anything less than an honorable discharge. In past years we prided ourselves in seeing that our Constitution struck down the vicious bills of attainder and the doctrine of corruption of the blood. In practice in our country we see the horrible consequences of this nonlegal bill of attainder in the practice of government to deny jobs to boys with a conviction or to refuse him civil service because of an arrest or a discharge less than honorable.

During my senatorial career in the New York State Senate I made a recommendation and introduced a bill which redefined the term "arrest." A person who has been adjudicated a juvenile delinquent or youthful offender should not be considered as a person having been arrested. I would give him at least one chance. In this way, a boy would be able to say truthfully, as on a civil service questionnarie, that he has never been arrested. We public officials or personnel officers will not knowingly take the responsibility to give a juvenile delinquent or youthful offender a position in public employment. We act this way because we know that if a government employee who was a former delinquent trangresses once again, a newspaper will call for the removal of the public official. It requires courage for a public official to give such a boy an opportunity in public employment and there are very few with such courage. Despite these obstacles some boys rehabilitate themselves. I salute them.

You gentlemen are steeped in law and in modern psychiatric and psychological approaches. In your field of endeavor you may find answers which may prove more realistic than mine or more attainable. I exhort you to use your intellect and experiences to the solution of this problem. It is the common concern of all of us.

Some Are Born Great

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial which appeared in the National Tribune-the Stars and Stripes on February 11, 1960:

SOME ARE BORN GREAT

As William Shakespeare so wisely expressed it long, long ago, "Some are born great, some achieve greatness, and some have greatness thrust upon 'em."

A review of the history of nations will reveal that few men are actually born great—that is if we are to evaluate greatness by their final accomplishments.

True greatness does not depend upon the acquisition of great wealth nor the assumption of great power, politically or by sheer strength of arms. True greatness depends upon certain other qualities which, alas, are not found too often in those whom the world has acclaimed as great. Those who are born truly great will achieve their destiny despite all odds. Nothing can prevent them from the final fulfillment of their greatness.

As for those who achieve greatness, we might place in this class men who have become wealthy by the use of a certain business acumen and a certain disregard for their fellowmen in rising to their positions of wealth. But these are not truly great.

As for those who "have greatness thrust upon 'em," they are for the most part opportunists, rising on a surge of popular enthusiasm to positions of power politically, but when their final achievements are summed up impartially, it will be found that they are the least great.

Without discussing the history of other nations and confining ourselves strictly to the boundaries of our own country, when we look back upon the men who have become leaders in government, industry, or politics, we find very few upon whom the mark of true greatness has descended.

Our country has been fortunate, indeed, that among those who have become important in the development of our Nation, we can count at least two men, who stand above their fellows and who can be said to have reached the greatness to which they were born.

We refer here to George Washington and Abraham Lincoln—one the father of our country and the other the saviour of our country. As we see it, there can be little doubt as to their greatness—greatness of mind, greatness of inspiration and greatness of courage to accomplish and, above all, the greatness of humility.

Intellect plus inspiration, plus courage, plus humility, make them stand out above all other men this country has developed over the years. The only men who can be ranked along with them to some degree might be those missionaries who explored our wilderness, bringing the Gospel of Christ to the Indians and, if need be, giving up their lives in their desire to spread truth. These men, also had inspiration, courage, and humility.

The anniversaries of the birth of Washington and Lincoln occur during the month of February and our citizens, recognizing their worth, have set the days apart.

Though born nearly a century apart and, to use an old cliche, "poles apart" insofar as their early training and education are concerned, the innate greatness with which the Creator endowed them could not help but assert itself as each faced a crisis which, on the one hand might have meant the end our our country before its history had even begun and on the other hand the disunity of our country which could have meant the road to ruin.

Two writers, as far apart as Cicero and our own Ralph Waldo Emerson, have discussed the meaning of true greatness. Cicero, the Roman, wrote that "All great men are truly inspired." Emerson wrote, "Great men are sincere." Washington and Lincoln embodied within them both inspiration and sincerity and with these virtues the sublime virtue of humility.

Just as Washington at Valley Forge knelt down in his tent and prayed that the cause for which he and his troops were fighting might win out in the end, so, also, did Lincoln, through the bitter 4 years of the Civil War, realize that without divine guidance the cause in which he believed—the constant union of our States—could not be preserved.

It may well be that in the not too distant future our country may be facing another crisis which, if not met bravely and firmly might bring about our destruction. God grant that if such a situation should arise, in His wisdom and kindness, He shall again smile upon us and give us another leader who can measure up to Washington and Lincoln. More than that, we could not ask.

Politicians—A Tribute From a Noted Educator

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 11, 1960

Mr. O'HARA of Illinois. Mr. Speaker, one of my distinguished constituents, Dr. Joseph F. Menez, chairman of the Department of Political Science of Loyola University, of Chicago, recently gave a talk at the 11th annual convention of the Christian Family Movement at Notre Dame University in which, as he writes me, he paid a small tribute to hard-working politicians.

I appreciate that all my colleagues are statesmen, but I suspect that even in the most statesmanlike there is more than a bit of the politician, certainly in the sense sought to be conveyed in Dr. Menez' most readable remarks, which follow:

POLITICS AS A VOCATION

(By Dr. Joseph F. Menez)

The topic assigned me is "Politics as a Vocation." I should like to discuss almost the heart of politics, namely, the politician, the most sophisticated of all political animals. Now the Greeks had a word for city-state, polis, and in our day this has a new connotation. You might say, it's a good word gone wrong. Professor Maurice Klein writes in the Antioch Review that he always asks his classes in government to write down what the word "politics," our off-shoot of polis, means to them. He gets various answers but to far too many, it means "dirty business" and other similar perjoratives. "When I hear that word, I feel like spitting," one wrote. "Wire pulling," "underhandedness," "dog eat dog," "where connections more than ability counts," "corruption and graft," and so on. The practitioner of politics, the politician, is assaulted with the same basic language.

All one has to do is read "The Last Hurrah" to know what has happened to the boss. The systematic welfare state, the decline of patronage, the rise of organized labor as a political force, the flight from cities into the suburbs and the subsequent rise of the independent voter, not to mention the improvement of mass education, intellectual communication, and a high standard of living—all have taken their toll of the "boss." Thus, the kind of person that these students are talking about doesn't exist. The political boss, says Cabell Phillips, "is almost a mirage, a gaudy memory of a gaudy past, a specimen which time has rendered almost extinct."

What does exist, though, is the Leader. As John Flynn wrote in "You're the Boss" the "Boss" is you—if you want to be. "The humblest worker in the ranks," he says, "has the right any time to challenge the top leadership. Whether he does so because he honestly believes the topman is a bad leader, or simply because he himself has an eye on the highest rank, his success or failure depends on his ability to attract to his new banner a sufficient number of other workers to unseat the leader he has challenged."

If you look in the Oxford Universal Dictionary, as I did, under "politician," you'll find among other definitions the one given by Adam Smith nearly two centuries ago as "that insidious and crafty animal, vulgarly called statesman or politician." James

Freeman Clark thought that a politician was always looking out for the greatest good for the greatest number but the greatest number is No. 1. "I'm not a politician," said Artemus Ward, the American humorist, "and my other habits are good." Mark Twain, a cynic of the first order, knew a great deal more about literature than he did about politics for how else could he have said "it can probably be shown by facts and figures that there is no distinct native American criminal class except Congress." Finally, we can recall Hilaire Belloc's statement, "Politics, politicians, you know how it is," he said, "you see a slimy pond, with a lot of insects swimming around in it and you go off to bed and next morning, there they all are, still mucking around in dirty water. That's politics. That's politicians for you."

Now whatever the reasons may be, there is little doubt that the politician in American literature has really taken a beating. This is the reason, I suppose, why Ben Franklin said "the first mistake in public business is to go into it." Another, I suppose, is because of the hard work involved. Eugene Gilbert, president of the Gilbert Youth Research Co., asked young people this question: "Would you like to be President of the United States?" Only 8 percent of the boys and 2 percent of the girls answered yes. One boy said: "I can't see any young boy who'd like to become President with the problems and the world tensions surrounding us today. It's just not worth it."

In "Laughing With Congress," ALEXANDER WILEY prints this ditty:

"He'll find, should he win
The office sought, that
One day he's sworn in
The next, sworn at."

Horace Greeley, you will remember, ran in the election of 1872 and admitted he didn't know at times whether he was running for the White House or the crazy house. Artemus Ward remarked that it is easy enough to see why a man goes to the poor house or to the penitentiary. "It's because he can't help it. But why he should voluntarily go and live in Washington, is entirely beyond my comprehension." Humorist Will Rogers' profound comment was that all politics is applesauce. It was, no doubt, nonsense like this that prompted a fiery tempered legislator to answer a constituent thus: "Sir," he said, "my stenographer, being a lady, cannot type what I think of you. I, being a gentleman, cannot think it. You, being neither, will understand what I mean."

Politicians are supposed to say one thing when they mean another. "There's just one role for politicians all over the world," wrote John Galsworthy. "Don't say in power what you say in opposition; if you do, you only have to carry out what the other fellows have found impossible." Politicians, after all, reflect their constituencies. One time Gladstone, Prime Minister of England, was reproached for having said one thing while running for office and doing another thing while in office. This does not mean one gives promises before being elected with no thought given to carrying them out; it only means that one cannot be absolutely pinned down. In our own country, was Mr. Dulles insincere in first thinking the Bricker amendment (which would have restricted the President in the conduct of foreign affairs) was good and then later bad when he was Secretary of State? Are judges or courts insincere when they reverse themselves? We do not have to labor the point that one yardstick is being applied to politicians and another to everyone else.

Edmund Burke, who certainly knew something about politicians and was himself one of the very highest type, had this to say about compromise, another area in which the politician is misunderstood. "All government, indeed, every human benefit and enjoyment, every virtue, every prudent act, is founded on compromise and barter. We balance inconveniences; we give and take, we remit some rights, that we may enjoy others; and we choose rather to be happy citizens than subtle disputants." This does not mean giving up principles. It does mean that in most of the issues one takes a half loaf. It is amazing that when the politician compromises we think he is splitting hairs, or that he's being weak and yet he does only that which everyone else does—except publicly and perhaps, let us admit it, more forthrightly. For politicians to compromise is not immoral any more than it would be for someone in private life. "Indeed," says Marshall Clinard, "Were today's politicians to adopt such a standard they would almost certainly be rejected by the voters as idealists, dreamers, crackpots or visionaries."

Just as the engineer runs a train, a group of politicians runs the party. It's as simple as that. "Party," said Edmund Burke, "is a body of men united for promoting by their joint endeavors the national interest upon some particular principle in which they are all agreed. For my part, I find it impossible to conceive that anyone believes in his own politics or thinks them to be of any weight, who refuses to adopt the means of having them reduced to practice." We make this refusal all the time. We are really a nation—if I may use a vulgarity—of beefers. We claim to know what's wrong and yet millions don't vote regularly. At the same time we do nothing about politics, we have the temerity to point the finger of blame at those who do.

It is the business of the politician, who is the philosopher in action, to find out the proper means toward those ends and employ them with effect. This means organization: it means assessment. The Jeffersonians, at the turn of the 19th century, organized, looked over the situation, saw what had to be done, and then adopted the means to effect the end. The Federalists, by contrast, didn't do this and they perished as a political party. A President like Theodore Roosevelt understood this. To his friends who warned that people of his class did not go into politics, especially low politics in the market place, he replied: "that if this was so it merely meant that the people I knew did not belong to the governing class, and that other people did—and that I intended to be one of the governing class; that if they proved too hard-bit for me, I supposed I would have to quit, but that I certainly would not quit until I made the effort and found out whether I really was too weak to hold my own in the rough and tumble."

What we sometimes do not understand is that the politician is a specialist. He's a specialist in the art of governing and in overlooking the affairs of the Nation. We forget Woodrow Wilson's remark that "politics ought not to be considered as a mere occasion for oratory, but as a branch of the national business." Especially is the politician an expert in human affairs for he spends more time, more energy and more thought in 1 week about politics than we do in 52 weeks.

Former Democratic National Chairman, James Farley, said that politics was a science because it was a "scientific approach to handling human beings." Leonard Hall, his counterpart, believes that politics is an art. He said: "When we speak of a science we think of something that can be measured at all times. There are too many intangibles in politics, like human nature and human progress." To Justice Felix Frankfurter "government is itself an art, one of the subtlest of arts. * * * It is the art of making men live together in peace and with reasonable happiness. * * * One of the shallowest distains is the sneer against the professional politician." It is, I think, a little of both, a little of an art and a little of a science. It is an art because the handling of men to form a peaceful community is a very high art, and a science because there is a science of administration. The politician sees the nuances of administration and of public policy, the vagaries of people, especially as voters, and the importance of issues. To sneer at him, or write him off as a nincompoop, untalented and busy with low concerns, is not only doing violence to the truth but it comes close to meaning that representative government, and that means party government, is a failure.

Does one have to lie and cheat to be a politician if one concedes grudgingly that party government is necessary? Is Wendell Phillips right when he said "politicians are like the bones of a horse's foreshoulder—not a straight one in it" or John Gay:

"That politician tops his part,
Who readily can lie with art."

"If you look down through history," said Leonard Hall, "that kind of politician doesn't last very long. A politician's greatest asset is his word. If his word isn't good, he doesn't last long." Agreeing with Hall, James Farley wrote: "I can truthfully say, I have found more truth telling, more sincerity, and more human feeling among politicians than among any other group with whom I have been associated. Basically, politicians are very decent people." The clearest headed politicians are most careful not alone on the basis of ethics but also on the basis of practicality for many a politician has had a promising career ended because the voters doubted his promises. Duane Lochard of the Connecticut General Assembly relates this anecdote: "I had accepted an invitation to give a junior college commencement address * * * and was torn between the obligation to my host and my duty to vote on the bill (involving the primary). The majority leader, Senator Joseph Longo, gave assurances that the matter would not be put to a vote before I returned although he knew the vote would be against him. The appointment was kept. I returned hours later and did, in fact, vote against the majority leader who had held the bill." This specific instance of politicians keeping their word, not only among themselves but to the constituencies, can be multiplied many times.

As Senator EUGENE MCCARTHY has noted, people are honest until proved to be crooks, while politicians are considered crooks until they prove themselves honest. Prejudices are comfortable and it is so easy to set politicians aside and attribute to them failings that nobody else is supposed to possess. In addition to being suspect, politicians are often accused of having pigmy mentalities. Thus, in "The Twilight of the American Mind," Walter B. Pitkin wrote that politicians are the semifailures in business and the professions, men of mediocre mentality, dubious morals, and significant commonplaces. This might be true of hack politicians as it is true of huckster businessmen, run-of-the-mill professors, or has-been actors. Which is to say, it proves nothing. Working under the searchlight of public opinion (you can't see it, but as James Russell Lowell said, it has, like the atmosphere, 16 pounds to the square inch), is no easy task. Politicians claim none of that passion for anonymity or personal privacy that their critics insist upon. I don't think one could find a similar group of people, individually selected as in Congress, who would have as much talent and as much know-how as politicians.

The American sport is to picture the politician in stereotypes. He's short; he's fat; he smokes cigars; he's a "deese, dem and dose" character; he's a man with no education and hardly eats his food with the proper instruments. I think this false but comfortable picture is due partly to the fact that we

like a scape-goat class, to whom we can attribute all the shortcomings of society in order to divert attention from ourselves. And yet, government which is out of sight, out of mind, out of touch—as Walter Lippmann put it—is made comprehensible to you and me because this politician stands between a complex and intricate piece of machinery, and a simple individual who does not know how or where to turn when he is in trouble. Though he may be socially and publicly rejected, opposed, and reviled, the politician is on the job 24 hours daily. In Boss Rule, J. T. Salter, the foremost authority on the political boss in the United States, puts it this way: "The world is so big it is like a thousand billion dollars; it is beyond comprehension. An incident in war or peace may bring it home to us, but, for the most part, it is the politician that cuts the world down to our size or helps bring up up to its size. And that is the permanent need now to see the world realistically * * *" Nor does the politician shudder at human nature nor try to remake the voter. He works with what he has and takes the voter as he sees him. He doesn't say "I could have more votes or better voters or more intelligent voting if I had better constituents." If you are in the habit of counting your blessings, then, said Bishop John King Mussio, count politics in, for the politician * * * is a dedicated man with a high mission and a stewardship entrusted to him by God. He confers a real boon upon his fellow men by a service that is indispensable in our modern society. And, inasmuch as politics carries out, in its sphere, the purposes of God in regard to man, the politician is likewise, in an official way, a servant of God. This is a dedication that puts the politician in very high company.

It is imperative, then, that exemplary Catholic young men of exceptional intellectual and spiritual qualities aspire to the work of the politician."

He doesn't read a lot of books and he doesn't do very much abstract thinking, because he's too busy. He's on the job all the time because he has no office hours. He's a man of action, says Salter, whose lungs and liver and stomach are continually assaulted. He subscribes to Mr. Truman's dictum, "If you can't take the heat, get out of the kitchen." I suppose this is the reason that Adlai Stevenson said once that "running for public office is something like being inebriated. If there is anything bad in a man, it will bring it out." It takes no great thought to realize that a politician could not go far in politics, with the opposition training its searchlight on him, if he were politically or morally vulnerable.

A man who can test his strength every year, or every 2 years in a ward, or a city, or a nation, and if he loses start from scratch again to build up an organization—this man is an optimist. Most of us tend, first of all, to refuse to be tested; if we are tested and lose, we quit. The politician is in the business of making friends. When he approaches us in a friendly manner we contemptuously say: "He's trying to get my vote." Of course he is trying to get your vote and mine in the same way the grocer uses friendliness to court our trade. The politician knows that the stranger votes for his opponent as readily as does his enemy. In this connection, it was said of President William McKinley (the remark is attributed to Uncle Joe Cannon, Speaker of the House) that he courted the people so assiduously and had his ear so close to the ground that it was full of grasshoppers. The politician, thus, is often the one man in the community who knows what is going on in some cases rivaling the priest or the minister. He is rigidly contemporaneous, says William White, a close student of politicians. He is not concerned for the most part with ultimate aims or with history but with the election returns today. He is interested in meeting people and getting votes. For this reason, quipped Paul Lazarfeld, in politics familiarity does not breed contempt; it breeds votes.

Politicians are people of considerable tolerance. Here is a breed of men who can't afford to hate; who can't afford to be stickmad; who, if not friendly, are courteous to everyone. For the most part, they can forgive and forget for they understand the high prices of personal hatreds. RICHARD NIXON'S success is partly based on this formula. "Once a battle is over," he said to Earl Mazo as recorded in "RICHARD NIXON, A Political and Personal Portrait," don't hold grudges." NIXON wouldn't, says Mazo, hesitate to utilize his worst enemy if he felt that person was the only man for the job. Columnist William White reports the story of a reformer who discovered to his shock that a local character had become a faithful campaign associate of the reformer's politician friend. Complaining, he said: "You told me a week ago that fellow was an S.O.B." The politician replied: "Yes, son, but now he's our S.O.B." The moral of that story is not that the politician doesn't know right from wrong but rather that the politician would rather be caught dead than forced into lengthy explanations because he knows that such explanations and alibis are costly. It is simply that the longer one is in politics the older he is at his art. As Oliver Wendell Holmes once remarked, "the young man knows the rules, but the old man knows the exceptions."

Politicians are always being put on the spot in a way the priest, the professor, the banker or the candlestick maker is not. A reporter asked Charles Evans Hughes during his unsuccessful 1916 campaign against Woodrow Wilson, "What would you have done when the *Lusitania* was sunk." "Why," said the Justice, "if I had been President, the Germans wouldn't have dared to sink her." When Howard McGrath was Chairman of the Democratic National Committee, he appeared on "Meet the Press." The program was nearly over; if some reporter were to ask a nasty question now, there would not be time for an answer. Sure enough, the question came. It involved former Governor Michael Curley of Massachusetts who had been sent to jail for using the mails for fraud. The question was this: "Why did Mr. Truman pardon Curley?" In the seconds left for him to answer what could have been better than the one he gave? "To get him out of jail, of course."

In summary, then, who is the politician, what is his breed, what is his stock in trade? The following gem, from J. T. Salter, is short but adequate:

"(1) . . . stick everlastingly at it; (2) they know that the Kingdom of Heaven is taken by violence; (3) they live decades among their people and learn to judge their wants; (4) have a flair for getting along with people; (5) have problem-solving ability; (6) understand that politics is the science of the possible; (7) are able to dramatize their appeal so as to effectively capture favorable attention; (8) often have an unusual memory for names and people; (9) can gage public sentiment and strength of various group attitudes; (10) have the kind of courage that enables the possessor to risk all on the outcome of an election and than be able to start building anew in case of defeat; and (11) have enough vision and imagination to see over the district for which they are candidates, whether this be a township or all 48 States. They understand that in politics the race is not always to the swift nor the battle to the strong, and that a smile and a genial manner may be more convincing han logic unadorned."

Let's praise the politician a little instead of always knocking him.

The North-South Problem: Breaking the Circle

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 11, 1960

Mr. PORTER. Mr. Speaker, in the recent annual report of Lloyds Bank, Ltd., written by Sir Oliver Franks, chairman of its board, there are several perceptive messages which I want to call to the attention of my colleagues.

Sir Oliver uses the term "north-south problem" to refer to the general problems of the relationships of the industrialized nations of the north of the globe to the underdeveloped and developing countries that lie to the south. He observes:

In 1947 the balance of the world turned on the recovery of Western Europe; now it turns on a right relationship between the industrial north and the developing south.

He speaks of the "vicious circle" arising from the fact that low living standards and free broadly democratic societies cannot produce sufficient savings for the rapid economic development demanded in these societies.

He points out that the circle can be broken in one of two ways:

It can be broken by tyranny which, by enforcing hardships on the people and holding down their standards of living, forces the savings for rapid development; or it can be broken by the inflow of capital from outside, giving a free society the chance both to develop and to remain free. In coming years for country after country this vicious circle will be broken one way or the other. We have already had evidence in the Middle East how real and how urgent these problems are.

Consider Sir Oliver's comments on the new regional groupings for trade:

The idea of the unity of Western Europe is the one creative political idea that has emerged since the war. We do not know yet whether the idea will successfully translate itself into reality, but if the notion of one country, one society in Europe is to have any validity it must gradually clothe itself with economic meaning. Any country, Britain or the United States, which failed to recognize this would put itself in the wrong with history.

The United States, and for that matter Canada, is troubled at the possibility of a recovered Western Europe, even though split in two, building discriminatory fortifications, with North America—and of course Japan—left on the outside. It does not seem to me in the interest of the outside world to try to break down these European groupings, still less to favor one against the other. There are bound to be regional economic groupings in the world half way between the single nation states of today and the universality of all the nations. The plain fact is the world is too big, and the individual nation is too small. Regional groupings are a natural occurrence. The United States sometimes forgets that it is both a great Nation and a large regional group.

The true interest of the international community is to see that the existing two groupings merge in the end, so that the dream of the free movement of men, goods and ideas comes true in Western Europe, and in addition to work with the six and the seven, or

with the group that may emerge, so that together we progressively lower economic discrimination in the free world.

Sir Oliver also recommends that the United States set free $12 billion worth of gold—which he says is nearly one-third of the entire gold stock of the free world—on its present immobilization as backing for Federal Reserve notes and deposits.

Under a previous consent, I include Sir Oliver's discussion on this point and the conclusion of his extremely able report:

CHANGE POSITION OF THE DOLLAR

The third issue we have to face is the changed relationship of the United States to us and to Western Europe implied in the scale of the deficit on the American balance of payments in 1958 and 1959. For the 2 years together this is likely to have been of the order of $7 billion, with a loss of gold approaching half that amount. The United States cannot, and of course will not, live with a deficit on this scale for long, but, as compared with the rest of us, the Americans still have comfortable reserves, with the corresponding advantage that they have time to decide on and apply a sensible course of action.

The one surely disastrous way of dealing with this problem would be for the United States to attempt to rid itself of a deficit on the balance of payments by one drastic surgical operation. It is obvious why the consequences of this would be disastrous for all the neighbors of the United States in the free world. But it would also be disastrous for the United States because it would mean risking, and probably losing, a considerable part of that large area of the world won for freedom since the end of the war. It is of vital importance to all of us that the Americans do not try to shrug off their difficulties by a large and violent lurch of policy, and I do not think that they will do so.

It follows, therefore, that the means by which the American deficit on the balance of payments is reduced must be numerous. Something of everything that helps must be done; no one line must be pressed to its logical extreme. What does this mean in more detail? There are the things which the United States will wish to do and the things which we and Western Europe should undertake to ease the strain.

One measure already adopted by the United States is to campaign for more manufactured exports from the United States to other industrialized countries. How easy it must be for manufacturers in a vast economy like that of the United States to think of exports only as marginal and not understand the relevance of their efforts to the national balance of payments. Further, given that in certain limited lines of export American products are a little dear as compared with those of their competitors, there are steps which the United States can take internally to change this situation. And there is one suggestion, aired by at least one well-known American economist, which could be relevant. It is that the $12 billion of gold—nearly one-third of the entire gold stock of the free world—at present locked up as backing for Federal Reserve notes and deposits should be set free for effective use. There are those who would oppose such a step on the ground that it might aggravate fears of inflation among the American public. It is, of course, for the American authorities to decide where the balance of advantage lies. I wish only to offer one or two comments, based on our own experience, which suggests that if the United States decided to take the plunge the water may not really be as cold as it thinks.

RELEASE OF STERILIZED GOLD?

It is now 30 years since the Macmillan committee pointed out that the effect of holding gold as backing for the currency was to forbid the Bank of England to use its gold for the only purpose for which it is held or could be used, namely the settlement of international payments. The committee therefore urged that central banks should give collective consideration from time to time to the question whether it would be in the general interest that the legal requirements in force in different countries as to gold reserves should be relaxed or tightened. It is now 20 years since virtually the whole of the Bank of England's gold was swept into the Exchange Equalisation Account, thus setting it free to help finance the war in its early stages. These transactions were received with complete indifference by the British public and it can be stated categorically that in the inflation that has taken place since 1939 the fact that our note issue has been entirely a fiduciary issue has played no part whatever.

If the United States were to liberate their $12 billion of sterilized gold, therefore, this step would not lack precedent and would be quite in line with a natural process of evolution in the management of money. Nor are the advantages of such a step related solely to the fact that the United States happens to be losing gold at present. Both sterling and the dollar are important reserve currencies. Over a period, international exchange reserves will have to grow steadily if world trade is not to be hampered by a shortage of liquidity. Since the gold component of the reserves (assuming an unchanged gold price) will expand only very slowly, we must look to a continued growth in the foreign exchange component. This means that the short-term liabilities of financial centers like London and New York will tend constantly to expand in relation to their gold holdings. Hence it is very important, for the preservation of world confidence and the prevention of disruptive flights of hot money, that those liabilities should have the effective backing of all the gold that can be mustered for use.

Quite apart from American action, it is clearly the job of a recovered Europe to dismantle dollar discriminations in trade which had their justification in an earlier period. This has already happened on a considerable scale and can go further. Convertibility of European currencies as against the dollar has already gone a long way. In Britain we have pretty well abolished the travel allowance for dollar countries as well as others. We have repaid in advance our drawing of $250 million from the Export-Import Bank, and we have freed most of our imports from quota restrictions. I should agree also that in our part of the world we should stand ready to work out afresh fair shares in constructive help to developing countries and I should suppose that an increase in effort and contribution should come from the recovered nations of Western Europe, including Britain.

Here there is one point which should be made: It is important that the Americans do not expect too much. They are so disproportionate to the rest of us in the size of their economy and the vast power of their productive machine, their standards of living so much higher, that what in fact is fair can easily seem the reverse. It is our job in Europe to do more: We shall help, but we cannot stand in the shoes of the United States. Nor is it the case, as is sometimes assumed abroad, that Britain has been doing little for the development of developing countries. If we take the countries of the Commonwealth alone, the British Treasury has stated that in recent years private investment has averaged about £150 million, public loans and grants £88 million, a total of around £240 million. This is equivalent to more than 1¼ percent of the average national income for the 3 years 1956–58.

Beyond this, everyone is aware that countries faced with difficulties in the balance of payments are subject to internal political pressures. In the period since the war the United States, by economic aid and expenditure abroad on a very large scale, has created conditions in which international trade has expanded freely. It has provided a growing market for imported goods, free from quantitative control, apart from a few well-known exceptions. It has progressively reduced the level of the tariff under the reciprocal trade agreements program. On occasion the straight line of policy has to become a little wavy in places to accommodate an existing political situation. But there is all the difference in the world between a rare concession and a breaking of the line. This last would be to deny that leadership of the free world which history in this half century has given the American Nation.

These are among the problems which face us in 1960, and now that our economy has been rebuilt and is reasonably strong we can give attention to them. It is important that we do so. For one thing it is expected of us by our friends both across the Atlantic and in Western Europe. For another we owe it to ourselves, since only in this way can we make time our ally.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. ALGER. Mr. Speaker, I include the following newsletter of February 13, 1960:

WASHINGTON REPORT

(By Congresman BRUCE ALGER, Fifth District, Texas, February 13, 1960)

The defense capability of the United States is provoking lively debate in the House and throughout levels of government. Normal interest in maintaining the necessary military strength is augmented now by factors (1) election year politics, and (2) the approach of yearly appropriations for defense. Every year Congress is warned, even "scared" by some who fear economy-mindedness in Congressmen. Lost in the muddy water of political controversy are these facts: (1) U.S. retaliatory strength in overall destructive ability is greater than Russia's. The United States is No. 1 in the world. (As the President, Secretary of Defense Gates, and Joint Chief of Staff Twining have all stated.) This overall strength is what is vital and necessary and not outmatching Russia in every single department, weapon by weapon; (2) security considerations—that is, preserving our military plans and secrets—are out the window as we are forced publicly to discuss all military matters. There is a great difference between coverup or concealment in the name of security, and the sensible refusal to divulge our plans to the enemy, a prudence difficult to maintain in the heat and thoughtlessness of political controversy. Some of the critics who seek to discredit the President and the administration for political gain have a record that does not bear scrutiny. In the critical years following World War II, the Democrat Administration and Congress failed to pro-

vide funds for missile research and development, even though the need was stressed before congressional committees. Only under this administration, now attacked by these critics, has missile development been expanded. In the 7 fiscal years, 1954 through 1960, this administration has been responsible for nine times the expenditures (and emphasis) of the preceding 8 fiscal years. The question now, Is a continual airborne alert needed? Our time in Congress would be better spent in constructive study, rather than in purely political controversy.

The agriculture situation was again highlighted by the President's message to Congress. The President stressed the need for freeing the farmer from government red tape and subsidy, using wheat as an example. Wheat as one of the subsidized crops costs taxpayers $1.5 million per day or $1,000 a minute. It represents $3.5 billion, or 30 percent of the CCC inventory, yet accounts for only 6 percent of the cash-crop money received by farmers. The ridiculousness of this situation is obvious. The President put the responsibility for a solution squarely up to the legislative body, the Congress. In this way, he is focusing a merciless spotlight on those to blame. The President can only do his best to administer the laws Congress hands him. His only control is his veto power and the threat to exercise it. The President has made it clear that he will approve any constructive approach that the Democrat leadership in Congress may adopt; but he has served notice that high, rigid price supports or direct payments to farmers (the Brannan Plan) are not the answers. Now, it's up to Congress. Just as in the case of the Landrum-Griffin labor reform bill, the people may force action over-riding the leadership in the House and Senate.

The election year Congress is already producing some new conflicts. The ambitions of the Senators aspiring to the Presidency has resulted in quick passage of legislation. It is interesting to observe that the traditional House-Senate comity or friendship may be strained as the Senate steals the spotlight and gets the credit (or blame?). Two of these bills, now passed, will come to the House: (1) The clean elections bill is now pending before the House Administration Committee. This bill involves political expenditures and reports. The "joker" is in extending the law to cover local primaries, considered by many an invasion of States rights. Yet the bill doesn't curb union bosses from extracting dues from union members to spend contrary to their wishes in campaigns. The bill passed 59 to 22 with both Texas Senators voting for it; (2) A new Federal-aid-to-education measure passed 54 to 35, with both Texas Senators voting for it. The $917 million per year for 2 years is a massive dose, and is the foot in the door, with no upper limit once adopted, as I see it. Federal control, of course, must accompany Federal spending. Underlying the bill is the bland assumption that any school shortage or educational shortcoming (wherever such may indeed exist) proves there is the need for Federal solution and bureaucratic control. This is a short-sighted solution, in my view. Nevertheless, as it is presently controlled, Congress appears determined to "aid" in local education.

Heavy mail from home indicates that a lot of Dallas people share my concern over the Humphrey move in the Senate to eliminate the so-called Connally resolution from our agreement to accept World Court jurisdiction in international disputes. I can see no valid reason why the United States should unilaterally surrender a single iota of our sovereignty in this way—why we should forego the right, jealously guarded by others, to determine for ourselves which disputes are essentially domestic in nature, and hence not subject to the mandate of any international organization or authority.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Senator Jennings Randolph Delivers Significant Address at Boy Scout Award Dinner in West Virginia; Speech of Cecil Dodd Is Also Noteworthy

EXTENSION OF REMARKS

OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, February 16, 1960

Mr. YOUNG of Ohio. Mr. President, our colleague, the senior Senator from West Virginia [Mr. RANDOLPH], is to be complimented for the thought-provoking address he delivered last week at a Boy Scout award dinner at Wellsburg, W. Va.

This year marks the 50th anniversary of the Boy Scouts of America, and because few organizations in this country have contributed more to our achievements and progress as a democracy than have the Boy Scouts, it seems to me to be especially appropriate to call the attention of my colleagues to Senator JENNINGS RANDOLPH'S inspiring remarks of February 11, 1960, on the occasion of the 5th annual dinner of Air Explorer Squadron 150, Boy Scouts of America, Fort Steuben Area Council, held in the American Legion Post 34 Home, Wellsburg, W. Va.

Mr. President, I ask unanimous consent that the speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR JENNINGS RANDOLPH, DEMOCRAT, WEST VIRGINIA, AMERICAN LEGION HOME, WELLSBURG, W. VA., FEBRUARY 11, 1960

We are gathered to honor the achievements of these youths as Eagle and Silver and God and Country Scouts. Tonight's award dinner has the added significance of marking the 50th anniversary of the Boy Scouts of America.

These 50 years have seen scouting grow from a handful of lads under enthusiastic but inexperienced leaders to a membership of over 5 million, led by thousands of practiced and devoted Scoutmasters. During this half century some 27 million boys have been enrolled as Scouts, and more than 8,500,000 adults have devoted themselves to scouting leadership. Thus, these principles and values have sustained the early experience of a large segment of the men alive in America today.

These figures offer some indication of the quantitative advancement during the 5 decades of existence, but they say nothing of the qualitative contributions of scouting to the lives of Boy Scouts as individuals and to America as a whole. In the last analysis, this contribution cannot be measured or weighed, but it may be at least suggested if we view the Boy Scout purposes in relation to the meaning and values of a free democratic society.

The purpose of the Boy Scouts of America, as stated in its incorporation papers, is to promote "* * * the ability of boys to do things for themselves and others, to train them in scoutcraft, and to teach them patriotism, courage, self-reliance, and kindred virtues * * *." It is of the very essence of these principles, as of the values of a democratic society itself, that they may not be imposed from above. To become viable and real these values must be perceived, embraced and made meaningful in the living experience of the person himself.

The sense of patriotism of the Scout is not one which can be legislated or promoted by executive decree; rather it must be generated out of the individual's own awareness of the meaning of America and his responsibility to maintain the values of our free society.

First among these values is the right of the individual to achieve excellence in whatever fields his character and abilities enable him to qualify. In this respect, there is no organization more closely geared to the meaning of democracy than the Boy Scouts. For in every aspect of their program, the Boy Scouts are dedicated to that personal achievement of excellence, and to the development of those qualities of character and citizenship on which a healthy democracy is based.

This is no mere pleasant pastime to fill the vacant hours of a growing boy. Though admittedly, scouting is also fun—as it should be—the values it seeks to instill are fundamental ones of high moral purpose. And they have never been more important to us than they are today, when we are thrown in mortal contest with an alien and despotic philosophy which would seek to reduce the free citizen to an automaton of the state.

There is much talk today—and much of it is pointed and wellplaced—concerning the general lack of moral purpose and aspiration in American life. Our philosophers and educators—and some of our political leaders and press commentators—have seriously questioned whether the traditional values and aims of American life can survive the rising tide of our preoccupation with material possessions and material prosperity. I am not prepared to predict the outcome; though I am hopeful concerning the strength and integrity of the American spirit. However, I will say without question that the condition I have referred to poses little threat to one who has truly embraced the principles and aims of the Boy Scouts.

I mentioned a moment ago the importance of Scouting as a means of advancing American values in relation to our contest with the totalitarian philosophy of Communism. But there is another reason for the growing importance of scouting which is unrelated to our competition with communism—and perhaps of greater significance in the long pull. I refer to the effect upon the individual of the changing structure of American life itself.

Though we may agree that the opportunities available to American youth today are broader in many respects than those offered to their fathers, it cannot be doubted that in some fields they have become restricted and diminished. The growing urbanization and complexity of American life, and the encroachment of our cities and suburbs upon field and forest have increasingly limited the prospects for the individual youth to achieve by himself those skills and abilities promoted by Scoutcraft. When we were a Nation of farmers and small townsmen these skills and capacities which provided the foundation for self-reliance came by natural due course to most youngsters. But now, with much of our population centered in the metropolitan areas, scouting has become increasingly important as the chief, and often the only means, of exposing millions of young boys to kinds of experience which elsewhere have passed from the American scene. In this respect also, Scouting therefore serves to perpetuate and extend some of the fundamental virtues of the American heritage.

Finally, we would be remiss if we failed to acknowledge the contribution of Scouting in the field of international living. Today, under the impetus of people-to-people exchange programs, the newest—and sometimes most effective ambassadors in the world—are the boys and girls and the young men and women in such programs as the international farm youth exchange, the experiment in international living, and the student exchange program. These young people are discovering with joyous wonderment that the barriers between people can be broken and that understanding and brotherhood can be realities and not merely the fictions of a utopian dream.

And not least among the achievements of these young people are those recorded in the annals of Scouting. The activities of Scouting are carried on today in 141 countries, colonies, and protectorates throughout the free world, with programs in some 90 countries having received help from the World Fellowship Fund of the Boy Scouts of America. In addition, Friendship Fund scholarships have enabled more than 100 leaders from 30 countries to attend our national training school for Scout executives at Schiff Reservation.

Thus it is that in the field of personal and individual development, in contributing to the meaning of American life, and in extending the range of international brotherhood, the Boy Scouts continue to exercise an ever-increasingly fruitful and creative influence upon contemporary experience. The records of previous Scouts offer a constant and living challenge to those who come after them. I am confident—as are the parents here tonight if we may judge from the representatives of the present scouting generation at this event—that our challenge will be met, and the goals of scouting will be pushed ever forward.

Mr. YOUNG of Ohio. Mr. President, also on the program for Boy Scout award dinner with the senior Senator from West Virginia, was Cecil B. Dodd, manager of industrial relations at Weirton Steel Co. division of the National Steel Corp., where many workers from Ohio are employed. He is cochairman of the Health and Safety Committee of the Fort Steuben Area Council of Boy Scouts, and spoke on "The Privilege of Being An American."

Mr. President, I ask unanimous consent that extracts from Mr. Dodd's speech be printed following the extracts from Senator RANDOLPH'S address in the Appendix of the RECORD.

There being no objection, the extracts from Mr. Dodd's speech were ordered to be printed in the RECORD, as follows:

It is indeed a signal honor to be invited to speak at this 5th annual dinner honoring the 50th anniversary of Scouting and presentation of silver and eagle awards. I also deem it a privilege to appear on the same program with West Virginia's distinguished U.S. Senator, JENNINGS RANDOLPH, who in more ways than one, is a good scout. In fact he was an active member of the Boy Scouts of America in his youth, and later served as a Scoutmaster. JENNINGS and I have been good friends for a great number of years, a friendship which has endured regardless of our individual political affiliations and one which I prize most highly. JENNINGS is truly a friend of man. When you have heard him speak, I am sure you will agree with me.

While thinking about what my subject should be this evening, I gave consideration to the 12 laws of scouting but realized that you who are hearing me would be far better versed in these laws than I because of your direct contact and exemplification with them in your day-to-day living. However, a boy who has passed through the several stages of scouting and adheres to its 12 laws—a Scout is truthworthy, loyal, helpful, friendly, courteous, kind, obedient, cheerful, thrifty, brave, clean, reverent—cannot help but be a better citizen in the community, a better husband, a better father, and a better believer in the supreme diety of his choice.

I care not for a man's race, creed, or religion. Denominationalism for a large part is following the faith of our fathers. There are as many roads to God as there men to trod them—therefore it behooves us all to respect the other fellow's beliefs and religion because we are all seeking as our final reward a life of eternity in heaven. May God prosper each of us in his own way.

A life of contentment and peace of mind is far more gratifying than one of riches when it is accompanied with jealousy and resentment. On this subject I speak from personal experience.

One hundred and fifty-one years ago, there was born a male child to a pioneer West Virginia mother in a log cabin in Hardin County, Ky. That child in manhood suffered political defeat at the hands of the electorate six times before he was finally elected an assemblyman to the Illinois State Legislature. Yet, this often defeated man was the one chosen to lead this great country of ours through its greatest crisis—the Civil War, 1861–65—only to be cut down by an assassin's bullet from the pistol of the depraved actor, John Wilkes Booth, on the evening of April 14, 1865, while attending a performance of "Our American Cousin" at Ford's Theater in Washington, D.C.

Surely his firm but kindly hand at the helm of our great Nation at the time of its possible dissolution was the one greatest factor in the perpetuation of the greatest heritage of men of all ages have been privileged to enjoy. He was a tall man in stature but more so in principle. Lincoln will be immortal until the end of time because of his belief in God, his humility, and his devotion to the rights of his fellow man.

This heritage and privilege is being endangered by a new philosophy or way of life, which has been growing in the last two decades. I refer to the 10 basic ideas of the totalitarian system of government which are opposed to our system—the democratic way—under which we all enjoy certain privileges as American citizens. Each of these 10 basic ideas furnishes sufficient material for an entire volume so I will only enumerate them with brief comment on each.

1. Man, according to democratic ideas, belongs to God, but under totalitarianism he belongs to the state.

2. The masses, under democracy, are freemen, but in the totalitarian scheme of things men must follow the dictator.

3. Supreme loyalty is to God and humanity in a democracy, but supreme loyalty under totalitarianism is to the nation.

4. Persons are of the highest value according to democratic views of Christians and Jews, but power has the highest value under communistic and fascist totalitarian rule.

5. Religion, under the democratic precept, is universal, but it is national according to the totalitarian idea.

6. Education is the development of the individual in a democracy, but under totalitarian communism or fascism it is considered nothing more than indoctrination.

7. According to the democratic ideas of Christians and Jews, government is by consent, but it is a matter of compulsion under totalitarianism.

8. The press, radio, and television are free agencies for public service in a democracy, but they are media of government propaganda in a communistic or fascistic totalitarian state.

9. Methods, under the democratic concept, are of faith and good will, but methods are instruments of fear and hatred in the totalitarian scheme of things.

10. Under democratic ideas other nations are included in mutual aid arrangements, but under totalitarian communistic and fascistic plans other nations are marked for conquest.

Most certainly this enumeration shows each one of us, old and young alike, that we must expend every effort to assure the continuance of our present way of life.

The youth of our Nation should keep sacred the Scout oath, "On my honor I will do my best to do my duty to God and to my country, to obey the Scout law, to help help other people at all times, to keep myself physically strong, mentally awake, and morally straight."

Our adults should fully subscribe to the pledge of allegiance, "I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one nation, under God, indivisible, with liberty and justice for all."

We all should add the practice of the four Oxfordian absolutes: Honesty, unselfishness, purity, and love, to our daily life. Then our great American heritage handed down to us by the supreme sacrifice of our forefathers—the privilege of being an American—with God on our side—will endure forever.

A National Lottery Would Yield $10 Billion a Year in Additional Revenue

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. FINO. Mr. Speaker, if Mark Twain were alive today he would undoubtedly revise his famous words about the weather to a more meaningful expression, such as: Everybody talks about taxes but nobody does anything about it.

In the 8 years that I have been a Member of this House, I have often heard many Members express deep concern over the excessive individual income taxes.

I have heard responsible Government officials admit that the present tax structure is oppressive and in need of reformation.

The President, in his state of the Union message to this Congress, acknowledged the fact that the American people are pressured by the heavy burdens of taxation.

Yes, Mr. Speaker, everybody has been talking about the high taxes but nobody has done anything about it. This is not only a sad but disturbing situation especially when we read reports that the average taxpayer must work 2¼ hours of his 8-hour day to pay the taxes levied on him by Federal, State and local authorities.

Mr. Speaker, everybody knows, or should know by now, that our fiscal picture is not bright at all. As a matter of fact, with the cost of Government operation on the rise, the outlook for future tax relief is most discouraging.

So, I believe, Mr. Speaker, that the time has come to not only talk about taxes but do something about it. The Members of this House should stop pussyfooting and face this issue squarely and sensibly. All I ask is that this House show some courage and pass my bill for a national lottery.

A national lottery would pump into our Treasury over $10 billion a year in additional revenue. With this new revenue we can give long-awaited tax relief to our wage earners and also help reduce our ever-growing national debt.

Mr. Speaker, I repeat, with a national lottery we would not only be talking about taxes, but doing something about cutting them.

Debating Military Policy

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. JOHNSON of Texas. Mr. President, Henry A. Kissinger, a young Harver professor, has contributed significantly to current thought on America's strategic world position. He is recognized as one of the outstanding thinkers of our times on America's defense against Communist aggression.

Yesterday, the New York Times printed a letter written by this very able man on our defense policy. I ask unanimous consent that the letter, and an editorial entitled "Needed: A Mightier Shield," which was published in Life magazine, be printed in the Appendix of the RECORD.

There being no objection, the letter and the editorial were ordered to be printed in the RECORD, as follows:

[From the New York Times, Feb. 15, 1960]

DEBATING MILITARY POLICY—PRESIDENT'S VIEWS ON CRITICISM OF DEFENSE PROGRAM QUESTIONED

(The writer of the following letter is the author of "Nuclear Weapons and Foreign Policy." He is associate director of the Center for International Affairs at Harvard University)

To the EDITOR OF THE NEW YORK TIMES:

The President says he deplores public argument by military experts regarding our

defense policy. Prior to this, he had called his critics parochial and had invoked his superior expertise in the subject. It is impossible, of course, for laymen to pass judgment on a debate of such technical complexity. They have a right to insist, however, that the categories of the debate be properly put.

The charge of parochialism can easily be pushed too far. As currently used it seems to mean that those who most deeply concern themselves with a given problem and who bear the immediate responsibility for it are thereby disqualified from having a valid opinion.

It is, after all, of some significance that two Chiefs of Staff of the Army, the current Chief of Staff of the Air Force and the Commander of the Strategic Air Command have been convinced that our present course is potentially disastrous. To be sure, they are not necessarily right. But in the President's use of the term "parochial" it seems to mean that the mere fact that they are the senior officers in their services implies that they are inevitably wrong.

One of the very serious problems of the present period is that the expertise acquired in the period up to and through World War II is almost completely irrelevant to the contemporary strategic problem. When weapons can traverse continents in half an hour and can destroy whole Nations, rules of thumb learned in a more secure period simply do not apply.

ORDERING AIR ALERT

The President said that it was time to order an air alert when there is an indication of an attack. It is true that with conventional weapons a period of preparation was usually required prior to an attack. In the era of missiles and nuclear weapons, where the forces in being are constantly ready, an aggressor cannot afford to give any warning of surprise attack and does not have to. Whatever the utility of our military program, the President's argument with respect to air alert is dangerous and beside the point.

The President correctly insists that the debate involves essentially a question of judgment. All judgment, even the most lofty, can be wrong. The ordinary citizen, in trying to make up his mind on so technical a subject may want to keep in mind, however, the penalties of a mistake.

If the proposals of Generals Power and White are accepted and prove to be wrong, we will have spent $500 million too much for a number of years. If the program of the President is adopted and he proves to be mistaken, we will have forfeited our national existence.

HENRY A. KISSINGER.

CAMBRIDGE, MASS., *February 12, 1960.*

[From Life magazine, Feb. 15, 1960]

NEEDED: A MIGHTIER SHIELD

President Eisenhower's defense budget is dangerously deficient. He has great military experience and deep confidence his $41 billion program is adequate. But harsh facts argue it isn't.

The harshest fact is that by the President's own intelligence estimates, the Soviets by 1963 will have twice as many ICBM's as we—enough, by SAC Commander Thomas Power's warning, to wipe out all our bases and retaliatory planes in one salvo.

A further glaring fact is that we do not have to accept this inferiority. In the judgment of men closest to the problem, we could double our current rate of missile production just by doing all that we can. By 1963 we could match the 400-missile Soviet stockpile which our own estimates say the Russians will then have. Despite this, the President is taking the calculated gamble of doing less than we are capable of doing during the next 4 critical years. It will take that time to make fully usable our most effective deterrents—the quick-firing, solid-fueled Polaris and Minuteman, one hidden in submarines, the other in hardened underground bases. To understand just how big the gamble is, Americans must also remember that their Government has generally underestimated Soviet capabilities, and that the new figures giving the Soviets only a 2-to-1 lead are themselves much reduced from previous estimates.

The problem is not to match in any particular number of Soviet missiles but to make certain the United States has so much striking power that a Soviet commander cannot dream of knocking it out in one sudden blow. This is necessary not only to deprive the Soviets of any temptation to risk a total attack but to neutralize the campaign of political threat and attrition which a pronounced Soviet military lead would allow Khrushchev to wage. In order to do all that needs to be done we are convinced that the United States must spend on defense, at the very least, $2 billion more than it is now planning. This money should be devoted to the following purposes, in order of priority:

Closing the missile gap: The production rate of the already proved and operational Atlas can be doubled within a year to give us 150 (against 75 now planned, and a reduced estimate of 100 for the Soviets in 1961). Work should begin at once, with highest priorities, to get these Atlases out of exposed positions and into deep, hardened bases. This can be done in 18 months. Since Atlas works, we should cancel the redundant, and so far inefficient, Titan and apply the remaining funds toward doubling Atlas. And every dollar that can make Polaris and Minuteman operational faster must be spent.

Safeguarding SAC: To preserve our deterrent during this period General Power believes we must have SAC capable of assuming, when the situation requires it, a 24-hour alert with a striking force always aloft. To make this possible a year hence, we must start now to provide the additional B–52's, tankers, crews, fuel, and spare parts which will be necessary. This isn't being done. Moreover, in order to preserve the most effective bomber-missile "mix" in our deterrent, full production should be begun on the 2,000-m.p.h. B–70 program.

Space and missile research: We need to step up our efforts to develop an effective anti-missile missile. We need to extend the electronic early-warning stations (see p. 38) to help us spot a Soviet missile's firing anywhere on land or sea. We should step up our space programs with emphasis on satellites for early-warning and reconnaissance. This could be done faster and cheaper if the President would close the artificial separation of "peaceful" and "military" space projects. They cannot, in fact, be separated. The Soviets make no such distinction.

Shelters: An immediate start should be made at providing shelters from radioactive fallout. Fully developed, a shelter program might save 80 million or more American lives. A serious start on shelters would in itself deter the enemy from trying a knock-out blow.

So much for immediate needs for adequate defense. They do not meet the argument which Generals Ridgway, Gavin, and Taylor, in succession, have stressed: that our preoccupation with "massive retaliation" is leaving us without adequate forces, airlift or new equipment to fight "brush fires" which may have to be met with orthodox forces and weapons. This issue also demands debate, decision, and, very likely, action. But since we have committed ourselves, above all, to a strategy of nuclear deterrence, we must certainly make sure that that program is adequate. As of now, it is not.

The Observance Never Ends

EXTENSION OF REMARKS

OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. ALBERT. Mr. Speaker, the official observance of National Boy Scout Week has ended. This year's observance was particularly significant because it marked the golden anniversary of the Scout movement in America.

While the official observance is over, the spirit of scouting will never die. The observance really never ends, as Mr. Fred G. Turner, editor of the McAlester (Okla.) News-Capital, has so effectively stated in an editorial in his newspaper for February 12, 1960. I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

THE OBSERVANCE NEVER ENDS

The official observance of the 50th anniversary of the Boy Scouts of America ends this week. McAlester people have read and heard of what the scouting movement has done in the past 50 years, and for what it stands.

This week a speaker told city business and civic leaders that:

"Scouting is established upon a spiritual foundation. The Christian spirit promoted the daily good turn of scouting. And doing a daily good turn crowds out other types of actions which are not good turns. Scouting doesn't teach any particular religion, but it encourages it at their camps and in their programs.

"The scouting program is universal. And it is available to all boys.

"It is based on the feeling of satisfaction, which is gained through service to others.

"It is a program which boys want. They have fun together, and it helps them to grow.

"Scouting provides a program in which parents and sons work together. It is a vehicle for developing family unity.

"And the Scout oath and laws make scouting different. Leaders and boys alike pledge themselves to the Scout code. It catches hold of boys at a young age. And it stays with them through life."

Because of this spirit and meaning of scouting, it came into being in America.

The Boy Scouts of America came into being through the good turn of an unknown British Boy Scout. A large bronze statue stands at the Gilwell training center, near London, bearing this simple but eloquent inscription:

"To the Unknown Scout Whose Faithfulness in the performance of the 'Daily Good Turn' Brought the Scout Movement to the United States of America."

William D. Boyce, Chicago publisher, was bewildered in foggy London in 1909 while seeking a street address. The British lad offered his services. The boy led the American to the address and when Mr. Boyce offerred a shilling tip to the lad, the boy saluted, thanked him and said, "Sir, I am a Scout. A Scout does not accept tips for courtesies and good turns."

Mr. Boyce, who had 20,000 to 30,000 boys on his sales force, was dumbfounded. After he completed his errand, he accompanied the British Scout to the office of Lord Baden-Powell, founder of the Scout idea. Here he caught the vision of Baden-Powell. He returned to America and incorporated the Boy Scouts of America.

Through this same spirit the Boy Scouts of America will keep on growing and training boys in its traditions.

The official observance of the 50th anniversary of scouting will end this week. But observance of the scouting spirit will continue during the whole year—and every year.

The Problem of Internationalizing the Panama Canal

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent editorial which appeared in the Wilmington Morning News, Wilmington, Del.

This editorial comments very favorably upon Senator AIKEN'S suggestions to the Congress in his recent Latin American report:

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIME TO EXPLORE

Senator AIKEN, Republican, Vermont, says the time has come for the United States to explore dispassionately the idea of internationalizing the Panama Canal He is right. The Suez Canal has been internationalized, if that is the right term, under conditions that leave much to be desired. America's exclusive rights with respect to the Panama Canal are a source of friction with Panama and suspicion elsewhere in Latin America. They are also a talking point for Communist propaganda in this hemisphere.

The question should be when rather than whether. Eventually, internationalization is sure to come. If we wait too long, it will come in ways we won't like. If we rush idealistically ahead without taking today's practicalities into account, we'll make a mess of things.

President Eisenhower has said that he does not intend to agree to internationalism of the canal while he is President, and we think he is right. But it is not too soon to explore dispassionately the whole idea, as Mr. AIKEN proposes. Just this week the President, at his press conference, spent some time discussing Panama's desire to fly the Panamanian flag beside ours in the Canal Zone. The tides of change are plain to see and it is better to be ready for them than to be swept off our feet by them.

A lot of problems would be involved in internationalizing the canal. Panama gets a considerable part of its national income—about one-fourth at this time—from the Canal Zone And while the importance of the canal to American defense is diminishing, we cannot disregard its relation to hemispheric security.

If we don't arrange at the right time for internationalization on terms that don't conflict with our national interests, says Senator AIKEN, we shall one day face the Hobson's choice of either defending the canal by force or withdrawing completely. Neither prospect is attractive. So let our policymakers think about it. Under what conditions and at what time would it be to our advantage to have the Panama Canal under international control?

A Time for Great Decisions

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. AVERY. Mr. Speaker, the following is an address given by the Honorable Alf M. Landon to the Traffic Club, Topeka, Kans., on January 21, 1960. I am sure that each Member of Congress will find Mr. Landon's remarks of interest:

A TIME FOR GREAT DECISIONS

This being a national election year there is a barrage of claims and countercharges by ambitious candidates and party leaders.

There is nothing unusual about that.

But there never has been a time when it was more important for American voters to keep those claims in proper perspective and to keep the far-reaching decisions confronting us in proper proportion.

The major national decisions we must face up to in the coming election are of worldwide, as well as national, significance.

Quoting from a recent Research Institute Bulletin:

"Inflation, labor crises, are the key issues of business, pulling nearly twice as many first and second rankings as any of the other nine issues listed in the institute survey.

"The Soviet challenge to America is third, closely followed by the rising cost of doing business. The next business problem is tight money, which received far fewer mentions in the poll.

"Compared to these, such potential campaign issues as the farm problem, civil rights, economic growth, even national defense, are apparently of minor importance to business executives today."

Now these economic issues and international policy issues are closely tied in with the political policies of the administration in power and the administration to be elected next November.

None of them can be separated from politics.

According to our all-time custom, the legislative branch and the executive branch of our Government will be arriving at their solutions not only with the long-view effect in mind but the November election.

That is the trial-and-error method by which a republic functions. And that is the contest for possession of leadership that has gone on throughout history since the first tribal government was formed.

It would take much—too much—time for me to discuss and to do justice to all the important issues listed in the Research Institute survey. I have heretofore discussed most of them in separate talks. Tonight I will attempt to hit the high spots only. If I were listing them I would name inflation, national defense, and the Soviet challenge to America. Actually, with the possible exception of civil rights, they are inseparably related.

In late 1933 an Englishman, Lord Keynes, sold the Democrat administration on his theory of planned inflation and a managed economy. There was nothing new in that. Many countries at different times have tried that to their sorrow. It had always ended in financial and political chaos resulting from debased money. As a result of their experience, all of the nations of the free world stuck to the old-time tested orthodox fiscal policies of trying to balance their budget, except France and the United States of America.

As you know, after the Second World War France grew steadily weaker economically, militarily, and politically, until in desperation De Gaulle was called back to save his country from total collapse and anarchy by reversing the soft money policy—for the stability created by orthodox fiscal policies. Now France is on her way—with the West Germans—to return to their old role of balance of power in Europe.

Soft money versus sound money has been a recurring issue in American politics—in the 1780's, the 1812 War period, the Jackson administration, the 30 years following the Civil War. Of course, other economic factors were present, but sound money contributed to national stability and prosperity. Since the 1930's the soft money policy has been with us on and off, and the warning signs have been flying. Fortunately, since 1940 our reserves and the relative weakness of other countries have served to bolster us. Recently however, the dissipation of our reserves and sound international reconstruction have caught up with us without our realizing it.

I think very few Americans know of that situation or that the United States is now working on its third year of unfavorable balance in foreign trade. Here is a representative comment from the Spectator, an English publication of worldwide prestige on economic and political affairs.

Heading its comment "The Dollar Crisis" the Spectator said on November 13, 1959:

"The fact that we British have gone out of our way to repay the $250 million loan from the Export-Import Bank, which was not finally due until 1965, is sufficient proof that the American Treasury is seriously worried by its continuing loss of gold. If the foreign holders of dollar balances, who are not as friendly and helpful as we are, were suddenly to get the idea that the dollar was overvalued, the flight from that currency would be so quick that the next announcement from Washington would be a refusal to sell gold. But we have not yet come to that point. The calculating foreigners are waiting to see what sort of settlement—inflationary or no—is reached in the steel strike.

"This is worrying Mr. Anderson, Secretary of the Treasury, greatly, for he is not used, as we are, to being an international banker with inadequate reserves.

"Even if the American Treasury succeeds in cutting foreign aid and military spending by as much as Mr. Anderson's target, the basic weakness of the American payments position will remain. Japan, Germany, and Europe have all recovered from their war shortages and are no longer dependent on America for the satisfaction of their vital needs in steel, coal, machine tools, and other manufactures. The recovery is so complete that European exports of manufactured goods have been expanding at the expense of American manufactures, not only in the world markets but in the American domestic market itself. The rise in American costs is not only hitting their exports but causing their own manufacturers to build factories abroad. It seems that the trend in world trade is at last going against the dollar."

That—in a nutshell—describes a fundamental change in our great country's position financially—a fact that we Americans can continue to ignore only to our own peril.

I have always believed as long as we keep our money sound we can survive other political errors we might make and correct them in the light of experience.

Our national defense is in reality based on sound money. We must be prepared to pay the cost to escape the fate of a conquered people. Despite the constructive steps in

1959 to reach a peaceful solution of foreign relations, we are living in a world today where political ideas are being established and maintained by loaded guns, tanks, atomic energy bombs, murder and assassination.

So far, little progress has been made to settle the conflicting confusion and contradictory statements between high-ranking generals, civilians, and our Commander in Chief on the status of our national defenses. That surely makes the Pentagon a weak spot in the heart of our military organization that can be fatal to our security as a free people, despite our President's assurances of America's overall military strength. I believe there are legitimate questions being raised about the status of our national defense, by competent authorities like Generals Taylor, Gavin, and Ridgway, who cannot be charged with political motives.

There are bound to be differences of opinion on how to fight an atomic war and what equipment is best, because there never has been an atomic war.

That's all being planned in theory. But there is a world of difference between theory and practice under war conditions.

It is apparent that the Pentagon is not so organized that it is efficient in resolving those differences. That causes a costly waste of both public money and time in bringing our military equipment and plans up to date. For illustration, there are 61 different bureaus and committees dealing with missiles. We are trying to run our huge Military Establishment by a committee arrangement with a revolving chairman instead of one bossman. We need a general staff with a chief, or strengthen the authority of the Secretary of Defense. The blame for the confusion and disputes between the military services rests with the Congress in the organizations created in the original miscalled Unification Act.

Personal diplomacy by the heads of governments in the conduct of international affairs is also something new in the world. That takes the initiative away from the heads of the State departments and is a dangerous technique in inexperienced hands because it can be a case of too many cooks spoiling the broth.

However, because of his experience and his personality and his talent for conciliation, our President won a great victory for the minds of men, a fight we have heretofore been losing. President Eisenhower by his visits to other great nations strengthened the cause of peace, based on freedom and justice, all over the world.

Our President broke through a false conception of America, created by years of Communists' false propaganda.

As the symbol to the world's masses, of a friendly America instead of a belligerent America, our President has achieved a tremendous change in world thinking.

Permitting American books—plays and broadcasts to reach the Russian people—and greatly increased cultural and travel exchange between Russians and Americans—following Premier Khrushchev's visit to the United States—opens the way for popular understanding of America's good faith in policies that promote higher spiritual, moral and materialistic standards of living for all peoples.

A turning point of those far-reaching consequences—once established—is hard to reverse—even by an absolute dictator of Premier Khrushchev's position—and it certainly is going to be harder for the Soviet's elaborate and efficient organization for manipulating and chaneling popular thinking to sell the Rusian people the old Communist line on America's decadence.

Another factor of importance is the excellent way we handled our exhibit in the Moscow Fair to reach the crowds. In the Near East fairs are a great attraction. They draw big attendance from wide areas. The Soviet has had the best of us there because they spent more money effectively than we did—in a more attractive way in exhibits that appealed to the thousands of visitors more than ours did.

These cultural and tourist intangibles are a real factor in promoting and cementing better relationships between governments and arriving at international understanding that are to the interests of the respective countries to keep. It does seem that the Iron Curtain is no longer effectively keeping out the encroachment of the modern world.

I do not think we can or should expect any great dramatic settlement of momentous questions like West Berlin or international control and disarmament of nuclear weapons at one summit meeting.

The words of that beautiful old hymn "One Step Is Enough for Me" should suggest what can best be accomplished—for the longer war is postponed and the greater the thaw in the hitherto freezing Communist atmosphere—the harder it will be for the Soviet hierarchy to prepare common people in the Communist countries for a full scale assault on the Western democracies.

In broad terms—I think the base of our new foreign policy that is beginning to emerge is that—without yielding on fundamental ideas—"two or more systems of government could live side by side without mortal danger to either"—the ultimate result of the bitter fratricidal wars of the 16th Century, according to Mattingly in his recent book "The Armada."

There will be many zone issues on the right and on the left and in front. The world's temperature will shoot up and down. There will be periods of chills and fevers. All the time we must keep our powder dry—and maintain a balanced deterrent power.

That is really the key to our whole economic foreign and military policies. If on balance America and the free world lose military position—we tempt the aggressor.

On the other hand—fear of the growing economic and military power of the free nations might cause jittery action on the part of the imperial Communist hierarchy.

Another development that affects the international political situation and can greatly affect American industry is the consolidation of six European countries, called the Inner Six, in a free trade area eventually designed to lower existing tariffs between themselves, but can raise trade barriers against outsiders, if desirable. That caused somewhat similar organization of seven other European countries into what is called the Outer Seven. France and West Germany are in the first bloc, and England in the second.

The potentialities of these two groups economically can, and undoubtedly will, not only benefit their internal social, economic, and political life in their respective countries, but ours as well, if their organization means freer trade in the world.

Since the breakup of the Roman Empire, all of these countries have been repeatedly at war, both as allies or foes. Treaties between all of them have been made and broken, and made again. This is the first time in all these centuries that a widespread area has been formed for trade purposes alone, and it can mean much in all other areas, both geographically, politically, and economically.

Despite the world trade potential involved in these two groups, there is one sure factor foreshowed in the new economic era ahead. That is that our United States is going to meet and face growing competition from an increasing variety of foreign products. No longer is it a question of how much the consumer can and will stand. The price of products not directly affected by lower foreign prices will be indirectly involved through the intricate relationships of one product to another and a jittery dollar.

Therefore, it behooves both labor and management to realize that a mutuality of interest is a sounder base for our complex industrial life than Government control. It is high time for us Kansans to realize that the Kansas Federation of Labor is just as important to the growth and progress of our State as our State chamber of commerce. Those two fine organizations must be seeking areas where they can work together for the welfare of all Kansans.

Just as America has a new emphasis in our international relations on mass public thinking, so we need a new concept of industrial relations in our great country based on the premise that a shutdown of a basic industry and railroads involves mass public rights.

A decision is inevitable one way or the other. Either labor and industry leadership is going to adopt new attitudes toward each other that result in their arriving at orderly and equitable settlement of their mutual problems or the Federal Government will adopt new methods of fencing both in.

Once again I point out that control by the Government has expanded. The Wagner Act begat the Taft-Hartley Act; the Taft-Hartley Act begat the Landrum-Griffin bill. And along the way some illegitimate State legislation called right to work.

The handwriting is plainly on the wall of what to expect in the way of further Government control over personal and property rights—in the event of another major strike.

Before the steel strike was settled U.S. Senator SMATHERS, of Florida, proposed an industrial court and with broad and sweeping power—with final jurisdiction and no appeal to the judicial processes. Former Gov. Adlai Stevenson proposed compulsory arbitration—limited to specific basic industries—by congressional legislation. Governor Nelson D. Rockefeller proposed compulsory arbitration by Presidential proclamation. That would be an enormous increase of Presidential power. U.S. Senator AIKEN, of Vermont, has introduced a bill in the present session of Congress providing that the Federal Government can seize and operate basic industries in the nature of a receivership in the event of a strike. The wages, rules, and working conditions remain the same until a fact-finding board appointed by the President arrives at a decision.

The corollary of either of the above proposed legislation would be fixing the prices by the Federal Government. We can all recall the redtape—the delays—the changes and the confusion that marked that Government function in the last war.

Another decision that we must face up to is our national policy on railroads. Modern all-out war calls for all-out defense. The entire life of a country is involved. No factor in war is greater than transportation. Despite hydrogen bombs and jet bombers, missiles, atomic submarines, firing interrange missiles, the old principle of General Mosby of "getting there fustest with the mostest" is still elementary. Therefore, our great railroad transportation systems are a vital part of our national defense as well as a necessity in our complex industrial life. Partly through the ineptness of some railroad management, in meeting the competition of new forms of transportation—and partly through paying dividends—that should have gone into capital expenditures—our Nation's railroads are having economic difficulties. One way to restore sound national transportation systems is to reverse over a half a century of public policy against mergers by railroads. When that policy was first established—the railroads had no competition. You either shipped by railroad or by

horse and wagon. When you traveled you either rode the cars or you traveled by horse and buggy or by "shanks mare." Now that is all changed. Therefore, in order for a prosperous railroad system to continue to furnish the necessary efficient service required by America in either peace or war—they should not only be permitted but encouraged under strict supervision by Government agencies—to merge or to enter new fields of transportation—whichever fits their individual needs. I believe such a public policy is sound today for the railroads as well as the general welfare. The Interstate Commerce Commission recently said in reversing its long established antimerger policy:

"The position of the railroads has deteriorated steadily in recent years with the accelerating transportation revolution."

The long view suggests that our Government agencies permit the railroads to meet that situation constructively by mergers that mean saving in operation as well as preserving services for the areas of population involved. But they must keep a stern eye on financing terms and under no circumstances permit profits to be paid out in dividends when the roadbed—trackage—the equipment—and their service needs money for improvements.

Another decision we must face up to is a national policy on land use. The able Secretary of Interior, our native son—Fred Seaton—said in his 1958–59 report:

"It is the Department's conviction that sound conservationwise use and orderly development of our resources will insure a steadily higher standard of living—not only for today's citizens but for multiplying millions of future Americans."

If we do not put into operation better and more complete conservation measures in the development of our land—the time will not be far off when the farm problem will become the food problem for the American people. That trend is obvious. Children and even people in middle life will be faced with that necessity.

I believe the soil bank offers the best solution to America's farm problem—efficiently administered as a conservation measure and not politically administered for the next election. Our land must be kept in the hands of individual owners. We must not force the ownership of the land into the hands of big corporations.

Our great country has just ended the most prosperous year in its history. It looks as if 1960 will even better that record—providing the present Congress follows the sound fiscal recommendations of President Eisenhower in his state of the Union message and that he is not interrupted by domestic politics in his successful campaign for a still larger field of worldwide cooperation. I say that as one who vigorously and promptly supported President Franklin Delano Roosevelt at critical periods in his foreign policies.

On his part, the President should act promptly to eliminate what he himself has described as the "archaic methods" in the Pentagon that take almost half the national appropriations. Last week decisions were speeded up by new procedures established by the new Secretary of Defense. It's not a question of whether the President has asked Congress for sufficient appropriations for adequate national defense.

The question is the waste of that money and the loss of valuable time in arriving at final decisions because of those "archaic methods."

Congress itself is to blame for the weak and cumbersome Unification Act.

Finally, labor and industry must realize if our country is to keep on growing now is the time for long-range planning and better cooperation on the part of both.

America needs not only political statesmen but labor statesmen and industrial statesmen with an abiding sense of public responsibility.

Peaceful cooperation—to be effective and successful in world long-range planning—must start at home.

As President Eisenhower said:

"To me it seems almost absurd for the United States * * * to seek * * * cooperation among nations unless we can achieve volunteer, dependable, abiding cooperation among the important segments of our own free society."

The Mutual Security Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. WILEY. Mr. President, I ask unanimous consent that a statement, prepared by me, entitled "WILEY Urges Strong Muscular Mutual Security Program," be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WILEY URGES STRONG, MUSCULAR, MUTUAL SECURITY PROGRAM

Senator ALEXANDER WILEY, Republican, of Wisconsin, ranking Republican of the Senate Foreign Relations Committee, today urged the adoption of a strong, muscular, mutual security program.

"The security of our country, the peace of the world, the future of freedom, may well depend upon what we, as a nation, are willing to dedicate to promote order, respect for law and human dignity, and deter aggression in the world," Senator WILEY said.

"As a nation—rich in resources, economic strength, industrial power, military might—we, without seeking it, have become a world leader. Our future may depend upon how well we discharge that great responsibility.

"As of now, we can be proud of our conduct in this field. In the postwar era, the American people have dedicated substantial volumes of manpower and resources to curbing aggression and promoting peace. Because of this, the climate of freedom is better, the outlook for preserving peace is brighter, the prospects of more nations to assume their rightful roles in world affairs, by self-determination, are more promising today than ever before in history.

"Now, what of tomorrow? The danger to world peace has not lessened, unfortunately. The Communist bloc is increasing its strength and capability for war.

"Can we, then, safely diminish our efforts to prevent aggression by the evermore powerful Communist bloc?

"The answer is 'No.'

"In the face of the continued threat of communism, President Eisenhower's comprehensive recommendations for carrying on an effective program to strengthen the chain of nations allied to deter aggression and promote economic progress deserves speedy, sympathetic consideration by the Congress.

"SCOPE OF PRESIDENT'S RECOMMENDATIONS

"As we know, the President's recommendation of $4.175 billion includes: $2 billion for military assistance; $724 million for support of defense establishments in 12 countries; $268 million for special assistance programs to promote stability, undergird economies, and combat the encroachment of communism in selected countries deemed significant to the security of the free world; $700 million for the Development Loan Fund; and the remainder for other special programs.

"What does this mean in terms of our national effort in dedicating resources to world peace?

"In total, it amounts to less than 1 percent of our estimated gross national product of about $500 billion for 1960. In relation to the U.S. defense budget, it amounts to about 10 percent of what we are spending on our defense program alone. For these expenditures, the allied air, sea and land forces of the free world are multiplied many times. In the evaluation of experts, mutual security—dollar for dollar—still provides more defense power than any other program.

"Economically, it is significant that funds for mutual security—for the most part—are spent to buy goods, materiel, equipment, right here in this country. As a result, a substantial number of jobs—annually about one-half million—are created for the American workers.

SIGNIFICANCE OF A STRONG PROGRAM

"Overall, the enactment of a strong mutual security program signifies:

"(1) The dedication of the United States to world peace;

"(2) A sense of responsibility in carrying out our role as leader of the free world;

"(3) Assuring our allies that we stand shoulder-to-shoulder with them against aggression;

"(4) Assurance to less developed nations that we recognize a need for establishing a world climate in which they, by self-determination, can attain their national goals.

"Overall, the effort, too, will keep alive the ideal of America—a country which, with the maximum of freedom, established the highest standard of living for its people in the history of the world; and yet, at the same time, is willing to be concerned with, and give assistance to, the less-developed and less fortunate nations of the world. While this is humanitarian, there is also a high degree of self-interest in such a program.

"Unless we are capable of deterring Communist aggression, the U.S. security is threatened. Unless the world succeeds, also, in wiping out economic conditions in which people exist, as the President has stated, 'on the ragged edge of starvation'—thus creating hotbeds of unrest, trouble and a breeding ground for infestuous communism—these will all serve as threats to peace.

"Naturally, Congress will need to examine and evaluate the President's recommendations for the mutual security program carefully. As deemed feasible and advisable, recommendations for constructive supplemental or alternative revisions should—and will, I am confident—be made in the program.

"Nevertheless, in the interests of our own security, as well as our overall effort to promote conditions in the world that would best foster peace—the Congress should give favorable approval to—and, I believe, the majority of our people will support—a strong, muscular mutual security program," Senator WILEY concluded.

Cub Scouts Honor Members of the Executive, Judicial, and Legislative Branches With Boy Scout Badges

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. BROYHILL. Mr. Speaker, I am pleased, especially so during this, the

50th anniversary of the founding of Boy Scouts of America, to list the following names of Cub Scouts from my district who have honored members of the executive, judicial, and our legislative branches with Boy Scout Badges.

These Cubs, their Packs and leaders are to be highly congratulated for their wonderful efforts during the week of February 7-13—indeed, the year around—for their efforts in reminding us of our country's heritage, and in helping to build a stronger America of tomorrow.

Alexandria District: Johnny Andrews, Steve Branam, David C. Clark, George Cushman IV, Jimmy Ferer, Warren Holmes, Spencer Howell, John Komoroske, Dorian Lester, Stephen Lyons, Luther Nassett, Jr., Dennis Eston Oyler, Mark Rosenberg.

Arlington District: George Baker, Scott Barnthouse, David Bennett, John A. Berud, Ted Bush, Jack Chiles, Robert J. Collins, William Craddick, Michael Doyle, Charles Dulaney, Jr., Larry Eckley, Kenneth Evans, Michael Hickey, Michael Ingram, Terrell Jackson, Timothy Johnson, Bryan Madden, Richard Millies, Dennis Rogers, Daniel Schecter, Richard Scheele, Philip Schulman, Alan Steckley, Grant Wallace.

Fairfax District: Jimmy Adduci, Charles Avery, Jr., John Bailey, Barry Barchard, David Bragg, Max W. Brake, William Campbell, Anthony Christ, Fayne Currence, James Davies, Robert Flake Dry, Jr., William Felchner, Stephen Finlayson, Sandy Finner, William Glickert, Ronnie Greaser, Stephen Grebok, Russell B. Hall, Douglas Hays, John P. Langford, Douglas Lindsay, John Morris, Richard B. Moyer, James Murphy, Robert Myers, Robert Nash, Jr., Jim Ogle, Lochlin Page, Charles Rodgers, Carl Slagle, Bruce Smith, Bruce Snyder, Steve Stebbins, Blake Sweeney, Eric Thamm, Norman Lee Thienel, Gerald Upton, Rodney Winterbottom, Walter Wing Woo.

America's Missile Posture Seen as Problem for Reds

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. SALTONSTALL. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD an article entitled "America's Missile Posture Seen as Problem for Reds," by David Lawrence, which was printed in the New York Herald Tribune of Monday, February 15, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICA'S MISSILE POSTURE SEEN AS PROBLEM FOR REDS

(By David Lawrence)

WASHINGTON, February 14.—Maybe the Soviets ought to be worried about the "gap" question. For it begins to look now as if the United States is not only the strongest military power in the world today but, if the Soviets do get their 300 missiles into the operational stage by the end of 1962, the United States will have by that time, too, more than 500 effective missiles equipped with nuclear bombs and able to reach all targets inside Russia.

Since many of these American missiles would be fired from movable bases, it is not going to be possible for the Soviets to prevent the deterrent power of the United States and its allies from becoming effective even if they try a surprise attack.

These conclusions can be drawn from the impressive testimony, just made public, given last week before congressional committees by Adm. Arleigh Burke, Chief of Naval Operations.

The Soviets are reported to have planned to operate 150 intercontinental missiles and 150 intermediate missiles by the end of 1962. The first group could supposedly destroy bases in this country, and the others could be aimed at allied bases overseas.

Admiral Burke says that it has been found difficult to get even one missile fired at a specific time, and that to fire 150 or 200 simultaneously to arrive at all targets coincidentally is impracticable.

So the potential enemy has to worry about the retaliatory power that may be directed against it in the law between firings of its own missiles.

IN AMERICA'S ARSENAL

First, there's the Polaris missile developed by the United States. No equivalent is possessed by the Soviets. The Polaris will be ready for use this autumn. It can be fired from submarines, and later it could be fired from cruisers. It can be carried on fleets of fast-moving merchant ships.

One submarine armed with Polaris missiles, according to a statement by the Secretary of Defense last year, carries as much destructive power as all the conventional bombs dropped by both sides during World War II.

"We have tested this missile," says Admiral Burke. "We have fired this missile from various types of launchers from under water, so that we know what it will do. We have tested the tubes. We have tested the warheads. We have tested all the components.

"We anticipate no difficulty whatever. It is just a question of putting the systems together now, which will take a couple more months. * * * This missile—warhead—will be many times the size of the bomb dropped on Hiroshima."

The admiral revealed that there will be a total of 32 operational Polaris missiles by the end of this year and 80 at the end of next year and 128 by the end of 1962.

Now, these Polaris missiles are relatively cheap. They cost only $1,500,000 apiece. They can be deployed far and wide—an arsenal that could be kept moving all the time.

But while all the Polaris missiles planned for submarines are to be operational by 1962—that is, about 128 in all—to this strength must be added the Atlas long-range missiles that the United States has already in operation and the Titan long-range missiles which are about a year away. The present production plan calls for 270 of these long-range missiles by the end of 1962.

Then there are the Thor and Jupiter intermediate-range missiles—to be based in Western Europe. The first of these are already in place in Great Britain. Soon there will be more squadrons in position in Italy and Turkey—all capable of reaching any vital target in the European area of the Soviet Union.

Adding the 128 Polaris missiles to these 390 land-based missiles makes a grand total of about 518 effective retaliatory missiles.

MORE TO COME

On top of this will come the Minuteman, which will supersede the others as the prime missile on land in 1963. This is a mobile missile like the Polaris. It can be moved on freight cars. Some bridges and overpasses will have to be increased in height to move the Minuteman around on trains or trucks, but, anyway, all or a large share of these will not be constantly in fixed positions where an enemy missile can find them.

With Polaris missiles roaming the high seas and Minuteman missiles moving around this country and intermediate-range missiles based on the territory of our allies and our manned airplanes carrying nuclear bombs, the deterrent power of the Western alliance today and in the foreseeable future is so formidable that it justifies in every sense the momentous declaration of General Twining, Chairman of the Joint Chiefs of Staff, who said to a congressional committee on February 9:

"On the basis of all the information available to me, and in view of the mission and locations of our retaliatory weapons systems, I just do not believe that any nation possesses the ability today or in the foreseeable future to attack us or destroy us without receiving unacceptable damage in return."

That's the whole missile controversy in a nutshell, and it explains the confidence about the outlook felt by President Eisenhower and the three military Chiefs of our Armed Forces. America doesn't like to do any saber rattling; but if it is forced on her by misguided politicians, plenty of missile rattling can be done.

Russia: No Trucking, Tovarich, as Seen by E. A. Hills of San Francisco

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report by my very close boyhood friend, Mr. Ed Hills, of San Francisco, Calif., on his recent visit to the Soviet Union. Mr. Hills was part of a group of northern California businessmen headed by Cyril Magnin of San Francisco who spent some very interesting times in Russia this past year. As a dedicated American and one who has no prejudices, but is certainly an excellent observer, I am very happy to insert this extremely timely and interesting report in the RECORD and commend the attention of my colleagues in the Congress to its importance as a document of personal observations of a citizen of the United States while in the Soviet Union. The report follows:

RUSSIA: NO TRUCKING, TOVARICH

(By E. A. Hills)

Truck transportation is one of the few things that the Soviet Union forgot to "invent" before the Americans.

What passes for highway or local trucking in Russia is slightly less modern than the flivvers Mack Sennett's Keystone Kops drove decades ago.

A visit to Sputnikland this August revealed to me a lamentable lack of trucking know-

how in the nation that put a rocket on the moon. No American backwoods one-rig operator would do business with Russian equipment that I saw. He couldn't afford it.

We were 39 San Francisco and Sacramento area business executives and professional men who toured Moscow, Leningrad, and Kiev—the three largest Soviet cities—to determine close up if increased trade between California and Russia was feasible, or even desirable.

I was concerned chiefly with inspecting the Red version of local and long-haul trucking. But I soon found Russian life so distressing that I felt like whistling "Stars and Stripes Forever" at every turn. Russian disinterest in trucking positively shocked me.

However, Russia's saddest shortcoming is housing. Only top government and party people have private homes in the big cities. Everyone else exists in dingy apartments. German bombs and shells made 30 million Russians homeless in World War II. Government urged more births. Big city industry brought hordes from the farms. The need brought a government crash program for apartment building as the quickest, cheapest means to house the greatest number soonest. Most private homes were wrecked and replaced by brick and concrete structures that soon became shoddy and began to fall apart.

We were well briefed before we left Washington. We got both sides from State Department and Russian Embassy experts. But Vice President NIXON gave us the best insight. He knew. He had just come from his historic model kitchen debate with Nikita Khrushchev at the U.S. exhibition in Moscow.

Howard Gilmore, of National Envelope Corp., San Francisco, and Envelope Corp., Los Angeles, and I had arranged a cocktail party at the Carlton the night before leaving Washington. Senator TOM KUCHEL and Congressman JACK SHELLEY promised to be there. TOM supplemented our invitation to NIXON and we were delighted when the Veep's secretary called to say that he would join us. We invited Cyril Magnin, our delegation chairman, to assist us in greeting Mr. NIXON. He came for 15 minutes, stayed 90. He warned us that we would see a land where the boast was better than the fact. He said that scores of features would be described as the world's best but that we would see for our ourselves that they were old hat, or, at best, secondary.

We got the drift when we landed at Moscow airport. Parked along the taxiways were 15 or 20 big Tupolov jet airliners. They obviously were not in service, or going to be. This was the first apparent instance of unsound planning. Some big shot had targeted completion of these jets on a long range program and they were delivered. But Aeroflot, the state airline, had no use for the aircraft. Lacking a private enterprise economic pressure to utilize the jets on delivery, Aeroflot need not worry about a reasonable return for each unit in its fleet. How long would United or American stay in business with 15 or 20 idle DC-8's or Boeing 707's?

Maybe the parked planes were a propaganda display of Soviet might for arriving Westerners. We got the same reaction when we rolled along the wide airport boulevard to Moscow which was lined with new five-story apartment buildings separated by park and garden areas. We found later that they were less than impressive when viewed from the rear. There was lots of building in Moscow but with quality in inverse ratio to quantity.

The Soviet desire to show off mainfested itself again when we arrived at the 30-story Hotel Ukraine, biggest and newest in the Soviet Union. It has 1,026 accommodations, from single rooms to 6-room suites. It has 100 baby grand pianos but no wastebaskets. Its ornate lobby is a quarter-mile long but it has only four working elevators. Its architecture is that of U.S. skyscrapers built when grandpa was in grade school.

When I asked to see a typical truck freight terminal, I drew blank looks from our Intourist guides.

Moscow has plenty of wheels. But they haul humans. Private autos are for government and Communist Party officials. Everyone else rides mass transit. The streets are filled with modern trolley cars, trackless trolleys, buses and taxis—all government-owned. The subway is one of the world's best, with cathedral-like stations, latest rolling stock and 1½-minute operating headway.

Trucks? Every so often you saw a beatup 1½- or 2-ton rig that appeared to be World War II surplus. The loads might be cobbles, or cartons, or machinery, or household furniture. If the latter, the moving family rode on top of the sticks. One doesn't trust precious furniture out of sight in the Communist "land of plenty." Invariably there was a driver and two helpers on each uncovered truck, no matter how light the load. No labor shortage in Moscow.

You couldn't identify wrapped cargo, even if you could read Russian. There is no competition in state industry, so no need for labels on merchandise, let alone on shipping cartons. The trucks bore no lettered designation—just numbers. They are state-owned, so why label them?

But I was convinced that there must be some large-scale trucking. They've copied most everything else we have. I was loaned a car by Chad McClelland of the U.S. exhibition, so that I could look for myself. Leaving central Moscow's well-paved streets, I soon bumped over cracked pavement or cobbled roads. Reaching the outskirts, I came upon the answer to "no trucking." The main intercity highways were but crude, two-lane, narrow roads like you would find in remote sections of our Western States. A fleet of American rigs would shatter the pavement in a half-day's use.

I was struck by the great number of women doing man's work. They drove trucks, loaded them with cobbles. They followed trucks, raking asphalt shoveled off by other girls.

Leningrad gave me a closer look at trucking. My insistence brought me to a large bus and taxi maintenance yard. Squads of women manicured the vehicles on wash racks. Women mechanics worked in shops that were primitive compared to ordinary facilities in California communities. I told the guide this still was no trucking operation.

The answer was a visit to a nursery home for children of trucking employees. The parents see the kids once a week. The quarters are clean, ample and cheerful. This is typical Russian. Everything for kids is first rate, for today's tots may be tomorrow's commissar. Once again I asked, "Show me the terminal where their parents work."

So they relented, took me to Leningrad's biggest truck yard. What a shock. It was large, yes. But a terminal to load and unload cargo, no. Why? Simple. There is no intercity trucking, period. You can blame it on the weather. Or Soviet economics. Or both.

Because trade is noncompetitive and state owned, there is no widespread dispersal of production plants. You make the product, whether it be beer or beds, close to the point of consumption. You don't have to worry about another brand competing with you from a plant 500 miles away. But what about the raw materials? You don't grow wheat or range cattle in the city limits. The answer to long hauls is railroad or canal barge transportation.

Even if central and northern Russia had adequate highways, they doubt that they could be kept open in the heavy winters.

I suppose a potent third deterrent to trucking is lack of fuel.

The Leningrad truck yard didn't compare with anything of similar size in the United States. Here was a large, motley assortment of World War II surplus, uncovered pickup trucks. Vehicles from this pool were assigned to all government and industry needs in the area.

The largest equipment that I saw were low horsepower diesel two-axle tractors hauling single-axle semitrailers of about 10-ton capacity. They had secondary two-axle trailers of about 5-ton capacity to run in tandem.

Officials proudly showed me heavy duty, low bed open trailers capable of large machinery hauling. But I looked in vain for a power unit capable of pulling the low beds. Maybe the trailers were like the jets at the airport—not going anyplace soon.

The diesels had air for brakes. Tires resembled a cheap U.S. grade. There were no driver refinements in cabs, or steering aids. There were no clearance lights such as we must have over here.

Here, then, was another sad Soviet paradox.

Out to beat the world in rockets and missiles, the Russians, by neglect of trucking and highway development, contradict their boast of military supremacy. What of the lesson that the U.S. Army Transportation Corps taught the world when the historic Red Ball Express trucks helped to defeat Germany? What if the Russians attempted a land war in western Europe? Railroads and canals can quickly be destroyed by today's missiles. But there's always a way ahead with a truck and even a makeshift road. It seems to add up to another colossal Soviet misplan.

The housing picture is equally bleak, in spite of the Red crash program of apartment building. Mile after mile, you see five-story structures. Taller buildings must have elevators. So the Government, as landlord, restricts housing to five-story walkups.

The older tenements were built when plumbing and ceramics were short. So they have no pipes and Ivan and his family must trudge down to snowy backyards to use a Chic Sales. Even new structures lack indoor toilets. But these are modern so they employ chemical toilet trailers parked in the rear. Even the newest buildings' sides are criss-crossed with outdoor plumbing. The out-fall pipes to the sewer mains are laid over ground, not trenched.

Many apartment houses have but one bathroom to a floor. But the typical setup is two or three families sharing a bedroom-parlor, kitchen and bathroom. You don't pick your roommates. A government bureau tells you where to live, period. The People's Court is jammed with cases evolving from room-sharing. Some complain because the forced neighbor cooks nauseous food. Or that Mr. Neighbor has pecked around the suspended drapes that separate families sharing one room. Three families can cook and eat together, if sociable, or suffer long waits to use the facilities separately. Lining up to use the bathroom before work or school presents more problems.

Experienced construction men of our group were amazed at slipshod workmanship and lack of building maintenance. A minimum of mortar tries to keep brickwork joined. Details of floor and wall finish would be rejected by any U.S. building inspector. Cabinet work is horrible. If a drawer slides properly or a door doesn't jam the sill, you are surprised. The paint is atrocious and soon peels.

Building mechanics are paid on piecework basis. A flat sum is allotted for a building project. So the sooner a job is completed, the higher pay for all hands. There's always another job of waiting. There are

bonuses for exceeding monthly quota and completing a job before target date. There is some building inspection but the incentive to rush the work seems to be the accepted procedure, regardless of the crudity of the finished product.

We saw a massive housing project in Kiev which, when completed in 1963, will house 25,000 in 200 five-story buildings. The "massiv" will include a cinema, polyclinic, nurseries, kindergartens, stores, laundromats, and barbershops (20 cents for a haircut). They are planning parking for 200 cars—for 25,000 persons. None of the 8,000 already housed there drives a car home.

Apartments in this "massiv" are hailed as tops. We saw a typical apartment for a family of three which has a 9½ by 15½-foot living room, a 7½ by 15½-foot bedroom, a 6 by 8 kitchen, and a closet-sized bathroom. That figures about 10 square yards of space per occupant which about equals the smallest U.S. prison cell (so they tell me).

But this accommodation offers sheer privacy compared to multiple-family housing. This lack of privacy tends to lower the birth rate. That's understandable. Many mothers will undergo legalized abortions rather than cramp one more child in a dingy room that would give a U.S. skidrow flophouse resident claustrophobia.

Poor workmanship isn't restricted to the poor comrade's abode. The swank Hotel Ukraine baffles visiting western engineers. They don't know what holds it together. Windows are wide but it takes an engineer to open them. Doors stick, drawers defy you to open them. The plumbing rumbles. You wait maybe 15 minutes for an elevator. You cannot walk up or down, the stairways are locked. There are no outside fire escapes. You ask your floor clerk what you do in case of fire and she replies haughtily that there cannot be a fire in such a fine building. There is a clatter when each of the three shifts goes off duty because the oncoming force has to take inventory, down to the last bathroom glass and sink stopper. If anything is missing, the chambermaid is docked. If a glass is missing, the guest is besieged until he comes up with it or promises to pay.

We were cautioned in Washington to watch our talk in our rooms because the quarters are often "bugged" with hidden microphones. One night as we were turning in, Gilmore loudly sounded off his bitter feelings about Khrushchev and all the Russians. He implored me to get out of the country on the first available plane, with him. I made vivid cautionary gestures, pointing to the lamps, the chandelier, the phone, and other possible "bug" locations. Gilmore halted suddenly, catching my silent warning. Then in a sonorous, changed voice, he barked out "Why Ed Hills, I am surprised at you. I am amazed that you would say such nasty things about the chairman and this nice country." If there had been a "bug," it would have recorded the thud of a flying shoe that missed Howard by a whisker.

Aside from trucking and housing, here are a few capsule observations:

The Russian man in the street greets Americans politely, but with few words. Young Russians seek to trade medals or pictures of Soviet big shots for chewing gum or ballpoint pens which are not on sale in the stores.

All, young and old, plead for you to say that America wants peace and won't attack the Soviets.

There are stores everywhere. And there are kiosks on the sidewalks also selling stuff. I guess it keeps a lot of people busy.

The big GUM department store is jammed with people. Everything sells for cash and there is some buying, but a lot of looking, too. Clothing is high. Mens' shoes run from $40 to $100 a pair. Wool dress goods are $15 a yard. A man's ordinary suit sells for $150 and the better grade price is $200. A secondhand suit that is wearable is ticketed at $120. That is the value of 45 days' pay for a skilled workman.

Food is also expensive. Bread and cabbage are reasonable but meat and better foods are priced above the laborers' abilities to buy. Vodka costs $5 a fifth so Ivan must give up almost 2 days' pay for a bottle.

Most men in the street wear coats and trousers that do not match. Their shoes are sandal-type (less leather). Most wear open-collar sport shirts (saves on neckties) and hats are a rarity. There is no such thing as a stylishly dressed woman. Their uniform seems to be a cross between a housedress and the type of frock you would pick up in a bargain basement. A serviceable woman's blouse sells for $30 and inferior nylon hose run from $1.70 to $2.60. And they seem to run soon after they are bought, too.

GUM seems to do a big business on minor luxury items. How do people afford it? Most couples work while their kids are kept free of charge in nurseries. Rentals are low, so are utilities. Medical care is free. Income taxes are petty. Education is gratis and university students are paid salaries and subsistence. There is incentive pay, as mentioned before. Demand for more consumer goods is such that heavy electrical industries, for example, have had to convert some production to electric shavers.

The classless society myth explodes when you see well-dressed men and women in the cafes and theaters. These are the executives of government, party and industry who are rewarded much better, percentagewise, than their opposite numbers outside the Iron Curtain. They splurge on expensive foods and wines. This affluence reaches into the lower echelons of bureaucracy where there is influence peddling in assignment of living quarters, upgrading or workers' pay and bonuses and granting of other supposedly unobtainable privileges.

In summation, I found that happiness seemed as absent as good trucking in the Soviet Union's top cities. I did not find in my 12-day tour a single pedestrian, transport worker, shop clerk, hotel employee—in fact anyone—who looked or sounded truly satisfied with things as they are.

Give me San Francisco or Los Angeles where the odds on a smile are a million to one over Moscow, Leningrad, or Kiev.

"The Governor and His Lady"—Wm. Henry Seward

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, February 16, 1960

Mr. JAVITS. Mr. President, a book has come to my attention which should find a large readership—especially in this election year when Republican Party programs for the future will be judged by the people in the light of Republican traditions and of the accomplishments upon which my party was founded. "The Governor and His Lady" by Earl Conrad is the story of William Henry Seward, who as Governor of and Senator from New York, and as Secretary of State to President Lincoln, practiced so well so much of that philosophy which the Republican Party was formed to represent; and which continues to this day the basis for much of President Eisenhower's liberal-conservative policies.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a book review from the New York Times of January 31, 1960, reviewing Mr. Conrad's book.

There being no objection, the book review was ordered to be printed in the RECORD, as follows:

PRIVATE COUNSELOR TO A PUBLIC MAN

("The Governor and His Lady." The story of William Henry Seward and his wife, Frances. By Earl Conrad. 433 pp. New York: G. P. Putnam's Sons.)

(By Ishbel Ross)

None of the wives of famous Civil War figures lived more obscurely than Frances Adeline Seward, the girl from Auburn who married William Henry Seward when he was establishing himself as a young lawyer in upstate New York. She stayed on in her father's house while her husband grew in fame as Governor of New York State; as U.S. Senator; as Lincoln's Secretary of State, and finally as elder statesman to the Nation.

Yet when she died it was said of her that she was the noted lawyer's own counsel, that she and Thurlow Weed alone had been able to sway him, that she continually fought his tendency to compromise, that she was strongly antislavery and radical Republican while Seward remained at heart the Unionist and moderate Whig. She did not hesitate to disagree with William Henry on matters political, philosophical, and domestic, and she regularly let him know her opinions. But most of her counseling was done by letter, since the Sewards were rarely together.

Earl Conrad, newspaperman and the author of many books on various facets of the national scene, offers factual evidence of Frances' political influence through the correspondence of both of the Sewards, from which he draws freely for this joint biography. It enables him to throw fresh light on the statesman's personal views and the burning amibtion that all but carried him to the White House. Seward, the advocate of the oppressed, the pacificator as war approached, the right hand man of Lincoln in moments of crisis at home and abroad, the finagler and diplomat, is vividly presented by Mr. Conrad, but the underlying theme of his book is his relationship with his wife. He nourished her ego by a "lifelong love letter * * * that was one long apology for not being with her as much as she wished." He revealed more to her than he ever did to his political associates, and he was half-apologetic to Frances when he yielded to expediency. She was his conscience if not his guide. She, in turn, wrote an endless series of letters to him, which were a litany of woe as often as a source of inspiration.

Invalidism was the key to this extraordinary marriage. Mrs. Seward lived her life largely in the sick room, although her mental vistas took in the world. Her indispositions ranged from depression over a shower of rain to rheumatism that totally disabled her in her later years. She bore five children, one of whom died early of smallpox, and her own health declined with each accouchement. As the years went on she was unable to tear herself away from the shelter of her childhood home and used every pretext to avoid joining her husband and facing the responsibilities of official life. Mr. Conrad applies to Mrs. Seward's story the contemporary psychological interpretation of neurosis induced by frustration.

William Henry finally forced her to move to Albany, where she stayed for 9 months, the longest period she was ever away from Auburn. She was with him only briefly during the days of his greatest fame in Washington. Frances viewed him as a great man, set apart, and she had ample tolerance for the life he led away from her. She knew that her real rival was the political game

and that his friendship with Charlotte Cushman and his liking for the company of clever and attractive women had no fundamental bearing on their marriage. In the end he always returned to Auburn, and when he did their relations were most harmonious.

Frances was taller than her russet-haired and shambling husband, with the trembling upper lip, the large nose, the beguiling manner and worldly spirit. She was of "reedish build," with an oval face and full throat. She was well read and studied to keep abreast of political affairs. But she did not like to entertain, or to have people fawn on her because of her husband's achievements. There was Quaker blood in her veins, and she had an independent spirit.

She would not put herself out, even for Abraham Lincoln, and chose to ride in her own carriage instead of in his on a day when she felt indisposed. The President was surprised to discover that she was more radical than her husband. She was wary of Mrs. Lincoln, who regarded Seward as a sneaky abolitionist and was suspicious of his loyalty to her husband. But Mr. Conrad is particularly successful in showing how Seward subdued his envy of Lincoln and worked wholeheartedly for him and with him.

Frances never recovered from the horror of the night that the President was assassinated and her husband and sons were attacked. Two months later she was dead, and all of Auburn, as well as the war leaders, attended her funeral. Her husband outlived her by 7 years and in the final stages was considered a garrulous old man. But Seward's work has reverberant echoes down the years. He negotiated 40 treaties. He signed the Emancipation Proclamation with Lincoln. He put through the purchase of Alaska, and Mr. Conrad draws an interesting picture of the bargaining with Baron Edouard De Stoeckl that preceded this transaction.

The Governor and His Lady is written in episodic style. The author races along with a wealth of picturesque detail, catching the high moments in Seward's half century of public life. It is not fullbodied biography in the political sense, but it makes interesting reading. Primarily it is the Governor's story. Frances' life in itself was flat and colorless, but by channeling their histories together in a strong current of mutual love, endurance, and esteem, the author offers a fresh conception of Seward the man as well as Seward the statesman, and gives status to a wife whose character and ideals transcended her physical limitations. He is the first to focus the spotlight on the shadowy Mrs. Seward.

All through his book he indulges in the debatable use of imaginary dialogue. Since he is deeply versed in Seward history and grew up in Auburn, the sense of environment is so faithfully conveyed that the reader is not jarred into total incredulity. But his technique affects his book as history. Mr. Conrad is at his best in creating period atmosphere. His picture of upstate New York is fascinating and authentic, from his nature observations to his understanding of small-town politics and the forces that propel a man of destiny.

Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. SHORT. Mr. Speaker, today marks the 42d anniversary of the proclamation of Lithuanian independence. Lithuania made a brave and, for a while, untroubled entrance into the family of free nations. From February 16, 1918 until invaded again at the start of World War II by, first, Nazi Germany and later by Soviet Russia, Lithuania earned the reputation of a model Republic. She was one of those nations to learn at an early date of the frail value of agreements with the Soviet Union. This little nation, which turned to the Soviets for help, felt the embraces of the bear. Russia scrapped their Mutual Assistance Treaty of 1939 and earlier nonaggression and peace treaties of July 12, 1920 and September 28, 1926. An illegal puppet government was forced upon the people, and on June 15, 1940, Russia fraudulently annexed Lithuania.

Since that date, it is estimated that over 500,000 Lithuanians have been deported to Siberia, or murdered.

Today only refugee Lithuanians and friends of Lithuania in the free world can observe that country's anniversary of independence openly. But we can feel confident that through radio, and other means, the word will get back to those patriots who have to observe their independence anniversary in secret. We are not commemorating an independence that has died. It still lives in the hearts of the people. It is kept alive through the determination of a proud people. The observance here today can remind them once again that we have not forgotten them.

Under Secretary Morse Visits Butler County, Ky.; Lauds Rural Development Work

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Tuesday, February 16, 1960

Mr. MORTON. Mr. President, last December the Honorable True D. Morse, Under Secretary of Agriculture, who also acts as national chairman of the Rural Development Committee, visited Butler County, Ky., in connection with ceremonies honoring the county for its very fine RDP accomplishments. In the January 1960 issue of the Kentucky Department of Agriculture Bulletin, there appears a description of this visit and of the program. As one who is personally interested in the expansion of this self-help rural development program and who is proud of the program in Butler County, Ky., I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Kentucky Department of Agriculture Bulletin, January 1960]

UNDER SECRETARY MORSE VISITS BUTLER COUNTY; LAUDS RURAL DEVELOPMENT WORK

For those who may have some skepticism about the value of the rural development program (RDP) in Kentucky the Bulletin editor would suggest that such persons pay a visit to Butler County. There they will see firsthand just what the program of rural development can do to a community.

The rural development program which has been dubbed "operation bootstrap" is a plan of self-help. While its expressed objectives are to improve living standards and increase job opportunities, RDP has many intangible assets that cannot be identified as easily as freshly painted buildings, community-owned buildings, newly paved roads, etc. Unseen, but, nevertheless, just as present, are the community bonds forged by working together toward a common goal—civic pride and spiritual rebirth.

Under Secetary of Agriculture True D. Morse was aware of these intangibles when he visited Butler County last December 14 and 15 in connection with ceremonies honoring the county for its RDP accomplishments. Morse, who is National chairman of the Rural Development Committee, described Butler County as one of the outstanding members of the rural development program that is now being conducted in 30 States and Puerto Rico. The Under Secretary declared that the Butler County accomplishments during the past 3 years is perhaps tops for any county in the Nation.

Speaking at the dedication of the New Sharer Community Center building, the Under Secretary lauded the 59 member Butler County Rural Development Committee which brought together the county's combined town and rural leadership. He also pointed out that the success of the Butler County RDP should in a large measure be credited to the unanimity of purpose of the 23 agencies and organizations working together, representing State, National and local agencies as well as private organizations. (The Kentucky Department of Agriculture is a member of the Kentucky Rural Development Committee and is represented by Assistant Commissioner Vinson on the executive committee.) Dr. E. J. Nesius, associate director of extension, is State chairman.

Morse who also visited the Reedyville Community Center listed the following accomplishments that had been brought about in Butler County largely through the stimulus provided by the rural development efforts:

1. A $46,700 health center has been erected.
2. The main street in Morgantown has been renovated with several new business buildings being built.
3. A fire engine has been obtained—which cut insurance rates in half.
4. A new post office building is under construction.
5. Sixteen acres of land was purchased for developing a fairground, recreation center, and park. The cost is to be approximately $17,500 to $20,000.
6. The rural development county committee has sponsored two dairy shows.
7. A County Fair was held for the first time in 2½ years.
8. An Artificial Breeding Association has been organized.
9. The dairy cattle of the county were tested for Bangs disease.
10. About 40 new houses have been built in Morgantown the past 2 years; this is more construction than there has been in the past 20 years.
11. Work is being done to eliminate the slum section with a public housing project.
12. Five industrial sites have been located.
13. Town-county relationships have improved considerably. Farm-City Week has been observed for the past 2 years.
14. Loans are easier to obtain as a result of changed attitudes.
15. One grade A and two grade C dairy routes have been started.
16. A Vegetable and Fruit Growers' Cooperative was organized.

17. The communications committee has succeeded in establishing a better telephone system for several communities. Telephones have increased as a result.

18. All agencies are cooperating and are being coordinated under the rural development program to do more effective work.

Through the Community Improvement Contest with $1,950 in prizes and eight communities participating these improvements have been brought about:

(a) Many remodeled houses.

(b) Huge increase in running water being installed in houses.

(c) Several new houses being built.

(d) Hundreds of additional head of livestock added.

(e) Roadsides and fence rows cleaned out.

(f) Mail boxes renovated.

(g) Two new community centers, costing about $10,000, were erected.

(h) Four schoolhouses have been bought for community centers; three already remodeled; the other to be reworked within 2 months.

(i) Community spirit and cooperativeness is much more prevalent.

(j) A new blacktop road in two communities.

(k) A drainage program, costing $15,000 or more, which involves 13 people in one community.

(l) Thousands of acres of improved pasture.

(m) Strengthening of several existing 4-H Clubs and new ones added.

(n) Cemeteries have been cleaned off and are being kept neat.

(o) Community signs to identify communities have been erected.

(p) Social and economic structure of communities is being strengthened.

Wilson Hourigan, area agent in rural development, made these observations:

"County-level activities alone will not do the job. Social and economic development is not limited to or determined by county lines, but takes place in an area and evolves about a trade and service center. Nor will area-level activities in themselves solve the social and economic problems. They need the interest, support, and participation of the people of the county and communities, levels as well."

James Thompson, president of the Sharer Community project, recognized these facts when he admonished his listeners at the community house dedication that Sharer is now only on the first step up the ladder toward the realization of its potential as a community that is so attractive that nonresidents would like to make their homes there.

We see rural development as something besides community betterment. Here in Butler County we have witnessed a demonstration of what can be accomplished when everyone, be it individuals, private organizations, or public agencies, work together toward a common goal.

We of the State department of agriculture are pleased that we had a small part in helping these people to improve their communities and possibly broaden their horizons.

Lithuanian Independence Day

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. DEROUNIAN. Mr. Speaker, today, we commemorate the independence of Lithuania. The people of this small country have played an important role in the history of Europe, once creating a barrier between the Tartars to the east and the Germanic tribes to the West. But the unhappy fact of geography has brought tragedy to them over the centuries since their period of historical greatness. During the 18th and 19th centuries, overwhelmed by superior numbers, they were encompassed within the czar's extensive realms. But they resisted his efforts to Russify them. And following the collapse of the ancient Russian Empire during World War I and the bloody war between Bolshevik Russia and Poland, the Lithuanians finally obtained their independence.

They used their liberties responsibly and well. While independent, their countryside flourished and their factories grew. But less than two decades later, they were again overrun by Russian forces. World War II saw Germans drive out Russians and then Russians drive out Germans. And finally, at the end of that tragic conflict, Lithuanians were integrated into the new Soviet empire.

And there they have remained. Many have been deported, others have been dragooned into the Kremlin's plans. Still others have fled for their very lives.

Those of us in this country, who are free to commemorate this anniversary of the declaration of Lithuania's independence as Lithuanians at home are not, have laid upon us a peculiar responsibility. For Lithuanians know what is lost when freedom is lost as more fortunate peoples who have never lost their freedoms may not know. Let us therefore dedicate ourselves to living in our freedom as worthy, responsible citizens, striving to perfect ourselves to make our maximum contribution to our society, and living at peace and with trust with our neighbors. In this way Lithuanians demonstrate to their fellow Americans their understanding of the trust that is upon us all, freemen.

Address of Hon. Charles H. Silver at Alfred E. Smith Memorial Foundation Dinner

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, February 16, 1960

Mr. JAVITS. Mr. President, the happy prospect of a world at peace and all its energies devoted to the benefit of mankind was forecast in an address by one of New York City's most honored citizens, Charles H. Silver. He is president of the Board of Education of the City of New York and presided at the Alfred E. Smith Memorial Foundation dinner on October 27, 1959. On this occasion, Mr. Silver paid tribute to the memory of Alfred E. Smith, one of New York State's most distinguished sons, and to the ideals which are being perpetuated by the foundation in his name.

I ask unanimous consent to have printed in the Appendix of the RECORD the address of Hon. Charles H. Silver on this occasion.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. CHARLES H. SILVER, PRESIDENT OF THE BOARD OF EDUCATION OF THE CITY OF NEW YORK, AS CHAIRMAN OF THE ALFRED E. SMITH MEMORIAL FOUNDATION DINNER, WALDORF-ASTORIA HOTEL, OCTOBER 22, 1959

Each year I find renewed pride and pleasure in coming before you as chairman to welcome our honored guests and the faithful friends who have gathered to keep alive the memory of Alfred E. Smith and the great foundation you have helped to sustain in perpetuation of his name and ideals.

I rejoice again in the presence of so many familiar faces—and new ones, too—whose hearts and minds are drawn here through devotion to the symbol of the "Happy Warrior" and dedicated to the cause of charity and peace.

The very concept and continuing success of these annual events give proof—in a care-burdened world—that there are some who do care. Too much of mankind is still concerned with its own personal needs and interests. This makes it all the more necessary for us to give thought to the well-being of others, to reach the heart of world problems, to see the hunger, the pain, the want and injustice that still exist in many corners of our world.

Recent events indicate that the great powers of the world are beginning to understand that a peace based on mutual fear is no peace at all. We are not yet confident that the forces of science, unleashed in appalling immensity, will usher in a richer and more rewarding future. It has all happened so quickly. It is difficult to revise our thinking to the incredible realities of the space age.

But we do know that, unless men of faith and courage take stock of our achievements and point the direction in which they will be used, these forces can bring an end to the progress of civilization, silence to our cities and death to their people.

This is inevitable unless—and it is a very great unless—we remember the prophetic teachings, the importance and the sanctity of life, so that, regardless of creed, we combine our strength and efforts toward brotherhood and good will—and justice for all men.

The surging tide of international events washed up on our own shores an emissary from abroad who has the self-confessed power, by his decision alone, with no man's leave, to throw the lever which could erase the past and present and any hope of a future for all people, including his own. He came on a mission whose major message expressed the hope that all nations disarm. We do not know whether it was really news or just noise.

We must receive this message with caution. It is not easy to accept the exalting vision of an olive branch of peace waved by the man whose implacable tanks crushed a freedom-loving people's blood into the paving blocks of their peaceful streets in Hungary, in Poland and in so many other areas and episodes of shameful conquest.

But all people should weigh carefully any call to beat our swords into plowshares no matter from what source it comes. For never was the need more great for genuine understanding among nations than it is today. Never was the desire more strong for freedom and peace throughout the world than it is in our time.

Yes, a call for disarmament must be heard but we will not forget that its advocate has waged relentless war against our way of life. We can only wait, and consider and pray, and keep our guard up. We can only listen to the man and remember the cautious motto of Al Smith: "Look at the record."

Yet, here is a matter well worth considering. If our current average expenditure of almost $40 billion a year for destructive and defensive armaments could be diverted to other purposes, what an enormous potential for good this would create.

Medical centers could rise on every hand. We could provide adequate care for the emotionally disturbed, curb juvenile delinquency, build better educational systems, offer adequate salaries to teaching personnel, train an ample number of scientists, and house every family in our land in decency and comfort. We could do all this and still have such a surplus that no worthy project to advance art or culture would remain neglected. All this could happen not only for us in this land, but, throughout the world, the hungry and impoverished could see the dawn of a new day.

In the wake of military disarmament and moral rearmament, all nations, renouncing war, could enter into a commonwealth for the betterment of life, the dignity of man and the service of God.

I am glad that I have been able to express these thoughts, so faithful to the guiding spirit of that immortal governor of our State in whose name and honor this dinner is given, before its present Governor—Nelson A. Rockefeller.

And I enjoy this opportunity of addressing myself, as well, to one of the able young legislators in whom the future of our nation and its principles are entrusted. The uncompromising courage he brings to any office strengthens the belief that his own profile in history will add still another chapter to his inspiring book, "Profiles in Courage." I refer, of course, to the crusading Senator from Massachusetts, JOHN F. KENNEDY.

Finally, I am happy that our own city's foremost champion of the rights of man is with us in the person of our mayor, Bob Wagner.

My friends, as president of the board of education, I am, of course, best acquainted with the excellent work of our public school system. However, let me tell you, just briefly, a few facts about the great Catholic parochial school system of this city. Its 13,000 teachers provide instruction for approximately 370,000 children. It would mean an additional cost to the city of $750 million for housing facilities, $120 million in annual operating expenses, plus many millions of dollars for teachers' salaries, if this were a municipal obligation.

I think we can salute this tremendous contribution to the youth of our city.

Under the sponsorship of His Eminence, during the past school year 35 new elementary and 6 new high schools have been constructed, and 24 buildings have been modernized and expanded. This is in addition to the many hospitals, homes, nursing schools and institutions of higher learning, 17 of which have been dedicated by His Eminence in the past year alone.

For such noble work, we give thanks to the Catholic parochial school system and to you, Your Eminence, whose faith has strengthened you as a great humanitarian and moving force in the advancement of education.

In closing, I express, on behalf of our foundation, my heartfelt gratitude to you and to all our honored guests for your presence here tonight and for your resolve to protect the imperishable destiny of our people so that freedom and decency may conquer the forces of darkness.

May we go forth into another year dedicating the days ahead to brotherhood and justice and to the triumph of truth.

This is the pledge that has brought us together.

God grant the perpetual endurance of this greatest democratic nation on the face of the earth.

An Outstanding Record of Achievement in Washington, the Performance of the Comptroller General of the United States, Hon. Joseph Campbell

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. STRATTON. Mr. Speaker, one of the most important officials of our Government is the Comptroller General of the United States. This official, who serves directly under the supervision of the Congress, is the watchdog of the American Government. By his diligence and efficiency he protects the American taxpayer and without his assistance it would be impossible for Congress fully to discharge its responsibility over the Federal purse strings.

Mr. Speaker, the United States is particularly fortunate in the person of the individual who presently occupies that post, Hon. Joseph Campbell, of the State of New York. Not only has Mr. Campbell done an outstanding job in this position of high responsibility and has demonstrated the kind of forthrightness and independence which should be the hallmark of a comptroller general, but he is also a very warm and friendly person. Besides that, I am particularly pleased that he happens to be a constituent of mine, coming from the beautiful and historic village of Cooperstown in Otsego County in my district in upstate New York.

For this reason, I was particularly pleased to read the other day in the Ostego Farmer, one of the newspapers published in Cooperstown, an editorial which appeared praising one of the unique achievements of Mr. Campbell, one of the most distinguished citizens of that community. This editorial demonstrates that Mr. Campbell has exercised his concern for economy and a judicious expenditure of the taxpayers' money even in his own agency. Under leave to extend my remarks, I include the editorial:

GOING THE RIGHT WAY

A memo from the office of Joseph Campbell, Comptroller General of the United States, indicates the least number of employees on the payroll of his Department since 1940. Present number on the rolls is 4,997. Peak employment in this Department reached 14,904 during the latter part of World War II years. There were nearly 6,000 on the rolls when Mr. Campbell took over in 1954. Mr. Campbell has been able to bring about a reduction in each successive year. We suspect that it has taken some doing, and have a feeling that not many departments or bureaus at Washington have been thus handled.

During the same period the number of employees in the Post Office Department increased 40,357. According to Tax Foundation there has been an increase of over 83,000 workers in the various Federal civilian agencies in the 1954–59 period.

Congratulations to Mr. Campbell. It would be wonderful if some of the other departments at Washington would try as hard.

The Condition of the Highway Program

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 16, 1960

Mr. MANSFIELD. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a summary from the Janeway Publishing & Research Corp. dated January 19, 1960, on the disappointing lag in our Federal highway program.

Janeway Service warns that the highway program is being drastically curtailed. In my judgment, the administration has failed to provide the management and financing of our vast highway program which is demanded by such a far-reaching project.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

Highway slowdown: But if Washington's money-raising operations are draining liquidity out of the spending stream, its spending operations are not feeding it back in on anything like a compensating basis. Herewith an audit of the most overtouted of all Federal spending programs—highway construction.

It is the Federal Government's contribution which is decisive for highway construction at any given time. Right now, for example, the Federal Government is sponsoring some $4.5 to $5 billion of new highway construction in process. During fiscal 1960, the Federal Government has the authority to obligate $2.7 billion for new highway construction. During the first half of fiscal 1960, however, the Government obligated only $900 million of new highway money. But the average leadtime between obligations and actual expenditures is no less than 19 months. This means that the disappointing level of Federal highway obligations during the first half of fiscal 1960 will force a correspondingly disappointing level of Federal highway expenditures during the first half of calendar 1961—when the boom is officially scheduled to begin running out of steam but when, instead, the slump now building up may already be seasoned. Any catchup in highway obligations during the current half can't be expected to benefit highway expenditures until well after the new President has been installed in the White House.

Contratcors and vendors alike have been complaining that the on-and-off pattern of the Federal Government's highway program has been as disruptive as the now-you-see-it, now-you-don't pattern of its defense program, only more so. During the months ahead, contractors and ventors will do well to brace themselves for another period of disappointing delay—only more so—in the Federal Government's highway construction program.

Tribute to Juan T. Trippe

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. FRIEDEL. Mr. Speaker, I would like to call to the attention of the Members of the House the contributions that Juan T. Trippe and his creation, Pan American Airways, have made to the Defense Establishment of our country.

During the past 2 years, since the appearance of the sputniks, there are many who have gone around decrying "doom" for us. There seems to be a feeling that American creativeness has gone forever.

I believe the American genius is as strong now as it has ever been and Americans are now, as ever before, striving to make the world a better place to live in. In our own time Mr. Trippe has single handedly thrust our country forward in the field of aviation creating new frontiers for us all. I cannot hope to improve upon the words used to describe the accomplishments of Mr. Trippe as has Mr. Charles Kraft on the occasion of the awarding of a citiation by the National Defense Transportation Association:

Our guest of honor, the dean of the air transport industry, launched his career in international aviation by the unusual process of leaving a profitable company which he headed and which had received the first domestic air mail certificate in 1926. He resigned from Colonial Air Transport, an airline which flew between Boston and New York, when that company decided it would be too great a risk to extend its route to Chicago and Miami.

In 1928 he formed Pan American and inaugurated the first U.S.-flag international air transport operation. This was only the first of many steps which advanced American aviation from a poor last to an unquestioned first place in world aviation. Other steps came in rapid succession—the first air service across the Caribbean—the first over the Pacific—the first over the Atlantic—the first around the world.

Today, three decades later and, in spite of far higher labor costs than foreign-flag competitors, the U.S.-air transport industry continues to lead the way in equipment, efficiency, and prestige. Today Pan American carries our flag to every country—no city in the world being further than a short day's flight.

Our guest not only has pioneered in the technical development of commercial aviation, but he has led the way in converting air transportation into a mass transportation business. He sought to make international air transport a vehicle to carry the average man at a price he can afford to pay. After World War II he initiated a campaign for greatly reduced air fares. Currently he is pressing for economy-level fares around the world.

He led the United States into the jet age when, 5 years ago, Pan American ordered 44 jet airliners, each with nearly the annual passenger capacity of a *Queen Mary*.

The rush to order U.S.-built jets by foreign-flag airlines in a follow-the-leader manner provided employment for thousands of skilled American craftsmen. It has helped maintain the position of the United States as the leader of world aviation.

The confidence of our Government in leadership of this caliber was clearly demonstrated when Pan American was selected by the Air Force to operate its missile base at Cape Canaveral.

In recognition of his countless contributions to the advancement of air transportation he has received almost all the known aviation awards, such as the Collier Trophy, the Daniel Guggenheim Medal, and the Harmon Trophy.

Many universities throughout the Nation have conferred honorary degrees upon him in recognition of—in the words of the citation from his alma mater, Yale University—"for organizing and administering a great new force in human life whereby space is forgotten and the ends of the earth are made neighbors."

As a U.S. Navy pilot in World War I he was able to contribute only one person—himself. World War II, however, found Pan American a growing company—and grow it did for its peak war effort found 88,000 employees working for their country under our guest's direction on every continent and on every ocean.

For Pan American's oustanding contribution to the war the U.S. Government awarded him its highest civilian decoration—the Medal of Merit. Even more important in this day of global tensions and brushfire wars, he has been awarded decorations by all the principal nations of Western Europe, the Middle East, the Orient, and South America as well. It is not surprising, therefore, that such an ambassador of international good will should have received more decorations from abroad than any other American civilian.

It is a pleasure to add the National Defense Transportation Association's Distinguished Service Award to the countless honors already bestowed on the man whose name is synonymous with air transport, Mr. Juan T. Trippe.

CITATION: JUAN T. TRIPPE, PRESIDENT, PAN AMERICAN WORLD AIRWAYS

Through the leadership of Juan T. Trippe, president of Pan American World Airways, a potent instrument of national defense is readily available to this Nation in case of emergency. Through his efforts and foresight 65,000 miles of air routes have been developed around the world.

The value of this great air system to the country is best shown by the experiences of World War II. Within half an hour after the Japanese attack on December 7, 1941, the peacetime activity of Pan American ceased and the more than 20,000 employees of this company joined our Nation's defense.

Crews of Pan American were called in to give the military the benefit of their experience in oversea flight. Thousands of pilots were trained by Pan American and the company's maintenance facilities were placed at the disposal of the Armed Forces. Many strategic air bases were built by Pan American in various parts of the world. In addition, the long lines of communications of the company were placed into military activity.

Today the same guiding hand of Mr. Trippe has developed Pan American World Airways into a system of jet airliners capable of transporting passengers and cargo around the world in half the time it took in World War II.

Juan Trippe's capacity for organization, his management skill, his patriotism and leadership are in the highest tradition of the Nation.

Birthday of Susan B. Anthony

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. KEATING. Mr. President, three great emancipators were born in February. Washington freed this country. Lincoln freed the slaves. And Susan B. Anthony freed women.

Yesterday marked the 140th anniversary of the birth of this incomparable woman. Today it is clearly recognized that the rights which the women of our country enjoy are due in large measure to the dedicated efforts of this native of New York State who resided in my home city of Rochester.

Although her achievements have been universally recognized, nowhere have they received more tangible tribute than in Rochester. There, the home of Miss Anthony and her sister, Mary, from 1866 to 1906, at 17 Madison Street, has been set aside as a memorial to her great life and works. Mementoes of her activities leading to the 19th amendment have been carefully preserved, and the house is visited by a constant stream of admirers.

But Miss Anthony belongs to America and the world, not just to Rochester. It is therefore fitting that we pay tribute to her on the occasion of her birthday anniversary. It is appropriate that we recognize at this time her great sacrifices and the great personal abuse she suffered in fighting for a cause she considered just. It was a cause which we all know today was and is just.

Miss Anthony was born during a period when women were considered not the equal of their male counterparts. The equality women had shared with the men of this country in the pioneer days had given way to a kind gallantry of the superior toward the lowly.

With the fading of the pioneer days and the growing of the industrial system, women found themselves relegated to second place. They had no legal entitlement to the salaries they earned, could not enter into contractual agreements, and were considered far too delicate to be subjected to education or to concern themselves with the hard task of selecting public officials or running for office.

Susan B. Anthony was born during that era, and she, being of pioneer stock, protested vigorously these inequities. Because of the kind of woman she was, she knew no course but action. She campaigned militantly in the interest of womankind. She became a champion of economic justice as well as social and political emancipation. She campaigned vigorously for the vote for women, for in this she knew rested the only salvation for equal rights for women and freedom of human equality.

Miss Anthony, like Abraham Lincoln, stands as a champion of human justice. Although, like Lincoln, Miss Anthony did not live to see the fruits of her efforts, a large portion of the ideals for which she struggled so arduously and long have been realized. Women have gained the franchise and they are more and more taking their rightful places in the professions and in the business world.

But Miss Anthony's program will not be complete so long as there is any discrimination against women as, unfortunately, exists in some places and occupations. Women still all too often have to struggle for recognition which should rightfully be theirs. Men do not benefit when women work in a discriminatory atmosphere at substandard wages. Our democracy does not benefit when democracy is applied in 50-percent measure.

It behooves us all, then, to take a lesson from Miss Anthony. Her memory can be revered best by the realization that in our great country men and women have a common destiny which can be fulfilled only on the basis of equality.

I am delighted to call attention to the fact that yesterday was celebrated throughout New York State as Susan B. Anthony Day. By proclamation of Gov. Nelson A. Rockefeller, the accomplishments and perseverance of this great teacher, humanitarian, and woman were recognized. Mr. President, I ask unanimous consent to have the text of Governor Rockefeller's proclamation printed in the Appendix of the RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION OF THE STATE OF NEW YORK
EXECUTIVE CHAMBER, ALBANY

The rights which the women of our country enjoy today as American citizens are due in large measure to the stanch and untiring efforts of a native of the Empire State, a resident of Rochester, Susan B. Anthony.

One hundred and twelve years ago an event destined to be of worldwide importance took place at Seneca Falls, N.Y., the first Women's Rights Convention. Those who took part were in the position of being nominally citizens but actually deprived of a citizen's right to vote and share in the government of their community, their State and their Nation. Susan B. Anthony was a leader of this band of brave and intelligent women. She, and others with her, persevered in the face of prejudice, abuse and ridicule. In the end, their courage and tenacity prevailed. What they achieved is part of the goal for which we are today striving—equality of opportunity for all

The right of women to take part in government is today recognized as beyond dispute. The State of New York extended this principle when its legislature was the first to pass a law providing that women workers must be paid on an equal basis with men for equal work. This was one consequence of the movement that Susan B. Anthony led so valiantly.

Now, therefore, I, Nelson A. Rockefeller, Governor of the State of New York, do hereby proclaim February 15, 1960, as Susan B. Anthony Day in the State of New York, and I urge the men and women of the State to join in paying tribute to that distinguished American.

Given under my hand and the privy seal of the State at the capitol in the city of Albany this 25th day of January 1960.

NELSON A. ROCKEFELLER.

By the Governor:

WILLIAM J. RONAN,
Secretary to the Governor.

The Air University at Montgomery's Maxwell Air Force Base

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. GRANT. Mr. Speaker, the people of Montgomery, Ala., particularly the members of the Rotary Club there, deserve commendation for the hospitable manner in which they have opened their hearts and their homes to the many allied officers from other nations who study at the Air University at Montgomery's Maxwell Air Force Base.

This story of Alabama hospitality is related in the following article written by Starr Smith, public relations expert who served during World War II on the public relations staff of General Eisenhower. I believe Mr. Smith's article will be of interest to the Members of Congress, especially those who are associated with Rotary International.

The article follows:

MONTGOMERY MAKING MEMORIES—AIRMEN FROM AROUND THE WORLD GAIN VALUABLE INSIGHTS INTO THEIR HOST COUNTRY AS GUESTS OF ALABAMA ROTARIANS

When you think about it, the letter that appeared one day in the Montgomery (Ala.) Advertiser-Journal might have had overwhelming results. From a Belgian Air Force captain, it was an open invitation for "anyone in Montgomery" (population 150,000) to come to Brussels where "I can repay in some manner the citizens of Montgomery for the wonderful 5 months I have been so fortunate to spend in your lovely and hospitable city."

Capt. Charles Soumoy wrote the letter after attending the Air University at Montgomery's Maxwell Air Force Base, and the friendly warmth of Montgomery people was still much on his mind. Montgomerians have opened up their hearts and homes in the past few years to more than 1,400 Allied officers from 52 nations. Sparking this effort is the Rotary Club of Montgomery.

U.S. Air Force Maj. Preston Dean says, "Our allied officers learn a great deal about American manners and customs through their constant contact with Montgomery Rotarians. This is as important as their actual schoolwork."

Classroom instruction is done by U.S. Air Force officers. The curriculum includes an intensive English-improvement course, world politics, and major military subjects. Carefully chosen by their own Governments for leadership potentiality, graduates of Maxwell's Air Command and Staff College now have the top Air Force command in Chile, Iran, the Philippines, Paraguay, Venezuela, Ecuador, Nicaragua, and Vietnam.

Montgomery is a city where the serene and subtle ways of the past blend harmoniously with a dynamic and progressive attitude toward the future. This successful fusion of tradition and spirited forward movement is most impressive to the allied visitors, and Alabama's continuing industrial and agricultural development is a constant source of interest.

Montgomery Rotarians—in gracious gestures of the South's celebrated hospitality—entertain the allied officers frequently at dinners, dances, sporting events, ladies' nights, and sightseeing tours. Thus a lasting bond of international friendship is being forged throughout the free world.

Philippine Col. Leonardo Miciano perhaps summed up the feelings of his colleagues when he said, "All of us had read much of Montgomery. But it was a surprise when we came here. It's a beautiful city and there is no tension. The men of Montgomery Rotary have given us good memories of America to take back to our own countries."

Address by Hon. Allen J. Ellender, U.S. Senator from Louisiana, Before the National Limestone Institute, Inc.

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. YOUNG of Ohio. Mr. President, all of us are at times called upon to speak before various groups interested in the problems facing our country. This is a privilege of public office, and one which we accept with pleasure.

I was particularly impressed by a speech delivered by our colleague, the distinguished senior Senator from Louisiana [Mr. ELLENDER] before the 15th annual convention of the National Limestone Institute on January 21, 1960.

In his address, the Senator from Louisiana stressed the theme of conservation of our natural resources, especially our fertile earth. His penetrating remarks should be preserved. I feel certain they will be of interest and value to my colleagues.

Mr. President, I ask unanimous consent that the address delivered by the Senator from Louisiana [Mr. ELLENDER] before the National Limestone Institute be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS DELIVERED BY SENATOR ALLEN J. ELLENDER, DEMOCRAT OF LOUISIANA, AT THE 15TH ANNUAL CONVENTION OF THE NATIONAL LIMESTONE INSTITUTE, INC., AT THE STATLER-HILTON HOTEL, WASHINGTON, D.C., ON THURSDAY, JANUARY 21, 1960

Ladies and gentlemen, I would like to begin by making a few observations about the prospects of farm legislation. I am sorry to say that I don't believe that there will be too much forthcoming in the way of farm legislation this year. I introduced a bill 2 weeks ago in an effort to rectify the wheat problem, if possible. During the last session of Congress, the Senate and the House each passed a separate bill. When it went to the

conference committee, the membership on both sides agreed on a compromise bill. The Senate immediately agreed to the conference report, and CHARLIE HALLECK, and I believe Mr. Benson, got busy on the House side. The conference report was not agreed to there, so the Senate was required to adopt the House bill. The President promptly vetoed it. Now if the House bill had been signed by the President, it would have saved considerable sums of money. According to the experts, savings would have totaled between $500 and $600 million over the next 2 years, but, as I said earlier, the President vetoed the bill.

Now the bill I introduced earlier this year was somewhat along the lines of the conference bill that was not agreed to. It is my sincere hope that the Congress will enact a wheat bill along the lines of the one that I have introduced because if we don't enact a wheat bill that will assist in curtailing the surpluses that we now have on hand, the whole agricultural program may be imperiled. I shall do my best, as chairman of the committee, to have a bill enacted.

I was also asked to say a few words on the soil bank, as to whether or not Congress will enact a new Soil Bank program. I tell you that I do not believe that Congress should or will enact another soil bank program. It is my belief that the present soil bank program, which has not been on the statute books too long, has cost the taxpayers a little over a billion and a half dollars and surpluses are continuing to pile up. An effort I believe is going to be made to extend the conservation reserve portion of the soil bank but even that I hope will not be enacted.

Another point I would specifically like to bring to the attention of your organization is that the President of the United States failed to budget $250 million for the agricultural conservation program. I do not suppose any of you will object if the Senate and the House put into the bill $250 million before it is sent to the White House.

I would like to direct my remarks today to two very important subjects which, I fear, are often overlooked in this era of intercontinental missiles, trips into space and atomic power; namely, the need for continued and expanded conservation and preservation of both our natural and human resources.

As is often said, it is very easy to lose sight of the forest for the trees. I think that is happening today for in many respects we are overlooking the fundamentals that have made our Nation great.

Putting it very simply, we owe our present position of national strength, in large measure, to the proper development of our God-given natural resources which our forefathers discovered in this country.

The development of a widespread system of internal communications, such as highways, waterways, and railroads which made it possible for all areas of our country to be linked together so that all could share in our joint progress, set the cadence of our unprecedented march forward.

If we ever fail to give close attention to our transportation and communication facilities and to the proper use and adequate conservation of our water and land resources, then we need never worry about who gets to the Moon or Mars first. It just will not make any difference to us by that time. Our economic backs will already be broken.

The value of a well coordinated internal communication system was never made more obvious to me than during 1958 when I had the privilege of making an extensive tour of the nations of South and Central America. There, I visited countries that are immensely wealthy in natural resources, yet, they remain underdeveloped, principally because of a lack of adequate internal communications. I saw veritable treasure troves of natural wealth, but no means by which these resources could be made available for industrial and other uses.

I resolved then that if the countries of Latin America are to ever become strong and viable—both economically and politically—avenues of trade and communication must be created, much as the United States did in our early years, and as we have continued to do as our Nation has grown. In large measure, we owe our present position of world leadership to our ever-expanding network of highways, waterways, and railroads. The magnitude of this achievement becomes even more astounding when it is realized that our rise to world leadership has taken place only within the last 60 years. In short, in only six decades, we have been able to overtake and surpass other nations which were leaders of the then-known world before our country was ever colonized.

A review of our history should make it very clear that there is need for a continuous improvement of our internal communication system—particularly through up dating and expansion of the present highway construction programs, the development of new waterways, and the modernization of existing waterways, including our ports.

Yet, I fear that some shortsighted persons have felt that we have gone far enough in this field. This is a good example of losing sight of the fundamentals, to which I referred earlier.

If we of the United States ever decide that we have gone about as far as we can go, then that is as far as we will go. That day will mark the decline of the United States as a world power.

It is for that reason, among others, that I have supported—and will continue to support—the current Federal aid to highways program, as well as our long-range plans for water transportation.

I would like to give a word of advice to the planners of our highway programs: Despite the emphasis on interstate highway programs—which I agree are vitally needed—we must not overlook the less spectacular, but just as vital, fundamentals in that field, also.

We must remember that superhighways are of no use without connecting links. If the Interstate System is the very backbone of our road construction effort, then the primary system, the so-called A–B–C road construction program, provides the muscle and sinew.

It is my hope that the Public Works Committees of both the House and Senate will reexamine the entire highway construction program during this session of Congress, with an eye to giving the A-B-C programs proper emphasis.

It might even be desirable for Congress to reconstitute the entire Federal-local relationship that now exists in highway construction. Just because the existing program is apparently sufficient for our needs of today is no reason for us not to make plans for the future.

This brings me to the heart of what I would like to discuss with you today.

I fear that in too many places—yes, even in places of high position—there is a mistaken notion that we need not plan for the future—that the future will take care of itself. This ostrichlike attitude is glaringly apparent in the field of natural resources development, particularly in agriculture. Just because we happen to have a surplus of agricultural products today, this does not mean that it will always be the case.

Yet, there are quite a few people—and some are powerful and influential—who are asking why we should continue conservation and reclamation programs as well as farm research. They point out that we already have farm surpluses and they even cite projections of the Department of Agriculture that by 1975, because of increased yields and more efficient farming methods, we will need some 7 million acres less cropland than we now have in production, and in the soil bank, to grow sufficient food and fiber for our increasing population.

I am here to say, ladies and gentlemen, that such an attitude is more appropriately associated with ostriches than with officials of a government striving to maintain a position of free world leadership.

For one thing, I deny and disavow any so-called short-range planning. The United States of America is going to endure for a lot longer time than merely another 15 years, and it behooves us to plan accordingly. Fifteen years from now, my youngest granddaughter will be only 16 years old, and I want to plan for her future—all of her future, not just the first 15 years.

The population of the United States today is about 175 million. It has been predicted that by 1980, our population will rise to 244 million and by the year 2000, it will reach 329 million people.

What is more, the Census Bureau has estimated that by the year 2010—just 50 years away—we will have in excess of 370 million people, more than twice the population we have today.

This means that merely to maintain our present diet levels, twice as much food and other farm products as we consume today will be required 50 years from now.

In other words, by the end of the next half-century, farmers will have to produce twice as much food and fiber as they do today—and they will have to do it on less land, for it has been estimated that by the year 2000, some 80 million additional acres of some of our very finest cropland, will be lost to creeping urbanization and other factors well known to you. This 80-million-acre loss compares with only an approximate 25 million acres of land which will be added to our cropland by reclamation and related practices during that period of time.

Of course, it is possible that we could increase our cropland by reducing our forests—but this would be merely another example of shortsightedness. We must preserve and conserve our forest resources, not strip them bare, and put them to the plow.

Part of this increased production can come as a result of the great strides being made in the field of farm research. Between 1935–39 and 1956 farm research in this country resulted in production increases equal to the yields from 142 million acres.

Yet, even an expanded research effort is not enough to take care of our needs 50 years hence. The Department of Agriculture has projected that by 2010, our progress in farm research will have to increase by more than 1½ times.

Where and how will we produce the food and fiber to feed and clothe the generations of as yet unborn Americans?

I say our solution can and must be found in both farm research and conservation and preservation of our two basic natural resources, soil and water.

The day is long past when the American frontiersman could just keep pushing west, bringing new lands into production.

Today, some 1 billion acres of land produce this Nation's food and fiber. If we were to follow the old methods of bringing production into line with consumption, we would need to double the amount of land now in use.

But the total land area of the United States is only 1.9 billion acres. In other words, even if we tore down every major city in the United States; if we made a garden plot of Manhattan; if we terraced and irrigated the Grand Canyon, and if we stripped our glorious national forests down to the soil

line, we would still have a shortage of land and we would still have to seek additional manner and means to feed and clothe our people. And remember, that's only 50 years hence.

This should make it very clear that we must take care of the land and water we have today.

Very simply, the situation is this:

We have a limited amount of land in this country.

More and more of this farmland—and I might point out that in many instances it is some of our best farmland—is being lost to growing urbanization, and erosion, among other things.

Our population is increasing.

Therefore, we must make plans now so that our children can grow more food on less land. We must take care of our God-given resources.

This can only come about through an increased realization of the value of good, realistic conservation programs; a continuation of a well planned series of experiments in agricultural research, and an unslacking drive to further improve our routes of internal communication.

As the projections made by the Department of Agriculture reveal very clearly—we must make plans now so that the coming generations of Americans will be born in a strong, self-sufficient nation. There can be no room for friction within our ranks. After all, we all seek one thing—the preservation and conservation of our natural resources and their utilization in the most practical manner.

It is true that there are many divergent views as to how best this can be accomplished, particularly in the field of conservation.

However, in my judgment, there is not only room for all existing types of conservation programs, but they are all urgently required, particularly those which have been successful in preserving our two most precious resources, soil and water.

As chairman of the Senate Committee on Agriculture and Forestry, I am not unaware of the raging battles which we have had to fight in the past to preserve and maintain the various soil and water conserving programs presently being conducted by the Department of Agriculture.

It was not too many years ago that the Secretary of Agriculture sent the Congress a reorganization plan which held out the possibility of being used in such a way as to adversely shift the structures and functions of some of the existing soil and water conserving agencies. This reorganization plan met with the approval of my committee only after we received assurances from the Secretary that no such shifts would be initiated without first obtaining the approval of our committee.

I want to be particularly emphatic in telling this audience that my position has not changed, nor do I believe the position of the Agriculture Committee has changed, since that time. I do not propose to countenance, much less endorse, activities from any source whatsoever which have as their purpose the hamstringing or shackling of any existing agricultural conservation program.

The fact is that what agriculture needs today is unity, not dissension. What farmers need, and what farmers deserve, are peacemakers, not agitators. Those who seek to divide farmers from farmers, or farmers from consumers, are doing a great disservice to themselves, our agriculture, and our Nation's future.

It would be nothing less than folly for us to fail to work together as a team, in pursuit of our common goal. We must have unity in our efforts.

Today's newspapers are abundantly supplied with one very good example of how in disunity there is weakness. I refer specifically to the current missile lag, where, apparently, the members of our defense establishment are more concerned over who is going to have authority over what project, than as to the successful completion of that project for the betterment of our country. This is a lesson I think we should all heed.

What all of us strive for is the future of our children. We were bequeathed a legacy of a rich, fruitful land by our forefathers. They worked hard to develop it and to make a strong, vigorous America.

We can scarcely do less for those who will follow us.

I thank you very much.

The Crisis on the Commuter Railroads—No. 6

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. IRWIN. Mr. Speaker, pursuant to permission previously granted, I include in the RECORD an article published in the New York Times on February 16, 1960, which emphasizes the willingness of State and local authorities to provide the necessary public authorities to administer Federal assistance to commuter systems at the local level. The proposed tristate agency plan dovetails with my bill, H.R. 10343, which furnishes Federal loans to metropolitan authorities for improvement of commuter lines. This plan of the New York Metropolitan Regional Council is unique in that it is the first interstate approach to the commuter system problems. As in the case of a program being worked out in the city of Philadelphia, this plan anticipates Federal assistance. The article:

THREE-STATE BOARD IS PROPOSED TO HELP COMMUTER LINES—REGIONAL COUNCIL WOULD SET UP AGENCY FOR CHANNELING FUNDS—NEW YORK, NEW JERSEY, CONNECTICUT BACKING SEEN

(By Harrison E. Salisbury)

A new tri-state transport agency to deal with commuter problems was proposed yesterday by the metropolitan regional council.

It won immediate endorsement from Gov. Abraham A. Ribicoff, of Connecticut. New Jersey's Governor, Robert B. Meyner, promised prompt consideration. New York State support is expected to be forthcoming.

A joint New York-Connecticut inquiry into the financing and accounting practices of the New Haven Railroad was also proposed by the council. The project evoked immediate and favorable response from Connecticut. It will be presented soon to the New York State Public Service Commission.

The new commuter-aid program was evolved by the regional council, which represents 21 counties and 15 cities of the New York metropolitan region.

The program was submitted to Governor Ribicoff yesterday by Maxwell Lehman, deputy New York City administrator and executive secretary of the council, and Herbert Baldwin, of Westport, Conn., chairman of the council's transportation committee.

Mr. Ribicoff suggested that the tristate transport agency be set up by action of the three Governors of the States involved, because the Connecticut Legislature was not now in session.

The agency would consist of representatives of the three States plus representatives of the city of New York and the regional council.

The precise powers of the agency have not been entirely defined. However, its principal purpose would be to serve as a medium for channeling public aid to the commuter lines. It would be empowered to accept grants-in-aid from local, State, and Federal sources to be transferred to railroads. It would also be empowered to receive Federal loans such as will be proposed in a bill to be introduced in Congress soon.

Another function of the agency would be to ascertain actual deficits suffered by railroads in commuter traffic and establish formulas for allocating the deficits. It might also negotiate leases with the rail carriers, and set specific services that would be provided.

It would draft plans for the long-range improvement of services and possibly for the integration of some existing facilities. At the outset its sphere would be strictly rail, but broader activities involving other transport media would be envisaged.

FULL ACCEPTANCE LIKELY

The regional council met privately with Governor Meyner last week and outlined its plans to him. Mr. Meyner, it was learned, agreed to give the new agency prompt consideration if Governor Ribicoff would go along with the idea.

Mr. Meyner's reluctance to go forward until Connecticut support was assured was believed to stem from past differences that had prevented the development of a tristate approach to the transport problem. Mr. Ribicoff's support appeared to remove a major obstacle to setting up the new agency.

The agency has the strong support of Mayor Wagner and was expected to receive the backing of Governor Rockefeller.

Connecticut's public utilities commission already has underway an inquiry into the New Haven Railroad's finances. However, the proposed bistate inquiry would be much more penetrating. It would be directed toward two goals—a close examination of all of the New Haven's financial practices and methods of allocating costs in commuter service.

The regional council will now place the proposal for a bistate inquiry before the New York Public Service Commission.

PLEA IN WASHINGTON TODAY

WASHINGTON, February 15.—A delegation of State, municipal and eastern railroad leaders will descend on Washington tomorrow to lobby for low-interest Federal loans to aid the ailing railroad commuter services.

The group will include Gov. David L. Lawrence of Pennsylvania, 10 city government heads and 1 deputy mayor and the top officials of 12 railroads. Mayor Wagner, of New York, will be on hand, as will a representative from the office of Governor Rockefeller.

They have scheduled meetings with the Republican and Democratic leaders of the Congress and with subcommittees of the House and Senate dealing with surface transportation. Sessions also are planned with Frederick H. Mueller, Secretary of Commerce, and Robert Merriam, a White House assistant to President Eisenhower.

The program the delegation will urge, modeled on one developed for Philadelphia, calls for long-term, low-interest Federal loans to municipalities to buy and lease new commuter equipment. It also calls for a study of grants-in-aid to cities on a dollar-for-dollar matching basis for other improvements in local and regional rail transportation.

Other municipal representatives scheduled to be present are the mayors of Newark, Cleveland, Boston, Chicago, Philadel-

phia, Baltimore, Wilmington, Del., and Milwaukee.

The railroads to be represented by top executives are the Pennsylvania, Long Island, Lehigh Valley, Boston and Maine; Central Railroad of New Jersey; New York Central; Delaware Lackawanna & Western Baltimore & Ohio; Erie; New York, New Haven & Hartford, and the Reading.

Conference on Disarmament and Peace

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. CHURCH. Mr. President, a group of prominent Americans recently concluded a conference on disarmament and peace. At the initiative of Michigan's Gov. G. Mennen Williams, who has sponsored in the past other conferences on questions of public interest, this conference was held on January 29–31 in Ann Arbor, Mich.

The conferees were from three main groups: physical scientists, political and social scientists, and present and former disarmament negotiators.

Among the signatories to the statement were Benjamin H. Cohen, former delegate to the United Nations and disarmament adviser to former President Truman; Dr. William Davidon, associate physicist at the Argonne Laboratory, LaMont, Ill.; Prof. Hans Morgenthau, visiting lecturer in political science at Johns Hopkins University; Prof. Eugene Rabinowitz of the University of Illinois, and editor of the Bulletin of the Atomic Scientists; Prof. J. David Singer, department of political science at the University of Michigan; and Prof. Alfred Stern of the philosophy department at Wayne State University.

In view of this variety of backgrounds and wealth of experience and competence, the conclusions and recommendations take on special significance. They cover most of the key areas in disarmament.

I ask unanimous consent that the conclusions and recommendations of this conference be printed in the Appendix of the RECORD.

There being no objection, the conclusions and recommendations were ordered to be printed in the RECORD, as follows:

CONCLUSIONS AND RECOMMENDATIONS OF THE DISARMAMENT AND PEACE CONFERENCE, INGALLS HOUSE, ANN HARBOR, JANUARY 29–31, 1960

The fundamental conflict between the Soviet bloc and ourselves is an unavoidable fact in the world today. This conflict can end in a nuclear holocaust. Or it may be resolved, slowly and painfully, through peaceful competition. The tremendous destructive capabilities of modern weapons are a major factor in building the tensions that can destroy our civilization, by impetuous action, by miscalculation or even by accident. Soon, not only the major powers but the rulers of other nations will be able to push a button and to start a chain reaction which may end in an all-out nuclear war.

We believe that effective arms control is necessary to deflect the conflict into less perilous channels. The time to act is now. Unlimited increases in retaliatory power, on both sides, will make the balance more unstable, and every new hand that holds the bomb makes its control more difficult.

The purpose of arms control, as we see it, is not just to mitigate the consequences of war, but to help prevent war itself. The Russians must share with us a common interest in arms control as a means to that end. The Western World has not sufficiently explored this area of common interest.

AN ESSENTIAL STEP

A workable agreement, with effective controls, to end testing of nuclear weapons in the atmosphere, outer space, under water and underground, is an essential step toward the reduction of armaments. It would slow down nuclear weapons development; it would retard the spread of nuclear weapons to more countries; it would establish the first international inspection and control system in the field of nuclear disarmament; and it would be a precedent for real disarmament.

We recognize that under present conditions no detection system can be 100 percent effective. But the risk to our national security that some tests may escape detection must be weighed against the risk of allowing the negotiations to break down, and the arms race to continue unabated. Therefore, the proposed joint agreement among the nuclear powers to conduct a joint research program should be launched as soon as possible and, in any event, as part of the test ban agreement.

Of particular importance is the need to develop improved detection methods for small-yield or muffled underground tests. This research program might include nuclear tests carried out jointly, and under international supervision, including any nations interested in sending observers.

TEST BAN ONLY ONE STEP

A nuclear test ban agreement is only a first step. The next step toward nuclear disarmament may be to cut off the production of fissionable material for weapons purposes, under effective international controls. So far only preliminary studies have been made. More comprehensive studies should be initiated by our Government immediately.

The final step of nuclear disarmament must involve the reduction and ultimate liquidation of the stockpiles of nuclear weapons. We recognize the difficulties of reliable control of these steps but urge that they too be made the subject, without delay, of a comprehensive study. In addition to the cessation of nuclear weapons materials production, the major weapons delivery systems should be controlled. To this end the United States should purpose that all launchings of outer space vehicles should be subject to international inspection and permitted only for peaceful purposes.

SURPRISE ATTACK AND ACCIDENTAL WAR

The major powers must also act to reduce the danger of surprise attack. Although it appears to be difficult to guard against a deliberate surprise attack with massive nuclear weapons delivered by long-range missiles, the United States must take the initiative in improving existing detection systems and developing new ones such as the reconnaissance satellite. The better the detection system, the more timely the warning of surprise attack. The more timely the warning, the surer the retaliation, and hence the less advantageous the surprise attack.

Surprise attacks resulting from miscalculation or accident my be more easily avoided by improved detection techniques and the establishment of international inspection systems, in order to obtain better knowledge of the other side's intentions. The possibility of surprise attack with non-nuclear arms (or tactical atomic weapons) may be reduced by geographical inspection zones and agreements to thin out ground forces and armaments in areas of potential conflict. This thinning-out process might further reduce political tensions in whatever area it was applied.

COMMUNIST CHINA PARTICIPATION

In any substantial arms control program, the participation of Communist China must be considered. In any general reduction of conventional armaments, or in the establishment of inspection zones in Asia to guard against surprise attack, its participation is essential.

LIMITED WAR AND CONVENTIONAL ARMS CONTROL

No arms control pragram is complete without attention to the problem of limited war. The immediate casualties are no less real than in a major war, and the danger of expansion is ever present. Prompt settlement of political disputes is the best preventative for limited war. But the major powers also have an obligation not to facilitate limited conflict through large shipments of weapons to areas of tension, such as the Middle East.

Simultaneously with, and independently of, the progress of nuclear disarmament, attention should be devoted to the limitations and reduction of armed forces and conventional weapons. Such exploration may result in a conventional disarmament which would materially reduce the possibility of limited wars breaking out.

A NATIONAL PEACE RESEARCH AGENCY

The U.S. Government, as presently organized, is greatly handicapped in its pursuit of a stable peace, especially by way of arms control, by the haphazard treatment of the technological aspects of agreements to be negotiated with other nations. Our negotiators have great difficulty in obtaining the most recent, reliable data which have a bearing upon our negotiating positions. There is, therefore, an urgent need for a separate and independent National Peace Research Agency to supply the appropriate agencies of the Government with authoritative scientific and technical information. This agency will have the primary responsibility for the investigation of the technical aspects of disarmament proposals, and the development of international control and inspection systems.

The National Peace Research Agency would organize investigations of its own and would contract with already established institutions. It would make investigations on its own initiative and would act upon the request of other agencies of the Government.

STRENGTHENING INTERNATIONAL INSTITUTIONS

For the permanent resolution of disputes among nations, the rule of law must be substituted for the rule of force throughout the world. The spirit of international cooperation must find expression in a full range of working institutions, from a strengthened United Nations and an effective World Court, to others not yet created or imagined. No longer can any nation or any group of nations achieve real security without providing for the common security of all nations. The extension of the rule of law cannot be achieved in a single giant stride; but the United States must seize every opportunity to strengthen international institutions. Furthermore, it is no longer possible for the economically advanced nations to be indifferent to the economic fate of the less advanced nations. For these reasons we suggest, for example, that the United States channel an increasing proportion of foreign aid through the United Nations; that it accept the World Court's determination of its own jurisdiction; and that it promote the establishment

of international scientific advisory groups to consider the technical problems of disarmament and other forms of international scientific cooperation.

Arctic Health Research Center at Anchorage, Alaska

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. RIVERS of Alaska. Mr. Speaker, I call to the attention of my colleagues the program and plight of the Arctic Health Research Center at Anchorage, Alaska. The center, first established by the Public Health Service in 1948 has made a successful start in the accumulation of knowledge about Arctic and subarctic environment and its relationship to man's health, but is being throttled by tight budgetary actions. This center, as the only facility of its kind under the American flag, needs strengthening as a very important part of our total health research effort.

The following portion of an article published in the Anchorage Times on October 10, 1959 under the byline of A. Robert Smith, Times correspondent of Washington, D.C., highlights the problem as a matter of national interest:

At one of his summer news conferences, Secretary Flemming was asked by this reporter about statements made by the director of the center that indicated increased funds would be needed or the center would gradually dry up as an effective research lab into the many unknown areas of man's health problems in a low temperature environment. Flemming said he would have to look into it, but at the next news conference he declared:

"The Surgeon General tells me that the (Public Health) Service has every intention of continuing and strengthening this research center. It is the only such facility on this continent and its work on the problems of low temperature areas of human health is a very significant part of our total research effort. The Arctic Health Research Center is, in fact, becoming increasingly important. With statehood, the development of exploration and economic resources will increase in Alaska, and with the growth of the jet air transportation the area's commerce and defense importance is increasing."

Secretary Flemming, in effect, confirmed Director A. B. Colyar's forecast when he noted that the center has had to continue operating on the same budget each year since it was established in 1948, while at the same time it has felt the pinch of increased costs during this period.

Flemming made it very plain that he is sympathetic to the aims and program of the Arctic Research Center. The obstacle to getting more funds lies not with the Secretary, but with the Bureau of the Budget which has vetoed requests for increases in the center's operating budget.

Some time ago, Flemming's Department drew up a statement of research goals that is tied in with the growth of Alaska's population and with rivalry from Russia in the field of conquering the problems of cold climate regions. It said:

"People from the United States going to Alaska will require standards of housing, waste disposal, water supply, heat, food, insect control, general sanitation, and health and medical services compatible with the standards enjoyed in the United States. The technical knowledge necessary to meet this demand is not presently available to us and will require considerable expansion of our research effort. The lack of this knowledge has impeded the population and the optimum utilization of these areas of the United States ever since we acquired Alaska in 1867 * * *. Unless we expand our present knowledge, the level of public health in Alaska will in the next decade fall far below any other part of the United States. Other nations with Arctic land areas, principally Russia, are now better able to populate and utilize these areas on a substantial scale than is the United States. Our goal is to eliminate this discrepancy and make possible the use of this vast land area."

Asian Center in Hawaii

EXTENSION OF REMARKS
OF
HON. HIRAM L. FONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. FONG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Asian Center in Hawaii," which appeared on the editorial page of the Korean Republic, Seoul, Korea, on December 4, 1959. The subject matter of this editorial is the proposed Center for Cultural and Technical Interchange Between East and West, which the Secretary of State, in his report to the Congress dated December 30, 1959, recognized "could constitute a valuable long-term contribution to the promotion of better relations and understanding among the United States and the nations of Asia and the Pacific."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ASIAN CENTER IN HAWAII

Ideas of great inspiration do not come along very often—perhaps once in a generation.

We think one is developing now in connection with the suggestion that a center for Asian studies be established in Hawaii, the 50th State of the American Union.

The center would fill an important and increasing need. Many universities of the West offer various Asian studies, but there is a natural tendency to specialize, and there is no center that covers all the major languages and cultures.

Through such an enterprise, Asians would come to know more about themselves and each other. All countries and all peoples of the region presumably would be represented among both faculty and students.

Hawaii is the ideal location for the center. Its climate is a compromise, and acceptable to those from both temperate and tropical zones. But of even greater consequence is Hawaii's racial tolerance and integration.

Of all places in the world, Hawaii is that which gives most dramatic answer to the contentions of the racists. Not only has intermarriage taken place on a large scale, but peoples of diverse colors and creeds live and work together in harmony and without discrimination.

Now that Hawaii is a State, this will have mounting impact on the evolution of racial problems on the mainland. The Asian center could spread the ripples of similar influence in the direction of the Far East, where national differences pose many difficulties.

It might be well to establish the center on international ground, much as is the case with the United Nations in New York, and to place the joint administration in the hands of the United States and the participating free Asian nations.

The experience of such an endeavor would represent a long step in the direction of more effective international controls and security.

Concept of a Hawaii center of Asian studies and research should stir the imaginations of all who care about the amalgam of East and West and should bring the project to the point of implementation in the earliest possible future.

Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. WILLIAM T. CAHILL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. CAHILL. Mr. Speaker, I am happy to join my many colleagues in the House of Representatives in noting the 42d anniversary of the independence of the people of Lithuania. Each year it has been a custom of the Congress of the United States to note this day as a tribute to the courage, faith, and patriotism of the Lithuanian people throughout the world and to encourage their continued fight against the communistic philosophy. We in the United States who have enjoyed freedom can sympathize more than any other people with the Lithuanians because we can recognize better the tremendous and admirable struggle they have maintained throughout the years against the tyrants of the Soviet Union. It has been 20 years since the Soviets first occupied Lithuania and even today the Lithuanians are resisting their old enemy with the same courage that they manifested during the first years of occupation. Let this day, therefore, be a constant reminder to the people of the United States of the evils of communism; let it also be a symbol of the meaning of courage and, finally, let it be a memorial to all of the people of Lithuania throughout the world.

I join with the Members of this House in honoring all those who strive valiantly for freedom which should be theirs and join in fervent hope that true freedom and independence will come to the people of Lithuania.

The Battle of Pea Ridge

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. FULBRIGHT. Mr. President, Ralph McGill in his column in the Washington Evening Star of February 11 discussed a little known, but very important battle of the Civil War. The Battle of Pea Ridge is not as well known as the Battles of Gettysburg, Bull Run, or Vicksburg, but the outcome of the Battle of Pea Ridge was a crucial turning point for the Civil War. This battle marked the end of any substantial Confederate threat west of the Mississippi.

I am pleased to report that this important engagement is being appropriately recognized by our Government. In the very near future the land upon which this battle occurred will be designated as the Pea Ridge Battlefield National Park. The land for the park has not cost the Federal Government 1 cent. It was purchased by the State of Arkansas for donation to the Federal Government. I am pleased to have been a coauthor of the legislation which authorized the establishment of this park. The Department of Interior appropriation bill contains funds for the initiation of the project, and I am hopeful that the park will become a reality in the near future. I know that all readers of the RECORD will be interested in Ralph McGill's account of this important battle. I ask unanimous consent to have his column printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STORY OF PEA RIDGE BATTLE OF 1862—SITE OF EARLY UNION VICTORY IN ARKANSAS CALLED WORTHY TO BE NATIONAL PARK

(By Ralph McGill)

Arkansas is asking the Union, in the centennial year of the Civil War, to accept the Pea Ridge battlefield as a national park. Governor Faubus has not insisted on segregation and the offer likely will be accepted. It should be.

This might serve to give to the largely abandoned Ozark farm area the dignity its name has denied. It was a small battle with large results. When the Confederates and their allies, a brigade of Cherokee Indians, were there decimated on March 8, 1862, the fate of the Confederacy was almost certainly doomed. Save for raids and a few futile maneuvers, the Confederacy soon thereafter ceased to exist west of the Mississippi River.

As long as they lived, the soldiers of Gen. Sam Curtis' Federal command remembered the Cherokee Indians and how they shot them out of trees like big squirrels. The Cherokees had never seen a cannon, much less heard one fired. They were armed with rifles and scalping knives, and Gen. Albert Pike, who had fetched them there, had great hopes for them.

But it was a bad day for the noble red man, and for Johnny Reb as well. Not long after the war began in 1861, General Curtis was maneuvering troops in Missouri and making gestures which indicated invasion of Arkansas.

Early in 1862 he made his move. He marched from Springfield across the Arkansas line to Pea Ridge, and there entrenched.

West Pointer Gen. Earl Van Dorn, who was in charge of the Southern forces, was an intelligent, able man. He knew what defeat would mean—loss of the western Confederacy and control of the Mississippi. He determined to smash General Curtis and sent out word for help.

Sterling Price's Missourians and Ben McCulloch's Texans marched to aid him. They burned rail fences along the roads at night, to light the way. It was cold and snowy in the Ozarks. General Pike hurried from Oklahoma with his hastily recruited brigade of Indians. Once General Van Dorn had his army, about 10,000 men, he advanced. He met, and drove back, a small artillery force near Bentonville, which retreated back to General Curtis' line. He, too, had about 10,000 soldiers.

General Curtis revealed a knowledge of fighting suited to heavily wooded areas and steep hill slopes. He felled trees in great profusion across the roads. And, more important, he camouflaged his cannon.

On March 8 the battle was joined. A gallant charge was launched by the Confederates, who were largely untrained and without combat experience. Suddenly innocent-looking clumps of bushes ahead of them flamed and roared. Heavy loads of grape and canister struck the gray ranks. In the first minutes three of their generals were killed. There were no orders. General Curtis' gunners worked madly at their guns, and the results were soon before them in the bodies of the dead and wounded, and the Confederates in retreat.

The Cherokees got their wind up at the first blast of artillery. The effect of the loads of grape made them panic. Many literally took to the trees. It was March. A fairly heavy snow was on the ground. The Indians in the leafless trees were huge targets against the background of white. General Curtis' riflemen gleefully shot them out of the trees, themselves whooping like Indians.

General Van Dorn took his men south, retreating slowly into Mississippi. General Curtis moved on southward to the Mississippi, occupying Helena on the river itself. It was his fate to perform well, but lose battles.

There was one Confederate who had a unique, if painful, experience at Pea Ridge. This was Sgt. Henderson Virden of the 2d Arkansas. In 1861, he went off to war from his farm at Pea Ridge. His regiment was marched back there by General Van Dorn. Some of the hottest fighting was on Sergeant Virden's own acres. He was badly wounded, falling in his own pea-patch, and was carried into his own house and laid out on the floor with others. He remained there to recover and rejoined his regiment, living out the war and returning to Pea Ridge.

Tribute to Msgr. Lucyan Bojnowski, a Great Priest and a Great Patriot

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. KOWALSKI. Mr. Speaker, on February 20, in the busy city of New Britain, Conn., a great American and a beloved spiritual leader will celebrate his 92d birthday.

Msgr. Lucyan Bojnowski, a truly heroic figure of a man, well deserves the tributes he will receive from the city for whose growth and progress he has been so largely responsible. His life has brought him honors and fame, but I know that he takes his greatest satisfaction from having helped the cause of humanity—a cause to which he has devoted a long and industrious life.

Born in Poland on February 20, 1868, he came to the United States and was ordained a priest in 1895. In that same year he was assigned to priestly duties in New Britain, the city with which he has been so closely identified for the 65 years since.

It is typical of the man that he helped built with his own hands his first church in New Britain, working alongside the ditch digger, the bricklayer and the carpenter. When the first Church of the Sacred Heart was completed and dedicated, he founded a Polish library, where he instructed hundreds of immigrants in English and other subjects and helped prepare them for citizenship. Next he established a newspaper, the Catholic Leader, a publication whose editorial influence has crossed the oceans. As an editor he won international fame, and some of the world's most illustrious figures engaged in correspondence with this busy Connecticut priest for whom the day never had enough hours.

He established an orphanage, which cared not only for Polish children but for youngsters of every racial background.

Far before his time, he saw and understood the desire of their elderly to spend their declining years in decent, homelike surroundings. The result was St. Lucian's Home for the Aged, which was a landmark in its field.

Monsignor Bojnowski, as his parish activities kept ever expanding, realized the need for trained, dedicated assistance. The result was the founding of a new religious order, the Congregation of the Daughters of Mary of the Immaculate Conception, whose beautiful Motherhouse now stands in New Britain.

He built schools, he built a new church. He gave friendly guidance to thousands on thousands of parishioners through the years. He was a community leader, in the forefront of every major civic enterprise. It was only natural, then, that a whole community rejoiced when, in 1946, this humble pastor was elevated to the rank of Monsignor of the Catholic Church.

In the heart of this man of God has always burned a flaming love of freedom. When World War I broke out, he saw at once the danger to the free world. Long before the United States entered the war, he was instrumental in raising large contingents of volunteers to leave for Canada, where they were trained for service overseas. When the United States declared war, he saw to it that the Polish-American families of his city contributed far more than their share of men to the services. He directed Liberty Loan drives; he visited camps; he kept in correspondence with hundreds of young men.

To the rectory where lived this simple man there came many of the great of the world, including Prime Minister

Paderewski of Poland, the legendary hero, General Haller, Archbishop Cieplak, Archbishop Dubowski, and many more.

To Monsignor Bojnowski have come many personal honors and awards. To name a few, he has received the Order of St. Lazarus, the Gold Star of General Haller, the Fidelitas Medal and the Order of St. George.

His has been a life of great achievement, but he has ever remained a simple, holy man. He has helped to build a city; he had been the spiritual guide for a large portion of that city's population. He has fostered a love of America and a love of democracy that for decades have influenced a whole community.

Mr. Speaker, I am honored to salute Monsignor Bojnowski for a lifetime of service to mankind, to America, and to the city he loves so dearly. Knowing him, I know that more important to him than the medals and the honors is the fact that we, who owe so much to him, love him for his simple goodness and the boundless warmth of his great heart.

Peace Through Understanding—The Student Exchange Program

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. FULBRIGHT. Mr. President, the Fort Smith Southwest American of February 8 contained a short article concerning the activities of a group which is contributing a great deal to promotion of international understanding and good will.

The article explains how the Arkansas Foundation for the International Exchange of Students has contributed to the success of the student exchange program. The unselfish and dedicated work of the members of this organization has not been properly recognized. I wish to take this opportunity to express my appreciation for the fine work which they are doing to insure that foreign students at the University of Arkansas receive a good impression of our country and its people. The important work of this foundation is being duplicated by similar groups at colleges and universities throughout the country. Their contributions to the success of our exchange program are immeasurable.

I think that all Senators will be interested in reading this account of how one small group of citizens is helping us win friends throughout the world. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HELPING PEACE THROUGH UNDERSTANDING IS AIM OF ARKANSAS STUDENT FOUNDATION

FAYETTEVILLE, ARK.—Promoting peace through understanding—that's the aim of the Arkansas Foundation for the International Exchange of Students.

The foundation is doing its part to advance peace through faith and confidence among people from different countries. To this end, the group works to bring foreign students to the University of Arkansas Fayetteville campus to study.

The foundation, 11 years old, brought 13 foreign students to Arkansas this year and was indirectly responsible for bringing a 14th.

Since 1949, when a group of university faculty members and students got together to form the foundation, nearly 125 students from other lands have rubbed elbows with Arkansas.

The students come from all over the world—Latin America, the Far East, Middle East and Europe.

When the foundation was established, its charter members felt that a movement to get foreign students to Arkansas was appropriate since it would bring them to the alma mater of Senator J. WILLIAM FULBRIGHT, Democrat, of Arkansas, whose legislation created the whole exchange program. The Fulbright Act for Educational Exchanges has since been described as the most profitable investment ever authorized by Congress.

The university has profited by it—and from other exchange arrangements that have come in its wake—by acquiring a continuing group of international students who leave a better understanding of the world's peoples with Arkansas and take a better understanding of America home with them.

Because the Fulbright act provides only for foreign students' travel expenses, the foundation must raise funds annually to cover the cost of a year's study at the university. The number of students the foundation can bring to the university each year varies with the amount of support given on the campus and throughout the State.

The foundation raises funds for board and room, fees and tuition. Because it is a State-supported school, the university cannot provide scholarships for foreign students.

Foundation support comes from individuals and from civic, religious, social, and service groups over the State. For example, the Arkansas Federation of Women's Clubs makes available $600 annually for the room and board of one woman student in a dormitory. Rotary clubs at Fayetteville, Rogers, and Springdale give continuing financial help. Fraternities and sororities contribute by giving room and board to some of the students.

How much financial support the students will need is known before they arrive. Every foreign applicant for a grant or scholarship to study in the United States is screened by the Institute of International Education in New York. The Arkansas foundation then selects from the list of applicants students most likely to work out well in the university community.

As a rule, the foreign students are good scholars. Some of them have obtained degrees at the university. Many are now teachers, scientists, business or administration leaders in their own countries

To aid in social adjustment, the foundation plans parties, helps in arranging tours through the State, and "places" foreign students in private homes during the holidays

Dr. Ann Riley Vizzier, assistant professor of history and president of the foundation, said:

"As we enter the second decade in the history of the foundation, we're looking forward to continuing this worthwhile and important program We hope to still better acquaint our international students with the people and customs of the State."

West Virginia Is Getting Shortchanged—XV

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. HECHLER. Mr. Speaker, one of the most priceless assets a State or Nation can possess is its young men.

These younger men, growing into the period where they become the masons charged with construction of a better world, are an indispensable factor in the elan vital which energizes and inspires a Nation or State to improve itself and reach for greatness and growth.

Today, my State of West Virginia is losing its young men and the loss is more potentially catastrophic than the decline of our coal markets, the high unemployment in the State, or the pressing social needs facing West Virginia.

The annual report of the West Virginia Department of Veterans' Affairs, recently released, contains an almost-completed breakdown on the payment of the State's bonus payments to veterans who served in the Korean conflict.

On previous occasions, Mr. Speaker, I have pointed out that in proportion to its population, the State of West Virginia ranks first in the entire Nation in the number of its citizens who served in the Korean conflict. I have also presented official statistics to demonstrate that in proportion to its population West Virginia also ranks first in the Nation in the number of its citizens who were killed and wounded in the service of their country during the Korean conflict.

At the time of their service to the Nation, most of these young men were between 18 and 26 years old. This means that they are now between 25 and 33 years old—entering their most productive wage-earning years. At the threshold of their years of greatest energy and power, where are these young veterans? Are they in West Virginia, grappling with the State's social and economic problems and helping to build a better State for their sons and daughters? Are they able to find employment in the State so they, as West Virginia natives, can share in the Nation's prosperity and plan for a secure future?

The answer to this, sadly, is negative. The bonus payment report shows that a staggering total of 43.32 percent of the claims by veterans were received from West Virginians now living outside the State. This is an incalculable loss to the State.

A total of 48.25 percent of the cash paid out in the bonus program went out of the State. A total of 34,783 claims were approved to Mountain State veterans now gone from the State. They shared a total payment of $10,331,532. Conversely, 46,366 claims were approved for veterans still living within the State, totaling $11,033,383.

This means that almost half our State's young men, when they marched

home from serving their country, could not find suitable employment within the State, and had to go elsewhere to seek jobs.

The political subdivision which claimed the largest number of our veterans was not Kanawha County, the State's largest, with nearly an eighth of the State's population. It was the State of Ohio, which now houses 6,890 West Virginia veterans, compared with only 6,612 for Kanawha County.

My own county of Cabell, second largest in the State, was outdistanced by four States, although Cabell County contained 2,899 Korean veterans. These States were Ohio, 6,890; New York, 3,988; California, 3,645; and Virginia, 2,999.

Mr. Speaker, something must be done about this grave situation. Our State has the capacity, the resources, and the desire for growth. But it cannot grow unless the manpower, such as is provided by these young men entering their most fruitful years, is able to stay in the State and make a living.

Recently an article in the Saturday Evening Post by an itinerant writer presented a rather distorted picture of West Virginia. Yet there is no denying the fact that there are pockets of unemployment and we are not enjoying the level of prosperity which other States enjoy.

Fourteen times previously I have pointed out that my State is grossly neglected by the Department of Defense, the Department of Commerce, and many other Federal agencies, in the allocation of facilities, personnel, and payrolls. If West Virginia could obtain only its just share in the apportionment of Federal facilities, it might keep many of these young leaders in the State, where they could provide invaluable contributions to the future welfare of West Virginia.

As Browning put it:

"Therefore I summon age,
To grant youth's heritage."

Mr. Speaker, the following table substantiates the tragic exodus of West Virginia's young people from their homeland:

Korean bonus payments to West Virginia veterans with West Virginia addresses

County	Veterans		Survivors		Grand total	
	Number	Amount	Number	Amount	Number	Amount
Barbour	327	$69,450	14	$4,165	341	$73,615

Valuable Support for the Theodore Roosevelt Memorial

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. KEATING. Mr. President, in a recent syndicated article, the great lady and distinguished American, Mrs. Eleanor Roosevelt, gave a warm endorsement of the Theodore Roosevelt Memorial. As a sponsor of legislation to make this dream become a reality, I am delighted to have this bipartisan and family backing for this project. I ask unanimous consent to have excerpts from Mrs. Roosevelt's article printed in the Appendix of the RECORD.

There being no objection, the excerpts from the article were ordered to be printed in the RECORD, as follows:

"MY DAY"
(By Eleanor Roosevelt)
JANUARY 28, 1960.

Congress has under consideration an appropriation of $889,400 for a memorial in Washington to Theodore Roosevelt. The de-

tails are in a published report on the Theodore Roosevelt Centennial Celebration.

Fittingly enough, the memorial is an island in the Potomac River which would be made into a park to shelter the wild life Theodore Roosevelt loved so much. This park would be of great value to Washington's young people, as well as to their elders, and I hope that Congress will appropriate the money for it in this session so that the work on the memorial can be completed.

Theodore Roosevelt was my uncle. And although he was a Republican and not a Democrat, I think our citizens, both Republicans and Democrats, feel that he was one of our greatest and most colorful Presidents and that there should be a memorial to his memory in our capital.

True Discrimination: Hate

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Camden Chronicle, Camden, S.C., of February 12, 1960:

TRUE DISCRIMINATION: HATE

We have never tried or wanted to force ourselves in company or places where it was very obvious that we weren't welcomed or wanted. Indeed, to do such a thing is to invite a brush with the law, not to mention the more serious aspects of the act, such as the irreparable animosity which would result.

Up in our sister State of North Carolina Negro college students are staging "restaurant and cafe sitdown strikes" in an effort to force these establishments to serve them right along with white customers. Since Negroes weren't being served, it was, then, quite obvious that these cafes and eating places didn't want colored business, not on an integrated basis, anyway.

These demonstrations are, to say the least, ill-conceived and are being directed by students who apparently have not the forethought to realize that the ultimate damage to racial relations will by far outweight anything conceded them as a result of their seat-shining pranks.

The hate and lack of respect for some by a majority of the populace can make a person wish for hell itself. The meaning of the oft-used word "discrimination" has been approached only superficially, compared to what it will be if the Negro forces himself upon a white society and social custom where he is not wanted.

Discrimination, in the visual sense of the word, would disappear if the Negro succeeded in forcing himself into the white classroom, the white cafeteria, and other places displaying the "White Only" signs. In the place of the visual discrimination would come a far more damaging type of discrimination: HATE. Hate which burns in the heart, which is most effectively transmitted by icy stares, one to the other; in a collapse of friendships, in the complete collapse of cooperation between the races. This is discrimination in its worst, most damaging form.

And so we reiterate: these sitdown strikes are the brainstorms of Negroes who are not truly interested in the progress of their own race, else they would surely see that, in the end, their losses will by far outweigh their gains.

Burris C. Jackson: Cotton's Man of the Year

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. YARBOROUGH. Mr. President, it is always a pleasure to see a man receive recognition for his chosen work. Recently, Mr. Burris C. Jackson, of Hillsboro, Tex., a man who has a long record of service to the cotton industry in Texas and nationally, was honored by being selected as "Cotton's Man of the Year for 1959."

Many publications carried stories about Mr. Jackson and his work, but the most excellent account which came to my attention was published in the Hillsboro Daily Mirror, Mr. Jackson's hometown newspaper. I ask unanimous consent to have printed in the Appendix of the RECORD the article from the Hillsboro Daily Mirror of February 2, 1960, the story entitled: "Burris C. Jackson is Cotton's Man of the Year."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BURRIS C. JACKSON IS COTTON'S MAN OF YEAR

Burris C. Jackson of Hillsboro has been named Cotton's Man of the Year for 1959, one of the top honors of the world cotton industry.

The selection was announced by the Cotton Digest, an international publication, that has been handling the man of the year in cotton for years. Some of the best known names in the cotton world have been selected in the past, and the requirements for selection are difficult to meet.

The article announcing Jackson's selection said that "it is doubtful if there has been a man who has given more freely of his time during the past quarter century to the American cotton industry than Burris Jackson. He has held many responsibilities that the industry gives only to a really top leader, and he has become a very potent spokesman for cotton."

"The mere enumeration of the positions that he presently holds will give an idea of his outstanding service and influence," the article stated, and it lists a number of his present positions, pointing out that he serves them all without compensation.

Jackson organized the Statewide Cotton Committee of Texas in 1937, the American Cotton Congress in 1940, and was one of the prime movers in establishing the National Cotton Association Council 21 years ago. He was president of the Texas Cotton Association in 1933, and has headed important committees every year since.

A leader in Congress said: "We trust Burris Jackson. He is well informed, and you can rely upon him. His loyalty is a thing to cherish."

Excerpts from the announcement say that "he is utterly devoted to his wife, Frances, who is herself, widely known and popular with cotton people. His loyalty to his friends and his ability to get things done are legend."

"At the age of 55, with more than 30 years of wide experience in cotton, Burris Jackson has become a senior cotton statesman."

The Hillsboro man is the son of the late Gen. Will E. Jackson, a pioneer cotton exporter, and prominent military leader, who was active in the business and civic life of Hillsboro and Texas for 40 years.

Burris Jackson married Frances Robertson in 1934. Her father was president of the Hill County Cotton Oil Co., Union Oil Mills, and Rio Grande Valley Cotton Oil Co. She is the sister of W. C. Robertson, Jr., of Hillsboro.

Cotton's Man of the Year will be presented a plaque with the inscription of some of his outstanding achievements.

L. C. Wannamaker Again Heads Camellia Society; Wife Shares Honors

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I call the attention of the Congress to honor, recently elected for the second time, a distinguished citizen from my district, Mr. L. C. Wannamaker, whose recent reelection as president of the American Camellia Society is a significant recognition of his service as president during 1959, and his outstanding contributions to the cultural world. Mr. Wannamaker has had distinguished service with the South Carolina Legislature, and eminent success as a lawyer and a banker.

I enclose an article from the Camden Chronicle which I would like to have placed in the RECORD. It tells the story of Mr. Wannamaker, and his lovely wife, and the story of a beautiful garden of nature, a camellia named the Gladys Wannamaker, honoring the devotion to things of beauty.

L. C. WANNAMAKER AGAIN HEADS CAMELLIA SOCIETY; WIFE SHARES HONORS

It was no surprise to Cheravians or even South Carolinians, that L. Caston Wannamaker was reelected president of the American Camellia Society at the national meeting in Jacksonville, Fla. Mr. Wannamaker had served a most successful tenure during 1959.

Sharing honors with her husband was Mrs. Wannamaker, who was featured in a delightful newspaper article in the Florida Times-Union, Jacksonville. In a picture of the couple, accompanying the article, Mr. Wannamaker is shown as he pins the first lady of the American Camellia Society.

Twenty years ago Mrs. Wannamaker planted a single camellia bush in her home garden. There was nothing special about the plant—just one of many lush ones in the lady's garden.

Special things have stemmed from this particular gardening effort. Today her name is a familiar one to camellia fanciers all over the country.

They know her as Mrs. L. Caston Wannamaker, first lady of the American Camellia Society, and wife of the current president. They also know her as Gladys Wannamaker, the woman for whom a new variety of camellia has been named.

True she planted the first shrub, and true she took him to his first camellia show, but he has been taking her ever since. During camellia season, they attend a show every Saturday at his bidding.

The Gladys Wannamaker variety is a direct result of an idea he passed along when he was president of the South Carolina society several years ago. Mrs. Wannamaker relates that her husband suggested that

members of the group should begin experimenting with seedlings and should select the best one to be used as a membership promotion gimmick.

The chosen variety would become the property of the South Carolina society and in order for other fanciers to obtain a scion—they would first have to send in two new memberships to the South Carolina society.

Mr. and Mrs. H. E. Ashby, of Charleston, who care for over 15,000 camellia seedlings in their own garden produced that one, in thousands of seedlings, that matures and blooms with a superior and lovelier flower instead of an inferior one to that of the parentage. They named it Gladys Wannamaker as a tribute to their past state president's wife.

As far as the honoree knows, South Carolina's camellia society is the only group that has ever owned distribution rights on a variety registered with the American Camellia Society.

The Gladys Wannamaker is a particularly lovely variety, according to its namesake.

She describes it as a large, soft, semidouble bloom with golden stamen and four petaloids. It has dark, glossy foliage, is cold resistant, and does not shatter.

She adds that she could think of nothing more beautiful than the camellia to have her name tagged to.

Hull Award

EXTENSION OF REMARKS
OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, February 16, 1960

Mr. WILLIAMS of New Jersey. Mr. President, at a recent conference the Committee for a National Trade Policy reinstituted the Cordell Hull Award for service on behalf of trade cooperation. As we all know, it was awarded most deservedly to Speaker SAM RAYBURN. For the February 1 issue of Export Trade, B. A. Rittersporn, Jr., has written a lively and informative account of Mr. Sam's yeoman service for a liberal trade policy and has recalled the past awards. I recommend this article as a pertinent reminder of the problems which have historically faced a liberal trade program and as a source of ideas to overcome those problems.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HULL AWARD TO SPEAKER RAYBURN RENEWED LIBERAL TRADE HONOR—COMMITTEE FOR A NATIONAL TRADE POLICY CONTINUED TRADITION SET BY COFTE

(By B. A. Rittersporn, Jr.)

Speaker SAM RAYBURN received the Cordell Hull Award last Thursday, January 28, in Washington. The award presentation climaxed the Committee for a National Trade Policy's 2-day conference on "trade policy for the 1960's."

No one better deserves being honored in the name of Cordell Hull than the House's doughty "Mr. SAM." In recent years alone, the Speaker has repeatedly brought liberal trade legislation "through," despite fierce attacks of the High Tariff interests and often fainthearted support of the administration.

In 1955, for instance, Speaker RAYBURN literally snatched votes away from the protectionists as the House members filed out of their Chamber in a division on a key test of the Reciprocal Trade Agreements Extension. Putting the heavy hand of national duty upon the shoulders of a half dozen Congressmen who strayed into the high tariff ranks—and with the political facts of life flashing from his eyes—the Speaker retrieved the votes necessary to pass the extension "intact."

Much of the credit for the extension of 1958 also goes to the Texan; he out-maneuvered the high tariff forces, lead by the late Richard Simpson, on every test.

The man who is to receive the Cordell Hull Award has, however, been honored by Secretary Hull, himself. He long ago singled RAYBURN out for his statesmanship, parliamentary skill and intense patriotism.

The praise stemmed, in part, from the close working relationship the two formed over more than 30 years of governmental service. Indeed, in terms of service, they were virtually contemporaries, for Speaker RAYBURN arrived in Washington in 1913, only 6 years after Hull.

A LIBERAL TRADE POLICY

Hull was battling for a liberal trade policy when young RAYBURN arrived. The Tennessean based all on this proposition: "* * * unhampered trade dovetails with peace; high tariffs, trade barriers and unfair economic competition, with war." As far back as 1916, he called for a "permanent international trade congress," thereby anticipating by almost 40 years the Randall Commission's proposal for an organization for trade cooperation—which may now be at least partially revived in some sort of Atlantic organization for economic cooperation.

But most importantly, of course, the award presentation commemorated Secretary Hull's historic role in creating the reciprocal trade agreements program—and honored SAM RAYBURN for the yeoman work he has done in carrying it forward. In addition, however, the award, as originated by the Committee on Foreign Trade Education, has had the aim of setting up a standard around which liberal trade groups throughout the Nation can rally during the new session of Congress.

As a medium for alerting the Nation and galvanizing liberal trade supporters, past award presentations were great successes. The first to be honored in Cordell Hull's name was his protege, Senator ALBERT GORE. Hailing from the Secretary's hometown of Carthage, Tenn., Senator GORE naturally recalled a number of anecdotes from the days in which "Judge" Hull would gather with his constituents on the courthouse steps. But the Tennessee Senator, who led the rebellion against the administration's decision to duck trade policy progress in 1954, also made a characteristically fighting speech.

PROTECTIONIST INTIMIDATION

He told his audience—and the Nation—that protectionist intimidation of trade with Japan threatened the free world's strategic position in the Far East. The campaign against GATT, he said, would isolate the United States nullifying its military and aid pacts with the non-Communist countries of the world.

The Senator contended that tepid administration leadership in the field of trade had inspired the ugliest outbreak of protectionist lobbying since 1913. He recalled that President Wilson hadn't tolerated high tariff obstruction and had blasted the lobby with: "money without limit is being spent to sustain this (high tariff) lobby. * * * It is * * * serious * * * that the people at large should have no lobby and (should) be voiceless * * * while great bodies of astute men seek to create an artificial opinion and to overcome the interests of the public for their private profit."

SOVIET ECONOMIC OFFENSIVE

Marshall Plan Administrator Paul G. Hoffman followed the next year, 1956, and won national attention with one of the first public analyses of the Soviet economic offensive. He said:

"There is a new element in the world situation which makes an effective and enlightened foreign economic policy even more imperative—and this is the new Communist economic offensive. Despite the startling repudiation of Stalin by Russia's new leaders * * * the basic goal of the Kremlin is unchanged. It is world conquest. But whereas Stalin placed great emphasis on periphery military action and threats of military action to make progress toward that goal, the new leaders put their stress upon offers of trade and economic aid.

"They are using trade to create dissension among the free nations and particularly to build up the resentment in all nations against the United States. Last February Mr. Khrushchev told the 20th Congress of the Communist Party: 'Altogether they (the free nations) have more than enough grounds to be displeased with the United States, which is disorganizing the world market by carrying on unilateral trade, fencing off its markets from foreign imports * * * and other measures hitting hard at other countries.'"

CLARE BOOTH LUCE

In the last of its presentations of the Award, the Committee on Foreign Trade Education honored Ambassador Clare Booth Luce in December 1957. Always outspoken, Mrs. Luce addressed an overflow crowd at the Waldorf-Astoria—and reached the Nation as a whole with a speech that reverberated through the mass media for months.

She bluntly declared that the Nation must move rapidly and strongly toward the abolition of American protectionism. Immediate steps, she said, should include (a) dissolving the Tariff Commission; (b) doing away with escape clauses; and (c) forgetting about buy America.

Why? Ambassador Luce answered:

"Russia, we know, is forcefully wooing the Arab world, Africa, southeast Asia, and flirting with some of our Latin American neighbors. Her 'loverly' chocolate boxes and bouquets are the bids she makes for economic equality in the exchange of goods. Such evidences of both good will and good business are bound to make friends, if not brides of the nations so courted. And the sputnik and muttnik racing around the world every 90 minutes, threaten to turn some of these affairs into shotgun weddings. If the United States is going to court friends effectively, it will not only have to catch up in guided missiles, but reexamine the appeal of its economic policies, especially in the field of trade."

DOLLAR PROBLEM FORESEEN

With a remarkable prescience, Mrs. Luce also pointed to the danger that high tariffs might leave the United States with a muscle-bound dollar. She observed:

"* * * what will happen to the world value of the dollar if it is not readily available through trade? What people need and can't get * * * they will find a substitute for. * * * That has already been happening to the dollar. The system of exchange controls which so many nations have maintained since the war is really a system by which these nations try to protect themselves against the scarcity of the dollar * * * it is for them a substitute for the dollar. The more this system becomes a habit, the less necessary becomes the dollar to their trade. Thus * * * American products are discriminated against in the very markets we

need most. • • • A musclebound dollar can become just as bad for American trade as can a sliding dollar. Either kind is dangerous in the long run to the strength and influence of America."

OTHER PROMINENT RECIPIENTS

In addition to these important addresses by Senator Gore, Mr. Hoffman and Ambassador Luce, the award meetings are also memorable for the important messages contributed by Representative Frank E. Smith, Democrat, of Mississippi; Senator Harrison A. Williams, Jr., Democrat, of New Jersey; ex-Gov. Theodore R. McKeldin, Republican, of Maryland; and Senator Jacob K. Javits, Republican, of New York.

As an officer in the Committee on Foreign Trade Education from the beginning to almost the end (1953–58) I think all those who had responsibility in its work, in the East and throughout the country, should be proud of having given proof that everyday citizens can be mobilized to fight for a trade policy benefiting the Nation as a whole.

And we can now be glad that the Committee for a National Trade Policy has renewed the Hull Award. As a national institution, the award can assume great importance. Each year it can be the platform from which our foreign economic policy goals are set down.

That won't be an easy order. In the seventh decade of our century, world economic problems will be the most difficult to beset the Nation. Indeed, the trade policy equations of the mid-1950's already appear relatively simple.

To be sure, we shall probably always be confronted by me-before-all-others pleadings of a wide variety of marginal producers. These must be rigorously met; no matter how their yelps insult the intelligence, the frightening truth is that failure to reach a commonsense policy on wooden screws, woolknit gloves, steel flatware, etc., could become the little incident that wrecks an alliance.

But much more vast problems must also be confronted. The Hull Award's objectives, then: not only to commemorate the past, but to lead in signaling the future.

Production and Conservation of Coal in the United States Through Research and Development

SPEECH
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. WALTER. Mr. Speaker, we have been fully cognizant of the depressed situation which has existed in the coal industry for some time. House Resolution 400 authorized a special subcommittee to study the possibilities of a coal research program. The Department of Mines' present research in this field has long-range objectives which are obviously needed. However, unless an immediate solution to the present industry problem is arrived at, it is conceivable that the small and middle-sized operators will soon be bankrupt and unable to benefit by the Department's long-range findings.

But this is more than just an area or an industry concern—it is the concern of the entire Nation because, as we well realize, coal is so vitally necessary for our national defense. A few large producers would not be able to carry the load in time of a major crisis and I need not dwell on what would have been our plight in World War II had this industry been previously decimated.

It is apparent that the $17 million for research for coal in 1955 was not sufficient help, whether considered on its own with its own results, or when compared with the $280 million for research expenditures in, for example, the textile industry. H.R. 3375 offers a road to a solution—a solution which could be reached in a relatively short period of time and make the expenditure of further moneys by the Federal Government unnecessary.

I, for one, wholeheartedly support this bill because of the dual needs—our defense and our economic well-being—which are herein dealt with. It is a small enough price to pay in seeking a solution to this very important problem.

Agriculture on the International Front

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. HUMPHREY. Mr. President, 2 months ago a meeting took place in New Delhi, India, which brought together representatives of the general farm organizations and cooperative marketing federations of the free world. The International Federation of Agricultural Producers is a shining example of cooperation between national groups on a nongovernmental level.

The problems of agriculture are not simply national in origin or in effect. All individuals and all organizations of the free world are profoundly concerned with the many problems of agricultural production and distribution. While we worry about having too much, in too many other countries the major concern is that they have too little.

The scope of the farm problem on a worldwide basis was stated with wisdom, understanding, and compassion at the New Delhi conference of IFAP by the president of that organization, Mr. James G. Patton, who is also president of the National Farmers Union of the United States.

I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from the speech made by Mr. Patton before the International Federation of Agricultural Producers at the New Delhi conference.

There being no objection the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM SPEECH OF IFAP PRESIDENT JAMES PATTON TO IFAP NEW DELHI CONFERENCE

It is a significant and historic event when IFAP, a relatively young and still pioneering organization of farmers of the free world, meets in a new and vibrant India which is shaping the pattern of democracy in Asia.

Farmers in both the developed and the developing nations alike are faced with (1) volume of production varying unpredictably from year to year due to weather conditions; (2) marketing problems resulting from inability to store some perishable commodities except for brief periods and (3) supplies of most crops and many livestock products in excess of demand for short periods due to seasonal production and harvesting patterns.

Fluctuations in prices are even more serious because agriculture is still a small-scale industry, composed mainly of family units who, acting individually, cannot influence the volume of supply. They lack the resources to withstand prolonged periods of low prices without severe privation and lowering of living standards, not to mention the cutbacks in operating and production expenditures and inadequate operating capital which tend to keep farm income low over indefinite periods.

That is why farmers have found it necessary to join together in general farm organizations and in cooperative marketing and supply associations. That is why governments in practically all nations of the free world have found it necessary to lend their powers to the strengthening of the bargaining position of the agricultural producer.

There will have to be, in my opinion, even more cooperation between producers themselves and between producers and their respective governments—if agriculture is to gain its rightful place in modern economic society.

Representation from Indian agriculture in IFAP has broadened our overall perspective of the problems of producers in the free world. Unlike the developed nations, India and other Asian nations suffer food deficits. The solution to the problem of so-called surpluses in some nations and food shortages in others offers a challenge to IFAP that already has been acknowledged. While we have given attention to this paradox, we must rededicate our efforts to solve distribution problems. We must expand utilization of food and fiber and at the same time protect prices and income of agricultural producers, in the so-called food surplus nations as well as in the food deficit nations.

It is indeed a tragic state of affairs that governments of the nations with excess food stocks do not think in terms of utilization of such stocks to contribute to the growth and development of democracy in the free world, instead of continuing to think in terms of "burdensome surpluses" and "surplus disposal" terms which are commonplace in my country.

As farmers and as representatives of farmers in our respective countries, we know the force for good which is unleashed when food is distributed amidst hunger, when grass is made to grow where the land was bare, when water runs over parched soil and when a crop is saved from insects. It has been, and it should continue to be, the policy of IFAP to support U.N. and specialized agency efforts to overcome hunger, poverty, disease, and privation.

We are going to have greater quantities of agricultural commodities than the commercial market will take for many years. Our problem—and our challenge—is the utilization of this overage or surplus for the benefit of mankind and to do so without penalizing the primary producers.

Such additional emphasis on filling the social market will help to overcome the problem of inelasticity of consumer demand. But I do not look upon such a program as the complete solution to the price and income bargaining disadvantages which farmers and their organizations are constantly trying to solve.

Producers of primary goods in developing areas generally face just as great instability

of price and net income as farmers in the more developed nations. And inasmuch as important goals set by developing nations in both short-range and long-range plans for economic development are interrupted, the effect of instability of price and income in such nations is of disastrous proportions.

The significance of this problem is magnified by the fact that many of the less developed countries continue to rely both for their foreign exchange earnings and for incomes of a large segment of their population, on the export of one or two primary products. These countries face a problem of particular difficulty in reaching established goals of economic development. Without adequate foreign exchange reserves, reductions in earning from exports must be made up with help from the outside—or development programs are retarded and disrupted.

In the interest of stable and growing economies, if not for the welfare of primary producers, governments will continue to take action to support the prices of primary goods. We still have with us the same network of human institutional factors which gave rise to the World Food Board idea. But looking hopefully toward this goal will not solve our present problem of widely fluctuating prices in the world market and shortages in some areas in the midst of overproduction and "surpluses" in other areas.

The two major problems as I see the world agricultural scene are (1) the problem of utilizing effectively, the so-called "surpluses" which have accumulated, and will continue to accumulate, in some of the more economically developed countries—to promote effectively the advancement of the economies, especially the agricultural economics, of the developing countries, and (2) the stabilization at reasonable levels of prices of primary products moving in international trade.

What can IFAP do toward helping to solve these problems? We can study them at regional and general meetings and come to agreement as to practical forms of international cooperation. We can, with the help of officers and members of the Secretariat, present recommendations to international bodies with a view to having them implemented through intergovernmental action. This is what IFAP has been doing throughout its relatively brief existence. And I think that it should be a matter of pride that we have been able to agree, with virtual unanimity, on numerous forward-looking recommendations.

There have been a number of cases where intergovernmental action has been taken in line with suggestions made earlier by IFAP. In some of these it seems apparent that IFAP has exerted some real influence; but on the whole, IFAP, as representative of millions of farmers in the free world, has not had as much influence as it should have had. Why is this?

One reason is that we do not take IFAP's recommendations sufficiently seriously. We do not put anything like the effort into persuading governments to accept IFAP's suggestions as we do in the case of the things that concern us more immediately in our respective national spheres. I do not say that member organizations should give IFAP's recommendations top priority. I do think, however, that we should at least discuss them positively and seriously with appropriate officials in our respective countries.

IFAP is a very representative body in the sense that it now includes in its membership the great bulk of the general farm organizations and of cooperative marketing federations in the free world—particularly, in the more economically advanced countries. But, in spite of a number of welcome additions in recent years, it is still lacking in members from the less-developed countries. The main reason for this is that there are very few farm organizations eligible under IFAP's constitution, in these latter countries.

There are three kinds of agricultural organizations, which are very important in some countries—especially the less developed countries—which are not now eligible for IFAP membership. These are: (1) large State, or provincial, general farm organizations; (2) large regional marketing and supply cooperative associations, and (3) large, nationwide, commodity organizations. These kinds of organizations were not made eligible for membership in IFAP in the beginning. I was present at the early meetings when this decision was taken, but times and circumstances change and I feel that the time has now arrived when IFAP should seriously review its membership requirements—particularly as regards regional and commodity organizations.

It is increasingly clear to me that one of the great challenges facing us is that of convincing our respective governments that an intelligent food policy for the free world has implications far and beyond the short-sighted so-called surplus utilization aspect.

We need and must develop a world food policy. Such a policy would put wheels under the efforts of farmers in the developed nations to manage production gluts and to use food stocks to promote economic development in developing areas. Such a policy would aid in protecting established international commercial markets.

An important objective in the negotiations leading up to a world food policy should be the means of stabilizing prices of agricultural and other primary goods.

We have proven instruments in this connection, the use of which ought to be expanded. I refer specifically to the need for a whole series of international trade and commodity agreements to stabilize commercial markets of those goods that are important in world trade.

We ought to have an international development corporation under the United Nations as an integral part of the world food policy concept and to work in conjunction with international commodity agreements. The primary objective of this development corporation ought to be furthering economic development. Food and fiber should be available to be used wherever possible in operations of the development corporation.

Food and fiber are our most valuable and highly prized possessions. And yet those with vested interest in its processing and marketing hold the reins, too much of the time, pulling alway on the side of low prices to farmers, high prices to consumers—in many cases administered-monopoly prices—short supplies or artificial scarcity at the consumer level, and nonrecognition of the international social market.

Catering to the basic needs of mankind the producers of food and fiber hold the key to capitalizing developing areas of the world. Moreover, farmers everywhere, should seek and be given greater recognition as basic contributors to the building of industrial economics.

Member organizations of the International Federation of Agricultural Producers have the unique opportunity as the voice of farmers in their respective countries to take the lead in creating interest on the part of their governments in the attainment of greater international cooperation in the full utilization of food and fiber. A broader base than possible under individual action of governments is needed to rationalize production and distribution between social and commercial markets and at the same time assure farmers the opportunity to earn an equitable or fair share of what the future holds in the way of further economic growth and expansion.

I urge all members to use this opportunity. It is something which not only will help solve our own problems but will bring enduring benefits to all of mankind in the form of abundant good will, more lasting peace and greater dignity of individuals wherever they work.

In Worrying About the Missile Gap Let's Not Forget About the Threat of Limited War

---

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. STRATTON. Mr. Speaker, the current debate on national defense has focused so much attention so dramatically on intercontinental ballistic missiles that there is a serious possibility we may have been overlooking the importance of also strengthening our ability to wage conventional warfare so as to deter those limited types of aggression which, the experts tell us, are still probably more likely will happen than all-out nuclear warfare.

If anyone doubts this possibility, let him consider the situation that already seems to be shaping up in Berlin.

In that connection, Mr. Speaker, under leave to extend my remarks, I include an article from the New York Herald Tribune of February 14 by Mr. Roscoe Drummond which very clearly and forthrightly points up this important consideration:

MISSILE BLINDNESS

(By Roscoe Drummond)

WASHINGTON.—Has it ever occurred to you that we may be talking about the wrong thing in this great debate on defense which is erupting with such fury?

We are being assured by the President and others that we will produce enough missiles in the next 3 or 4 years so any Soviet superiority in ICBM's will not be a peril.

We are being warned by the defense critics of the President and others that there is no evidence that we are closing the missile gap and that in the near future we face a Soviet capacity to destroy us with missiles.

But isn't there a very serious possibility that the danger from the Soviet Union may not lie in missiles at all and that we are being induced to put our greatest attention on trying to avert what is least likely to happen?

And neglecting what is most likely to happen?

What is most likely to happen? I suggest that while missiles dominate nearly everything that is said in Washington in the defense controversy, we throw on the screen of our minds in large capital latters the following testimony which, buried in a welter of other matters and lost in the news, Adm. Arleigh A. Burke, Chief of Naval Operations, gave to Congress:

"In the next 4 or 5 years the danger of limited wars will be much greater than the threat of all-out nuclear war."

This isn't a sentimental foot soldier asking for more tools. This is the No. 1 sailor of the United States agreeing with every Army Chief of Staff since the end of the Korean war in 1953 when Secretary of Defense Charles Wilson, with the support of the President began cutting down the ground forces.

I am not assuming to have an expert's opinion on exactly what the best balance of all our forces should be. I am simply joining with Gen. Matthew Ridgway, Gen. Maxwell Taylor, and Gen. Lyman Lemnitzer, and Admiral Burke in questioning whether we may not, indeed, be putting far too many of our defense eggs in the big basket of massive retaliation.

Admiral Burke is not himself asking for a stronger, more modernized army. That is not his job. But he is expressing a judgment about the kind of military danger we face. He adopts the premise which justifies more attention to ground-force and airlift strength.

He is, in effect, warning against a military strategy which prepares almost exclusively to deter and fight a nuclear war, which he considers the lesser threat, while leaving the Nation not as well prepared as it should be to deter or fight a limited, nonnuclear war, which he considers the greater threat.

We must not allow ourselves to forget that from the day the Soviets exploded a hydrogen bomb, the United States and the Soviet Union entered the era of mutual deterrence. Neither side can resort to nuclear weapons without expecting retaliatory devastation.

This means that there is a built-in military resistance to resorting to nuclear weapons.

There is also a powerful political deterrence to using nuclear weapons. Under almost all conceivable circumstances a nation which first used nuclear bombs in any conflict would be condemned by every nonparticipant as a nation willing to imperil the lives, through radioactive fallout, of hundreds of millions of people.

We didn't use nuclear weapons in Korea—and not just for military reasons.

We wouldn't let the marines who landed in Lebanon even take a single tactical nuclear weapon ashore for fear of its bad psychological effect.

Now, if it is true, as many think, that we would not be the first to use nuclear weapons—large or small—this means that the Soviets can use their vastly superior ground forces to carry out a limited-war aggression and that aganist this kind of aggression we are in the weakest position.

On Admiral Burke's premise that "limited" war is a "much greater danger" than all-out nuclear war, shouldn't we be giving more attention to our nonnuclear capabilities—and not get blindly fascinated with missiles?

The Factors of Growth

EXTENSION OF REMARKS

OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 16, 1960

Mr. KERR. Mr. President, on January 8, this year Mr. Carrol M. Shanks, president of the Prudential Insurance Co., at a luncheon of the Friday Forum, Oklahoma City Chamber of Commerce, made an enlightened and instructive speech on the resources and opportunities in the great State of Oklahoma. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FACTORS OF GROWTH

Today, I should like to bring you a bystander's reaction to the progress you are making in developing metropolitan Oklahoma City and your State into one of the Nation's important economic and cultural centers of influence. Perhaps I also can point out a few things that remain still to be done.

The task you have undertaken will not be easy. There is grim competition among hundreds of cities and areas for the kind of income-producing activities that make growth and development possible. Many of these areas are older and better established than yours and this puts you at a disadvantage. The need and demand for new industry is overwhelming, yet at any one time relatively few business organizations are expanding into new areas, few government agencies are planning new installations, and still fewer important businesses are moving. There are not enough to go around. They always have a buyer's market. They are being solicited these days not by tub-thumping promoters, but by capable technicians with facts, figures, and records at their fingertips. This is tough competition.

You may have chosen an opportune time to concentrate on this drive for new industry. I think you will be helped by continued and even stepped-up expansion in the national and international economies.

The much-heralded "golden sixties" would seem to be off to a good start. There should be a series of good years ahead of us. The long steel strike will leave its mark, but it should not materially affect economic progress in the coming year. Our economists at the Prudential expect the gross national product to reach a rate of a half-trillion dollars for the first time in history during the first quarter of 1960 and this should be only the beginning. By 1970, we expect a gross national product of $750 billion.

The economy will have occasional adjustments, possibly during 1960, and certainly in the years to follow; but there is no inevitable reason why they should be serious or lasting.

The final outcome of the "golden sixties," however, will depend upon the United States facing up to a few basic necessities and mustering the national discipline to accomplish what is necessary. The discipline would be mild. There would be no real deprivation or hardship. The end result, if we face up to our responsibilities, would be a far sounder, more stable, and faster growing economy for Oklahoma, for the United States, and for the free world.

First, our armaments must be stepped up where called for and maintained at a level which will enable us to contain and win brush-fire wars. It must be made clear to our enemies that a general war will not pay them. The cost involved should have full priority over all other expenditures.

Second, we must recognize certain international facts of life. The international value of our dollar must be maintained. International trade must be maintained and expanded. We must remain competitive, pricewise and servicewise, in international trade.

These things hinge upon what we do here in our own domestic economy.

The external and internal value of the dollar depend upon a reasonable balancing of the budget from year to year, upon sound monetary policy, and upon our putting an end to the wage-price spiral. We cannot condone inflation and still enjoy the international strength that has traditionally come from the soundness and integrity of our monetary system.

We are not now gaining ground in international trade: we are steadily losing ground to other countries who can supply more for less. We are teetering on the edge not only of being priced out of many foreign markets, but out of volume domestic markets as well.

We can no longer tolerate continuing wage rises which sop up all or more than all productivity increases, and price rises to cover increased costs. On the contrary, there must be price reductions, which, incidentally, have been the historic basis of expanding free enterprise. No one thing could help the farmers, for example, so much as price reductions in the things they buy. If we do not muster the discipline to do these things, the results, I believe, will be very serious and much more immediate than is generally realized.

Third, we must do the hard way some of the things the Russians can do easily. One, step up our savings. Two, channel more of our national income into modernization of plant and equipment. These are sound economic steps which the Russians accomplish by keeping consumer goods relatively unavailable—and by channeling savings through building a tax into the price of goods. We have to do it the democratic way. Make saving attractive: good interest rates are one way—education another. Savings, of course, would grow with the economy so that the volume of savings would be increased even at the present rate of saving.

Modernization of plant and equipment lifts our productivity—our true growth rate—and is a major influence in stepping up the economy. It enables a product which may now cost $10 to produce, to be made better for $8 or $5. This is one of the ways that some foreign countries have stolen the march on us—they lost their plants in the war, and these generally obsolescent installations were replaced with equipment far more modern than much of ours. This puts us at a tremendous disadvantage. As a matter of national policy we should give every incentive, such as speeded up depreciation schedules, to updating and upgrading of productive equipment. This is the true way to speed up our growth. The building of new plants and the modernization of plant and equipment provide one of our greatest generators of employment and income.

These items of action are simple, well known, and involve little or no hardship. They are well within our capacity to accomplish. I find myself unable to believe that we will not do them. Accordingly, I think the Sixties truly will be golden.

In addition to growth of the economy, there are many factors working solidly in your favor.

First, there are your natural resources. You have always had a full share of these. Mining, for example, has always been important; and Oklahoma's income from mineral resources far exceeds the average for all States of the Nation. Some of the newer developments in this sector, such as liquid petroleum products, will open up new avenues for expansion.

But in the long run, your most important natural asset is one you will soon have in ample quantity: water. Water is the critical resource in most of the country. Without ample water, there can be no chemical industry, no steel industry, and only limited operations in many other industries. It is safe to say that most areas of the country have water problems now, or will have in the near future; and any area with insufficient water has two strikes against it at the outset. Without the concerted and constructive action which you now have well underway, Oklahoma City might have become a two-strike city; but as it is, your water problems appear to be well along toward solution. Senator KERR has made this a personal project, and Senator KERR has a way of getting things done. I think we can safely assume that for you, water will be all asset and no problem before long—and this will give you a great competitive advantage.

Climate is another natural resource that will give you some help. An advantageous climate is not essential to industry in the way that it is essential to farming, but a favorable climate is one of the factors in an area that attracts people. In times of full employment, which is a large part of the time, workers as well as skilled technicians seek employment in places where they want to live, rather than simply resigning themselves to live wherever they happen to have a job. Our working population is remarkably mobile, and there is a mounting tendency for people to gravitate to places where they can find a good climate, good schools, good recreation facilities and cultural facilities.

This is why many of our best and most productive businesses—electronics, for example—often establish new plants where they find technicians and skilled workers living comfortably, rather than picking a site for other reasons, and setting out to bring in the help they need. People are still the most essential segment of any business enterprise and automation will not change this. Oklahoma City appears to be the kind of a place where technicians and skilled workers are living and liking it. A livable climate is an important factor in this. You may not be as fortunate in your climate as a few areas that are famous for climate, but your weather generally is favorable. Summer overheating can be remedied on the spot with air-conditioning equipment, and over the weekends by a short drive into some of the best vacation country in the world. Fortunately, you have plenty of outdoors, which has again become an important part of the lives of modern Americans. The developments at various nearby lakes, and at Texoma, plus the new areas that will come as a result of your water and canal developments, will stand you in good stead when you are attracting new people and new businesses. You can provide the kind of relaxation people are looking for, and incidentally this will help stabilize your population. Turnover of people can be most expensive to business, and there is growing evidence that nearby outdoor recreation tends to reduce the wanderlust.

The second basic factor working for you, at least as important as your natural assets, is your improved position as a major supplier to the ecutral and southwestern States area. With retail and wholesale trade now your most important economic sector, and with an efficient transportation network that places you firmly in the center of one of the Nation's most active markets, you have something that every business needs. But you can be sure that it will come as a surprise to most business leaders throughout the United States to learn that you have 42 million people, with a total income in excess of 67 billions, within a radius of 500 miles. This is a fundamental keystone for your future.

A third basic factor working for you is a resourceful population. Good people make good business—and therefore the people and their influences in a city loom large when a modern big business is contemplating a major move or expansion to another area. What makes good people? Attitudes, education, cultural facilities, provision for wholesome recreation, civic activities, churches, and clean, decent, effective political leadership are some of the influences that can be assessed.

On all these fronts, Oklahoma City has much to offer. The progress that civic enterprise is making in Oklahoma City is a monument to the constructive, wholesome attitude of your people. To the bystander, this indicates that the vast majority of your citizens are working together; they are attuned to the changes that progress will bring; they subscribe to the objectives of your leadership. You can have planned progress—a luxury denied many of the older centers, where the dissenters are often as numerous as the supporters for any civic project. This public support makes practical your effective and highly skilled, well-staffed chamber of commerce; it paves the way for such groups as Oklahoma Industries, Inc., which can plan, develop, and even finance industrial expansion; it creates sufficient latitude so that you can plan your metropolitan area as a coordinated, diversified, and integrated area that will stand the test of time. Most of all, it permits you to take time by the forelock and reserve areas you someday will need for roads or developments or reservoirs or industrial parks. The attitude of your people, and of their civic and political leaders, constitutes a good business climate. This is a precious advantage.

Any assessment of Oklahoma City would recognize its theater and symphony activities, its active church support, and its cultural activities in general.

Certainly your outstanding educational activities deserve special attention. Unquestionably, education, and the willingness to be educated, are basic raw materials of the future. We have lived through a generation of technological revolution; we have seen atomic energy and space become the subjects of popular discussion; we have a younger generation with a vocabulary of technical terms that would startle a reasonably well educated man of a few years ago. The quest for knowledge—and the need for it—in the years to come will tax the facilities of most educators and their systems. You here in Oklahoma have a long head start on most of the rest of the country.

There is, for example, the major research center at the university which will involve many hundreds of highly trained people; also, the center for continuing studies that will capitalize upon the demonstrated desire of adults in this area for more education, and is expected to train as many as 75,000 adults a year within 10 years. This is not a far-fetched hope when you consider that 30,000 enrolled last year. You will have your computer center and your research park—all within a few minutes of downtown Oklahoma City—which will provide business with facilities not readily available elsewhere. The university's projected building and curriculum for advanced studies by executives and professional people will supply a growing need—and again, a need that cannot be supplied so near at hand in most cities.

But the most striking and revealing of all the evidences of your attitude toward education is the frontiers of science program. This is a brilliant concept. You have heard that before—from experts. The impulse to launch it, and its continuing success, reveal a widespread urge for self-improvement and the determination to do something constructive about it. Such determination is not as common as it should be, but it has been an essential part of the life of this country. Frontiers of science represents a cooperative spirit between educators, civic leaders, and ordinary citizens which is far too rare. It tackles the problem of controlling and developing youth by catching the young mind and keeping it absorbed. It keeps adults alerted to the forces that are shaping our lives and our future. It provides industry with a forum for discussing its potentialities and responsibilities. But most of all, it nourishes the pioneering spirit, which is slipping away from the rest of us too rapidly—a situation which can produce disastrous results, because it is the growth and development of a pioneering spirit which is inspiring the newer nations. These include some that seek world supremacy and may achieve it if we become too complacent, too self-satisfied, and lose the spirit of adventure.

To summarize, not many other areas can match you in the record you can set down before an industrial leader who is considering a new plant, or a businessman who is planning for expansion:

1. A fast-growing industrial economy fortified by the expenditure of over a billion dollars for physical facilities in 8 years, and the commitment or expenditure of 107 millions for capital improvements during the first 6 months of 1959. This is a remarkable demonstration of your determination and purpose.

2. A labor pool that has proved to have an exceptional talent for quick learning, productivity, and steady working habits—this seems to be the testimony of the businesses that have moved here from elsewhere.

3. An extraordinary distribution organization which is growing and developing far beyond growth averages in the United States, and serves, primarily, one of the fastest growing markets in the country.

4. A transportation system that includes virtually an interstate highway center, a rail system that services the entire area and can pick up and deliver to 76 of the 77 counties in the State, airline facilities that serve 4 major lines, and plans for a canal system.

5. A tax arrangement that could well be the subject of an entire discussion—a system far better planned than most, and one that in many cases helps local industry improve its competitive position.

With such a gratifying list of assets, it might seem that all Oklahoma City has to do is sit on its hands and let the line form on the left—but it won't be that easy.

You are not without hurdles.

A substantial, but not insurmountable barrier is lack of public knowledge and understanding about this area. To many people, to those in the East particularly, Oklahoma seems far away and somewhat isolated. The development of your markets and the remarkable strides you have taken in urbanization are not widely known. The popular conception of Oklahoma is still colored by the Grapes of Wrath, and duststorms, and the surrey with the fringe on the top—and in the absence of the facts, this farfetched concept is nourished 7 nights a week by television westerns. You have tremendous sentimental acceptance, but wide business acceptance is yet to come. To do that part of your job will require an educational campaign as well planned, as meticulously applied, and as liberally financed as the work you have been doing to get your area ready for its future. It will have to be aimed at business leaders, but it will not be enough to convince them alone. Moving a business means transferring key personnel and often skilled craftsmen. If these people don't have enthusiasm for the move, it may be easier—and safer—for the business to go to some widely publicized area like California, where employees generally can be transferred without too much complaint. Your educational job is a job in depth. It will have to be done thoroughly.

Finally, you must realize that you are bucking a deeply entrenched tradition: business generally settles in the long-established centers because this is the easiest thing to do—everybody else did it first. The areas that have broken this tradition barrier—the South, for example—more often than not were helped by circumstances: for example, when western lumber resources became overtaxed, improved techniques in the paper and cellulose industries made inexpensive southern operations, where scrub trees grow rapidly, too good to overlook—so, much paper industry moved south. Overorganization in labor, obsolescence of mills and high taxes sent the textile industry out of New England into the South where labor was plentiful and operations were less complicated and expensive. Ample water brought heavy chemical operations to certain sections of the South.

Many of these businesses came to the South for reasons other than pure choice. Once they developed experience in the Southern States, however, it was discovered that here were ideal conditions for many industries—good labor, rapidly growing markets, good living conditions, reasonable taxes, and a satisfactory business climate. The industrialization of the South, once underway, moved ahead rapidly. This was good for the South, and has proved a momentous development for the Nation as a whole.

Businesses are not likely to be forced into Oklahoma as some were into the more heavily populated Southern States; you are not likely to have much circumstantial help. You cannot expect, in the near future, to have hordes of visitors, which was an important factor in planting the seeds of development in California and Florida. You will have to sell Oklahoma. You have to get your story told the hard way. But take heart: It is a good story.

When President Eisenhower opened your Frontiers of Science program, he said: "I hope that other States will follow your example."

The President was referring particularly to frontiers of science. I want to broaden the thought to encompass all those aspects of pioneering and progress you have demonstrated; all the things you are doing to forge a good way of life for yourselves.

Toward Clean Elections

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. McDOWELL. Mr. Speaker, it is gratifying to note that the first major legislation passed by our sister body this year was the clean elections bill sponsored by the senior Senator of Mssiouri [Mr. HENNINGS]. Our colleague across the Capitol surely deserve the praise and gratitude of all citizens interested in good government for their action, on January 25, toward modernizing our horse-and-buggy election laws.

Legislation in this vital area has not been adopted by the Congress since enactment of the Corrupt Practices Act of 1925. Methods of campaigning for public office have changed dramatically during the years since that time, and it is surely time now for us in the House to match the statesmanship of the other House by enacting legislation requiring the fullest possible disclosure of funds used by, and on behalf of, candidates, allowing realistic campaign expenditures, and closing other loopholes that time has demonstrated exist in the 1925 act.

It is gratifying to me, Mr. Speaker, to call the attention of my colleagues to the support being given this worthwhile cause by some of the outstanding newspapers of the State which I have the honor to represent in the Congress. I include as part of my remarks editorials from the Wilmington Morning News, and the Journal-Every Evening, of Wilmington, Del.:

[From the Wilmington Morning News, Jan. 27, 1960]

STEP TOWARD CLEAN ELECTIONS

The new corrupt practices bill passed by the Senate is so much better than political wiseacres had believed possible that suggestions are being heard that the Senate passed it only because the House is sure to kill it. The wiseacres, who were wrong once, may be wrong again. But even if they prove to be right the fact that so good a bill has passed one Chamber of Congress improves the chances that it will eventually be made law.

Even a law as good as this bill will not finally solve the problem of how to limit campaign spending so that the winners are neither unduly committed to special interests nor men who virtually bought their way into office. Our anarchic party system is extremely difficult to regulate satisfactorily. But we do make progress.

The Corrupt Practices Act of 1924 has undergone constant change, and political professionals have found ways to evade their provisions. This process of revision and evasion will continue indefinitely, slowly approaching but never achieving perfection, until our practical political system—which is largely outside the Constitution—evolves into something more responsible and more truly national.

Meanwhile, one step at a time; and the Senate's passage of the present bill is a significant step. The bill sets more realistic limits on contributions—no individual could give more than $10,000 to one party. It sets more realistic expense ceilings—$12,000 for House candidates, $50,000 for Senate aspirants, $12,500,000 for presidential campaigns. As long as much lower ceilings prevailed, there was almost universal evasion. Perhaps the new ones can be enforced.

At present the State and local and special campaign committees which have done 75 percent of campaign spending are under no effective control because they are not required to report what they spend. The bill calls for reports when more than $2,500 is spent for a candidate for Federal office.

Another improvement is the provision applying to primary elections. In one-party States in the South, where nomination in the Democratic primary is tantamount to election, the exemption on primaries meant exemption from corrupt practices requirements. Why the representatives of any State would have the gall to insist on the privilege to remain corrupt is hard to understand, but it is a fact that the inclusion of primaries is the principal reason for southern opposition to the bill in Congress.

Its chances in the House are hard to assess at this time, but they look none too good. But if the House refuses to adopt an excellent bill which the Senate had the courage and statesmanship to pass, the voters are going to want to know why.

[From the Journal-Every Evening, Jan. 26, 1960]

CLOSING LOOPHOLES

It is greatly to the credit of the U.S. Senate that the first bill it has approved this campaign year is a sweeping revision of the outdated and ineffective law controlling election campaign spending and reporting. The Corrupt Practices Act of 1925, which the new legislation is intended to replace, has as many loopholes as a venetian blind. The new one closes many of them.

For one thing, the Senate bill applies the law to primaries involving Federal office as well as to general elections. This makes good sense everywhere but it is particularly important in the States of the Southern bloc where a primary victory is tantamount to election.

In addition the bill requires, for the first time, detailed reporting by State and local committees and by presidential and vice-presidential nominees. It limits the total campaign contributions of any one individual to $10,000 in any calendar year. The present law limits individual contributions to any one candidate or committee to $5,000 but allows as many $5,000 contributions as an individual's purse can stand. And finally the present unrealistic limit of $3 million on Presidential campaigns, which has been consistently evaded, is raised to $12,500,000 and the limits in Senate and House races has also been raised to $50,000 and $12,500 respectively.

Both Delaware Senators, JOHN J. WILLIAMS and J. ALLEN FREAR, JR., voted for passage of the bill. They share credit for its passage together with Senator THOMAS C. HENNINGS, JR., Missouri Democrat, who led the successful fight for the measure over the opposition of Southern Democrats and the Republican leadership.

It is already being freely predicted that the House will never approve the bill in its present form, even though it does not apply to this year's elections. The pessimists may well be right. However, they were dead wrong when they predicted that the Senate would never approve the key restrictions on spending in primary elections and on reporting by State and local committees.

We believe that the American public as a whole is solidly behind effective controls on spending and contributions to political campaigns. If it makes its sentiments known, the House may surprise us, too, and approve substantially the same reforms.

Cultural Activities in Washington

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. HUMPHREY. Mr. President, early this month Mr. Patrick Hayes in his weekly radio program over WGMS argued most eloquently the need for greater financial support for cultural activities in the United States.

I was pleased that Mr. Hayes spoke out so favorably for the bill Representative FRANK THOMPSON of New Jersey and I are sponsoring to provide that one mill out of each tax dollar collected by the District of Columbia be placed in a special fund for grants to nonprofit organizations engaged in cultural activities. Such organizations would include the National Symphony Orchestra, the Corcoran Gallery, and many other groups promoting opera, ballet, drama, and the fine arts.

I ask unanimous consent that Mr. Hays' comments of February 7 over WGMS be printed in the Appendix of the RECORD.

There being no objection, the comments were ordered to be printed in the RECORD, as follows:

BROADCAST BY PATRICK HAYES, WGMS, SUNDAY, FEBRUARY 7, 1960

Good afternoon, during January Congressman FRANK THOMPSON of New Jersey and Senator HUBERT HUMPHREY of Minnesota introduced into the House and Senate respectively a bill to provide a subsidy fund for music and the arts in Washington, D.C.

Each bill reads "To provide for the adoption in the Nation's Capital of the practice common to many cities in the United States with regard to cultural activities by depositing in a special fund 1 mill out of each $1 of tax revenue of the government of the District of Columbia to be used for the National Symphony Orchestra, the Corcoran Gallery of Art, and other nonprofit art programs of the District of Columbia, and for other purposes."

It is a short bill, two sides of a page, and the definitive paragraph is this one: "All money in the special fund authorized by subsection (b) of this section shall be available to the Board to defray in part the expense of the National Symphony Orchestra, the Corcoran Gallery of Art, and other nonprofit art programs of the District of Columbia, and programs in arts and crafts, music, drama, speech, dancing (other than social dancing), lectures, forums, and other creative opportunities for leisure-time participation," etc. The Board referred to is the District of Columbia Recreation Board, established in 1942, and which now operates the citywide recreation program of Washington, including many musical and artistic endeavors.

The opening language of the bills refer to the practice common to many cities in the United States of giving financial support to civic-cultural activities. What other cities do this? In his speech in support of his bill, Senator HUMPHREY had this to say: "I was most interested in the study prepared last year by the Library of Congress for Representatives HARRIS B. MCDOWELL of Delaware, which revealed that Washington's budget has allotted for civic-cultural events only $16,000, of which about $10,000 helps to support the Watergate concerts. As compared with Washington, New York spends $2,600,000, Philadelphia $824,000, and Baltimore $448,000. The small city of Hagerstown, Md., only a short distance from the Nation's Capital, gives its Museum of Fine Arts $12,500 out of its regular annual budget, only $3,500 less than the entire amount that Washington spends out of its more than $200 million budget." This brings us to the point, the point of possible action. Last Sunday I argued for a bold national program of financial support for cultural activities, on a matching fund basis, with initiative and control at the local level in all instances. I am as opposed to Federal handouts as the next intelligent taxpayer, but I understand subsidy, regard the word and what it represents as honorable and good, and believe in that theory that says that government should do for the people and for private enterprise those things they cannot do for themselves which promote the general welfare and contribute to the common good.

My own remarks last week and today are concerned with the need of greater financial support for the cultural activities of the country, through Government subsidy at the city, State, and National level. I find front-page ammunition this morning on the front page of the New York Times, the article by Edwin L. Dale, Jr., titled "Great Debate in Capital: Is United States Misusing Wealth?" Mr. Dale writes that in Washington these days there is much conversation involving politicians, civil servants, intellectuals, and many plain persons on the point that the basic trouble with American society is that we devote too much of our resources to increasing an already affluent level of private consumption and too little to public services of all kinds. The idea, says Mr. Dale, has been emerging gradually for about a year. Its two proponents most widely quoted are Walter Lippmann and John Kenneth Galbraith, Harvard economist and author of the provocative book, "The Affluent Society." The conclusion of those who support the basic idea involved is that the Nation should spend far more on public purposes and raise more taxes as needed to finance the higher expenditures. At this point I will return to the more modest area of cultural activities and leave this broader debate to the politicians, economists, and national writers. But Mr. Dale's article, given front-page importance by the Times this morning, reveals that there is a wind blowing in the direction that we are talking about. Cultural activity represents high public purpose, to say the least.

Senator HUMPHREY and Congressman THOMPSON would have 1 mill out of each tax dollar put aside into a special fund here in Washington for supplementary grants to nonprofit organizations engaged in cultural activities. While the NSO and the Corcoran Gallery are mentioned by name, it appears that the plan would fit the Opera Society of Washington, the Washington Ballet, the Modern Dance Council, the Institute of Contemporary Arts, and many others. Would it work?

The first city to do this, to my knowledge, was San Francisco, back in the 1930's, or earlier, where 1 mill out of each tax dollar was put aside as a partial subsidy for the San Francisco Symphony and the San Francisco Opera Association. The mill plan, and outright appropriations of amounts of money whether based on the 1 mill formula or not, have spread widely throughout the United States. Not too many years after San Francisco began its plan of financing civic-cultural affairs, the State of Indiana passed a bill authorizing the city of Indianapolis to appropriate $50,000 a year for its orchestra and other local cultural activities. The New York City plan dates from the administration of F. H. La Guardia, when the city took over the old Mosque on 56th Street and made it the New York City Center we know today. The State of Virginia appropriates $10,000 a year to subsidize the Barter Theatre down in Abingdon. There is no area pattern, and all experience to date seems to be based on action at the local level, not the Federal level. But as I asserted last Sunday, what is going on is not enough, we are not keeping pace with the fast moving times, our overall cultural growth is lagging at a time when our available American talent is increasing and improving at an incredible rate that is a compliment to our cultural educators throughout the Nation. Where are these young artists and musicians going to go? What are they going to do? The establishment of a $100 million a year national fund, thru congressional appropriation, would double all local activity within a year. The estimated $180,000 that Washington would have from 1 mill out of every tax dollar could be matched from the Federal fund—the same formula could be followed in all cities. This would mean longer seasons for symphony orchestras, opera companies, dance companies, dramatic companies. It would mean bolder programs, such as the New York City Opera Co. will bring here late this month. It would stimulate our composers and playwrights. It would encourage young people to enter the field of the cultural arts for careers.

And all the dollars would remain in the United States of America, and their daily flow would find many of them getting back to the Treasury through the many direct and indirect taxes we all pay. Senator HUMPHREY and Congressman THOMPSON are to be commended for their imagination and initiative. Their 1-mill plan is a firm step in the right direction. They now need local support, in the press, and among the citizens of the District. Once such a local plan is working, here and in more and more cities, the national fund could be established. Indeed, I would argue for its establishment first and forthwith, as an incentive for applications for local grants, based on matching funds. To repeat, it works in building hospitals. It works, period.

It seems to me there could be no finer climate of opinion than now eixsts for the Humphrey-Thompson bills. Again today, Commissioner Karrick has a major statement on the cultural status of Washington, which the Washington Post and Times Herald puts on the front page. Mr. Karrick, like many a Washingtonian, is stung by the hick-town label put on the city by Howard Taubman of the New York Times several weeks ago. He makes a good reply. A better one would be his vote, together with the other two District of Columbia Commissioners, for the 1-mill plan and a civic-cultural subsidy fund.

The question remains—to subsidize, or to subside.

Thank God for Sputnik

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. ALBERT. Mr. Speaker, Dr. Charles Evans, a 90-year-old educator who is recognized as the founder of the first PTA unit in Oklahoma and has served with distinction as a school superintendent and as a college president, recently returned to the city of Ardmore, Okla., in my district, where he had served as superintendent of schools for a number of years. His remarks at a meeting of the PTA in the elementary school in Ardmore which bears his name prove that his keen mind has been sharpened by the years. I ask unanimous consent that the account of Dr. Evans' address as written by Johnnie Riddle, managing editor of the Daily Ardmorite, Ardmore, Okla., be printed in the RECORD:

THANK GOD FOR SPUTNIK

"Today's pupils are being fed a soft diet of pale pablum—we could wind up with a generation of semiskilled idiots."

That's the belief of Dr. Charles Evans, of Oklahoma City, a 90-year-old famed educator who returned to Ardmore last night to address the PTA unit at the elementary school which bears his name.

"We need to apply more emphasis to the 'hard' subjects—mathematics, history, English, and science—and not just let a child slip through school.

"He needs to be taught how to live so he will be at least partly conditioned for the hard world he must face after leaving school.

"Not nearly enough emphasis is being placed on the cultural aspects of living. Life is much more than just working for a living and raising a family."

Dr. Evans, whose spryness is a thing to marvel, beamed as an oil portrait of himself was unveiled by a former student of his in Ardmore, S. N. Goldman, an Oklahoma City chainstore executive.

The portrait, commissioned by Goldman and painted by Richard Goetz, well-known Oklahoma artist, will hang in the hallway at Charles Evans School, according to Principal Buell L. Awtrey.

Dr. Evans, who was superintendent of city schools here from 1905 to 1911, is recognized as the founder of the first PTA unit in Oklahoma. The Ardmore group was first known as a mother's club.

"I am here to appease my own soul," the educator said at the opening of his address. "I'm not just here to speak to the Charles Evans PTA. I defy any of you to find another situation like this—a man 90 years old, an educator for 72 years, only 6 of which were spent in Ardmore, returning after 49 years to speak in a school that bears his name.

"I hope you invite me back 10 years from now. I'll come. And don't you take that lightly because I have neither an ache nor a pain."

Dr. Evans believes that "inequality is the worst thing that can happen to a student. That is what mothers have to fight for—equal opportunities for their children."

He lauded the late John F. Easley, publisher of the Daily Ardmoreite, for his contributions to education. "Mr. Easley helped build the schools in Ardmore."

Speaking to the teachers in the audience, he urged them to "teach children to use what they have—every ounce of it. Let them discover the joys that can be found in thinking."

Dr. Evans relishes the atomic age.

"Thank God for sputnik. It woke up the American educators. It proved we must have individual education, not the stereotype kind that does not offer a challenge to the bright student."

Evans started his teaching career in 1887 in Kentucky. He was superintendent at Marion, Ky., school system from 1895 to 1905, when he came to Ardmore.

The educator left here in 1911 to become president of Central State College at Edmond.

Next position in his outstanding career was as president of Kendall College in Tulsa in 1916–17. It is now Tulsa University. He was a member of the board of education in Oklahoma City from 1921 to 1925 and director of education extension at Oklahoma A. & M. College at Stillwater from 1921 through 1927.

Dr. Evans resigned his post as secretary of the Oklahoma Historical Society 5 years ago, after serving for 12 years. He is now chairman of the Oklahoma Civil War Commission, a Washington appointment.

Mrs. George P. Selvidge, Sr., a teacher under Evans here, introduced him. Arthur Straehley, a boyhood friend of the educator in Salem, Ky., gave the invocation.

A number of guests were present, including Mrs. Grace Carr, Mrs. Kate Galt Zaneis and Mrs. Mary Galt Cox, all former educators here under Dr. Evans.

Also Mr. and Mrs. A. C. Hall, Mrs. Hall was a former student under Evans; Dr. Otey Johnson; Marshall Wilson; George Selvidge; George Norris, and Jim Bruce assistant city school superintendent.

A social hour and inspection of the school building followed the ceremonies.

Flexible Benefits Under District Unemployment Compensation Act

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, February 16, 1960

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine editorial entitled "Flexible Compensation," published in the Washington Post of February 15, 1960, dealing with the hearings which I have been conducting in the District of Columbia Committee on the District of Columbia Unemployment Compensation Act.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FLEXIBLE COMPENSATION

The principle of flexible benefits under the District Unemployment Compensation Act should have a strong appeal for Members of Congress. They are now being asked to change the rate of compensation for the fifth time. Even so, the benefits have been inequitable most of the time since the first payments were made in 1938. Indeed, experience has proved that it is impossible to keep the rates equitable in a period of inflation so long as the ceiling is expressed in a fixed number of dollars. Senator MORSE is doing a favor to his fellow legislators as well as to the unemployed by urging that the maximum compensation be tied to the average wage level.

It is really absurd for an overworked Congress to impose on itself the burden of changing a fixed dollar limit on unemployment compensation every time it becomes obsolete. Congress needs only to lay down the general principle to be followed, and this can readily be done by authorizing benefits in terms of a percentage of average wages. The District Commissioners, too, are to be commended for embracing this view. It could be advantageously accepted by the State legislatures as well as Congress.

Differences will persist as to what the percentage should be. The Commissioners would fix the maximum benefits at one-half the average wage of the District's privately employed, calculated annually. This would be $44 per week at present. Senator MORSE's bill would authorize benefits to a maximum of 67 percent of wage scales, using an average of Government and private wages, the equivalent of $69 per week. With interest on the reserve fund now paying 25 percent of the unemployment benefits, the adjustment ought to be on the generous side. Of course the wages-benefits ratio must be economically sound, but if it is to stand for any length of time it must also be recognized as being entirely fair to the unemployed.

An Unsatisfactory Farm Program

EXTENSION OF REMARKS

OF

HON. ROSS BASS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following editorial from the Clarksville Leaf-Chronicle, one of the most outstanding newspapers in my district. I feel that this is an excellent article and one which merits the attention of the entire membership of the Congress.

Editorial follows:

[From the Clarksville Leaf-Chronicle, Feb. 10, 1960]

AN UNSATISFACTORY FARM PROGRAM

President Eisenhower sent a farm message to Congress Tuesday in the form of wheat surplus controls but the program offered little hope to the farmer. It might eventually wipe out wheat surpluses, but it might also wipe out many a farmer.

The President seemed almost glad to pass the buck to the Democratic Congress for he promptly added that he would support any logical alternative the Congress might offer.

The plain facts seem to be that the Benson farm program has not worked and won't work, yet Mr. Benson is determined that his program will continue with minimum alterations. As long as he is Secretary of Agriculture he is boss of the farm program and Mr. Benson hints that he might be willing to continue on as Secretary if Mr. NIXON is elected President.

The administration has saddled itself for 7 years with a program that has offered little relief to the farmer and has cost the Treasury billions. And now it seems quite hopeful of passing the blame on to Congress in this election year.

Transportation Blindspot

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, February 16, 1960

Mr. WILLIAMS of New Jersey. Mr. President, I am pleased to note that we, in centers which rely on rail transit to serve urban and suburban communities, are not alone in our concern about the rapidly deteriorating commuter situation. A thoughtful editorial which appeared recently in the St. Petersburg (Fla.) Times recognized the national challenge involved in the commuter problem and recommends a long look at the whole picture.

I ask unanimous consent that this important editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRANSPORTATION BLINDSPOT

A reasonably thoughtful businessman planning for the movement of masses of people into and out of his establishment would be adding entrances and exits instead of boarding them up or partly closing them.

But something like this is being done in the accommodations for the mass movement of people into and out of our huge population complexes—the Metropolitan New York City area, for example.

This is in the deterioration of rail commutation service, which has not been considered on our various levels of government as an integral part of the transportation mechanism.

New York's Mayor Wagner was sharply critical of the Federal Government's role—or lack of a role—in commutation recently in a speech in Chicago. He felt that the National Government had concentrated too much effort on highway and airport construction, at the expense of rails, and said he would favor Federal subsidies for commuter lines if necessary.

There has been a striking change in public and official attitudes toward the rails, as witness New Jersey Gov. Robert B. Meyner's proposal last year that commutation lines be subsidized from turnpike surpluses.

In Philadelphia, the city government, two railroads, and railway labor have formed a nonprofit organization for in-town and suburban rapid transit, with the city underwriting an estimated $2 million subsidy the first year.

Although the New Jersey plan failed in referendum, it and the Philadelphia plan are representative of the new view that rails

are the fourth wheel—along with automobiles, buses, and airlines—of the inter-city transportation machine. The others receive governmental aid in the form of highways and airports.

But not enough of this has been done and a closer look at the whole picture, rather than only parts of it, seems to be in order. To make the commutation picture even darker, the National Transportation Act of 1958 permitted railways to abandon losing commuter service without Interstate Commerce Commission authorization. Many schedules, running deficits largely because of federally built highways, were dropped quickly, instead of a means being sought to make them profitable.

It is not the problem alone of such centers as New York and Chicago; sooner or later, as great population complexes develop and grow all over the country, it will be a national challenge. For the rapid movement of masses of people into and out of our cities, the rails hardly can be improved upon.

Europe's Six Cite Inflation Fears

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. WIDNALL. Mr. Speaker, those of us within the Congress who have been working to hold in check the forces of inflation have often been criticized for overemphasis. I personally believe that the evils of inflation cannot be emphasized enough, so that all of our people—in every walk of life will do their best to hold the line. A newspaper article on the front page of the New York Times of February 13, 1960, evidences the deep concern of responsible officials in six European countries about the same subject. Under leave to extend my remarks the article is appended:

EUROPE'S SIX CITE INFLATION FEARS—WAGE-PRICE SPIRAL CALLED BIGGER PERIL THAN SLUMP

PARIS, February 12.—Finance Ministers of the six Common Market nations have concluded that inflation is a much greater cause for worry in the near future than the possibility of a recession, French Finance Minister Wilfred Baumgartner reported today.

The ministers go together in Paris for a 2-day session devoted to analysis of the economic situation and measures that could be taken to bring national fiscal policies into line. M. Baumgartner explained that the ministers had exchanged views on the various issues but had reached no official conclusions.

This was the third in a series of talks among the finance ministers of France, Germany, Holland, Luxembourg, Belgium, and Italy.

PICTURE OF EXPANSION

M. Baumgartner said that the situation outlined by the various ministers was generally that of economic expansion at the end of 1959, whereas a year earlier Europe was coming out of a slight recession.

The present situation seemed to be one of preinflation, he declared, but there had been no major effect yet on prices or wages from the inflationary pressures.

He noted that the situation varied in each country, although the broad general trend seemed to be about the same. Germany and Holland reported the highest rates of industrial activity.

Manpower shortages had been cropping up in many fields, M. Baumgartner said, and "we must follow a prudent course on salaries" not to fall into the trap of inflation.

COUNTERATTACK IN EUROPE

Until recently most West European nations had seemed to have developed exceptionally effective anti-inflation techniques, observers here said yesterday. Tight restraint on credit, high interest rates on borrowing and a degree of price controls in some countries have been among the chief checks employed.

As a result, price indices of nearly all the West European nations have shown only moderate and gradual rises. Even France, where the De Gaulle regime started sweeping financial controls, has in the last year been able to check its wage-price spiral while gaining new financial strength.

Success of the European battle against inflation has been attributed to the relative severity of controls, a heritage from the period of austerity following World War II.

The unequaled prosperity attained in recent years by the majority of West European countries, however, has been marked by mounting demand for consumer goods. Cars, appliances and other attributes of a higher standard of living have become the great popular goal. Installment credit has grown extensively, although it still is conservative by American standards.

Some of the consequences of this trend have shown themselves in recent months, notably through announcements by West German and British labor unions of plans for a shorter working week.

Conservation News

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. HUMPHREY. Mr. President, because of the intense interest throughout the Nation among sportsmen and outdoorsmen in the Federal programs of conservation, I have prepared a brief summary of some of the key legislative and administrative developments in this important field, beginning with the water pollution control bill which Congress has now sent to the President for action.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD my summary entitled "Conservation News."

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

CONSERVATION NEWS

Water pollution control showdown nears: After a major effort by conservationists in the last session of Congress, the Humphrey-Blatnik water pollution control bill passed both Houses and will soon be sent to the President. According to the Outdoor News Bulletin of the Wildlife Management Institute, President Eisenhower soon will have the opportunity to show the American people where he stands on the proposal * * * which would double the existing program of Federal grants to municipalities for help in constructing State-approved sewage treatment plants. The bill's real hurdle is the White House. He has said repeatedly that he believes pollution control should be a State and local responsibility and recommended that Federal funds be slashed.

The cost of this vital program needed in cleaning up polluted waters amounts to no more than the price of one package of cigarettes per month for each of us. If Americans are to have ample water supplies for drinking, fishing and all other uses we must be sure that the President hears from us all.

Wilderness bill at critical stage: The wilderness bill seeks to avoid commercialization of the pitifully small remnant of 13 million acres in the centers of some of our national forests. Hearings have been held on this measure, S. 1123, which 18 Senators from both parties have joined me in sponsoring. I am hopeful it will soon be reported out by the Senate Interior Committee. In the Midwest the only national forest wilderness area is in the Quetico-Superior region on the Minnesota-Ontario border. Wisconsin has the marvelous Flambeau River State Forest wilderness which is protected by State legislation. Those of us who have been working with conservationists are grateful for their unreserved support for this effort to preserve a few remnants of our once great frontier for our grandchildren's grandchildren.

Pesticides and wildlife and human life: The recent "cranberry scare" over the use of chemicals in cranberry marshes, the Fire Ant eradication program using heptachlor in the South and the concern of many people over uncontrolled use of chlorinated hydrocarbons have made it imperative for an accelerated research program to discover the effects on human beings and wild animal life. As long as song birds only seemed to be threatened, there was little public agitation for stricter use of these chemicals except by my friends in the conservation movement. I was particularly pleased to see the resolution sent me by Mrs. Max Schmitt of Milwaukee, president of the Citizens Natural Resources Association of Wisconsin urging a Senate investigation of the effect of chemical pesticides and herbicides. As a Member of the Senate Committee on Agriculture and Forestry, I am calling this resolution to the attention of Senator ALLEN ELLENDER, committee chairman. It has been a great disappointment to me that the President's budget failed to provide for a speedup in the very modest research program now in progress. I am urging that the Fish and Wildlife Service and the Department of Health, Education, and Welfare be given adequate funds to do the job of protecting the lives of our citizens and our wildlife resources.

Conservation of wetlands: Our Wisconsin, Minnesota, and Dakota marshlands urgently require more attention from Federal and State agencies. These marshlands have an important effect on our underground water supplies, on regulation of our surplus runoff during critical flood stages and are the principal breeding grounds in the United States of our shrinking waterfowl resources. Conservationists have been urging a speeded up program of acquisition and leasing for some years. In 1958, I supported the increase in the Duck Stamp fee to accomplish this wetland conservation program. And I have long urged that government-encouraged wetland drainage be eliminated—as one means of cutting expenditures. With Congressmen HENRY S. REUSS, of Wisconsin, and GEORGE S. MCGOVERN, of South Dakota conferences have been held with Department of Agriculture and Interior officials. Agreement was reached that before any new wetland drainage was approved for planning or subsidy, clearance must be given by the U.S. Fish and Wildlife Service. If these two Executive Departments fail to achieve this coordination

without legislation, I will join the two Congressmen in sponsoring a measure to require that this senseless and wasteful policy be halted.

Soil conservation being studied: You will be interested to know that a major analysis of our whole soil conservation effort is being undertaken by Resources for the Future (a Ford Foundation research group) in cooperation with the National Association of Soil Conservation Districts. The purpose of this study will be to find ways and means for extending much-needed soil conservation practices on those lands not now being protected by these measures. As you know, terracing, strip cropping and other measures (such as those I saw on my trip through Wisconsin's pioneering soil conservation area last fall) require sizable sums of money. I am confident that this study will be helpful in meeting the problem of these unprotected millions of acres.

Parks and outdoor recreation: The astronomical increase in the number of families who spend their vacations camping in our national and State parks and forests is beginning to tax the facilities and personnel on these recreational areas to the breaking point. Conservationists, campers and other outdoorsmen all feel that those who use public camps will be willing to pay for this privilege and thus raise the funds needed for more and better facilities.

Tree farming at alltime high: News that the Nation's private tree-farm system has passed the 50-million-acre mark is pleasing to all of us concerned over future forest resources. It is good to know that so large an area of well-managed, privately owned forest land is being given intensive forestry practice. Several years back (1954) when the administration sought to cut forest firefighting funds, and appropriations for tree nursery stock, a group of us in the Congress banded together to assure that these vital programs would be continued. Without the protection of a forest firefighting force and without small trees grown at cost, private owners would lose heart in their efforts to manage their forests well. The more private conservation effort we can encourage now the less necessary it will be for the government to spend large sums in bringing back wasted lands in the future. In the three lake States we have over a thousand individual tree farmers.

Salt Grass Trail Awindin'

EXTENSION OF REMARKS

OF

HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. THORNBERRY. Mr. Speaker, one of the most interesting and famous institutions in Texas is the Salt Grass Trail. Symbolic of early day Texas trail rides, it is the world's largest organized horseback movement. It originates at Brenham, Tex., which is in the congressional district I am privileged to represent, in February of each year. Its destination is the Houston stock show and rodeo in Houston, Tex.

The founder of this famous institution is Hon. Reese Lockett, mayor of the city of Brenham, who heads the Salt Grass Trail each year. Mayor Lockett is not only an outstanding mayor but also a successful businessman, farmer, and rancher.

In the February 1960 issue of Texas Parade, appears this article, "Salt Grass Trail Awindin'," by Shirley Insall Deviney, telling of the Salt Grass Trail and the splendid leadership furnished by Mayor Reese Lockett.

Because I know that the Members of Congress will appreciate this fine article, I ask consent to include it in the RECORD with my remarks:

SALT GRASS TRAIL AWINDIN'

(By Shirley Insall Deviney)

All along the Texas gulf coast a 15-mile-wide band of salt grass grows lush, tall, and green. To the cattlemen of the 1870's, it waved an invitation to winter their herds on the Coastal Plains. Steers did particularly well on salt-grass grazing, but sometimes the ranchers sent cows and calves down the trail, too.

One of these trails started in the Brenham area, and thousands of cattle, horses, men, and wagons journeyed along this route each winter.

Horseback riders and oxbow wagons still wind their way down the rutted trail to the coast each year—but it's all in the spirit of fun. And there's nary a beef in sight.

Known as the largest organized horseback movement in the world, the new Salt Grass Trail carries some 2,000 riders 80 miles overland each February. Their destination: The Houston Fat Stock Show and Rodeo.

Farmers, cattlemen, merchants, bankers, doctors, housewives, teens, and children make the annual ride. Their ages may range from 5 to 80. A movie or TV star goes along for part of the trip; this year it's Bob Horton, of "Wagon Train" fame.

Reese Lockett, cattleman and mayor of Brenham, instigated the return to the cow trail. As a former three-event man (saddle bronc riding, bulldogging, and calf roping), Reese had rodeo'd far afield, even taking part in a 1924 rodeo command performance in London for the Prince of Wales.

Though he'd settled down to rodeo directing in recent years, the rancher got to musing about the rugged salt grass cattle drives of pioneer days. Complaining of bad weather on his last plane trip to Florida, Reese told friends, "I'll never make another trip if I can't get there on my horse."

So when he was asked to be arena director of the 1952 Houston Rodeo, Reese trotted down from Brenham on horseback. With him rode three hardy friends; and a dozen other persons joined the group along the way.

Since the inception of this ride, many other cities in Texas and even in faraway Spain have started similar treks. Invariably, Reese is asked to serve as honorary trail boss.

As Salt Grass Trail boss, Reese's difficulty in keeping the antlike procession closed up and moving is like marshaling a parade over an 80-mile route. That the ride functions so smoothly is the result of ironclad rules.

Each group of riders has its own number, wagon, and wagon boss; and this group must stay together.

And 13 experienced horsemen serve as scouts (a polite word for policemen). Woe betide the rider they catch taking a nip when he hadn't oughter.

"We can't have public drinking on the trail; we've got too many women and children along," Reese said. "We all have a good time and holler like cowboys—but there's no misconduct."

Overexuberance is also controlled by a rule that each rider belong to the Salt Grass Trail Association.

Two more rules: No skinny mules or fat wagon tires allowed. Before small mules were banned, the whole procession bogged down in the mud. "Undersized mules can't make it, I tell you for sure," Reese scoffed. "And neither can rubber-tired wagons."

To remove last-minute kinks, a practice run parade is held in Brenham each year. Broken traces, tangled lines—all kinds of problems arise and are solved on parade day. Then the riders bed down at the Brenham fairgrounds.

Before dawn the next morning, sleepy men scramble to saddle horses and harness mules before Reese blasts "Roll out" on his cattle horn. Avoiding highways, the procession snakes its mile-long length across open country, stopping in Hempstead for lunch. No cooking facilities are available, so the women heat beans and fry bacon over open fires.

When the riders arrive at their first camp east of Waller, some are joined by pickup trucks bearing extra bedrolls and food. (Not one truck, van, or trailer is allowed on the trail, however.)

Camp life at night is gay, in a weary sort of way. Several cowboy bands always enliven the train, strummin' and singin' songs of the Old West.

Last year a bunch of riders staged an impromptu footrace—longhandles, boots, saddle slickers and all—just to see if they could still make tracks after riding all day. Surprisingly enough, all stepped pretty high.

If this year's February 23–25 trail ride is like most of its predecessors, you can describe it in just three words: cold and wet. Yet, despite bone-chilling temperatures, mud and driving rains, the riders always manage to survive the grueling stretches with few accidents. Those who bundle up in long handles and saddle slickers stay dry, warm and have fun. The few who don't are miserable.

The second day carries the cavalcade from Waller south through Hockley to the Paddock Ranch near Cypress. By this time, newcomers are trying to decide which part of their anatomy hurts the most, so they can rub it down with horse liniment.

As the riders near Houston on the third day, scores of youngsters fall in with the procession, basking in reflected glory. But it's easy to spot the real troopers who started in Brenham. Horses' heads droop, their riders are blistered and bruised, and wagon wheels creak as the drive along an old cattle trail nears its end.

The aching riders ease gingerly out of their saddles at Memorial Park. This is the busiest night of all, for it takes lots of soap and water to get horses and riders back to normal.

Next morning the procession files in triumph down Houston's Main Street, officially opening the 28th annual Houston fat stock show and rodeo.

Though SGT is the original, and largest trail, three other annual rides now converge upon Houston. This will be the fourth year for the Old Spanish Trail riders, who journey 200 miles from Logansport, La. The Tejas Trail, beginning at Lovelady, joins the Sam Houston Trail, starting at Montgomery. Both groups merge with the Salt Grass Trail at the edge of Houston.

Last year, SGT riders registered from six Eastern and Northern States. One group from France made a television film of the ride. And Don McClelland, a disc jockey from Halifax, Nova Scotia, came to take part.

One pair of dudes from Baytown, who had never sat a horse before in their lives, each took three hours' worth of riding lessons, then gamely mounted up. They lasted as far as the first night's stop.

What prompts 2,000 men, women and children to undertake the three-day grind.

Most of the riders say they do it for the chance to get away from everyday routine. Many say each ride will be their last; but most come back for more punishment next year.

Problems of the day are forgotten by the participants, whose main concerns during the journey are eating, the well-being of their horses and a few blisters. By the evening campfire a rider feels a close kinship with the pioneer Texan who fought to protect his longhorns on the open range, then drove them several thousand miles to market.

Reese Lockett thinks television westerns are partly responsible for the keen interest in trail rides, for TV shows the West in a glorified light: "I was once a cowboy on a ranch 40 miles from town," he said. "And I can tell you there's nothing glamorous about fixing fences, riding herd and pitching hay."

But the Old West still exists in the minds of practically everybody, as Reese pointed out in this anecdote:

The SGT riders execute a flank movement in which 80-odd wagons and the riders cross highways abreast in less than a minute. Before this mass crossing was perfected, wagons crossed one at a time, often snarling highway traffic for hours.

At one such bottleneck, a woman leaned from a car bearing an Ohio license plate—and proceeded to give the nearest trail rider a segment of her mind.

Doffing his dusty Stetson, the rider said with dignity:

"Sorry to disoblige you, ma'am, but one of the cowboys on our spread has headed for the Last Roundup. We're going to see he's laid under proper."

"Oh, I am so sorry," the Ohio woman murmured shamefacedly. She didn't say another word.

New Mortgage Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. WIDNALL. Mr. Speaker, the following editorial from the New York Times of February 13, 1960, gives an excellent analysis of the so-called emergency homeownership bill now pending before the House Banking and Currency Committee. The bill relies on an emotional title to obtain support, as is clearly shown in the editorial:

NEW MORTGAGE BILL

A new housing bill introduced by Representative RAINS of Alabama has been approved by a subcommittee of the House Banking Committee. This proposed measure would not only call for the pumping of an additional emergency $1,050 million into the residential mortgage market under the special assistance program of the FNMA (Fannie Mae); it would at the same time alter beyond recognition the character of that secondary market for Government-insured residential mortgages.

Neither of the two implicit assumptions underlying the proposal to pump this huge additional sum into the market for residential mortgages will stand even superficial examination. One of them is that the economy is faced with an emergency that calls for such stimulants as this; the other is that the residential mortgage area is getting less than its fair share of the available supply of capital funds.

So far as the state of the economy is concerned, it is such as to indicate that the proposal to blow up mortgage demand artificially would not only be potentially inflationary on the demand side (for residential building has an exceptionally high multiplier effect on municipal and private spending) but it would lop off at a stroke nearly one-fourth the hoped-for surplus in the 1961 Federal budget. As to the lack of funds available for residential mortgages, this is true only if one believes that the Nation has a responsibility to maintain the supply of such funds at all times at a figure equal to or exceeding the recent previous high.

But more serious, perhaps, even than the provision for this huge sum itself are the terms on which it would be provided. For a year after the enactment of this suggested legislation it would, among other things, direct the FNMA to purchase any kind of Government underwritten mortgages so long as the title to the property was not in doubt; it would forbid the latter to dispose of any mortgage; it would prohibit it from paying less than par for any mortgage; and it would freeze the premium charge (which is now discretionary within a range of one-half to 1 percent) to one-fourth of 1 percent. (It is out of this premium that the reserve is created on which the Government insurance is based.)

In short, "Fanny May" would be transformed overnight from a revolving fund designed to provide a secondary market for insured mortgages on time when other purchasers were not available to a priming market that would buy all mortgages offered at fixed prices, presumably above the true market price, and at the same time be prohibited from liquidating any mortgage presently held.

It's "30" to Bill Arnold, Outstanding Texas Labor Leader and Citizen

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Tuesday, February 16, 1960

Mr. YARBOROUGH. Mr. President, because of the acts of a relatively few irresponsible and corrupt labor leaders, whose misdeeds have been used as a whipping boy to attack the great majority of honest and honorable union members, much has been spoken and written in condemnation of the workingman.

Today I want to call the attention of the Senate to a labor leader in Texas who was in every sense a model of what a responsible, honest, progressive, Christian citizen should hope to be, Wiliam Blaine Arnold, who before retirement recently was a leader in the San Antonio Allied Printing Trades Council and of organized labor in Texas for 35 years, died Sunday, February 7, 1960.

He was a labor official, a responsible citizen, a Christian gentleman, a dedicated Texan, and he is missed by all those whose lives he touched. They were many. The ranks of labor, and management, too, for that matter, need more men like him.

Both Bill Arnold and I have served on the board of directors of the Lower Colorado River Authority, that authority which has built six great dams on the Colorado River in Texas. Bill Arnold's service was dedicated, honorable, and efficient.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the article from the AFL–CIO Weekly Dispatch for Friday, February 12, 1960, entitled: "It's Goodby and '30' to Bill Arnold."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT'S GOODBY AND "30" TO BILL ARNOLD—TRIBUTE PAID TO 50 YEARS OF SERVICE

Seventy-five years and 5 months after he came into the world, William Blaine Arnold, editor emeritus of the Weekly Dispatch, closed his eyes, murmured one last word: "Water," and slipped quietly into death after an illness of several months.

He left behind his widow, a son and a daughter, and uncounted numbers of men and women who looked upon him as a friend.

The Rev. R. K. Heacock of Highland Terrace Methodist Church, who spoke the last words, paid tribute to a long life, well used for the benefit of the labor movement and other causes which attracted Bill Arnold, affectionately known as "Uncle Bill" to many of his colleagues and coworkers. A deep religious feeling, he said, made itself manifest in the expressions of the veteran labor editor.

Reverend Heacock quoted from the last column to appear in the Weekly Dispatch under the widely known byline of William B. Arnold:

"We cannot build a fence around a little world of our own creation and thereby achieve peace * * * God made us creatures who need fellowship; we need one another. Our main problem is living in such a way as to be a blessing to others."

Masonic rites were conducted at the funeral in the Alamo Funeral Chapel and burial was in City Cemetery No. 4.

Death came at 5 a.m. Sunday, February 7, to the man who achieved a reputation for service not only throughout the State, but beyond the border of Texas as well. Great affection seemed to be one of the most characteristic responses which he evoked in others with whom he was much in contact.

It was this friendly, personal touch that enabled him to be most effective, both in serving others and in influencing others to serve.

Bill Arnold had given more than half a century of service and leadership to organized labor in San Antonio and in Texas. The value of that service was recognized and praised by men in high places in labor, industry, and government and by workers of the rank-and-file.

On November 15, at the 40th convention of the Texas Allied Printing Trades Council, tributes were paid to San Antonio's great labor leader and editor by his fellow printing trades craftsmen, by officials of the Texas State AFL–CIO, and by Senator RALPH W. YARBOROUGH, who was the main speaker on that occasion. Senator YARBOROUGH came to speak in the place of the former Governor, James V. Allred of Texas, who later became a U.S. district judge. Judge Allred had been scheduled to make the address until his untimely death intervened. Senator YARBOROUGH pointed out that it was a mark of special honor to Bill Arnold that Judge Allred had agreed to attend. Allred seldom went to public affairs after he became a judge and the fact that the former Governor had accepted the invitation to speak was in itself a high tribute to Mr. Arnold.

JOINED ITU IN 1910

Among those who joined in the tributes to Bill Arnold at the allied dinner was Wallace Reilly, editor and publisher of the Dallas Craftsman, who had been secretary of the Texas State Federation of Labor when Mr. Arnold was president. Reilly said, "Bill Arnold's advice and help to me was invaluable. He was an inspiration and help to

me and all who have known him. It is a great privilege to be able to pay tribute to such a great man as Bill Arnold."

In October, last year, Mr. Arnold retired from the post of secretary of the San Antonio Allied Printing Trades Council in which he had served for 35 years.

He had been a member of the San Antonio Typographical Union for 50 years, joining the organization in 1910. In 1912 he was elected delegate to the Texas Allied Printing Trades Council and held that position continuously, attending all conventions until 1958, when he was unable, for the first time, to go to the meeting in Houston. In 1912, also, he had been named delegate of his local union to the San Antonio Trades Council.

In 1924, he became president of San Antonio Typographical Union No. 172 and in 1925 was elected delegate to the International Typographical Union. In 1923 he was appointed as ITU organizer by President James Lynch and served in that capacity for 3 years. In 1924 he became secretary-treasurer of the San Antonio Allied Printing Trades Council.

He served as president of the Texas Labor Press Association for 8 years, was secretary-treasurer of the Texas Allied Printing Trades Council for 12 years, was vice president of the International Labor Press Association for 5 years, and became vice president of the Texas State Federation of Labor, and after 1 year was elevated to president, in May 1936. He served as president for 3 years, and then resigned. He also served as secretary-treasurer of the State organization for 4 months when the post was vacated by resignation and was chaplain of the State federation.

In 1937 he was appointed a member of the Lower Colorado River Authority by Governor Allred. After 2 years he became vice chairman and then advanced to chairman, in which post he served 2 years.

Senator YARBOROUGH, in his tribute to Mr. Arnold pointed out that the LCRA records and activities were always open to the public and that millions of dollars were spent under the supervision of the board of which Mr. Arnold was a member with scrupulous fairness and honesty in spite of great pressures attempted by certain contractor and lobbyist interests.

So careful and correct was the LCRA administration during Mr. Arnold's service that despite the huge amounts of money spent for great projects there was never a suggestion, never a breath of suspicion or criticism, Senator YARBOROUGH emphasized. This was a tribute not only to Mr. Arnold but to the basic honesty and integrity of the labor movement and its best leadership, he added.

Mr. Arnold also served 2 years as San Antonio licenses and dues collector and on many city boards and commissions, including the Municipal Advertising Commission, the 15-man board that wrote San Antonio's present city charter, the War Labor Board, and the San Antonio Library Board. At one time he was director of civil defense here.

He was greatly interested in aiding underprivileged boys, and was one of the organizer's of the San Antonio Boys Club.

He was executive secretary-treasurer of the San Antonio Advertising Club and chaplain of the 10th district of the Advertising Federation of America.

He was a 32d degree Mason and a life member of Alzafar Shrine.

Survivors are his widow, his son, Frank Arnold, Sr., his daughter, Mrs. Margaret Arnold Sahm, 5 grandchildren and 10 great-grandchildren.

Pallbearers were: Calvin Daniel, C. D. Simpson and Charles Hofer of the Carpenters Union; Regan Lofton of the Electrical Workers; G. Lee Carleton of the Typographical Union, and Jeff Forehand.

Crisis of Our Cities

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. HUMPHREY. Mr. President, ever since I was mayor of Minneapolis, I have been deeply concerned about the deterioration of our Nation's urban centers. The critical problem of blighted cities and the necessity of large-scale projects of urban renewal is an important issue. The welfare of American democracy is at stake—decent living standards for our people, sound education for our youth, vital local government, and the integration of marginal economic and social groups into community life under conditions of liberty and equality.

Clearly the crisis of urban deterioration is a national as well as local responsibility and merits our immediate attention and forthright action. A healthy dynamic urban comunity life is indispensable to the maintenance of our democratic tradition and to the continuing development of American culture.

Recently I came across an excellent article on urban problems by Julian H. Levi entitled "Crisis of Our Cities," Vital Speeches, February 1960, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CRISIS OF OUR CITIES—THE DEPARTURE OF THE MIDDLE CLASS

(By Julian H. Levi, executive director, South East Chicago Commission, Chicago, Ill., delivered before the Citizens League of Minneapolis and Hennepin County, Minn., November 18, 1959)

I

It is a melancholy fact that in this mid-century, American cities all over this country are in grave trouble. The literature confirms this day after day. Within the month the New York Times summarized the Harvard University report on the New York metropolitan area. It stated:

"The New York metropolitan region was warned yesterday that the spectacular growth in its outer reaches had produced and was quickening the decline in its older cities.

"Industrial and residential blight, with accompanying loss of population, industry, trade and jobs, was pictured as spreading through these cities. It was predicted that urban renewal, at its present scale could not halt the decline.

"The warning came in the first published report of a $600,000 study of the region, which includes 16 million people in parts of 3 States. The 3-year study was directed by Harvard University."

Similar studies which have been made in other parts of the country reflect the same conclusions. We deal with two dynamic forces.

First. An ever-increasing urbanization of our society as a whole. Thoughtful students of population trends predict that within the next two decades the 140-odd metropolitan areas in the United States must house and accommodate an ever-increasing percentage of our total population. By the time of the next census it is estimated that 7 out of every 10 citizens of this country will be living in urban centers. Mechanization of our farms and the consequent increase in the size of our agricultural producing unit, further growth of our industrial complexes inevitably produce this result.

Second. An ever-increasing physical growth in the size of our urban areas with consequent great population movements from our central cities to the satellite suburbs. In some places in this country, this growth has been so pronounced that one planner describes Los Angeles, Calif., as "40 suburbs in search of a city." The social trauma and economic consequences of this suburban movement cannot be underestimated. The Harvard study stated:

"More and more, Manhattan is becoming the home only for the very rich and very poor."

The departure of the middle class from our great American center exposes painful vacuums. The backbone of municipal tax base disappears. While sources of income dry up and deterioration of property leads to lower assessments and lower revenues, increased densities and deteriorated living conditions develop increased crime, poorer health, greater dependency, more family instability. All of these factors at a time of diminished rate impose a greater governmental expenditure. It has been estimated in some situations that the city will be obliged to spend three or four times as much in the provision of services as the city is able to obtain from revenues within such an area.

In many parts of this country these difficulties are compounded by the advent of ethnic and racial changes. Central business districts find their future clouded by the loss of customers and purchasing power. Churches, universities and colleges find their environments incompatible with their functions.

We must recognize, moreover, that these realities are those of the market place. The American consumer, when he purchases his housing, of course, has a freedom of choice. If the central city is obsolete, unattractive, the customer will buy elsewhere.

Of course, we have a choice here. You can, for instance, decide that you will not do the things necessary to maintain your central business districts competitive with the outlying shopping centers. You can decide you will leave the customer with the assurances that he will find convenient parking for his car at Southgate and the privilege of a hunting license in downtown Minneapolis.

You can decide that public education in the suburb will equip the gifted youngster for a National Merit Scholarship, while the city schools lag behind, handicapped by a lack of open space and a deteriorated community about them. Some cities can decide that the quality of housing made available in the central city will be so poor as to be attractive only to those who cannot afford to live anywhere else.

A case might be made for each of these positions, but hardly in ethical or even economic terms. In our office we have an important useful device, incidentally conceived and manufactured by one of the great commercial enterprises of this State. The record of this success story has been due primarily to the fact that whatever that firm has offered to the customer has been excellent and competely competitive with the market. Even more pointed is the reminder that when we deal with the future of American municipal government we deal with the future of the American people. Youngsters, whose educational opportunities are thwarted by the slum school with its inadequate facilities, its lack of open space lose a great deal, but the Nation ultimately loses even more. It has been said that our greatest national asset truly is our young

people of inherent promise and ability. Whenever we fail in the realization of these abilities, the Nation loses a portion of its future which it can never replace.

II

Citizens in American cities, confronted with these harsh realities have begun to organize to meet the challenge. We have an American Council To Improve Our Neighborhoods. We have many fine organizations such as yours in city after city. These efforts are sincerely inspired in a desire to improve our living conditions and standards. Incidentally, the fact that many of these movements find support in activities of merchants and property owners in the central business districts is not cause for their deprecation. So long as municipal finances are basically tied to the property tax, the maintenance of the major real estate tax asset—to wit: the downtown central business district—is much more than a matter of passing interest to the citizen in any municipality. It is only through the maintenance of these tax assets that the revenues necessary to the fundamental functions of local government can be obtained.

III

Yet when all of this has been said, what all of us are doing is too little and too late. Too little and too late because we really have not understood the basic forfeits of our battle, nor the rigors of the challenge before us. What is really at stake in the problems which confronts us are the fundamentals of American civilization and democracy.

Lewis Mumford in a remarkable address some months ago in discussing ancient civilization said:

"If I read the record right, the first beginning of urban life, the first time the city proper becomes visible, was marked by a sudden increase in power in every department and by a magnification of the role of power itself in the affairs of men. A variety of institutions had hitherto existed separately, bringing their members together in a common meeting place, at seasonable intervals; the hunter's camp, the sacred monument or shrine, the paleolithic ritual cave, the neolithic agricultural village— all of these coalesced in a bigger meeting place, the city."

And again Mr. Mumford said:

"The other function fostered by the city is the dialogue. Within the city you meet face to face people you might have spent all your life looking for if you wandered up and down the great river valleys. Here they were concentrated, and a meaningful exchange takes place."

So it is today. While a home in the country and the joys of the small town may excite nostalgia and envy, these places are by definition impossible for the main business of our civilization. You can't do great cancer research or great heart surgery such as you do in this great urban center in a convenient suburb. In fact, the history of one of the most meaningful enterprises of our generation in medical care was that when two country doctors began their brilliant careers, a city grew up around them.

Great educational institutions themselves create their own urban environment. We've all heard it said that the ideal education consisted of a student on one end of a log and Johns Hopkins at the other.

But today there would have to be a library, a laboratory, and perhaps a medical center and a hospital somewhere close at hand. Even more meaningful there would have to be the dialogue to which Mr. Mumford refers. A dialogue in which many skills, many disciplines and many tongues must participate. While those who live in the suburbs love music and opera, the symphony orchestra and opera house are inhabitants only of the American urban center.

What we are really saying is that the American urban center is essential to American civilization. Somewhere along the road between the industrial revolution and Henry Ford, the Jeffersonian picture of this country as a Nation of sturdy small landowners, farmers, and yeomen disappeared. Our civilization today, with its complexities requires an urban setting.

These observations are not intended to attack the heroism of the average commuter about whom E. B. White has said:

"Commuter—one who spends his life
In riding to and from his wife;
A man who shaves and takes a train
And then rides back to shave again."

IV

But our democracy demands a healthy urban setting. One of the most disturbing publications of recent years is an article written by Morton Grodzins which appeared in the October 1957, Scientific American entitled "Metropolitan Segregation." Here Dr. Grodzins, an imaginative and able political scientist, analyzes the political consequences to this Nation in the development of the segregated central city Negro ghetto, with its potential conflict with the segregated suburban hinterland. When we reach the point in our democracy where substantial political units of our local government are inevitably alined against one another, we strike at the heart of a free society. If Manhattan becomes only the home of the few very rich and the many extremely poor, we plant profound seeds of conflict and difficulty. Certainly the assumption of the ballot box is that the broad mass of American citizens within any given political unit will have a fundamental leavening and community of interest. We do not achieve this essential condition to the success of democracy when we eliminate the broad middle class from the equation. In our American democracy, we cannot permanently carry on if the American city, the smallest and most intimate political unit with which our citizens deal, is bankrupt, frustrated, and unable to proceed with its necessary services.

The moral of these considerations is clear—if we care about the future of American civilization, if we care about a healthy democracy then the business of the revival and maintenance of our cities is urgent, necessary, and immediate.

V

In practical terms, what are the applications of these concepts?

First. We have to rethink our notions of property rights. In the days before the knowledge of bacteriology and the spread of typhoid fever, for instance, it was perfectly acceptable practice for the owner of property upstream to discharge his sewage into the common waterway. Modern knowledge and practice has changed this. A man's ownership of riparian rights does not give him the right to distribute his sewage to the detriment of his neighbors.

By the same token, a fee simple title to a parcel of urban real estate does not afford the owner or anyone who holds title either above or beneath him the right to spew obsolescene, slum and blight upon his neighbors and the surrounding community. This concept must proceed further than the classic assumptions of the police power. An obsolete commercial structure amidst a central business district represents more than an individual misuse of land value potential. Such obsolescence destroys a part of the value of every other structure in the block. An obsolete residential structure even if maintained in accordance with minimum standards of health and sanitation can injure the future of every other house or apartment in the vicinity.

We also have to rethink the whole concept of value. In city after city over this country the acceptable practice in the enforcement of housing and building codes has been that we would enforce these codes short of real penalty to the offending property owner. Fines assessed against slum operations in most parts of this country have been so nominal that they constitute licensing rather than detriment.

In my own State, incidentally, our legislature largely as the result of the courage and determination of our mayor adopted a statute which provided that in an eminent domain proceeding, the court could disregard such value as came from operations in violation of city minimum codes or in the alternative that there could be deducted from the award the capital expenditure required to bring the property into minimum code condition. This past week, I asked one of the eminent appraisers in our community to apply this statute. I was met with the statement that he felt uneasy about this because this would result in the determination of awards at less than what he thought the going market rate was for such merchandise. The answer has to be that the bundle of rights which we describe as fee simple title does not include the right to receive a price calculated on illegal income nor on a structure maintained at less than the community standards, and if this means a decrease in fair market value—so be it. These assumptions will come hard in some quarters, but their acceptance is inevitable to the future of American civilization and democracy.

Second. We have to face up to the magnitude of the task before us. Those of you who have read the veto messages to the first two omnibus housing bills of 1959 will understand the observation that a substantial part of the political leadership of this country just doesn't understand the urgency of the task before us. If we believe that the future of this country depends on a healthy urban setting there can be no alternative but to find funds that are required to carry it out. A 2-year program involving Federal funds in the aggregate sum of $640 million in order to attack the urban renewal problems of the United States (a sum of money, incidentally, somewhat smaller than the amount made available for the support of potato prices), cannot begin to dent the problem. Moreover a governmental program directed towards the renewal and revival of our urban centers cannot be postulated on the basis of a 2-year program.

If we are serious about the task before us we must recognize that for the foreseeable future this program must be a permanent responsibility stretched over this generation.

Perhaps there is great justification in the aim of returning this program to the States and cities. But it is a grim jest to return responsibility locally without a corresponding release of taxing power to meet these obligations.

Budget allocations for urban renewal are, of course, political questions, but the future of American civilization and democracy had better also be debated. If an ever-increasing number of our people will live in urban centers, then the conditions under which they live and work, study and yes, just play, become a concern of urgent Government action and assistance.

Our requirement is the magic ingredient of any free society—the vision to see; the leadership to achieve; and the courage to persevere.

Some 400 years before the common era, Thucydides said it for us:

"Day by day, feast your eyes upon the greatness of Athens, until you become filled with the love of her; and when you are impressed by the spectacle of her glory, reflect that this empire has been acquired by men who knew their duty and had the courage to do it."

State Board of Health Official Says Missoula Is Poorest Sewered Large Municipality in Montana

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Missoula (Mont.) Missoulian of September 20, 1959:

STATE BOARD OF HEALTH OFFICIAL SAYS MISSOULA IS POOREST SEWERED LARGE MUNICIPALITY IN MONTANA

Missoula is the poorest sewered large municipality in Montana, declared C. W. Brinck of Helena, director of the environmental sanitation division of the State board of health, Saturday afternoon in a brief interview following participation in a panel discussion of the first Montana Planning Institute.

The panel subject was "Subdivision Control in Montana." Brinck spoke on "Utilities in New Subdivision"; Vernon R. Peterson, Missoula County surveyor and president of the Missoula City-County Planning Board, on "How Urban Land Is Controlled in Montant," and R. W. Christensen of Seattle, chief land planner, Federal Housing Administration, on "Good Subdivision Design."

In saying that Missoula is the poorest sewered large municipality in the State, Brinck explained that the city has the smallest percentage of buildings sewered. Not many years ago, he added, only 20 percent of the buildings had sewer connections.

The official reported that at present 62 Montana communities have sewage plants and 14 others have appropriated the money to build them but 13 other communities having sewers do not have proper sewage treatment plants. Missoula is one of the latter, he pointed out.

Brinck's remarks in the interview arose from a statement in his address that septic tanks and cesspools are causing a serious pollution problem in Missoula, Kalispell, Libby, Shelby, Billings, Glasgow, Laurel, Miles City, and other localities.

In his speech, he said, "Septic tanks are fine when there is plenty of land and if the soil is suitable for septic tanks. Cesspools are not recommended under any conditions. The problem with septic tanks has been that in many places they operate satisfactorily for a few years then, as the pores in the soil become clogged with grease and soap film, the liquid forces its way to the surface where it runs down streets and alleys and into neighbors' yards. Children play in it. Flies breed in it. * * *

"We also have had problems with wells. Most problems with privately owned and operated wells are from improper construction or improper sewage disposal in the neighborhood. Last year synthetic detergents in individual domestic wells were found in Suffolk County, Long Island, N.Y. This caused the county health department to temporarily halt the completion of new wells in several housing developments. More restrictive rules were imposed on well locations and depths of wells. The detergents were traced to seepage from cesspools and septic tanks. In one subdivision in this area, 60 of 186 wells showed the presence of detergents. When the detergents are present, bacteria also may be found.

"In Montana it has been necessary for the Federal Housing Administration to refuse to insure home loans in two districts adjacent to Montana municipalities because of ground water being contaminated with sewage and affecting wells in the area. In another situation a sewage-contaminated irrigation ditch contaminated the ground water supply in adjoining wells."

In closing Brinck said "We have problems in Montana today with suburban water and sewer problems. These problems will continue unless we work together to solve them. Proper legislation is required. If we cannot provide proper water and sewer facilities for a given area, then that area should not be developed. At the present time your Montana State Board of Health can offer only consultation to you, the subdivider, and the moneylenders that may be interested.

"We do not think there should be a continuation of the problem where an individual will drill a well in front of his house, have a properly constructed septic tank in the rear and then have a neighbor construct his septic tank but a few feet from his already drilled well. This endangers the health and well-being of persons living in the area and the investment that the persons may have may be lost unless the situation can be changed. We can change it by proper planning and with proper legislation."

In response to questions asked in the interview, Brinck advised that Missoula has sewage problems in the southeast part of the city, Rattlesnake Valley, Orchard Homes, and other points in the city. He said Missoula has water pollution problems in Orchard Homes and other locations in and out of the city using wells.

The official would not make a prediction as to whether a request that Missoula be given additional time to provide adequate sewage and treatment facilities would be granted. He told Mrs. Thomas Payne, Missoula City Council member, that a mechanical sewage treatment plant does not smell if properly designed and operated but emphasized that it has to be properly designed and operated.

When queried in the interview about pollution of the Clark Fork River from the Waldorf-Hoerner Paper Products Co. pulp plant west of the city that caused concern for some time, Brinck stated that none was found in observations made during the summer.

Let's Break Down the Age Barriers

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. HUMPHREY. Mr. President, I invite the attention of my colleagues once again to the plight of so many older citizens in this country who find themselves too old to work but too young to retire. In an article in the February issue of Eagle, I have spelled out the facts. I have called this article "Let's Break Down the Age Barriers." I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET'S BREAK DOWN THE AGE BARRIERS—EAGLE SENATOR OFFERS SOLUTION TO PROBLEMS OF HIRING MEN OVER 40

(By Senator HUBERT H. HUMPHREY)

To see the widespread discrimination against older workers, you don't have to look any further than the "help wanted" section of most large city daily newspapers.

"Prefer men under 35." "21 to 40." "Age 25 to 45." These are the barriers which too often face older men and women who must find a job.

But the age limits in these advertisements tell only part of the story. The age barrier appears again in a less blatant form when the older job applicant turns up in an employer's personnel office.

"Sorry, the job has been filled." "Sorry, we are looking for someone a little younger." "Sorry, we only hire temporary workers over 40."

Is it any wonder that discouragement, frustration, and hopelessness overcome the older jobseeker? It is bad enough to be out of work, worrying about food, rent, children, and health expenses.

But even worse is the feeling, "No one wants me; I am too old to get a job and too young to get a pension." This is a terrible blow to any person's self-respect. Without a job, a man feels loss of his status as a breadwinner in his family and in his community, plus a terrible loss of his dignity as a human being.

By 1970 one-third of our population will be over 45 years of age. But older people will find it harder and harder to compete for jobs in the next 10 years. The high birth rates during and after World War II are going to bring a bumper crop of new young jobseekers into the labor force in the 1960's. Also, automation and new technology may displace many workers now holding good jobs.

In the past 10 years, relatively few young people entered the labor force, as a result of the low birth rate of the 1930's. Therefore, employers needing more workers had to hire and retain older people in spite of their reluctance to do so. This will not be the case, however, in the 1960's.

We cannot afford to waste any of our manpower. Our manpower—young and old—is our greatest resource in achieving prosperity at home and in meeting the challenge of Soviet competition abroad. The age barriers not only are wasteful, but have profound human and social consequences. Age discrimination may turn an able unemployed worker into a bitter, hopeless idler, a ripe victim for any demagogue's propaganda.

What is behind the reluctance to hire older workers?

Some employers claim that older people are less productive, too often sick or absent, unwilling to learn, prone to accidents, quick to "job hop," or hard to get along with. Like most prejudices, these ideas simply cannot be substantiated.

The facts show that older workers are as good as, or even better than, younger workers. This has been determined in studies by Government agencies, by universities, by labor unions, and by management groups. It is clear to me that age discrimination in employment stems from a few hasty generalizations—not from a serious study of the facts.

Employers often follow quick "rule of thumb" restrictions on hiring older workers. One frequently expressed concern is the added pension and welfare costs in hiring older workers. Because of this cost, younger workers—even those with a minimum of experience or training—are often hired instead of older men.

Obviously, employers must take account of any added costs in hiring older workers. I believe we must remove such roadblocks which often cause employers to discriminate against older people. It is not fair that we should ask an individual employer to bear alone the additional expense of pensions, welfare funds, or special training when hiring older workers. These are costs which our whole society should bear—and should be willing to assume.

Let me give an example from a Labor Department study last year (1959) of the steel industry. An employer's annual contribution to the pension fund for a worker who is employed at the age of 30 comes to $120 a year. The pension fund contribution for a new worker aged 45 is $214 a year.

You can bring this down to hourly costs. The steel company will be paying 6 cents an hour into the pension fund for the 30-year-old worker. For the 45-year-old worker, the steel company will pay almost 11 cents an hour into the pension fund.

So it is costing the steel company an extra 5 cents an hour or almost $100 a year in pension contributions to hire the older worker. I believe we must remove the temptation to discriminate against the older worker because of this added cost.

Therefore, I have introduced legislation to allow employers a tax credit to cover the added costs of hiring older workers. My proposal is now before the Senate Finance Committee. A companion bill, sponsored by Congressman ROMAN C. PUCINSKI, of Illinois, is also now before the House Ways and Means Committee.

My tax credit bill would allow an employer to figure out how much he is paying for the additional costs of hiring older workers—above what it would cost him if he were to hire the youngest age group which could do similar work. Then the employer could write off this additional cost as a tax credit against his income tax.

Suppose a firm hires two men for similar work—one aged 30 and the other aged 50. If pension contributions cost the firm $200 a year more for the older worker than for the younger worker, the firm could treat the $200 as a tax credit and deduct the entire amount from its income tax for that year.

This tax credit would be allowed for extra pension contributions, extra insurance premiums, extra training costs, and even extra medical and nursing staff needed where older people are employed. Any increased cost of doing business resulting from the employment of older people, above the expense of hiring younger people, would be treated as a tax credit.

Therefore, an employer who is thinking about hiring older workers will not have to worry about the added costs which might normally be expected. I am convinced that this tax credit bill would encourage many more employers to hire middle-aged and older workers and would in the long run be of benefit not only to the workers and employers but to the entire economy of our country.

Of course, the employment problems of our older citizens will not be solved by any one approach. Age discrimination has many faces—and we must act on many levels. Readers of the Eagle magazine are familiar with the problem. The Eagles' campaign for Jobs After 40 is making wonderful progress in educating employers on the value of hiring older workers. Also the Eagles' drive for legislation to outlaw discrimination based on age has speeded action by State legislatures to prohibit age discrimination in employment by private industry.

We have already a national responsibility, set forth in the Employment Act of 1946, to maintain full employment in our economy through all possible means.

This policy set by Congress has special meaning for older workers. When our economy fails to grow, when it falls into even a mild recession, older workers looking for jobs are hit harder because they cannot compete on equal terms in a tight labor market. It is harder to conquer age prejudice in employment when many younger people are also looking for work.

If we are to provide opportunities for older workers seeking employment, we must fulfill our national responsibility for full employment through an expanding economy. Recessions and depressions are bad enough—but a man who loses his job at the age of 55 or 60 may not be able to find employment even after prosperity finally rolls around.

In spite of rising prosperity, we have persistent pockets of unemployment problems of older workers.

Younger people who do not own their homes can pack up their possessions in a car and go across the country looking for work. But the older worker has a big investment tied up in a house he cannot sell, and he has more family and community ties to keep him from moving away.

Unless the community, the State, and Federal governments act together to bring in new industries, the valuable skills of these older workers will simply go to waste while they wait for the new industries and job opportunities that never come. I believe approval of the Area Redevelopment Act, which has passed the Senate, would help to bring new life and activity to these depressed areas with chronic unemployment problems and would be of particular help to older workers.

Even when they have needed skills, older people must face the fact that most large firms promote from within and do not want elderly beginners. They must spend more time visiting smaller firms, trudging around to more employment offices, to more potential employers than younger job applicants do.

We must face the fact that it is not easy for older people to find a job. We must give them extra guidance and placement services. And we should make sure that our systems of unemployment compensation do not leave them high and dry just when they need help most. In many States, unemployment compensation is grossly inadequate and far too short in duration. We must set up minimum Federal standards of unemployment compensation and provide special employment services to make sure that these people get the help they need and get it as soon as they need it.

It is heartening to see growing activity by public and private organizations to help older workers find jobs. More and more, both labor unions and management are becoming aware of the problems, the needs, and the abilities of older workers.

But we must set forth a national policy against discrimination because of age. I have joined in sponsoring legislation to prohibit age discrimination by private firms working on contracts with the Federal Government. This is a first step toward a sound national policy to break down the tragic, wasteful, and needless barriers of prejudice and discrimination.

This policy will reflect the wisdom and compassion of the American people in bringing new hope to those who now are unable to find employment—not because of lack of ability, but simply because of their age.

Mikoyan's Trojan Horse

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. PUCINSKI. Mr. Speaker, I should like to call attention to an editorial which appeared this morning, February 16, in the Chicago Sun Times. I am indeed very happy to see responsible newspapers calling attention to the tragic situation which is developing in Cuba, only 90 miles from Miami.

The more I see Deputy Prime Minister Mikoyan's nefarious work in countries like Cuba, the more I am convinced that my warning before this very body that the United States is indeed making a tragic mistake by dignifying these Communist leaders with invitations to this country was sound and prophetic. The editorial follows:

MIKOYAN'S TROJAN HORSE

Vodka glasses must be clinking in the Kremlin over Deputy Prime Minister Mikoyan's slick trick in Cuba. Unfortunately, the self-congratulations are well justified. By binding Cuba to Russia in a long-term pact providing for extensive purchases of Cuban sugar and $100 million worth of credit for Cuba's depressed economy, Mikoyan has materially strengthened Russia's economic and ideological pipelines into the hemisphere.

Where do we go from here? Condemn Prime Minister Castro as an ingrate? He would snicker. Embargo U.S. purchases of Cuban sugar? Russia would increase its own purchases. Sit back and wait for Castro or the Cuban people to come to their senses? It could be a long, long wait. For the moment, at least, we seem to have Castro right where he wants us.

Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mrs. DWYER. Mr. Speaker, in further recognition of the 42d anniversary of Lithuanian independence, I include under a previous permission a group of resolutions unanimously adopted on February 7, 1960, by the Lithuanian-Americans of Linden, N.J., under the auspices of the Linden branch of the Lithuanian-American Council.

The resolutions follow:

RESOLUTIONS UNANIMOUSLY ADOPTED ON FEBRUARY 7, 1960, BY THE LITHUANIAN-AMERICANS OF LINDEN, N.J., GATHERED UNDER AUSPICES OF LITHUANIAN-AMERICAN COUNCIL, LINDEN BRANCH, FOR COMMEMORATION OF THE 42D ANNIVERSARY OF THE DECLARATION OF LITHUANIA'S INDEPENDENCE

Whereas February 16, 1960, marks the 42d anniversary of the declaration of Lithuania as a free and independent Republic; and

Whereas in 1940, Soviet Russia, in violation of solemn treaties and declarations, did forcibly occupy Lithuania, and in 1944, following defeat of the German Eastern front armies, did again occupy Lithuanian territory in complete disregard of wartime policies and obligations under the Atlantic Charter and the Charter of the United Nations, to which Soviet Russia is a consignatory with other allied nations; and

Whereas international communism, by unprecedented and unorthodox methods has infiltrated into adjacent areas of the free world, using any deceit or stratagem to further its subversive attacks upon every institution of free society, including education, art, press, labor, agriculture, industry, and government; and

Whereas Soviet Russia proclaims peaceful intentions yet meanwhile asserting that the

future of mankind will be determined by scientific achievement and the development of new and terrible weapons of war; and

Whereas the people of Lithuania have bravely resisted all Soviet efforts to convert them to the Communist way of life: Therefore be it

Resolved, This meeting express gratitude to the U.S. Government which has never recognized the purported annexation of Lithuania by Soviet Russia, and has consistently demonstrated a favorable attitude toward Lithuania's independence, and for allowing many refugees to find new homes in this country; and be it further

Resolved, This meeting respectfully recommend to our U.S. Government to abstain from entering into any discussions or agreements which would in any way recognize Lithuania's illegal occupation by Soviet Russia; and be it further

Resolved, This meeting respectfully urges the U.S. Government refrain from any formal agreement with the Soviet Union until the latter agrees to restore Lithuania's freedom and sovereign right; and

Resolved, That copies of these resolutions be forwarded to the President of the United States, His Excellency Dwight D. Eisenhower; to the Secretary of State, the Honorable Christian Herter; to the U.S. permanent representative to the United Nations, the Honorable Henry Cabot Lodge, Jr.; to the U.S. Senators of New Jersey, the Honorable Clifford P. Case and the the Honorable Harrison A. Williams; to the Representative of the Sixth Congressional District of New Jersey, the Honorable Florence P. Dwyer; and to the Governor of the State of New Jersey, the Honorable Robert B. Meyner.

JOHN LIUDVINAITIS,
President.
VLADAS TURSA,
Secretary.

Production and Conservation of Coal in the United States Through Research and Development

SPEECH
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. GRAY. Mr. Speaker, I want to join with my colleagues in complimenting the distinguished chairman of the Committee on Interior and Insular affairs Mr. ASPINALL, and the others who have worked so hard to bring this legislation to the floor of the House. As one who comes from a coal-producing area where we have a high rate of unemployment I can vouch for the fact that there is certainly need for additional coal research to establish new markets.

In three counties of my congressional district of southern Illinois, we have 7,000 less coal mining jobs today than we did 10 years ago. This had been brought about by mechanization and mine closures. Great hardship has been experienced by our people. Thousands have been forced to leave their homes and loved ones to seek employment elsewhere.

High freight rates and the foreign importation of residual oil have added to our loss of coal markets.

I had hoped that we could secure legislation setting up an independent coal research commission but the President would not approve therefore the bill before us today seems to be our only chance of getting on with an important job that is long overdue. It is my sincere hope that the Department of the Interior realizes the very serious need for this program and will exert every effort to implement it without delay. We need new coal markets. Mr. Speaker, we need new jobs. Let us hope this legislation will do both.

Eulogy to Franklin Roosevelt

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 16, 1960

Mr. HUMPHREY. Mr. President, on January 30, I had the pleasure of attending the annual Roosevelt memorial dinner in Indianapolis. At that time, I was most impressed by the eulogy on the late and beloved President Franklin D. Roosevelt given by my friend, Mr. John J. Dillon. Mr. Dillon is one of the outstanding leaders of the Indiana Young Democrats. His splendid message was well received.

I ask unanimous consent that this eulogy be printed in the Appendix of the RECORD.

There being no objection, the eulogy was ordered to be printed in the RECORD, as follows:

EULOGY TO FRANKLIN ROOSEVELT JANUARY 30, 1960

(By John J. Dillon)

Mr. Toastmaster, Reverend Clergy, Senator Humphrey, Senator Hartke, Mayor Boswell, militant Democrats, young and old, "his life must be regarded as one of the commanding events in human destiny," said Winston Churchill, who himself history will regard as the only true contemporary of the man we honor this evening. It doesn't seem possible that 15 years have elapsed since the 32d President of the United States passed to his eternal reward.

It is commendable that the Young Democrats in this community each year have fostered a custom of honoring the man who had "a rendezvous with destiny." This is the seventh annual memorial dinner at which a few moments have been set aside to give warm and continuous praise to the greatest leader our beloved Nation and Democratic Party ever has had.

The Democratic Convention of 1932 in Chicago was deadlocked, with numerous candidates and stifling heat, when William G. McAdoo of California obtained the floor and shouted, "California came here to nominate a President of the United States. She did not come here to deadlock the convention * * * California, 44 votes for Roosevelt." Mr. McAdoo spoke the truth because these delegates nominated the man who was to be four times President of the United States.

All the country watched this convention with intense interest, because the country was immersed in the most devastating depression of all time. That the Democratic nominee would be elected President was a foregone conclusion, because, as one columnist so aptly paraphrased, "Hoover fiddled while the United States burned."

The delegates to the 1932 convention discharged their duties admirably. They chose a nominee completely equipped to lead the country out of the morass it was in.

He displayed an early interest in government. Born an aristocrat, he was educated at Groton, Harvard and Columbia University School of Law, but still he was in spirit and in reality a man of the people. It was while practicing law he was elected New York State senator from Duchess County by virtue of a house to house campaign in a traditionally Republican stronghold.

Having observed this young man's activity in New York, Secretary of the Navy Josephus Daniels, during President Wilson's administration, appointed him Assistant Secretary of the Navy after he had reached but 30 years of age. This was firsthand experience in the formidable task of preparing the United States for war and then in coping with the actual demands of a global conflict.

It was quite by accident that he was nominated at the 1920 Democratic Convention as a vice presidential running mate to James M. Cox. Governor Samuel Ralston of Indiana was instrumental in nominating the man who went to California only as a spectator. After their nomination, he and Mr. Cox journeyed to Washington to see an ailing and failing Woodrow Wilson. Both pledged themselves to the policies of the Wilson administration and to the League of Nations. It was more than 20 years before their promises could be kept. It wasn't until the second conflagration that he could convince the isolationist Republicans that the countries of the world should band together to try to attain lasting peace under the United Nations charter. It's interesting to note that, now that our opposition feels the tenor of the people, as he did long ago, they continually cry "peace and prosperity."

Today none of us thinks of this electrifying personality as a man who reached middle age a hopeless cripple. It was shortly after his campaign for Vice President, while vacationing with his family at Campobello, that he was stricken with infantile paralysis. He turned this plague into a living monument through his work with the National Foundation for Infantile Paralysis. Through the nickels and dimes of children was developed the polio vaccine which today is looked upon as a Godsend by all of us who have little children.

It's understandable, isn't it, that each of the four times he was inaugurated as President, this deeply religious man took his oath of office on an old Dutch family Bible opened to the 13th chapter, 13th verse, of First Corinthians, "And now abideth faith, hope, charity, these three; but the greatest of these is charity." He was truly a charitable man. Even those interests who passionately hated him could not deny this.

As in his candidacy for Vice President, he received the 1928 nomination for Governor of New York quite unexpectedly. Advised by his doctors he might regain the use of his legs, he went to Warm Springs, Ga., for treatment. Told that to give up this treatment might defeat a cure, he informed Al Smith he would not under any circumstance be a candidate. Nevertheless, the Happy Warrior and his followers nominated him and he didn't know he was nominated until the day after the convention. In the face of nationwide Democratic defeat, he carried New York with an overwhelming majority.

Recognizing that he was needed by the country, a well planned effort to secure the Democratic nomination for President was led by such men as Jim Farley, Ed Flynn, Frank Walker, Joe Guffey, and Vincent Dailey. Some of you here tonight may remember the start of this campaign when Roosevelt spoke at the Conference of Governors at French Lick, Ind., in June 1931.

All the country watched with fascinated anticipation as the candidate for President

boarded a plane at Albany and flew cross country to accept the nomination.

The "Golden Voice" was never more eloquent than when accepting. He said, "I pledge you, I pledge myself, to a New Deal for the American people. Let us all assembled constitute ourselves prophets of a new order of competence and courage. This is more than a political campaign; it is a call to arms. Give me your help, not to win votes alone but to win in this crusade to restore America to its own people."

He kept his pledge immediately upon assuming office. Never had official Washington seen such activity as the first hundred days of his administration. He made 10 important speeches, sent 15 messages to Congress and sponsored 15 major pieces of legislation. This was the start of the Presidential career that led us out of the depths of depression.

He gave us social security. It's paradoxical that when the Republican chairman of Indiana, during the 1959 campaign, said social security should be torn out by the roots, he was summarily thrown out of his party's leadership. This is a far different attitude from that which the opposition party had during the thirties. You see, President Roosevelt forced the Republicans to assume some social conscience.

The people rewarded him by returning him to office, as he would have said, again and again and again. Even the austere and distinguished Chief Justice of the U.S. Supreme Court, Mr. Charles Evans Hughes, said with a twinkle in his eye when swearing him in for the third time, "Mr. President, this is getting to be a habit."

We had all just about concluded that "happy days" were really here again when "that day which will live in infamy," December 7, 1941, was upon us. By almost superhuman effort, he led us through the most awful war the world ever experienced. But this war and the rigors of office were to demand from him that last full measure of devotion. It seemed to me, as a young GI, that there was a tremor at the bedrock foundation of our Government on that fatal day. The Commander in Chief of my whole generation had left this "vale of tears."

For an entire week commercials were omitted from our radios, and memorials to "that man" were given instead. Yet today, 500,000 people a year visit his Hyde Park home on the Hudson.

As a brilliant young Democrat, the Lieutenant Governor of Oklahoma, has said of him in a moving tribute, "He stood taller in a wheelchair than most men stand on two good legs."

Franklin Delano Roosevelt will be for every coming generation of young Democrats the shining ideal of all that is new and fresh in Government. Franklin Delano Roosevelt will be transformed during our lifetime to a towering legendary figure.

Thank you.

Navy's Polaris Can Give the Russians Something To Worry About by Way of a Missile Gap

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. STRATTON. Mr. Speaker, I have frequently in recent weeks spoken out about the tremendous potentialities of the Navy's Polaris missile submarine, and its relevance to the current debate on national defense that is raging in this country.

Nothing that I have read recently has pointed up the tremendous capacity of this weapon so graphically as has a report in the current February 22 issue of U.S. News & World Report, based on testimony of Adm. Arleigh Burke before a committee of the other body. On the basis of this testimony our effective development of Polaris can give the Russians a missile gap of their own to worry about.

Under leave to extend my remarks I include the article:

IT'S RUSSIA'S TURN TO WORRY ABOUT THE MISSILE GAP

(The missile gap everbody is talking about really spells trouble for Russia. That's the meaning of top military information just put before Congress. The United States has a whole arsenal of weapons in being and on the way—fast. Missile batteries are now in place, zeroed in on Russia. The versatile Polaris is almost ready. There will be 32 of them aboard two submarines at sea before this year is out. Movable missiles, riding rails and highways, will be another U.S. defense. There is scant comfort for Russia in the 1960 standings in the missile race.)

Maybe you're worried by the missile gap about which there is so much talk. Soviet Russia conceivably in 1962 may have 300 missiles that can plaster the United States while the United States will not have so many of equal 6,000-mile range.

Highly significant testimony given on February 9 puts a new face on that supposed gap. This testimony of Adm. Arleigh Burke, Chief of Naval Operations, has largely gone unnoticed.

On that day, Admiral Burke revealed to Congress:

The Polaris missile, developed by the United States, is perfected, and by autumn will be ready for use. During this year, 32 of these missiles will be aboard two nuclear submarines, ready to be fired in anger. These missiles are powered by solid fuel, can be fired under water. Their range of 1,200 miles can reach any important part of Russia.

The Polaris can be made in quantity. Its cost is relatively low—$1.5 million per missile. It can be mounted on railroad cars in Germany—movable bases largely invulnerable to destruction by missiles fired from Russia. It can be mounted on trucks. It can be mounted on innocent-looking freighters at sea. It can be mounted on naval cruisers.

Each missile could blow up a Soviet city. By 1961 there can be hundreds of these Polaris missiles. Russia has no comparable missile. She has no atom-powered submarine.

Other testimony of Admiral Burke indicated: Soviet Russia does have ballistic missiles that can be fired from submarines. Soviet threats, however, have centered on long-range missiles. Yet Russia in 1960 will have no more than a few dozen such missiles, compared with 32 Polaris missiles alone that can hit Russia. Thor missiles, liquid-fueled and mounted in Britain by United States, also can hit Russia. And they now are in place, ready for firing in substantial numbers. Jupiters will be operational in Europe soon.

If any shivering is to be done, official testimony now suggests, it should be done by Soviet Russia, not by United States.

MINUTEMAN SPEEDUP

There are other disclosures, also given little notice, which suggest that it is Soviet Russia that is on the short end of any missile gap, when all forces are considered.

Congress learned on February 10 that it would be asked to provide $1 billion to raise the clearance under bridges on main U.S. highways. On February 11 a report told that the Minuteman missile may be operational in 1962, instead of 1963. The Minuteman is a long-range Polaris, and will be able to hit Russia from bases in the United States. Also a solid-fuel missile, it can be mounted on trucks or railroad cars—movable bases—and will require higher clearance under bridges than now available.

It was Admiral Burke's testimony of February 9, however, that put a new light on U.S. power to destroy Soviet Russia.

From one exchange came this information:

Senator JOHN STENNIS, Democrat, of Mississippi: "You said in a very few months you would have the Polaris submarines op-operational?"

Admiral Burke: "We will have one operational in the fall, sir, and we will have a total of two this year."

Senator STENNIS: "When you say in a very few months you will have the Polaris submarine operational, to my mind that carries the idea—and I believe it does to the average American—that is saying we will be ready to hit them?"

Admiral Burke: "That is correct."

Senator STENNIS: "In war?"

Admiral Burke: "That is exactly what I mean."

Senator STENNIS: "We have a memorandum here that last year the Secretary of Defense made the statement that one Polaris submarine carries as much destructive power as all the bombs dropped by both sides during World War II."

Admiral Burke: "Yes, sir. This missile—warhead—will be many times the size of the bomb dropped on Hiroshima. It is not a small one."

The range of the Polaris missile came into question:

Edwin L. Weisl (special counsel): "What percentage, what parts of Russia on the map could you hit with the Polaris submarine?"

Admiral Burke: "With the missile you will hit anything within—you can figure it out on a 1,200-mile radius."

Mr. Weisl: "Can you hit behind their Ural Mountains?"

Admiral Burke: "Yes, sir."

Mr. Weisl: "You could?"

Admiral Burke: "Yes, sir."

The admiral testified that on nuclear-powered submarines alone there will be a total of 32 operational Polaris missiles by the end of 1960, with 80 by the end of 1961 and 128 by the end of 1962. These will be in addition to liquid-fueled Thor missiles already operational in Europe and to be operational in increasing numbers in years just ahead. They also will be in addition to long-range Atlas and Titan missiles now based or to be based in the United States.

Soviet Russia, in other words, already is looking down the barrel of a loaded missile gun.

MISSILES ON TRAINS

Other missile vehicles soon will be in the process of being loaded as well.

A whole new class of these missile vehicles was revealed by the testimony of Admiral Burke. Questions were raised about using the Polaris missile on railroad cars, on cruisers, and on ordinary freighters.

From railroad cars in Europe, Polaris missiles could cover key industrial areas of Western Russia.

Admiral Burke had this to say:

"We in the United States publish before the missile sites are ever built exactly where they are. So they know where our targets are. So missiles on railroad trains are valuable, because they can be moved from one site, from one firing site to another."

Senator STENNIS: "You think it is practical, then, to put them on moving railway cars or on moving submarines and on moving surface ships? Is that right?"

Admiral Burke: "I don't think it is planned to fire the missiles on a moving railroad car. I think what they propose to do is to move it from one place to another."

Senator STENNIS: "I mean, move them around on railway cars. Now would you want to go further into this—putting the missile on the surface ships?"

Admiral Burke: "Surface ships are on normal routine duties anyway. There will be a considerable proportion of them deployed. They are there."

How widely the Polaris missiles now can be deployed in this way is indicated in the admiral's testimony, too. He said:

"We have 18 heavy cruisers that could be so equipped, and about half a dozen light cruisers. * * * In addition, if it were an emergency and we wanted to do it, you could equip merchant-ship types with the Polaris.

"* * * You could probably put a couple of dozen Polaris missiles on a merchant-type ship, and the rest of the equipment, so they could be used."

Figuring 16 missiles per vessel, that would provide a mobile arsenal of 384 Polaris missiles aboard cruisers, plus hundreds more aboard merchant freighters, compared with the 300 missiles with range enough to reach the United States which Russia is supposed to get, conceivably in 1962.

Russia, lacking oversea bases, must rely on these intercontinental ballistic missiles in order to reach this country, unless a Soviet version of the seagoing Polaris is developed.

On that question, there is this testimony—

Senator THOMAS E. MARTIN, Republican, of Iowa: "Do the Russians have the equivalent of our Polaris missile at this time?"

Admiral Burke: "No, sir. We estimate that they have a missile which is probably a much shorter range missile than our Polaris, but we think that they do have a ballistic missile which can be put aboard submarines, sir."

Suppose Russia, without Polaris-type missiles available, launched a massive attack by 6,000-mile ICBM's. Could she catch the United States by surprise and wipe out all retaliatory bases in this country?

Admiral Burke says not. His reason: "It is nearly impossible for us to get even one missile fired at a specific time, so getting 150 or 200 missiles fired all simultaneously to arrive at all places simultaneously is a tremendous number."

Any such attack, the admiral insists, could not be accomplished all at once, so that some retaliatory forces would have time to take off for counterattack against Soviet Russia.

FROM NOW TO 1963

How much retaliatory capability will the United States have in the years between now and 1963, in the form of missiles able to reach Soviet Russia? The new testimony provides these answers—

In long-range ICBM's—Atlas and Titan—there are several in operational status at Vandenberg Air Force Base, Calif., at this time, with more to be added at Warren AFB in Wyoming in April. Production plans recently have been increased, with 130 Atlas and 140 Titan missiles now on order—for a total of 270 long-range missiles to be built before the Minuteman takes over as the prime missile by 1963.

In medium-range missiles—Thor and Jupiter—plans now call for 120 to be based in Western Europe within range of key targets inside Russia. The first of these intermediate-range ballistic missiles are in place now in Britain. Soon there will be five squadrons based there, plus two more in Italy, another in Turkey.

SHIPS AND TRAINS?

Polaris is in addition to these 390 big missiles on station. The plan now is to build 128 by the end of 1962 for use in submarines alone, with more to be turned out during this period if plans are approved for putting them on surface ships and European railroad cars.

That's a minimum of 518 effective retaliation missiles, each equipped with a nuclear bomb, all able to reach targets inside Russia, all to be in U.S. hands by the end of 1962, on the basis of official testimony.

MOVING TARGETS

By 1963 or sooner, Minuteman solid-fuel ICBM's will be added to this arsenal in quantity, based in large part on mobile missile trains. Each of these trains, consisting of a special car for the missile and others for the crew and launching equipment, will be traveling around the U.S. countryside so as not to provide a fixed target for enemy missiles.

At the same time, Polaris submarines will be roaming the high seas, invulnerable to long-range ballistic attack for the same reason. And a large portion of Strategic Air Command bombers will have a capability of being on continuous, armed, airborne alert. A good share of the Nation's retaliatory force, as a result, will be constantly on the move as a guarantee against being wiped out in a surprise attack.

It is the 1,200-mile Polaris, which can be produced much faster than the bigger, longer-ranged Atlas, that is being counted on to provide much of this country's strike-back power in the years immediately ahead. Hundreds can be turned out in a hurry if the Soviet steps up its missile output to dangerous levels.

With the final test of Polaris still ahead, how sure is the Navy that it will work? Admiral Burke comments:

"We have tested this missile. We have fired this missile from various types of launchers. We have fired the missile body from underwater, so that we know what it will do. We have tested the tubes. We have tested the warhead. We have tested all the components."

Later he commented:

"We anticipate no difficulty whatever. It is just a question of putting the systems together now, which will take a couple more months."

These are the reasons, now coming to light in testimony by high-ranking defense planners, why talk of a missile gap seems to be stirring no great concern among the top officials.

Gen. Nathan F. Twining, Chairman of the Joint Chiefs of Staff, summed it up while testifying before Congress on February 9, in this way:

"On the basis of all the information available to me, and in view of the mission and locations of our retaliatory-weapons systems, I just do not believe than any nation possesses the ability today or in the foreseeable future to attack us or destroy us without receiving unacceptable damage in return."

Summary of H.R. 4700

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. FORAND. Mr. Speaker, as a result of the many inquiries I have had regarding the various provisions of my bill, H.R. 4700, providing insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old-age and survivors insurance benefits, I include as a part of my remarks a summary of the provisions of H.R. 4700 and I invite the attention of our colleagues to this very humane and worthwhile measure.

The summary follows:

SUMMARY OF PROPOSED HEALTH BENEFITS UNDER OLD-AGE AND SURVIVORS INSURANCE AS PROVIDED FOR IN H.R. 4700

1. THE PROPOSAL

To amend old-age and survivors insurance so as to provide insurance against the cost of hospital, nursing home, and surgical services to all those eligible for old-age and survivors benefits or who would be eligible if they applied.

2. ITS PURPOSE

As people grow old, they need more medical care but usually have less money to meet its rising cost. Most of them cannot get adequate protection through private insurance, and a severe disability may mean financial disaster.

Individual health insurance policies are expensive; they usually exclude a preexisting condition; they may be refused or cancelled. Group insurance also is unavailable to most retired persons and aged widows since they have no employment connection such as normally is required.

Young widows and children similarly have low incomes and little opportunity to obtain private insurance.

Many hospitals have constant and serious financial difficulties because they have to provide free service to these people. Private charities and public assistance agencies frequently pay for such hospital care or help make up hospital deficits.

The proposal would transfer to the self-supporting insurance system a financial burden which now falls on individuals and private charities, and on public assistance financed by taxpayers. Thus it would work in the direction preferred by Congress.

Fifteen million persons would be eligible in 1960.

3. THE BENEFITS

(a) Hospital and nursing home services: Each eligible person would be insured against the cost of hospital care, including a semiprivate room and all the hospital services, medical care, drugs and appliances which the hospital customarily furnishes its bed patients. The insurance system would not pay the attending doctor's bills, except for surgical services.

Skilled nursing home services would be covered if the patient is transferred to the nursing home from the hospital and if the services are for the same condition or one arising from that for which he received hospital care. The care in the nursing home could be extended so that up to 120 days of combined care would be provided in a 12-month period but only 60 days could be hospital care.

(b) Surgical services: The insurance system would pay the cost of surgical services provided in a hospital, or in case of an emergency or for minor surgery, in the outpatient department of a hospital or in a doctor's office. Any individual may freely select the surgeon of his choice provided the surgeon has attained specified professional recognition (subsec. (c)(2)), except in cases of emergency or where the requirement of such certification is not practical. The cost of oral surgery by a dentist in a hospital would be covered.

(c) Procedures for insured persons: The insurance procedures would be like those already developed for patients covered by private insurance plans that provide service benefits.

A person eligible for hospital or nursing home insurance would, as at present be admitted to such an institution on his physician's referral. The patient could receive insured services from any qualified practitioner or institution which has agreed to participate and to be paid for services insured under the plan. In emergency situations, referral or prior agreement could be waived.

4. ADMINISTRATION

The program is to be administered by the Secretary of the Department of Health, Education, and Welfare. The OASI system would use its existing recordkeeping system to certify eligibility, to issue insurance cards, and the like. For aged beneficiaries, this would mean paid-up hospital and surgical insurance for life.

Any qualified provider of services would have the right to participate. Payments could be made at such rates as are provided in each agreement, covering the actual costs incurred, or on some other mutually agreed basis. Widely used patterns for determining rates have been developed under Government and private programs.

The agreements are to stipulate that the payment at the agreed rates shall constitute full payment for the contracted services; the patient may not be billed for additional sums for the contracted services. Agreements of this type are now in effect under the Federal program for medical care for dependents of members of the Armed Forces.

The Secretary could make agreements directly with providers of services or with their authorized representatives. Group practice prepayment plans would be included.

The Secretary shall prescribe regulations and establish an Advisory Council. He may utilize the services of private nonprofit organizations to the extent that he determines that their utilization will contribute to effective and economical administration.

5. SPECIAL SAFEGUARD

Nothing in the bill shall be construed to give the Secretary or administering agencies authority over the internal management of participating institutions or over the practice of medicine or the manner in which medical services are provided.

6. EXCLUSIONS

Persons eligible for permanent and disability benefits are not included. The proposal does not apply to costs incurred in Federal hospitals, or in tuberculosis or mental institutions, or in other countries. It does not cover all types of nursing homes or apply to institutions that provide primarily domiciliary care. It does not apply to workmen's compensation cases unless arrangements are made to reimburse the insurance system. It does not include elective surgery, or nonsurgical medical services except those customarily furnished by hospitals as an essential part of hospital care for bed patients.

7. FINANCING

The bill would increase contribution rates of employers and employees by one-fourth percent each and of the self-employed by three-eighths percent. The health benefits would cause about half of the additions to total cost which would be met in these ways.

8. RELATION TO PRIVATE INSURANCE

The benefits would start 12 months after enactment. This would give time for adapting private insurance arrangements so that they supplement rather than duplicate the new benefits.

Daily News Joins in Support of Unification Plan

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. KOWALSKI. Mr. Speaker, as the sponsor of a bill, H.R. 9874, to provide our country with a more efficient defense establishment by real unification of the armed services, I was happy to read the editorial, "Dollars and Defense," in last night's Washington Daily News.

I recommend that every Member of this body read the News editorial, which I am happy to place in the RECORD under unanimous consent.

Says the News: "There must be one military service, instead of three," and in this sentiment I concur most heartily.

Only by true unification, by sweeping away the layers on layers of assistant secretaries and organizing the Department of Defense on a functional basis, can we provide the best defense for our country. By the same unification process we could make possible the savings of billions of dollars a year for our taxpayers.

Following is the editorial in the Washington Daily News of February 15, 1960:

DOLLARS AND DEFENSE

With all the angry political debate over the state of the country's defenses, it is difficult, to say the least, to know just how we stand.

Confusion is confounded by suspicion that representatives of the high military command tend to view the problem largely through the eyes of their own branches of the service. The airmen want more supersonic planes and airborne alerts, the sailors more Polaris-carrying submarines, and the soldiers more power to fight "brush-fire" wars.

Out of this the impression strengthens that there must be one military service, instead of three—one uniform, one basic system of officer training, one source of promotion, one single devotion to national security without regard to the cut of the uniform of the man with the gun.

One need not impugn the motives of the advocates of the various services. Their viewpoints are the products of their different training and tradition, starting at an impressionable age in the military academies. However, though their attitude is honest, it is narrow; it has got to be changed.

Interservice rivalries have cost us billions in duplicated military equipment. More billions will not protect us adequately if the system is basically unsound.

This bears on a misconception, nourished daily by the alarms of politicians seeking election and some of the military seeking appropriations. It is that, if we just spend enough money, we will have and hold the necessary edge over the Russians. Despite our experiences all around the world, which should disillusion us, our faith in the magic of the dollar remains unshattered, apparently. It is a dangerous illusion.

From the walls of Jericho to the maginot line, history provides ample evidence that defenses—however costly—which produce complacency are easy targets for an enemy rich in imagination, even though poor in resources. And the Russians are poor in neither.

Not necessarily more money, but money more wisely spent, is what we need. And more assurance that our antipathetic military services are more interested in defense against Communist aggression, and less interested in defense against each other.

The Law of Diminishing Returns

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. PORTER. Mr. Speaker, as a member of the House Post Office and Civil Service Committee, I have been unusually alert for newspaper accounts, constituent letters and statements of business firms reporting the repercussions on business of the postal rate increases which were authorized in Public Law 85–426.

An article in the January 6, 1960, issue of the Greenfield, Ohio, Daily Times, has recently come to my attention, I believe every Member of the House of Representatives will be filled with apprehension when the implications of this news release are pondered.

The sharp decline in postal receipts in 1959 over 1958 in the Greenfield Post Office, as reported by Postmaster J. Paul Witt, is not the kind of figure that indicates progress and prosperity. The report singles out the increase in bulk third-class postal rates as the greatest factor contributing to the shocking drop in receipts. Decreased employment in local industry is also reflected in the statistics released to the Greenfield Daily Times.

In reading this story one cannot help asking himself if the present postal rates are not already bringing in to force the law of diminishing returns.

The article follows:

POSTAL BUSINESS NOSEDIVES IN 1959

Greenfield Post Office had business receipts totaling $329,006.24 during calendar 1959, a sharp decline from the office's all-time record high of $505,693.54 in 1958.

The annual summary report was prepared by Postmaster J. Paul Watt and was made public today.

The dropoff of receipts—$176,687.30—was attributed largely to the reduction of circular mailing by Wilknit Hosiery Co., Inc., particularly since bulk postage rates were increased last July.

The overall rate increases also contributed to the decline in business.

The year 1959 also brought some reduction in the volume of mail dispatched by the Greenfield Printing & Publishing Co.

On the other hand, the American Pad & Textile Co. increased its parcel post mailing.

The 1959 figure of $329,006.24 was the lowest registered by the office since 1955 when business amounted to $303,712.48.

Figures for other recent years include: 1957, $454,276.07; 1956, $394,039.01; 1954, $356,844.50.

The postage rate increases are continuing. Rates went up in some mail categories on January 1, and another one-half cent hike in bulk rates is scheduled for this July 1.

As nearly as the business year can be divided into quarters in the fiscal system now

employed by the Post Office Department, the quarterly receipts during 1959 were: $11,196.35, $61,063.01, $103,809.97, and $52,936.01.

In view of the effect of Wilknit mailings on the business volume at the post office, as well as the fact that the firm has been gradually reducing its personnel, the Times today asked Lowell Wilkin, president and general manager, for a statement as to prospects for possible business improvement in the new year.

In response, he said:

"We have taken on several new items and we are endeavoring to find others to help maintain volume, but what the prospects are I just can't say."

Food Explosion Versus Population Explosion, a Thoughtful Look to the Future

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. CUNNINGHAM. Mr. Speaker, much has been said about a so-called population explosion and what should be done about it. This is a serious matter, meriting our thoughts and attention.

Under leave to extend my remarks in the RECORD, I am including a most interesting paper written by Dr. Nicholas D. Dietz, Jr., of Omaha, Nebr. This paper was recently published in the Social Justice Review.

The paper results from a serious study of future population growth by Dr. Dietz. He brings up a previously unpublicized relationship between diet and population and makes telling points about the untapped food production resources in the world.

I most earnestly commend this paper to anyone concerned about this matter:

FOOD EXPLOSION VERSUS POPULATION EXPLOSION — NATURE SEEKS COOPERATION, NOT FRUSTRATION

(By Nicholas Dietz, Jr.)

There is much genuine concern—even alarm—among very many well-meaning people about the imminent world "population explosion" following in the wake of the present "golden age" of both preventive and curative medicine. Many more people are surviving longer and better than ever before, especially in the so-called underprivileged countries. Ceylon, for example, aided by WHO (World Health Organization), has halved its death rate in only 10 years. It is a sober fact that world population is presently increasing at the impressive rate of 1.6 percent per year. Better understanding of nutrition and constantly improved methods of production and distribution of food are helping, too, for despite severe regional shortages, especially in protein, the evidence indicates that there is probably less malnutrition, as well as less disease, in today's estimated 2.8 billion world inhabitants than there were when the total was only the 1 billion or so of the mid-19th century.

FERTILITY OF HUNGER

The contribution from better nutritional understanding includes the important and relevant "fertility of hunger" theory of the noted Brazilian nutritionist, Dr. Josue de Castro of FAO (United Nations Food and Agriculture Organization). This theory correlates fertility with the intake of animal protein, that is, with the protein supplied by milk, cheese, eggs, meat, or seafood. The theory holds that very low animal protein consumption (common in undernourished, overpopulated areas) engenders a pathologic, hormonally induced hyperfertility by virtue of liver damage brought on by the protein inadequacy. The accompanying table of data for the year 1939 supports de Castro's theory, as do also some important and long-overlooked nutrition-fertility studies on six generations of albino rats carried out by Sionaker at Stanford University about 30 years ago and reported in the American Journal of Physiology. The table reveals that the birth rates in Formosa, India, and Japan, where animal protein intakes were relatively very low, were 2 or 3 times higher than the corresponding birth rates in Australia, the United States of America, and Sweden, where such protein intake was 6 to 12 times higher than in the other countries. If it is suspected that the large differences in the birth rate data were due to artificial birth control practiced in Australia, the United States of America, and Sweden, we would point out that a correction of the data for birth control would be too small to significantly alter the total picture, and we might add that the similar hunger-fertility data for the albino rats could not possibly have been influenced by any rat birth control.

Country	Average daily per capita animal protein intake in grams	Annual birth rate per 1,000 population
Formosa	4.7	45.6
India	8.7	33.0
Japan	9.7	27.0
Australia	59.9	18.0
United States of America	61.4	17.0
Sweden	62.6	15.0

In short, de Castro indicates that adequate protein nutrition tends to act as a natural brake, so to speak, on any "population explosion," whereas inadequate protein nutrition tends to accelerate it.

In any event, the question earnestly and constantly being raised in many quarters is: "Where will enough food ever come from as the population explodes, when very many people even now go to bed hungry at night?"

A common reaction to this threatening surplus of human mouths to be fed without enough food to go around, is that "after all—let's have the courage to face it—it is really a problem like that of an excess of rabbits at large vainly trying to scavenge enough food to keep alive." The suggested solution very often is the neo-Malthusian one: "Let's cut down the surplus of mouths by some humane, well-organized system of population control and thus bring about a realistic balance between population and food supplies. Naturally, we just can't kill off a lot of people or let them starve to death, as in the case of the rabbits, but we can achieve the same result by a humane program, government sponsored if necessary, of organized, systematic, artificial restriction of surplus births."

Unfortunately such an approach, well intentioned though it is, is actually not only in utter conflict with the innate dignity of man and the natural law which governs all men, but it also overlooks one of man's most cherished convictions—his strong and widely held faith in divine providence, which is supported by memories of such Biblical events as the providential manna supplied to the Israelites of old in the desert wilderness, and Jesus' miraculous multiplications of the loaves and the fishes to feed the hungry multitudes, not to mention the constant verbal teachings of Jesus, such as: "For your Father knoweth that you have need of all these things" (Matthew 6), and "Do not be afraid; you are of more value than many sparrows" (Matthew 10).

The universal Judeo-Christian acceptance of divine providence is eloquently attested to, for example, by the wonderful story of Job's patient acceptance of God's will, by Roger Williams' choice of the name "Providence" for the capital city of Rhode Island in our colonial days, in gratitude for "God's merciful providence," and by the concluding sentence of our American Declaration of Independence: "And for the support of this Declaration, with a firm reliance on the protection of Divine Providence. We mutually pledge to each other our Lives, our Fortunes, and our Sacred Honor."

Furthermore, it is not at all axiomatic that the population explosion will long continue. The neo-Malthusians calculate that there will be standing room only for the 290 trillion people in the world by the year 2690 if the population explosion goes on unchecked. This would amount to 5 square feet per person, and is, in the words of the population expert, Father Anthony Zimmerman, S.V.D., "a good exercise in mathematics, but it is demographic nonsense." The plain fact is that the present rate of increase will be of relatively short duration by its very nature, and, shall we add, by the wisdom and providence of Almighty God. As we know, average infant survival rates have risen and average life spans of all have lengthened. Once the ultimate of most of the human race, as Father Zimmermman points out, there will be a marked slowing down of population expansion, on the basis of present fertility rates. Crude mortality rates will rise because of the large percentage of senior citizens; crude birth rates will decline because they will be measured against an increasing number of senior citizens. Furthermore, as De Castro points out, present fertility rates in overpopulated areas like India may be expected to decline if nutrition can be significantly improved—and it can be as we shall show presently. However, independently of the Da Castro theory and of any potential fertility decline due to atomic or other injury to human genes, Father Zimmerman foresees that there may be two more doublings of the human race before the population explosion ends and expansion then continues at a much slower pace. Two more doublings would result in a world population of about 11 billion.

Finally, the neo-Malthusian approach assumes that the present supply and distribution of good food cannot be greatly improved upon by man's efforts. Actually, this assumption is quite invalid, to say the least, in the face of all the scientific, economic, and historical evidence.

POTENTIAL FOOD PRODUCTIVITY

In a careful 5-year experiment near Essen, Germany, an engineer's family of six lived in excellent health on the products of 3 acres, which were supplemented only by salt, baking powder, lime, mineral fertilizer, and peat. On the basis of the estimate of Colin Clark, director of the Oxford Agricultural and Economics Research Institute, of about 19 billion acres of "good temperate agricultural land" presently available, the German experiment would indicate that these acres could supply a population of about 38 billion without a single improvement in existing agricultural techniques. Note that this estimate excludes lands in the Torrid and Arctic Zones, as well as potential but presently unavailable Temperate Zone lands. Actually a total of only about 20 percent of the earth's presently arable acreage is now under production, according to the U.S. De-

partment of Agriculture, and nine-tenths of the earth's total land surface is not under any production.

One of the countries which is most fearful of overpopulation, and as a result, has been promoting a "family planning" program as a population control measure, is India. And yet India can be said to be more truly faced with underproduction than with overpopulation. Of her 1 billion acres which can be cultivated, only 80 million were under cultivation in 1952. Rice and wheat are her two principal crops. But she was producing only 800 pounds of rice per acre, while Germany produced 2,000. If De Castro's "fertility of hunger" theory is correct, the population of the subcontinent of India (including Pakistan) has increased so fast—from 200 million in 1870 to 450 million in 1951—largely because of underproduction of foods and famines during the intervening years, not in spite of them. When hunger cuts down, say, 3 in every 10, nature, says De Castro, sees to it that 4 or 5 extra babies are produced, simply to insure race survival, so to speak.

The continuing agricultural crises of chronic surpluses and their inevitable economic consequences in the United States and elsewhere, are largely due to the extremely rapid improvement in farming efficiency whereby more and more food and fiber are constantly being produced on less and less acreage by fewer and fewer workers. Paradoxically, these crises are self-perpetuating in that they are in themselves very strong stimuli for the improvement of farm income through the achievement of constantly greater efficiency. For example, between 1954 and 1958, there was a 30 percent rise in the annual wheat yield per acre in the United States. In America the amount of food and fiber produced per man-hour of farm work has doubled in the past 18 years, and it is now costing the Commodity Credit Corporation the staggering yearly total of $1 billion—over $100,000 per hour—just to store our embarrassing Government-held agricultural surpluses.

MAN'S INGENUITY AND NATURE'S POTENTIAL

Despite large acreage losses due to erosion, immense highway and parking systems, airports, military installations, sprawling factories, mushrooming suburbs, etc., our agricultural soil bank acreages will probably continue to increase for some time, for farm machinery becomes ever more efficient and automatic. Greatly improved plant and animal strains and breeding practices continue to be developed, along with richer fertilizers, revolutionary plant stimulants, like gibberellin, more efficient animal feeding programs, better crop disease control and prevention, better insecticides, fungicides, and weedkillers, more crop rotation, irrigation, water and soil conservation, reclamation, improved weather forecasting, etc. Space satellites may revolutionize the science of meterology, with great obvious advantages to agriculture.

The manufacture of synthetic materials in factories is releasing large farm and plantation acreages once devoted to raising non-food crops, such as certain dyes, and more recently, fibers, plastics, rubber, etc. About one-half of the world's rubber supply is presently of high quality, factory-made material. Soap manufacture in this country now uses only one-third as much animal fat, such as lard, as it did only 10 years ago, because of the advent of excellent detergents made from petrochemicals. Rural electrification, many types of mechanization, mass production, and even automation are also releasing large acreages previously devoted to supplying food for farm work animals. Control of dread disease vectors, like the malaria-bearing anopheles mosquito and others, are releasing lush tropical areas which have been previously unavailable for agriculture or even for human habitation.

Large scale, soilless, rapid, and very efficient growth of protein, fat, carbohydrate, and vitamin foodstuffs (algae and yeast culture, hydroponics, etc.) has progressed well beyond the research and development stages. De Castro estimates that one tank-factory for algae-yeast culture could produce enough precious protein for 3 million people and enough fat for 1,500,000 people—the equivalent of tens of thousands of acres of arable land. Intensive chemical, biochemical, and engineering research would doubtless be able to achieve the commercial manufacture of edible oils and fats from petroleum. Similar research likewise would be able to achieve the commercial production of sugars from wood and other cellulose sources. Once science and engineering have adequately comprehended and finally duplicated the photosynthesis of foodstuffs by sunlight, the nutritional possibilities will be so tremendous that they will challenge the imagination.

Vegetation captures only 2 percent of the solar energy which falls upon it. Research is in progress to develop new patterns of leaves and branches which will intercept maximal amounts of sunshine, and new patterns of roots which, instead of spreading outward, will burrow deeper into the soil and hence closer to the water table, thereby providing an acreage economy by making it possible to grow plants closer together.

Canning, dehydration, the making of concentrates, refrigeration, deep freezing, and other commercial forms of food preservation, including the widespread use of a variety of safe chemical preservatives and a growing use of sterilization by nuclear radiation, are constantly contributing to the better conservation as well as the better distribution of food supplies. The possibilities of food preservation were dramatically illustrated by a banquet held at the Explorers' Club in New York some years ago. The menu included meat from an extinct prehistoric animal which had been safely preserved for thousands of years in subzero Arctic ice. The Admiral Byrd and other Antarctic expeditions have less dramatically but very practically demonstrated the efficiency of natural, long term, deep-freeze food preservation in the vast south polar continent Antarctica.

Scientific marine agriculture (the planting and harvesting of fish) can yield as much food per acre as can good land. Fresh water fish farming has been successfully promoted by FAO in Haiti and elsewhere. An acre of warm pond water is reported to produce almost 1,000 pounds of fish per year without artificial food or fertilizers in Haiti. Even a rice field can produce 300 pounds of fish per acre and also grow a rice crop.

Only 1 percent of the world's food at present comes from the 71 percent of the world's nonland surfaces, that is, from its rivers, lakes, seas, and oceans. So far, little or none of this food is vegetation. Surprisingly, an average square mile of ocean surface spontaneously produces about 13,000 tons of vegetation per year, which amounts to a world total five times greater than that from land. This in spite of so-called ocean deserts with inadequate nutrients because of lack of natural vertical circulation of nutrients from lower ocean depths. The National Academy of Sciences and the National Research Council are studying ways of turning some of these ocean deserts into fertile ocean areas.

The recent, famous voyage of the raft, *Kon Tiki*, from Peru to the islands of the Southwest Pacific, demonstrated that harvesting with very fine mesh nets of the tiny ocean zooplankton (which feeds on the phytoplankton) can be achieved, and further that these plankton are both delicious and nutritious.

It is already feasible to desalt sea water rather cheaply, at perhaps as low as 20 cents per 1,000 gallons of fresh water produced. It is not at all unrealistic to foresee a day in the not too remote future when the demineralized water which land vegetation requires will be pumped inland from coastal areas by inexpensive solar, tidal, atomic or other available forms of energy. This will mean that gigantic desert wastelands, like Africa's Sahara, Asia's Arabia, Iran or Mongolia, the Australian desert or our own parched Southwest, will be able to blossom out and burst forth as nutritional paradises—paradises which will simultaneously be able to afford employment to uncounted multitudes of immigrants of many skills, because the water will be available for industry as well as for agriculture in these vast areas of hitherto untouched natural resources. The impressive desert transformations already taking place in Israel are but a faint glimmering of future possibilities. A substantial plant to demineralize about 1 million gallons of salt water per day is about to be constructed in California, the greater part of which State, as is well known, is quite arid. But this aridity has not prevented California from applying technical measures which have already made it, among its many other achievements, the leading agricultural State, and will soon make it the most populous of our 50 States.

SOLUTIONS IN SIGHT

These changes are occurring, or can be anticipated to occur, all over the world, as man makes better use of the earth's natural resources, as suggested by Pius XII. In fact, since 1948, as Father Zimmerman has stated, world food production has been increasing at about 2.7 percent annually, and industrial production 5 percent annually, whereas world population has been increasing at the significantly lower rate of 1.6 percent annually. As these changes take place, the challenging problem of distribution—half the consumer's food cost in the United States is still a distribution cost—will inevitably shrink in importance as new centers of food production rise up to shorten distances, and as distribution itself continues to expand and to improve in response to natural demands and to its own competitive economic pressures. Indeed, modern transportation and transportation systems, like the new St. Lawrence Seaway, can be foreseen as potential aids not only in bringing more food and other goods and trade more quickly to more people, but also by facilitating peaceful emigrations from overpopulated and refugee areas to newly developed and underpopulated food centers and bases which need worker-consumers and their skills.

An illustration in point is our newest State, Hawaii. Two centuries ago, infanticide was regularly practiced among the 100,000 Kanaka inhabitants of the Hawaiian Islands, to balance the number of mouths against the apparent food supply. Hawaiians now number well over 500,000, and they eat better than ever because of an enlightened and prosperous agricultural economy in the wake of peaceful migrations of settlers of varied cultures and skills from the United States of America, Japan, Portugal, China, the Philippines, Puerto Rico, Korea, and elsewhere. Many of these settlers migrated from surplus population or refugee areas. Hawaii has just peacefully and proudly chosen Hawaiians of three ethnic origins—Caucasian, Japanese, and Chinese—to represent them in the U.S. Senate and House of Representatives.

A greater and more familiar illustration is, of course, our own continental United States, whose 178 million population has arisen from diverse surplus and refugee European peoples and others from all over the globe. All of them, working peacefully and diligently together, have made America, under God, not only the "melting pot of nations," but also the "greatest of nations."

An immediate emigration problem is being seriously espoused by the United Nations World Refugee Year program which has received the hearty endorsement of Pope John XXIII. We of the Catholic Central Union

(Verein) and the National Catholic Women's Union, together with our beloved central bureau and especially its esteemed director, know and endorse this work even as we have consistently done in the past. In the light of our present view of the overall population-refugee-food picture, we feel, I am certain, more assured than ever that as we work and as we confidently continue to pray "give us this day our daily bread," to the prayer's divine Author, our prayer will never be said in vain. It is not entirely inconceivable that men may even one day be confidently offering this same prayer to the God of all the universe, from nonterrestrial human colonies established by interplanetary space travel and migration.

In summary, then, does it not seem that in Almighty God's own good time, the much feared "population explosion" is really destined to be providentially slowed down of its own very demographic nature, while at the very same time it is being contained and balanced by enlightened and hard-working men of good will as they make much better use of the manifold gifts of God's creation—as they set off a veritable world "food explosion"?

"World explosion?" Yes. But a controlled and a useful explosion, a wise and a providential one; destined to carry bounteous new manna to modern peoples, new and astronomical multiplications of loaves and fishes to uncounted latter day multitudes.

Defense in Politics

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. GARMATZ. Mr. Speaker, in view of the many statements, arguments and charges being made in regard to the adequacy of our national defense and the budget requests for that purpose for the coming fiscal year, I believe the nonpartisan article appearing in the Baltimore Sun on February 15 is worthy of careful reading by all Members of Congress.

The writer, Price Day, is on the editorial staff of the Baltimore Sun. He is an outstanding journalist and analyst, and his writings are always thought provoking and stimulating. For the consideration of the Members, I am inserting the article in the RECORD.

The article follows:

DEFENSE IN POLITICS—PARTISANSHIP, BOTH KINDS

(By Price Day)

The glib way of describing the debate over defense is as a political fight, with Republicans arrayed on one side declaring that the defense planning is adequate, and Democrats in phalanx on the other crying that it is not.

In a degree that picture is accurate. The great issues of any election year, as defense is a great issue of this, are going to be used politically. Political considerations are involved, if not indeed uppermost, when Senator SYMINGTON waves papers to challenge administration figures on Russian missiles. Political considerations are involved, if not indeed uppermost, when Mr. Eisenhower makes a quick junket to Cape Canaveral; even though in a press conference the next day, with a straight face, he decries headline-seeking in matters of defense.

When Senators JOHNSON, HUMPHREY, and KENNEDY—each of them, like Sentaor SYMINGTON, a possible Democratic nominee—press the attack on the administration's defense policies, they are thinking of the political effects of their remarks. When Mr. Maurice H. Stans, Director of the Bureau of the Budget, makes a public address in which he presumes expertness in the subtleties of intelligence estimates, he has politics on his mind.

This is not to say that the Senators named are concerned with politics alone, or that Mr. Stans is not convinced that he is right about the intelligence estimates. But they are all politicking. It is inevitable that they should be, and not improper. It is the way the country runs.

Developments within the past few days have shown, however—if the showing was necessary—that the defense debate is something more than a simple partisan argument.

As noted by Mr. Gerald Griffin in the news columns of the Sun yesterday, a new line of criticism on defense has appeared within the past week, on the theme that a larger effort in the whole defense program is required, and that the public would support it.

It is just another Democratic line of criticism, in the sense that its three most notable proponents, Representatives RAYBURN, VINSON, and CANNON, are Democrats. Where they differ from many other Democratic critics is in their established reputations for knowledge and for nonpartisanhip on large issues.

Mr. RAYBURN in one of his aspects is strongly partisan. There is no need to labor the point that in another he has for decades taken a consistently nonpartisan stand on defense and foreign policy. When he says that "we have not made anywhere near the progress we should have made in our defense," few people in Washington doubt the genuineness or the depth of his concern.

Similarly with Mr. VINSON, chairman of the House Armed Services Committee, who, as Mr. Griffin writes, is "generally considered to be one of the true experts on the Nation's Defense Establishment," this in contradiction to the President's suggestion last week that expertness in that field is confined to the Defense Department and to wearers or former wearers of general's stars. When Mr. VINSON says that during the past decade (a time covering more than the Eisenhower administrations) "we have worried about dollars when we should have worried about a more adequate defense," none but the radically partisan in the other party are going to accuse him of playing politics with the national security.

Mr. CANNON's case is the most startling of the three. When Mr. CANNON, a noted guardian of the public purse under whatever administration, says that more money ought to be spent on defense, people sit up and take notice.

Away from the Washington scene and its political labels, others also who do not qualify for the President's expert badge but who still speak from knowledge carefully gathered and painstakingly weighed are not altogether convinced that the administration's defense policies are adequate. One example: The report of the Russian-research institutions of Columbia and Harvard Universities, which in its section on defense doubts that sufficient account has been taken of the Soviet capabilities for local and limited warfare.

President Eisenhower said on Thursday that on questions of defense he tried to keep his own statements outside partisanship. It is undoubtedly true that in defense and foreign policy he believes himself nonpartisan. Indeed, it is unquestionably true that—Cape Canaveral junkets notwithstanding, for any politician must do things like that—he holds himself in these fields above party.

But at the same time he seems to deny nonpartisanship to others. He persists in dismissing as parochial any military opinions at odds with his even from men by his own definition expert. He appears to agree with those in his party who charge that the Democrats, from political motivations, are undermining the Nation's morale with their criticisms of defense policies.

Granted the election-year inevitability of vigorous politics on both sides, the issue is too important for debate to be stifled, or for opinion from any informed, earnest, and thoughtful source to be brushed aside.

U.S.A.: Second-Class Power

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. SANTANGELO. Mr. Speaker, last year I received from Columnist Drew Pearson a complimentary copy of his book entitled "U.S.A.: Second-Class Power." After I read it avidly I was shocked, angry, and mortified. I asked myself soul-searching questions. How could our country, the United States, be second to any other country in military might and power? After all, did not the United States develop the first atomic bomb and terminate a phase of World War II by dropping this devastating atomic bomb on Japan destroying completely the cities of Hiroshima and Nagasaki? Did not the United States develop also the powerful hydrogen bomb more powerful than any other instrument of destruction? Did we not also in the Korean war develop our regard for mankind by refraining from using these weapons of total destruction?

I have continued to wonder as to our military position and reports from our President of the United States, our generals, and knowledgeable people, like Senator SYMINGTON, do not resolve these doubts. Is the American citizen satisfied that this administration has done everything to maintain our prime position which we enjoyed in the 1940's?

Is the American citizen satisfied that we are not a second to Russia in military power?

Do the statements of our President, Dwight D. Eisenhower, which are contained in the following editorial published in the Washington Post this day, February 16, 1960, satisfy our quest for security and resolve our doubts?

The editorial follows:

CATCHING UP

Tass, the Soviet news agency, announced the first intercontinental missile on August 26, 1957. The first Soviet sputnik took flight on October 4, 1957. On September 13, 1959, a Soviet rocket reached the moon. On January 20, 1960, the Soviet Union reported the successful test in the Pacific of a missile that went nearly 7,800 miles and struck within 1¼ miles of its target.

Following are some of the comments of President Eisenhower during this progression:

"Let's take the earth satellite, as opposed to the missile, because they are related only indirectly in the physical sense, and in our

case not at all. Never has it been considered as a race." (October 9, 1957.)

"So far as the satellite itself is concerned, that does not raise my apprehensions, not one iota." (October 9, 1957.)

"It is my conviction, supported by trusted scientific and military advisers, that, although the Soviets are quite likely ahead in some missiles and special areas, and are obviously ahead of us in satellite development, as of today the overall military strength of the free world is distinctly greater than that of Communist countries." (November 7, 1957.)

"At this moment the consensus of opinion is that we are probably somewhat behind the Soviets in some areas of long-range ballistic missile development." (January 9, 1958.)

"With respect to the thrust * * * I do know that our plans, programs of development, are the kind that will put up any kind of missile or any kind of satellite that we believe will be necessary." (June 18, 1958.)

"There has been no place that I can see where there has been any possibility of gaps occurring." (August 27, 1958.)

"Today the so-called missile gap is being rapidly filled." (October 20, 1958.)

"We are rapidly filling the gap that existed; and in some ways I think that our scientists have already achieved what we would call even more than equality, particularly in types and kinds, even if not in numbers." (October 21, 1958.)

"The so-called missile gap of 6 years ago is speedily being filled." (October 22, 1958.)

"Today America—and all the world—knows that in less than 4 years we are rapidly closing the missile gap that we inherited. And sputniks have been matched by Explorers, Vanguards and Pioneers." (October 31, 1958.)

"It is absolutely fatuous and futile to try to balance, item by item, the progress of two great nations in their technology of defense. To disturb ourselves too much that we have not yet caught up with another great power and people with technical skill in a particular item, it seems to me to show a loss or a lack of a sense of balance." (January 14, 1959.)

"We do not believe that there is a relative increase in their capacity." (February 4, 1959.)

"Our military missile program, going forward so successfully, does not suffer from our present lack of very large rocket engines, which are so necessary in distant space exploration. I am assured by experts that the thrust of our present missiles is fully adequate for defense requirements." (January 7, 1960.)

"I am always a little bit amazed about this business of catching up. What you want is enough, a thing that is adequate." (February 3, 1960.)

"There are too many of these generals with all sorts of ideas. I cannot be particularly disturbed because everybody with a parochial viewpoint all over the place comes along and says that the bosses know nothing about it." (February 3, 1960.)

"The biggest problem there is in the United States today is to make sure that her own people * * * understand the basic issues that face us and form their own judgment." (February 11 1960.)

The Second Battle of Gettysburg

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. QUIGLEY. Mr. Speaker, as I have already indicated, the action of the House today in approving the 1961 appropriation for the Department of the Interior leaves the status quo unchanged in the second battle of Gettysburg.

Much has been written in the past year about the efforts being made and some that should be made to save the Gettysburg Battlefield and other historical monuments from being overrun by unrestricted commercialization. Few more comprehensive and understanding articles on the subject have come to my attention than the one which appeared in last Friday's edition of the York (Pa.) Gazette and Daily. The article is written with malice toward none and with charity and understanding for all who are currently striving to resolve for everybody's benefit the second battle of Gettysburg.

I commend the article to the attention of all the Members who are desirous of having a better understanding and appreciation of the problems involved.

The article follows:

ON LINCOLN'S 151ST BIRTHDAY—NORTH LOSING TO VIRGINIANS IN SECOND BATTLE OF GETTYSBURG

The 151st anniversary of the birth of Abraham Lincoln finds the North losing the first skirmish in the Second Battle of Gettysburg.

The battle is for funds to save the historic battlefield from encroachment by commercial establishments and residential development.

A Department of the Interior official this week said further Federal purchases will not be made at Gettysburg in this fiscal year. He placed the blame on local officials who have not taken action to provide zoning laws to protect the field and surrounding land from encroachment.

A $450,000 congressional appropriation last year was earmarked for the Gettysburg and Manassas (Va.) battlefields and other historic Civil War sites with the string attached that the local authorities must provide zoning protection. At Manassas, site of the Battle of Bull Run, the zoning was rushed through and the way cleared for purchases there.

Officials in Gettysburg and in Cumberland township, where most of the battlefield land lies, have not yet provided the zoning protection. Gettysburg borough officials have not even started to plan for zoning. But that may not be very important to the battlefield since very little of the land where the fighting occurred is in the borough.

In the township, a planning commission is at work and has the help of Fels Institute, Philadelphia, in preparing for zoning. "We feel we must take it slow enough so that if we pass a zoning ordinance, it will stand up," Col. Thomas Nixon, chairman of the planning group, explained.

As a result, money already appropriated by Congress has been allocated to Manassas and elsewhere and none is left to buy land in Adams County.

Another $400,000 is recommended for further purchases of Civil War battlefield land in the year beginning July 1, but Congress is expected to attach the same zoning requirement.

FALSE IMPRESSIONS

The second battle has received widespread attention, through national publications and Sunday supplements. Some of the articles have promoted false impressions of the role of Gettysburg and Adams County.

The first false impression is that the battle is being waged by Gettysburg. Gettysburg and Adams County are involved almost as accidentally in the second battle as they were in the first. The town and county have their share of combatants but these represent a comparatively small portion of the total population.

The second misconception is that Gettysburg and the county are dependent on the battlefield. True, the site attracts thousands of visitors—the National Park Service estimates about 800,000 a year—and the visitors buy meals, lodging and souvenirs. Estimates of what they spend vary widely. The pessimists say $4 million, the optimists, $11 million. County officials estimate that less than 1 percent of the county's population is engaged in employment directly connected with the battlefield and related services to tourists.

It is because of this that the county commissioners feel wronged when they are charged with a lack of patriotism or with being unfeeling when they do not donate some $80,000 worth of county home land—which includes the site of the first day of battle—to the cause. If they were personally willing to do this, they would still be prevented from doing so because they have no legal authority to make such a donation. Aside from this, they feel that it is quite likely that they would run into considerable opposition from county taxpayers.

The commissioners are counting on using money from the sale of the land to help finance a new county home. If they give it away instead, the donation will be reflected in tax levies, and many Adams Countians who would like to see the battlefield preserved are not that enthusiastic about it that they care to foot so large a part of the bill.

The third false impression that there is imminent danger that the battlefield area will suddenly be turned into a section of garishly lighted beer parlors and honky-tonks. There are two kinds of pressures being felt—one is the population growth in the community which is creating a demand for housing, the other is the increasing flow of tourists and the demand for accommodations.

Houses and motels are abuilding in the community and with much of the battlefield land still privately owned, there is the danger that the pressure of rising land values will tempt owners to sell, regardless of how hallowed the ground may be in the eyes of others.

There are probably some half dozen commercial establishments already on land which even the most moderate of battlefield savers would like to see turned back to the State in which it was in 1863. One such place has been bought by the Park Service and bids are being asked for removal of the buildings. But buying this kind of property is expensive.

To bolster the effort, the Gettysburg Battlefield Preservation Association has been formed and is in the midst of a campaign to raise funds by donations so as to purchase some of the threatened land. This effort, while centered in Gettysburg, is not local but is fostered by persons from over a wide area. Governors of several States are members of its advisory committee.

This effort is not unlike the effort that followed the 3 days battle in 1863. The smoke had scarcely cleared away before visitors poured into town. There were the relatives of those who had fallen in battle and there were the curious. Two Gettysburg attorneys conceived the idea that the battlefield should become a memorial to the thousands who fell there. David McConnaughy wanted to preserve the field. David Wills thought it appropriate to establish a national cemetery there.

The ideas of the two men soon spread and State after State joined in the effort. Wills had been asked by Governor Curtin to look after the dead. Three weeks after the battle, Wills reported to the Governor that rains had washed away the soil from many of the graves and that "hogs and dogs are eating" the bodies. The Governor called

on Wills to contact Governors of other States of the Union and funds were appropriated so that the national cemetery became a reality in a few short months.

It was in November of 1863, 4½ months after the battle, that Abraham Lincoln came to Gettysburg to dedicate the cemetery. His simple and brief speech of dedication, the one he said "the world will little note nor long remember," has become one of the most widely known pieces of literature.

While Lincoln was wrong about the world forgetting what he said, he apparently was right when he said, "It will never forget what they did here." The number of visitors to the Gettysburg battlefield grows greater year by year.

While Wills was at his work of bringing the cemetery into being, McConnaughy was busy too. Governor Curtin recognized his efforts and on April 30, 1864, approved the establishment of the Gettysburg Battlefield Memorial Association. Money was raised and land bought. By the time a score of years had passed, about 800 acres had been acquired. In 1896 the land became the National Military Park of Gettysburg and was under the control of the War Department. Control passed to the Department of the Interior in 1933. By then the park had grown to 2,743 acres.

But even in 1933, much of the actual battle area remained in private hands. Indeed, little has been added to the Federal holdings since that time. While the land remained as farms there was little change. The threat that is posed today reflects the changes of the last 30 years—tourists are turning to motels and more people are touring.

Congressman JAMES M. QUIGLEY, who has been in the forefront in the second battle, told an audience in Gettysburg last year that the community would receive and deserve condemnation if it did not provide facilities for its visitors. This, he said, means commercialism. The important thing, he said, is to keep this commercial growth under control.

SOME OPPOSITION

The effort being made by the Cumberland Township Planning Commission is not without opposition. Last October, the township supervisors received a petition signed by 150 township residents demanding zoning be held up, at least until the voters of the township could be polled on the matter.

The situation locally is touchy, Nixon said. Local residents as well as officials are becoming resentful of implications that they are selfishly interfering with efforts to preserve the battlefield.

What is often overlooked is that whatever is done, particularly in Cumberland Township, will be costly to the local citizens and will do little for their benefit. Any land that becomes Government owned is lost for development, is no longer a source of taxes, and may even be an impediment in the conduct of business. If the surrounding area is zoned to prevent commercialization, the potential tax revenue loss is even greater.

The second battle is a battle for money. Some can be raised locally, but not nearly enough.

The battlefield is not the only problem. The old dormitory at the Lutheran Seminary, which served as a hospital during and after the battle, has deteriorated to the point that extensive repairs are needed if it is to be preserved. The seminary no longer uses the building and probably would have razed it long ago if it were not for its historic significance. Estimates on the cost of renovation run as high as $500,000.

The Adams County Historical Society is making some effort to maintain the building but it looks like a losing battle, unless some real money is available.

Then too, despite its close ties to Lincoln, the community has no statue of the 16th President. A year ago a drive was launched to raise a fund to commission a statue. But little has been raised toward this $75,000 project and in face of other campaigns, prospects do not look bright.

Resolutions for the Restoration of Lithuania's Independence

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. DONOHUE. Mr. Speaker, on February 14, 1960, members from 67 organizations of the two Lithuanian parishes in Worcester, Mass., St. Casimir's and Our Lady of Vilna, the Lithuanian Aid Association, and the local branch of the Lithuanian Community of the United States of America, held exercises at St. Casimir's Parish Hall commemorating the 42d anniversary of Lithuanian Independence Day.

During these exercises, the members of the committee, the official delegates, and the more than 1,500 people in attendance unanimously adopted and passed the following resolutions, which I am pleased to include at this point:

Whereas the Government of the United States stands ever firmly for the God-given and sovereign right that all nations, both large and small, have to be free and to choose for themselves their own political, cultural, and economic systems, and ever remains convinced that relations between all nations must be guided by justice and charity and governed by the principle of equality; and

Whereas Soviet Russia, having formally recognized in 1920 the independence of Lithuania and the other Baltic States, 20 years later forcibly deprived Lithuania of her freedom and since then continues to this day to terrorize her people by oppression, dispossession, mass persecutions, and exile, and to deny them the right of self-determination by staging mock elections, thus converting Lithuania into another vassal state; and

Whereas the Republic of Lithuania, a neutral nation ever advocating freedom for all peoples, made astounding advancement and progress in all fields of human endeavor during the years in which she enjoyed freedom (1253–1795 and more so 1918–39); and

Whereas Lithuania continues in her desire to have and enjoy freedom and constantly reminds the free world, "There is no peace without freedom; there is no security without self-determination"; and

Whereas the Government of the United States in 1940 denounced the Soviet Government for forcibly incorporating Lithuania and the other Baltic States into the Soviet Union and since then has maintained its present policy of not recognizing de jure the unjust absorption of those countries within the Russian orbit: Now, therefore, be it

Resolved, That the Government of the United States continue to remind the free world of the injustice committed upon Lithuania by Soviet Russia and by continuing its policy of not recognizing de jure the ruthless seizure of Lithuania by the Soviet; be it further

Resolved, That the Government of the United States, together with the other Western Powers, take appropriate and concrete measures to force Soviet Russia immediately out of Lithuania and to compel her to return to Lithuania all Lithuanians now exiled to and forcibly detained in Siberia and elsewhere; be it further

Resolved, That the free world ever remember that all nations, regardless of how small they may be, have a right to freedom and justice and that, should the spoils of Soviet aggression ever be recognized, the Soviet would be encouraged to grab other nations neighboring her present boundaries and the cause of world peace would be grievously harmed; be it further

Resolved, That due admission and full approbation of Lithuania as a member of the United Nations be made for thus she would be in a glorious position to state her just case to the entire world; be it further

Resolved, That copies of these resolutions be forwarded to the President of the United States, His Excellency, the Honorable Dwight D. Eisenhower; the Vice President of the United States, the Honorable Richard Nixon; to the Secretary of State, the Honorable Christian A. Herter; to the U.S. Representative to the United Nations, Ambassador Henry Cabot Lodge, Jr.; to the Senators of Massachusetts, the Honorable John F. Kennedy and the Honorable Leverett Saltonstall; to the Representative of the Fourth Congressional District of Massachusetts, the Honorable Harold D. Donohue; and to the press.

JOHN PIPIRAS,
Chairman.
JONAS PALUBECKAS,
Secretary.

Top News Award Goes to Hayward Daily Review

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, the Hayward Daily Review, published by Floyd L. Sparks, of Hayward, Calif., has won first place for the "best individual spot news reporting" of any California newspaper in 1959.

This is not the first time that the Daily Review has been singled out for honors in the newspaper field and I am very glad to include in the RECORD the narrative of Reporter Charles Peterson's stories that won this prize for the Daily Review, as follows:

CALIFORNIA NEWSPAPER PUBLISHERS ASSOCIATION TRIBUTE—TOP NEWS AWARD GOES TO REVIEW

The Daily Review won first place today for the "best individual spot news reporting" of any California newspaper in 1959.

A trophy signifying that honor was presented to Publisher Floyd L. Sparks this morning at an awards breakfast of the California Newspaper Publishers Association in Los Angeles.

The first place award for the Review, outstripping all of the State's other newspapers, including all the metropolitans was given in the Publishers Association Annual Better Newspaper Contest.

The Review award was for Reporter Charles Peterson's stories about Eden Hos-

pital doctors' operations on Billy Smith's famous leg.

The Daily Review first place citation read: "Best individual spot news reporting (judged on initiative and enterprise, thoroughness of coverage, accuracy, terseness, fairness and informative value and organization and presentation of material)."

The CNPA award marks the second first place the Review won for topflight newspapering in 1959.

Last fall the Review won a gold medal award in the California State Fair annual newspaper contest for the Review's reporting and editorials on the State college.

The Daily Review exclusively revealed the story of the historic effort to save Billy Smith's right leg in a front-page headline article published October 28.

Publication of the story followed several days after the Review picked up word that Eden Hospital doctors had apparently succeeded in a unique operation to graft a severed leg back onto a human being.

Discreet checks with Eden Hospital spokesmen indicated that an operation of some importance had been performed. They referred the newspaper to one of the doctors involved in the case.

This physician in turn checked with two colleagues who had played major parts in the initial operation, received a green light from the Alameda-Contra Costa Medical Association to discuss the case, and agreed to an exclusive interview with the Review.

The story burst like a bombshell on news wires the next afternoon. News services, radio networks, even foreign news media clamored for more details of the surgery.

Stimulating extra interest in the Smith story was its publication a few days after a Russian surgeon announced his plans to graft a human leg onto a girl amputee.

In the months that followed the first story, Smith appeared to do well, but this proved to be an illusion.

Failure of skin grafts to succeed as planned and infection which developed in Smith's leg bone and knee joint combined to prevent repair of the main nerve to the lower portion of the leg.

Last week, doctors reluctantly conceded that, as things then stood, the best result they could obtain by pursuing their efforts to save the leg would not be as good as Smith could gain from an artificial limb.

The operation to remove the famous leg was performed on Wednesday.

Reporter Peterson, 31, joined the Daily Review staff last June. He lives at 31350 Brae Burn Avenue with his wife, Camilla, and two children, Karen, 6, and Lance, 5.

A 1952 graduate of the University of Oregon, he served as a Navy communications officer for nearly 5 years. Following his release from active duty, he was on the staff of the Wall Street Journal in San Francisco for nearly 2 years.

He is currently president of the Association for Retarded Children of Southern Alameda County and is communications officer of Naval Reserve Electronics Division 12-25, Hayward.

More Grassroots Opinion on Present Farm Program

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 4, 1960

Mr. PELLY. Mr. Speaker, H.R. 10350, introduced by me, would cut out the farm acreage and price support program. My bill would cushion the effect and in particular offer relief to the small farmer.

As I have previously indicated in my remarks, this repeal legislation is welcomed by the great majority of American people. In this connection, here are a few comments which came from communications received by me since I proposed repeal of all farm subsidies:

Overdue. Overdue.

This ridiculous situation must be corrected.

Let the market find its own level.

Eliminate price supports entirely.

The beef cattlemen and the fruit farmers have had no price support and I haven't heard any complaint. Neither has the small businessman had any guarantee that he will make a profit.

We are giving a lot of money to farmers who already have a lot of it.

Price supports should be taken off all products.

I favor total abolishment of agriculture price supports.

If we guarantee the farmer, how do we guarantee the rest of us?

It is sad to contemplate hungry children in many lands while foods rot in our granaries.

I would restrict aid to agriculture to no more than we give to industries.

Wouldn't it be better to forget our folly and start with some good sense.

Keep up the work on removing price supports. Farmers were once the backbone of the American economy; now they are only the marrow dependent upon the rest of the bone structure for support.

The farmers themselves thought some of the benefits they received * * * ridiculous.

Paternalism has ruined several other nations.

A continuation of the program as it presently exists can lead only to bankruptcy of the whole country including the farmers.

Why can't we take the price supports off entirely rather than have this excess surplus in wheat and other agriculture products.

I favor reduction down to absolute zero.

Do away with price supports and surplus wheat storage.

The farmer could work out his own salvation if let alone.

Let's stop this farce right now.

You have our complete support on your price support policy.

I was very glad to see in tonight's paper that you came out strong for repeal of all price props.

I am strongly opposed to this program as it now exists.

Absolutely.

This privilege has been so grossly abused.

Congratulations for your bill.

This is one I would turn back to the farmer; he is able to handle his business like any other investor.

Positively.

Farm price support should be stopped.

Why should farmers get so much aid.

Have just read that you are proposing repeal of price-support subsidies. I must say that I am heartily in favor of taking away all price supports.

Your plan on farm problem is the only one * * *. I wish commonsense would persuade enough other Congressmen to agree with you.

The Commonsense "Gap"

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. ALGER. Mr. Speaker, in an election year, it is always possible that intemperate statements can be made in the heat of campaigning. Yet even under such circumstances and much less when there is time for sober deliberation, it is not becoming to a man seeking office to jeopardize our great Nation in the eyes of the world.

This situation and this danger is recognized and discussed in the article by David Lawrence entitled "The Commonsense 'Gap'." He recognizes, I believe, as do we all, that our great Nation is unquestionably the leading military power in overall strength, and that it is this overall strength and not our excelling in every weapon, weapon by weapon, that counts in our defense ability. It is my hope that our citizens will not succumb to the defeatism and lack of judgment demonstrated by some who too quickly are selling short America's tremendous military might.

THE COMMONSENSE "GAP"

(By David Lawrence)

Judging by the sensational headlines and the political hysteria of the hour, America is in grave danger of being destroyed at any minute by 300 Soviet missiles.

We are supposed to be behind and cannot catch up for a couple of years or so—if then. This is called the missile "gap."

But what is even more serious is the credulity of many people who have been led by Democratic Party politicians to believe that we are in dire peril.

It may suit the ambitions of the candidates for political office to play politics with our national defense. But what possible good can it do the cause of peace and understanding in the world for Americans to present the spectacle of a nation divided, leaderless and shivering with apprehension?

Even though as strong as our potential enemies, we run the risk of conveying the impression that we really are weak and hence must submit to their demands. What a tragic way to portray the United States at a critical time, when the President

is about to go to a summit conference in Paris and then is to tour the Soviet Union.

Is Mr. Eisenhower to be presented before the world as the quivering messenger of a defeated people? Is this what the Democratic politicians want for their country?

None of the politicians, however extreme their statements, could really have been thinking of the impact of the recent barrage of criticism about our alleged weaknesses in defense. But it will be said that the politicians were, after all, just echoing the viewpoints of those generals who criticize the defense program on a professional basis, and that there could be no harm in bringing all this out into the open.

Nobody, of course, is objecting to discussion of our defense needs. We have had such debates since the founding of the Republic. But all of us will want to see some self-restraint imposed upon any public debate revealing vital facts about weapons of war, details of our military strength, and secret data gathered from abroad.

Commonsense tells us that if we are weak and are remedying the weaknesses, it is not wise from any standpoint to tell a potential enemy about it.

For the last 2 weeks there actually have been debates in Congress about our intelligence estimates. This is the most confidential of all categories of governmental information. Yet we actually see would-be candidates for the Presidency and Democratic leaders publicly interpreting such estimates to the detriment not merely of the administration, but of the position of their own country versus a potential enemy.

When General Power of the Strategic Air Command testified that the Soviets might, with 300 missiles, destroy our bases in this country, he was confining himself to a hypothetical situation that illustrated to him the importance of maintaining an airborne alert 24 hours a day, every day in the week. This would require a large and perhaps unnecessary expenditure. For when a crisis is on the horizon—and there are no signs of it in the immediate future—such an airborne alert can be ordered. The President has said that, the instant an airborne alert seems necessary, he will order it.

But is it true that 300 missiles could destroy America's retaliatory power just because bases in continental United States might be destroyed? First of all, those who know how far the development of rocketry has actually progressed say that it is impossible to fire a simultaneous salvo that would destroy all our bases at the same time. Since there necessarily would be a time lag between enemy firings, this would result in an opportunity for us to apply our retaliatory power.

Also, our Army has just revealed that, for the first time in history, a ballistic missile has been tracked down and destroyed in the air by another missile.

The Soviets, moreover, would have to do more than merely destroy our plane and missile bases in this country. There would have to be simultaneous destruction of all such bases in Britain and in southern Europe, and of all our aircraft carriers and their bombers. Likewise, every single one of our missile-carrying submarines cruising under the seas in different parts of the world would have to be demolished at the same moment.

Our Polaris missiles, which are to be fired from submarines, are to be operational soon, and within the next 2 years we shall be building many more of them. They can approach unobserved within a few miles of an enemy's coast and fire missiles 1,200 miles inland.

The key to the controversy over defense is not how many missiles the Soviets possess but what our overall power of massive retaliation happens to be.

There is need in America to apply common sense and close the "gap" between those who are engaging in flights of political fancy in an election year and the majority of the people, who believe the statements of the President of the United States—a military leader in his own right. He says unequivocally that we have the overall power to deter attack.

Our Veterans

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, I wish to present herewith a copy of a resolution adopted by the Department of Louisiana, the American Legion, in convention assembled, in support of legislation to extend educational benefits to the men and women who serve in the Armed Forces after January 31, 1955. This group represents a large and important segment of the people of Louisiana who are interested in the welfare of our veterans and our country, and I present it for consideration.

The resolution is as follows:

Whereas the Congress of the United States, expressing the will of the citizenry by the enactment of the Servicemen's Readjustment Act of 1944 (Public Law 346, 78th Cong.), recognized the justice, equity, and the general value of a sound education and training program for the veterans of our country; and

Whereas, the legislation enacted to provide such education and training benefits was for the purpose of restoring lost educational opportunities to those men and women who served in the Armed Forces of our country and has accomplished this purpose and has been an immeasurable factor in contributing to the economic security of our veterans and their families, as well as to the security of the Nation as a result of the increase in the general education level and professional and technical skills of the veterans; and

Whereas the increased earning power of veterans directly attributable to the program is resulting in payment of increased income taxes which will more than repay the total cost of the program; and

Whereas, notwithstanding the continuing involuntary military service program, Public Law 7, 84th Congress, denies entitlement to education and training benefits to all veterans who first entered service after January 31, 1955, which is grossly inequitable: Now, therefore, be it

Resolved, That the American Legion, Department of Louisiana, in annual convention in Baton Rouge, La., July 23-26, 1959, strongly urges a continuation of an education and training program similar to that provided by Public Law 550, 82d Congress, to all veterans of our country who serve in any period in which involuntary military service is authorized, and urges the Congress to enact appropriate legislation to accomplish; and be it further

Resolved, That copies of this resolution be transmitted to the House Veterans Affairs Committee, the Senate Committee on Labor and Public Welfare, all Members of the Louisiana congressional delegation, and to the American Vocational Association.

The 42d Anniversary of Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. DONOHUE. Mr. Speaker, over this past weekend the spiritual directors of the two great Lithuanian parishes, in Worcester, Mass., St. Casimir's and Our Lady of Vilna, sponsored ceremonies commemorating the 42d anniversary of Lithuanian Independence Day.

Joining with the parish directors were representatives of 67 organizations within the parishes including members from the Lithuanian Aid Association and the Worcester branch of the Lithuanian community of the United States in America.

The main exercise consisted of a radio program on the evening of February 13 over station WNEB, in Worcester, and a great mass meeting held on the afternoon of February 14 in St. Casimir's Parish Hall.

I had the special honor of taking part in both of these programs and have been requested to include, at this point, the address I delivered at St. Casimir's Parish Hall:

THE 42D ANNIVERSARY OF LITHUANIAN INDEPENDENCE DAY, WORCESTER, MASS., FEBRUARY 14, 1960

It is an honor for me to once again join with you patriotic Americans of Lithuanian descent here in my area, as well as those throughout the country, in commemorating the founding of the Republic of Lithuania.

It is nearly 20 years since the barbarian hordes of Soviet Russians overran Lithuania reducing your native land of freedom to a slave state incorporated in the Communist empire.

Today, however, we recall a happier occasion in the history of Lithuania. It was 42 years ago that Lithuania proclaimed her independence.

It is most fitting that we commemorate this event and recall Lithuania's former days of liberty. For the spirit of freedom, the love of liberty, the conviction that Lithuania shall one day be again free, lives on in the hearts of the Lithuanian people today, just as it lived through more than a century of czarist oppression.

Let us remember that Lithuania became a free land four centuries before America was even discovered. That freedom was lost in 1795 only to be regained in 1918. The same Russian imperialism that enslaved Lithuania before holds her in chains again today. The name of this tyrannical government is different now but the oppression is just the same and even worse.

Through 123 years of czarist rule, enduring all sorts of cruel hardships the brave Lithuanian people passed on from generation to generation their national traditions, their love of liberty, their ideal of national freedom and independence. Today's generations are no less firm in their determination that Lithuania shall once again know freedom.

We realize, of course, that at this hour, unfortunately, the people of your homeland are living behind an iron curtain of fear and persecution. All of the extremes of brutality are being constantly visited upon

your people in a ceaseless attempt to destroy the national consciousness, religion and freedom of Lithuania.

Despite all cruelities your people have steadfastly maintained their religious faith, their national identity, and an unquenchable yearning for renewed independence that must surely be ultimately rewarded.

Through the terrible ordeals of seven centuries, the Lithuanians have given consistent testimony to the fundamental truth that man has an inborn desire for freedom which cannot be rooted out or destroyed by any tyrant. I believe that this fundamental truth will in the end spell defeat of the brutal Communist system, but we must persevere in our own efforts to assist Lithuania, and the other Communist enslaved nations.

The Kremlin leaders are now engaged in a great campaign to try to make us forget the Red atrocities of the past. Through cultural exchanges, good-will ambassadors, offers of trade, and soft words, they attempt to lull us to sleep, while they prepare for further aggressions.

The passing years have tended to dim the memories and still the consciousness of many in the free world. We must then strive with all our might to keep these memories alive and the conscolusness of free people alert.

This anniversary of Lithuanian independence should remind all Americans that we cannot close the door on Lithuania's just claims to independence without betraying our solemn obligations and denying our own heritage.

I do not believe that this country will ever abandon our moral commitment to strive for eventual freedom for Lithuania and all the other Communist enslaved nations, and I am very proud to add my voice to so many others today in pledging that we will keep the faith with the forces of freedom everywhere in the world.

We are inspired in our common task by the knowledge that the spirit of liberty still, and will forever, breathe in the hearts of all Lithuanians. The illustrious Lithuanian poet, Maironis—1862–1932—aroused the nation with his undying verses and instilled all Lithuanians with fervent love of their country, their language and their people. He preached, through verses, the gospel of national resurrection and even today his words continue to be a source of spiritual strength, a battle cry, and a promise of ultimate victory.

Although Lithuanians are forbidden on this 42d anniversary to sing their national anthem I am sure that Lithuanians everywhere will be repeating these words of consolation and strength written by Maironis:

"Protect, O Almighty, our beautiful homeland,
The soil where we labor, where our fathers rest.
Thy fatherly mercy is boundless and lasting;
Hear us, Thine own children, long ages oppressed.
Forsake not our land, All Highest, while the fury rages;
For Thou art our hope and vision, now and through the ages."

All Americans, not just the Lithuanian Americans, share, I am certain, these sentiments and look forward to the time when Lithuania will again take her rightful place with the free nations of the world. Let us pray together that the Almighty will speed that happy day.

Mr. Speaker, I also wish to include at this point a radio address given by Anthony J. Miller, Esq., a prominent Worcester attorney of Lithuanian descent:

I am very proud, as an American citizen of Lithuanian descent, to participate with our friend, Congressman HAROLD DONOHUE, in this ceremony marking the origin of the independence of the Republic of Lithuania 42 years ago.

We take this occasion, on behalf of our enslaved homeland of Lithuania, to reaffirm our pledge to work for self-determination and freedom for all people of all states.

It is idle to speak of peace when whole nations are ground under the heel of tyranny. It is a mockery to talk of negotiations looking to an equitable solution of the issues dividing the East and the West when valiant nations like our Lithuania are held in stern and brutal subjection.

It has been well said that foreign policy is forged on the anvil of public discussion, that public opinion is a determining factor in determining policy. Let all take note then that the rank and file of Americans, of all national origins, look with abhorrence on the enslavement of Lithuania.

Tonight we call upon liberty-loving people the world over to remember that the Red heel came down with crushing brutality and terrorism in 1944, that the brief flame of rewon Lithuanian independence was tragically snuffed out and Lithuania has been held a prisoner nation to this hour in defiance and violation of the principles of the Atlantic Charter and the Charter of the United Nations.

Above and beyond that, the enslavement of Lithuania is in violation of the spirit of equity among the community of nations, does great violence to international morality, and is a constant affront to the conscience of the world.

Just as the great Lincoln, whose memory we so reverently honor, said that a nation "cannot endure half free and half slave," so we say today in the name of Lithuania, as we address ourselves to the aggressors and tyrants: The world cannot endure half free and half slave.

To the Red tyrants who have forcibly impressed once-free Lithuania into the Soviet Imperialist Empire we say: Do not try to inveigle us to a so-called peace conference so long as you hold Lithuania and other once-free states in terroristic captivity.

America, the world, the conscience of mankind will never recognize Soviet supremacy over Lithuania. In the fervent prayer and belief that God is still in His heaven and will one day make all things right with the world, we confidently look forward to the day when Lithuania will once again take her place among the free nations of the world.

We can be sure that the anniversary of Lithuanian independence will be remembered in Lithuania. But there will be no festivities—no gay bunting, no unfurled flags; no music—to commemorate it. Rather, it will still be observed in mute if defiant silence, or perhaps in reconsecration to those ideals, to those ways of life which the Lithuanian people cherish.

In this country, on the contrary, the day will be openly celebrated by the nearly 1 million Lithuanian Americans who are scattered throughout the States of the Union. Here in this blessed land of freedom these, our fellow Americans, will, as they have in the past, take occasion to remember their oppressed kinsmen across the ocean and to solemnly pledge again their spiritual and moral support for their eventual liberation.

They well know of the painful tortuous years the people of our homeland have bravely endured. The deportations, the enslavements, the destruction of political freedom and economic initiative are facts which have leaked through to the free world despite the Iron Curtain of silence behind which the Communists try to hide the countries that they persecute.

We Lithuanian-Americans, especially, know that the people of our homeland are of stout heart. We know that faith and hope cannot be removed from the Lithuanian spirit. Inevitably the time will come when the tyrants grip will weaken, when freedom will win over enslavement and sorrow will be turned to joy.

The American people and Government have refused to recognize the Soviet Union's annexation of Lithuania. In many ways America is informing the world of Soviet misdeeds in Lithuania, and is mobilizing the moral forces of world opinion against the oppressors, in the hope that Lithuania's day of freedom will be hastened and that the Kremlin's rule of misery and hatred will be forever overturned.

While we wait for that fateful time, I ask you to join with me tonight in sending across the seas to our beloved people of Lithuania this message:

"Be not discouraged, be not downhearted. The night may be long and dark, but the sun of the morning is soon to break upon you, your homes, and your land. Each day that passes brings our blessed country closer to inevitable independence. We shall not fail you and will work and pray together with you until your liberty is finally accomplished."

College of the Pacific at Stockton, Calif., Achieves Growing Recognition in the Field of Scientific Research

EXTENSION OF REMARKS
OF
HON. JOHN J. McFALL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. McFALL. Mr. Speaker, under leave to extend my remarks, I would like to take this opportunity to call your attention to an article in the January 1960 Pacific Review, alumni issue, published by the College of the Pacific at Stockton, Calif.

During the past few years the College of the Pacific has achieved growing recognition in the field of scientific research.

The article follows:

The college laboratory—a maze of tubing, chemicals and machinery. Into these scientific surroundings come eager—and sometimes not too eager—freshmen to struggle with the fundamentals of chemistry, physics, or pharmacy. Into these surroundings also come the advanced student and the professor to reach beyond the knowledge imparted in a textbook or lab manual into the unknown—to open new vistas through research.

Research has become an increasingly important part of the Pacific picture and has drawn nationwide attention to the projects and experiments conducted in College of the Pacific laboratories. The recognition of the vitality of these projects has encouraged financial support of the work by various national organizations through grants and contracts.

A search for an effective combatant to one of the Nation's leading killers, cancer, is being conducted in the College of the Pacific chemistry department, financed in part by grants from the American Cancer Society.

Working with an idea similar to an atom bomb reaction, Dr. Emerson Cobb, chairman of the College of the Pacific chemistry department; William Rhoads, graduate student; and Dr. John Phillips, Stockton surgeon, have been experimenting with two common substances, tetracycline and boron.

In the experiment, tetracycline, which has a great affinity for cancerous tissues but is expelled by normal tissues, is used as

a carrier to deliver a radioactive boron isotope to a cancerous cell. A nuclear reaction is then triggered and the cancer cell is destroyed. The neighboring cells are not greatly affected since the range of the explosion ends close to the walls of the cancer cell.

The College of the Pacific researchers are working in conjunction with a Stanford University team headed by Dr. Victor Richards. The boron-tetracycline compound is prepared in Stockton and sent to Stanford, where Dr. Richards and his associates inject it into cancer-stricken mice. The cancerous tissue is then sent back to Pacific for examination and study.

The conjunction of the tetracycline and boron was a "chemical pioneering job," according to Dr. Phillips.

"But our work is just beginning," Dr. Cobb remarks when asked about the progress of the cancer project. The chemistry department head predicts the team has 5 to 10 years more of pharmacological research ahead of it, including the solution to such problems as loading the bomb with different compounds for different jobs, simplifying the loading procedure, and using the process in treating brain tumors.

In another part of the chemistry department, a part of the search for solids that would be able to stand the friction and heat of a trip into outer space is in its beginning stages.

Working under a $1,000 grant-in-aid from the Research Corp. of New York, Dr. Jesse Binford, assistant professor of chemistry, and several graduate assistants are attempting to discover what materials can withstand heat up to 1,500° C. without disintegrating, changing their atomic makeup, or changing the presence of other substances with which they might react.

The chemistry professor said that one of the big problems in missile construction today is the discovery of a solid that will remain stable at high temperature. New compounds are being made to fill this need, he said, and he hopes to obtain samples of these for testing. Later, in the project, the team may make samples of their own for experimental purposes, he added.

The College of the Pacific researchers constructed the compact, but complicated, equipment that they are using in their experiments. One of about six such sets known to be in existence the testing unit consists of an electrically heated furnace a canister holding a cylindrical copper block, and a control panel for temperature regulation and measurement.

Each solid being tested is heated in the furnace to the desired temperature, then lowered by a wire from the furnace into a cup in the copper block below. By determining the temperature of the copper block, the investigators are able to measure the heat capacity of the substance.

"Measurement of the heat capacity, the step with which we are concerned, is but the first step in discovering what solids could be used successfully in outer space," Dr. Binford says.

Research for the pure joy of investigating the unknown is the purpose of the experiments being carried out by Dr. Herschel Frye of the chemistry department under the auspices of a $900 Penrose Grant from the American Philosophical Society. Dr. Frye and Constantin Vlassis, doctoral candidate, are conducting polarographic studies involving reduction of inorganic coordination compounds, a field in which there has been little investigation.

Chicken eggs are of great importance to the school of pharmacy's department of physiology and pharmacology which recently was awarded a $35,000 contract by the Office of Naval Research to develop methods of utilizing chick embryos to measure the effects of drugs and chemicals.

Dr. N. S. Van Matre, assistant professor in the department and chief investigator of the project, said they are trying to develop techniques of changing and regulating the chemical contents of egg yolks in order to use the chick embryos for controlled tests of many compounds. Completely artificial egg yolks can be substituted for the original in the laboratory method, according to Dr. Van Matre.

The new research method may add greatly to the knowledge of the actual cellular effects which many drugs and chemicals have on the human body and its various systems, according to Dr. Carl Riedesel, chairman of the department.

Although the project is directed in the school of pharmacy, Dr. Van Matre always emphasizes that all the science departments at Pacific are contributing to the research program. The physics department, for example, is investigating a delicate preamplifier for an electrocardiograph to record graphically the heartbeat of chick embryos.

The project, which has been going on for some time sustained entirely by the college, will continue for several years, according to Dr. Riedesel. A summary of the project and data assembled will be filed with over 27 agencies, including the Smithsonian Institution and the Biological Sciences Information Exchange.

A $1,200 grant from the American Philosophical Society is financing a study by Dr. Riedesel of the physiological effects of certain alkaloids found in varieties of narcissus bulbs grown in the Stockton region.

Although the poisonous effects of these bulks have been recognized for years and some of the alkaloids studied chemically, practically nothing has been done to evaluate the ways in which the bulbs can cause distressing symptoms when eaten by mistake, according to Dr. Riedesel.

Assisted by Mrs. Cisco Kihara of the school of pharmacy, Dr. Riedesel will try to develop efficient methods of extracting the alkaloids found in the bulbs, which have poisonous effects when eaten, and will investigate the effects of these alkaloids on the nervous system, blood pressure, and other body systems.

Thus, the research project goes on—quietly, but effectively. And thus Pacific expands in another facet of its "pursuit of excellence," growing not only intellectually but also making a vital contribution to the modern times.

Much of County Sewage Will Go to Sea in 1960's

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Tarrytown (N.Y.) News of January 12, 1960:

MUCH OF COUNTY SEWAGE WILL GO TO SEA IN 1960'S

The decade of the 1960's will see Westchester sewage go to sea in style—or at least a large part of it will.

While sewage is a problem for Westchester in the next 10 years, public officials don't think it will be a headache, at least for most of the county.

Westchester County has purchased a huge barge—*Westco I*—which will haul sludge from the joint Yonkers sewage treatment plant out to sea. The barge and the $15 million treatment plant itself, now nearing completion, are part of a county program to curtail pollution of the Hudson River.

The date for the opening of the plant, which will serve seven sewer districts, is late February. The districts are the Bronx Valley, Hutchinson Valley, North Yonkers, South Yonkers, Central Yonkers, Saw Mill, and Upper Bronx Valley.

BUILT UNDER ORDER

The county was under order of the Interstate Sanitation Commission to build the plant. A similar order is in effect for the Mamaroneck and Blind Brook (Rye) treatment plants. The county is preparing plants for modernization of those plants on the Long Island Sound side of the county.

Westchesterites will be called upon in the 1960's to approve the issuance of bonds for those two plants because the jobs are expected to cost several million each. County voters must approve any issuance of bonds over $2½ million. Only the persons actually served by the sewer districts have to pay the debt.

While southern and central Westchester with its network of sewers are in good condition, the outlook for the north-central part of the county is not as bright.

That area has been using backyard disposal all along but the area is being developed rapidly. Sewage will become a public problem in the next 10 years, if not already.

The problem is multiplied because the area is largely in the New York City watershed area. Fifty-eight percent of the water Westchester uses comes from New York City supplies so Westchester is very much concerned.

HUGE INVESTMENT

Since a sewer system in the north-central part of the county will have to start from scratch, a huge investment is seen. Recent limited commercial development of the area may help absorb the tax burden for sewers.

Outside aid is possible.

New York City might share the cost of developing sewers since it is interested in protecting its water supply. There have been precedents for New York City to act. The city, under an old agreement, now disposes of Mount Kisco's sewage.

The Federal Government might help. Right now, prospects for a sewer district for Yorktown seem brighter. Supervisor John Downing of Yorktown has reported that Federal Government money is now available for such work. The sewer district would be in the Yorktown Heights business district. The Federal Government would pay up to 30 percent of the costs and the town would also be eligible for State aid for costs of engineering work.

Tadeusz Kosciuszko: 1746–1817

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 19, 1960

Mr. BOLAND. Mr. Speaker, Friday last was the birth anniversary of Tadeusz Kosciuszko. This son of Poland was a great soldier of freedom, and he is best remembered in this country as a brave fighter in our War of Independence.

He was born into an impoverished family on February 12, 214 years ago. At the age of 13 he lost his father, but his yearn-

ing for education led him to the royal school at Warsaw in 1765. He was graduated with the rank of captain in 1769. Then, aided by a scholarship, he entered the famous military school at Mezieres in France, where he specialized in artillery and engineering. In 1776 he had already finished his studies when he heard of the American Revolution. At once he saw his chance for action in a good cause, and on borrowed money he sailed for America. Here he was admitted into the service, his qualities at once recognized, and he was charged with drawing up plans for fortifying the Delaware River. His success at this assignment earned him a commission as colonel of engineers in the Continental Army.

In the spring of the following year he joined the northern army at Ticonderoga. During the next 2 years he was in charge of the building of fortifications at West Point. Subsequent he took part in many battles, distinguishing himself in all of them. On October 13, 1783, in recognition of his signal services, Congress made him a brigadier general.

Having served the noble cause of this country with distinction, in July of 1784, he returned to his native Poland, hoping to carry on the fight for her freedom. There for more than 20 years he continued his brave but unfortunately futile efforts, and was fated to die in exile on October 15, 1817. Today in commemorating the 214th anniversary of his birth we pay homage to his blessed memory.

U.S.S. "Oakland"

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, a gallant warship that saw service in the battles of Leyte Gulf, Bismark Sea, and Tokyo Bay, and that also saw action in the Marshall, Gilbert, and Mariana Islands, is shrinking away under the welders' cutting torches at the Todd Shipyards in Alameda, Calif.

The U.S.S. *Oakland*, built at Bethlehem Shipyards in San Francisco and commissioned on July 17, 1943, is being scrapped.

Her short life was filled with battles and alarms and she goes to her death within sight of the city of Oakland after whom the gallant lady was named.

Under leave granted I include the following article from the Alameda Times Star, Alameda, Calif., of January 27, 1960:

U.S.S. "OAKLAND" IN ALAMEDA TO DIE—TORCHES CUT CRUISER'S ARMOR

The 18-year-old cruiser U.S.S. *Oakland* was dying today at Alameda's Todd Shipyards.

After 11 years of retirement, the end had come for the 6,000-ton veteran of 10 World War II Pacific battles.

Welders' cutting torches cut through the inches-thick armor of the 541-foot-long light cruiser in the yard across the bay from where she was built during World War II.

The vessel was towed to the Todd yard late Monday night after spending over a decade in mothballs at the Navy's reserve fleet headquarters near Stockton.

The Lerner Co., of Oakland, bought the ship from the Navy for about $200,000. The vessel, which will be scrapped at the Todd yard, should be demolished by July 1, according to a Todd spokesman.

COMMISSIONED

The U.S.S. *Oakland* was commissioned on July 17, 1943. She was christened by the then president of Mills College, Aurelia H. Reinhardt, on October 23, 1942 at the San Francisco Bethlehem Shipyards.

The ship served in Task Force No. 38 which was under the command of Admiral "Bull" Halsey in the Pacific. The *Oakland* participated in the Battle of Leyte Gulf, the Battle of the Bismark Sea, and Battle of Tokyo Bay and saw action in the Marshall, Gilbert, and Mariana Islands.

Ironically, during the battle for Okinawa on April 11, 1945, the U.S.S. *Oakland* suffered its only casualties of the war. A sailor from Oakland—the only man among the ship's 700-member crew who was from the namesake city—was killed along with another sailor during a dive bomber attack.

TROOP CARRIER

Following the end of the war, the *Oakland* served in Operation Magic Carpet, making four trips across the Pacific bringing soldiers back to San Francisco from the Western theater of the war.

The vessel is of the Worcester class of light cruisers and had six sister ships of her class. She was armed with ten 5-inch cannons. The *Oakland* was inactivated in 1949 and put into mothballs near Stockton until her recent sale.

Human Background of the Civil Rights Issue

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. LINDSAY. Mr. Speaker, in the magazine section of the New York Times of Sunday, February 14, Mr. Anthony Lewis has written an article entitled "Human Background of the Civil Rights Issue." This is must reading for everyone concerned with this subject. The article is too lengthy for insertion in the RECORD, but I should like to draw my colleague's attention to it.

Mr. Lewis succinctly traces the development of civil rights in the United States, pointing out that areas of the North are just as guilty as areas of the South in giving concrete recognition to the inalienable rights stated in our Constitution. Mr. Lewis traces the progress that has been made both in the North and the South, but, he says, "The difficulty with this impressionistic sketch of improvements in the life of the Negro American is that it is too rosy. A closer examination shows what everyone knows—that life remains much harder for a Negro than for a white man of the same talents."

Mr. Lewis points to the voting problem, reminding us that only 25 percent of voting-age Negroes in the South are registered compared with 60 percent of the whites. The employment situation, he says, is probably worse.

Mr. Lewis concudes his article as follows:

Can the goals be reached? The mood of those concerned with Negro rights is optimistic.

A recent authoritative book, Jack Greenberg's "Race Relations and American Law," sees these factors pushing the end of racial discrimination in the South: industrialization; urbanization, bringing with it social anonymity and security; the homogenization of the South and the rest of the Nation through television and other mass media of communication; universal training in unsegregated Armed Forces; the stand of most churches against segregation, and the Negro's growing political and economic strength.

To these should be added the fact that racial discrimination conflicts with the American ideal. What Gunnar Myrdal said in 1944 is true today: "When we say that there is a Negro problem in America, what we mean is that the Americans are worried about it. It is on their minds and on their consciences."

The Economics of Fairplay

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. DERWINSKI. Mr. Speaker, the Chicago Sun-Times on February 9 carried a most interesting and enlightening editorial which I am including in the RECORD for the consideration of the Members of the House and Senate:

THE ECONOMICS OF FAIRPLAY

Labor Secretary James P. Mitchell issued a bread-and-butter-type forecast over the weekend that should be of interest to every American. In his report, drawn from a Labor Department study titled "Manpower: Challenge of the 1960's," Mitchell talked about the number of jobs that will be available in the 10 years ahead and the type of workers that will be available to fill those jobs.

He had words of warning for employers, words of hope for workers who have been discriminated against (including Negroes, handicapped and older persons), and words of advice for youngsters undecided on careers.

To the employers, Mitchell aimed a warning that changes in the labor force "will require a major overhaul in the employment policies of many businesses." For example, Mitchell cautioned that there will be comparatively fewer workers available in the 25-to-45 age bracket—the so-called prime-of-life bracket. Reduced birth rates in the thirties and early forties account for this situation.

Mitchell said bluntly: "Employers who do not abandon policies against hiring workers because of their age or sex, or race, religion, or nationality, or because they may be handicapped in some way, may have real trouble finding enough workers in the decade ahead."

In the past, arguments against discrimination in employment have been based primarily on the moral premise that the No. 1 criterion for employment should be the employment seeker's ability to do the job—not the color of his skin, his religion, his age or the fact that he walks with a crutch. This remains the most valid argument against discrimination.

Mitchell's warning, however, adds a new weapon—economics—to the arsenal of fighters against discrimination. Mitchell points out that in the years ahead it will be a simple matter of good business to hire workers previously viewed as untouchable.

The labor secretary also had blunt advice for youngsters debating whether they should continue their education or go job hunting. His warning: Stay in the classroom. Once again it's a matter of simple economics. He said the biggest increase in jobs will come in fields requiring the most education, such as professional and technical occupations. These also are financially rewarding jobs. Mitchell suggests it will pay Johnnie to stay in school, and the dividends will increase as time goes on.

The Power Issue Today

EXTENSION OF REMARKS
OF

HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, I call to the attention of the Members a provocative speech and proposal made by Leland Olds, former member of the Federal Power Commission, at the Electric Consumers Information Committee workshop meeting, Washington, D.C., January 19, 1960:

THE POWER ISSUE TODAY

Today I want to deal briefly with the power issue in terms of some historical background. I think, as we enter a new legislative year, we need to make sure that we see the problem before us as a whole, in order that the separate legislative proposals may form a picture which the public can understand and make its own, in spite of the distorted image being offered by the electric companies advertising program.

After suggesting this perspective, I shall offer a few broad recommendations as a focus for our efforts.

As my text I can find no better statement than that of Presidential candidate Franklin D. Roosevelt, speaking in Portland, Oreg., in 1932. He said there was need for bringing the discussion back into simple, honest terms because, "there has been in the past few years, as the Federal Trade Commission has shown, a systematic, subtle, deliberate, and unprincipled campaign of misinformation, of propaganda, and, if I may use the words, of lies and falsehoods." He noted that "the spreading of this information has been bought and paid for by certain great private utility corporations."

That statement fits the situation today. We might only add that the great private utility companies are battling in the courts and elsewhere to regain their right to charge to the taxpayer and the consumer the costs of this lying misrepresentation of America's vital institutions.

I am convinced that we are at a turning point in the evolution of American power policy—and more broadly in the evolution of the management and financing of what must be a steadily expanding public sector of our economy. Our success as a nation in meeting the challenge of a world in revolution will depend in large measure on how we take the next step forward.

And let me say this without the slightest hesitation. We are entering an age of comprehensive planning and orderly public financing. And, whether the planning and public financing are in terms of multipurpose river-basin programs, or regional giant power, or ample supplies of water for all purposes, or broader opportunities for recreation, or highways, or schools, or cultural opportunities, or greater health and happiness at each stage of man's existence on earth, we must establish a goal which people will make their own, as well as the means to achieve it. In the words of Prof. Lawrence Krider, of American University, addressing a convention concerned with road construction, "the goal of our planning is some image of a future America."

We started reformulating our goal and testing the means of achieving that goal nearly 30 years ago in terms of what appeared a national economic emergency. But, after a pause of 8 years, we must go forward again with the obligation to present to the billions of underprivileged peoples in the world a workable system for providing under freedom the higher standards of living which the technological revolution applied to resources can make possible not for a privileged few, but for all.

And let me say that we cannot allow freedom to be interpreted in terms of the sacred rights of enthroned selfishness, because the underdeveloped parts of the world will see through that sham. In fact, they have experienced it as colonialism. My contact with some of their representatives over the years made it clear that they saw a wide range of New Deal activities, including the TVA, the REA, Government participation in the financing of public and other economic activities including use of resources, the Wagner Act as a charter of industrial democracy, the Social Security Act, and many other reforms, as roads to greater freedom under democratic government.

THE DEMOCRATIC APPROACH TO MODERNIZING INSTITUTIONS

In order to get the fundamentals of our approach squarely in mind let us go back to the basic thinking of the man who provided leadership 30 years ago. I have always felt that Franklin D. Roosevelt's broadest formulation of that approach is to be found in his address on receiving a degree at Oglethorpe University, May 22, 1932. His subject was: "The Country Needs, the Country Demands Bold, Persistent Experimentation." He was talking particularly to "my fellow members of the class of 1932."

After noting that some students of economics traced the country's difficulties to defects in the world's monetary systems, he said that, among other phases of the problem, "that which seems most important to me is the problem of controlling by adequate planning the creation and distribtuion of those products which our vast economic system is capable of yielding." In a previous reference to the need for a larger measure of social planning he had said:

"Such controlling and directive forces as have been developed in recent years reside to a dangerous degree in groups having special interests in our economic order, interests which do not coincide with the interests of the Nation as a whole."

He said that, "when the Nation becomes substantially united in favor of planning the broad objectives of civilization, then true leadership must unite thought behind definite methods." He concluded:

"The country needs and, unless I mistake its temper, the country demands bold, persistent experimentation. It is commonsense to take a method and try it. If it fails, admit it frankly and try another. But above all, try something. The millions who are in want will not stand by silently forever while the things to satisfy their needs are within easy reach."

This, it seems to me, could be recognized as keynoting the remaking of our society into a modern, up-to-date social order. It involves the application of the scientific method not only to the development of the machinery required for the release of atomic energy, or the automating of our industries and our lives in general, but also to invention directed at improvement in our social institutions, changes which would make technological invention the servant of a joyful life for all peoples.

And let me state, without equivocation, that we cannot as a people afford to leave the establishment of goals, the planning, the control of experimentation in developing the means of reaching those goals, the building of the image of a future America, to self-perpetuating financial "groups having special interests in our economic order, interests which do not coincide with the interests of the Nation as a whole," to borrow FDR's 1932 words.

With this brief general introduction, I will turn to the power issue interpreted in terms of modern experimental approach.

SOCIAL INVENTION IN THE FIELD OF POWER POLICY

FDR's 1932 campaign speech in Portland established the principle and pattern for experimentation in bringing American institutions in the field of electric power up to date. His title is still significant: "A National Yardstick To Prevent Extortion Against the Public and Encourage the Wider Use of That Servant of the People—Electric Power."

The yardstick function in the American power economy was not of itself a new experiment. It had been effectively performed by thousands of American municipal systems since the beginning of central station electricity. But the experimentation lay in adapting that democratic American institution to the age of giant power. This required that local yardstick operations be supplemented with national yardsticks in the field of bulk power supply. It lay also in providing public financing at low interest rates for the extension of electric service to all farms, including not only the distribution cooperatives but also combinations of these cooperatives for joint undertaking of the wholesale power supply function.

In his Portland address Governor Roosevelt made this clear. He laid it down as a basic principle "that where a community—a city or county or district—is not satisfied with the service rendered or the rates charged by the private utility, it has the undeniable basic right, as one of its functions of government, one of its functions of home rule, to set up, after a fair referendum to its voters, * * * its own governmentally owned and operated service." He added: "That is the principle which applies to communities and districts, and I would apply the same principles to the Federal and State Governments."

At the very start of his address he set forth his belief "that the question of power, of electrical development and distribution, is primarily a national problem." He took issue with the 1925 statement of former Secretary of Commerce Herbert Hoover that there has been outrageous exaggeration of the probable extent of interstate power."

In other words, F.D.R.'s experimentation in this field was based on a recognition of the fact that the electric power business had ceased, so far as power supply is concerned, to be essentially a local responsibility, power trust slogans mouthed by the present national administration to the contrary notwithstanding. In fact, the 1925 Hoover statement suggests that the "power is a local responsibility" hallucination may be deep-rooted in the Republican Party—hereditary perhaps.

The New Deal experimentation in this field gave new strength to the American public yardstick as a supplement to regulation. It proved a vastly important force in bringing low rates to consumers served by private power companies. It extended the benefits of the electrical age to the Nation's

farms, and produced a tremendously expanded market for electrical equipment and appliances. But, perhaps equally important in the long run, it showed the way to institutional progress through establishment of integrated hydrosteam generation and transmission systems with utility responsibility for ample supplies of the lowest cost power that modern technology can provide to all systems serving ultimate consumers.

Our legislative program must provide an orderly basis for the organization and financing of giant regional generation and transmission cooperatives democratically organized to provide low-cost bulk power supply to all electric systems serving ultimate consumers in every region.

FROM ROOSEVELT TO ROCKEFELLER

The recent report of Governor Rockefeller's Committee on Power Resources makes it perfectly clear that the country cannot depend on the private power companies to lead the way into giant power. The Electrical World news story, which is all I have to go on, tries to put the best face on it, emphasizing its recommendation of joint action by all New York utilities in planning and locating generation, increasing transmission capacity, and resolving financing, regulatory, and system organization problems. According to Electrical World, the seven utilities serving 98 percent of New York consumers promptly formed the Empire State Utilities Power Resources Associates to study ways of providing future power at the lowest possible cost, a worthy objective.

But a reading of the Electrical World article is enough to reveal the extent to which the recommendations fall short of offering the region the full advantages of giant power. All the New York companies want is a nice little giant that won't subject them either to Federal Power Commission or Securities and Exchange Commission control.

Thus, while the report recognizes that some form of joint ownership may be necessary to finance larger and more efficient generating stations, it rules out merger of the seven utilities as impractical, if desirable.

Just what this means in terms of unnecessarily increased cost of service to consumers can be shown by drawing a rough map based on the distribution of company franchise areas in New York State as reflected in the Federal Power Commission Typical Residential Electric Bills Report for 1959. The Rockefeller committee little giant power report reflects the inability or unwillingness of the private power companies to simplify the overlapping patchwork power system setup which now prevails in New York State. In a few minutes I will suggest the reason why.

Similarly, the report recognizes that large generating units and large capacity stations, pooled for integrated operation, would require heavy high-voltage transmission to permit economical loading, minimize reserve requirements, and support or firm up hydro capacity. But it backs away timorously from regional integration which would add further advantages in the way of lower fuel costs and time-diversity of peak loads.

I show you on this map symbolically the kind of regional giant power system which could bring 7.0 mill delivered bulk power costs to the entire Northeast region. Yet the Electrical World reproduction of a map from the Rockefeller committee report shows essentially an intrastate system. The New York Power Authority in its 1938 annual report showed a more up-to-date map of an integrated power supply system for New York. Surely the Rockefeller committee has labored and brought forth a mouse. The Electrical World summarizes the report's explanation for this basic deficiency as follows:

"Multiple regulation by State public service commissions and the Federal Power Commission do not appear to be necessary when companies exchanging power across State lines are seeking only engineering integration, economies of pooling, or emergency backup. Big integration has been hampered by utility reluctance to assume the burden of such multiple regulation. The committee believes a workable arrangement to facilitate interstate pooling can be worked out without impairing the Federal Power Commission's essential jurisdiction."

Watch out for an early effort of the power companies either to amend the Federal Power Act along the original Walker Cisler-Detroit Edison lines, or to gain a phony exemption under the emergency or defense provisions of the act so as to exempt interstate wholesale power pooling from effective Federal regulation.

The fundamental reason for this timorous approach and this failure of the Rockefeller committee to recommend a giant power corporation with power supply as its separate function is that this would simplify regulation and make it more effective in asserting the public interest in low-cost electric power supply. Due to the multiplicity of interchange contracts for all classes of power in the private company interconnected systems approach, the handling of the wholesale power cost factor in electric rates is already all too frequently permitting overallocation of costs to residential consumers as well as to municipal and rural electric systems obtaining their power supply from private companies.

As an example of private company scrambling tactics, let me go back to a 1927 directive from a holding company official to those engaged in reorganizing its Pennsylvania properties, involving a writeup of $36 million, or more than 100 percent. The New York holding company official, after making the point several times, wound up his memorandum thus:

"I again desire to impress upon you the importance, in my opinion, of scrambling all those reorganizations together so that the only thing the Pennsylvania commission will be able to understand will be the result and not how the result was obtained."

Actually, it was not until the Federal Power Commission, referrred to in the Rockefeller committee report as "the burden of multiple regulation," was brought into the picture that the writeup in this reorganization was eliminated from the Pennsylvania company's capital accounts. Throughout the history of regulation company efforts to befuddle regulation have included the concoction of complexities including reproduction cost valuation, observed depreciation, economic depreciation, and allocations of cost. If we can set regional wholesale power supply up as a separate function, delivering power to local distribution systems on a single rate schedule basis, we will have taken a big step toward ending some of this befuddlement.

The Rockefeller committee was heavily weighted with power company executives, and was headed by John E. Burton, Governor Dewey's chairman of the New York State Power Authority, who consistently played the power company game. Fortunately, however, one member was Dr. James C. Bonbright, member of the power authority from its beginning until Dewey made a clean sweep of survivors from the preceding Democratic regimes. Professor Bonbright had filed with the Governor a supplementary report which has not yet been released, except for a summary of points attached to the committee report. One of Bonbright's points, reflected in the Electrical World article, is significant. He suggests that the State power authority, responsible for generation and marketing of about 3 million kilowatts of Niagara and St. Lawrence power, should have had recognized status in the pooling of the State's power resources, as well as in the generation and sale of low-cost power. Apparently, even this State agency is being euchred out of the basic power setup. We shall await with interest release of the Bonbright comment.

FROM ROCKEFELLER TO RUSSIA

To get some idea of the technological backwardness of the Rockefeller little giant power approach and the reasons for the backwardness, let us return a moment to the Third World Power Conference and the report on "Electric Power Development in the U.S.S.R.," prepared by the Russian Academy of Science for that conference. That was back in the 1930's and reflects mainly principles and plans and experiments, but it seems to express the technological approach uninfluenced by ulterior considerations. And the recent Senate Interior Committee report on "Relative Power and Resource Development in the U.S.S.R. and the U.S.A." suggests that we've got to reckon with that kind of planning being carried out in the Soviet Union.

The 1936 Russian report refers back to the Goelro plan submitted to the 8th All-Russian Congress of Soviets in December 1920. It sums up the essential features of the Soviet electrification program based on that 1920 plan as follows:

"(a) The centralization of electric power economy and the concentration of generating plant and regional electric stations, interconnected into electric systems by high-voltage networks, with interregional interconnection of the networks later on. * * *

"(b) The development of the centralized combined production of electrical and heat energy in heat-and-power (H. & P.) stations, as organic links in planned electric power systems.

"(c) The development of hydroelectric stations, based on the coordinated development of waterpower. Like the H. & P. stations, the hydroelectric stations are essential factors in the location and combination of productive forces.

"(d) Fullest utilization of low-grade local fuel (peat, culm, oil shales, local coal of low-heating value, etc.) for electrification * * *."

The Goelro plan was approved by the all-Russian congress of soviets 5 years before Governor Pinchot submitted his 1925 giant power report to the Pennsylvania Legislature; 13 years before the birth of TVA, and 30 years before McGraw-Hill published the "Integrated Power System," a book by Philip Sporn, president of what has become the American Electric Power Co. integrated power system. What has been holding up modern power planning in our technically advanced Nation?

The 1936 Russian report tries its hand at an answer. It refers to the retarded development of centralized electric power economy in other countries as attributable to monopoly capitalism, to the competitive struggle between various financial groups, and to the fear of a high level of centralization in the electric power economy. The report says:

"The competitive struggle between electric companies, the planless location and development of productive forces, subject only to profit interests, and the hunt for consumers to increase the plant factor of the power station—all these have resulted in the high-voltage networks in capitalist countries possessing a configuration and extent that are irrational from the standpoint of national economy."

It should be noted that Western Europe has taken steps to overcome this irrationality in power system organization.

NATION CANNOT AFFORD TIMID APPROACH

The Rockefeller committee report is just the latest in a series of programs reflecting the private power company approach to giant power.

Technologically, the American Electric Power Co. system, extending from the Chicago area to Roanoke, Va., probably leads the way. In the South, the Southern Co. system serving Georgia, Alabama, and part of Mississippi and the Middle South Utilities system in Mississippi, Louisiana, and Arkansas, are going forward on the interconnected systems principle with joint planning of generating capacity.

The five-company proposal to the Bureau of Reclamation for integration of their transmission systems in the Rocky Mountain area, among other things to wheel Colorado River storage project power to preference customers, has also recently come into the picture. And Pacific Gas & Electric's baby interconnection between California and the Pacific Northwest, recently found financially feasible by the Bonneville Power Administration for possible marketing of its surplus Columbia River Basin power, has all the appearance of a camel's nose poked under the tent. We should review these projects in terms of the Bureau of Reclamation 1952 "Study of Future Power Transmission for the West," which would link Colorado, Central Valley (Calif.), Columbia, and Missouri River hydro with giant steam located in regional fuel areas to assure low-cost power for the entire region.

Whatever their technological merits, all private plans are essentially following the interconnected systems approach. No plans call for development of giant regional wholesale power supply as a separate function with all the possibility it offers of reducing costs through a high percentage of bond financing and simplification of rate regulation.

I do not think our great Nation can afford to go forward on this piecemeal, patchwork basis in a period when we are going, in any case, to add tremendous blocks of generating capacity, combining steam and hydro in combinations which mark a new technological breakthrough. I do not think that we can afford, on the one hand, to leave our essential yardstick public and cooperative electric systems insecure as to future supplies of low-cost power and, on the other, to leave regulation to unscramble a scrambled multiplicity of wholesale power interchange contracts.

And, perhaps most important of all, I do not think that, in the competition of social systems, we can afford to have the leader of the democratic world come off a poor second or third best in the sound engineering organization of its vital power supply function because ulterior considerations block progress.

THE ENGINEER RATHER THAN THE FINANCIER MUST GUIDE

Whether we turn to the 1936 Russian report to the Third World Power Conference or to the more recent Senate committee report, which tells how rapidly the plans described in the earlier report are being carried out, we cannot get away from the contrast with our approach to giant power in this country. It is a contrast between the engineer's approach, where he is free to do his best unpressured by ulterior considerations, and the power company approach, in which enginering planning must adjust itself to possibly conflicting private financial interests.

Some years ago I talked with Ted Parker, chief engineer of the Tennessee Valley Authority during its first extraordinary construction period. Parker had previously worked for a great engineering firm which served the utility industry. But he told me that he had found in the TVA his greatest opportunity to perform the service an engineer always longs to perform, in complete accord with the ideals of the profession. Never before, he said, had he worked where everyone was working for a common objective, where no one was seeking a profit for himself, where love of job predominated, and where the only pressure was to do his best and be his best.

That engineering approach has continued to characterize the planning of TVA in building the biggest single power-supply system in the country. And it is that kind of engineering approach—unwarped by our present patchwork of power-system organizations and uninfluenced by the dislike of big finance for Federal regulation—which must lay out the plans for the Nation's power supply if it is to meet the challenge of the balance of the century.

Long-range planning for this immediate future means projecting power-supply systems which will meet our requirements when the population reaches a quarter of a billion, when the number of family units reaches 80 million, when worker productivity sustains a $10,000 average annual wage in today's dollars, and when the annual family use of electricity in the home and on the job reaches 80,000 kilowatt-hours, when each quarter of a cent saved in the per-kilowatt-hour cost of electricity will mean $200 to the family and more than $15 billion to the country as a whole.

Private power spokesmen have defined the basic outlines of the power-supply systems required to meet these demands as including (1) very large steam-generating units and stations, conventional and atomic; (2) hydro, including pumped storage projects, for peak loads and reserves; (3) integration of generating stations by high-capacity transmission; (4) joint ownership; and (5) possible high bond-ratio financing in order to bring power-supply costs down. But they show no present intention to provide the country with the full advantages of this approach.

In the light of the foregoing, and following F. D. R.'s diagnosis of what the country needs and demands, I conclude by proposing two bold experiments, as follows:

Proposal No. 1: That the country encourage and facilitate the establishment of giant regional generation and transmission cooperatives to meet the Nation's herculean power requirements in years ahead at the lowest possible cost. These giant power-supply cooperatives would be open to membership of all systems, however owned, on a democratic vote per member basis, except that provision might be made against preponderance of control by any single type of ownership. In connection with its river basin undertakings, the Federal Government could participate in such giant power-supply cooperatives to the extent of planning and operating hydroelectric projects and backbone transmission systems as integral parts of the regional power-supply programs. Otherwise, backbone transmission would be part of the giant power cooperative systems. Each giant G. & T. would be responsible for long-range planning of regional power supply, cooperating with Federal agencies in such planning, arranging for the financing of the necessary facilities, and their operation, to provide bulk power supply to all electric systems serving consumers in the region at the lowest possible cost without discrimination. There would be nominal investment of members in stock and patronage dividends, so that service would be rendered substantially at cost. The bulk of financing, however, would be provided by bonds sold to the agency provided in proposal No. 2. In general, this would follow the Swedish principle, in which all types of ownership work together for the common good.

Proposal No. 2: That the country establish a public and cooperative investment finance corporation to handle the long- and short-range financing of the public and nonprofit sector of our economy. This would be carefully planned on the basis of the experience of the several New Deal financial agencies, including the remodeled Reconstruction Finance Corporation, the Public Works Administration, the Farm Credit Administration, the Home Owners Loan Corporation, the REA, etc. The Federal Government would subscribe to the stock of this corporation, would vest in it ownership of all outstanding loans and advances on which repayments, in part or in whole, with or without interest, are required, including the reimbursable investment in river-basin projects and programs The agency would be authorized to advance money for all public and nonprofit purposes at varying interest rates, depending on the public purpose rather than the supply and demand for money theory. It would be operated increasingly on a revolving-fund basis, along somewhat the lines of private issuance of bank-made money for the conduct of business in the private sector of the economy, as some multiple of the institution's cash resources. From time to time, Congress could subscribe to more of its stock when desirable otherwise to expand its loan capability. Long-range investment planning would provide a safeguard against inflation.

In previous papers, copies of which are available, I have outlined the giant power problem and suggested alternative solutions. Recently, at a meeting in South Dakota of the Midwest Electric Consumers Association, representing the eight-State Upper Missouri Basin area, where 41 percent of all consumers of electricity are served by public or cooperative systems. I proposed the initiation of steps to create such a giant power supply cooperative as I have just outlined. A special committee has been set up to look into the matter.

There are many problems to be solved, but spokesmen for all groups in the power industry recognize that the country requires a new step forward in power organization. In view of its tremendous importance, in terms of the Nation's ultimate leadership in a world of change, Congress should give the matter consideration at the present session. Meanwhile, candidates for the highest office in the land could well make sound programs for the country's future power supply, and more generally for the financing of the public and cooperative sectors of our economy, leading issues. They would thus play their parts in creating the image of a future America, in which a modern society is scientifically evolved under procedures which we sum up as democracy.

A Tribute to Lincoln

EXTENSION OF REMARKS

OF

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks, I wish to include the following poetic tribute from one of my constituents in Cambridge that appeared on the editorial page of the Boston Herald on the 151st anniversary of the birth of the Great Emancipator. In these days of confusion, it is

well to have the words of Lincoln recalled to our minds:

LINCOLN

(By William H. McMasters)

How futile are the words of men to make
their heroes' deeds stand forth
Or bring to mind full measure of their
character!
So has it ever been with Lincoln.
He, of all our country's great, eludes the
tricks of rhetoric
And makes our efforts impotent, our studied
phrases trite and common.
As the pages of history turn and countless
yesterdays flow into the vast eternity
of time.
The best that we can do is mark the passage
of his tragic years
And breathe our heartful thanks that such
eternal grandeur
In one undaunted soul,
Belongs, in growing strength, to those who
live within the shadow
Of his stature.
On this anniversary of his birth, reverently
we pray;
That he look down from the serene and lonely heights of Mount Olympus,
And, once again, implore us:
"To do all which may achieve and cherish
a just and lasting peace
"Among ourselves, and with all nations."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D.D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Schoeppel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Aiken, Capehart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Long of Hawaii, Dworshak, Kuchel, Goldwater, Allott, Martin, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Dirksen, Hruska, Keating, and Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Dirksen, Case of New Jersey, Javits, Prouty, and Brunsdale.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Fong, and Brunsdale.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Keating, and Brunsdale.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, 3013 Q St.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED — TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Congressman Lee Metcalf Speaks to School Administrators

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 17, 1960

Mr. MANSFIELD. Mr. President, one of the leaders in the field of education in the House is, I am proud to say, my colleague, LEE METCALF, from Montana's First Congressional District. During his four terms as a Representative he has been a champion of improved education facilities and instruction in this country, a prerequisite to the maintenance of our world leadership.

Congressman METCALF is a cosponsor of the Murray-Metcalf legislation which would establish a program of Federal aid to education with the least possible Federal controls and would provide funds for construction of schools and teachers salaries. The proposal provided the basis for the action recently taken by the Senate in approving the Federal aid to education bill.

On Monday of this week my able colleague, LEE METCALF, spoke to the American Association of School Administrators at its annual convention in Atlantic City, N.J. I ask unanimous consent to have the text of his speech printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TAPPING NATIONAL RESOURCES FOR SCHOOL FINANCE, FEBRUARY 15, 1960

In 1954, a subcommittee of the Committee on Education and Labor of which I was a member, in a Republican-controlled Congress, under a Republican chairman, made a brief report on Federal aid to education. The subcommittee said, "It is clear that Federal legislation is needed and that the legislation must be designed to encourage State and local efforts to meet the problem." The subcommittee recommended that "legislation be enacted to enable the States and local communities to expand their school construction programs."

In the years that have elapsed there have been weeks of hearings, dozens of hours of testimony and scores of recommendations for Federal assistance to States and local school districts. In the intervening years several independent agencies have also studied this problem and arrived at the same conclusion reached by our subcommittee in 1954—that if we are to maintain adequate educational opportunities in America, we must have substantial Federal assistance.

Yet today, the classroom shortage is more serious than ever before. The number of children enrolled in the public schools in excess of normal capacity has grown to the largest in history.

In the jargon of the bureaucrat, these are "surplus" children. I know very few parents who consider their children surplus. Last year, the number of surplus children was 1,850,000, this year, it is up to 1,883,000. But these surplus children are not the only ones who are being educationally short-changed. Because of the crowded, obsolete and substandard classrooms and the half shifts, the education of at least 10 million boys and girls is being impaired.

In addition to the nearly 2 million in excess of normal school capacity, there are at least 6 million in crowded urban elementary schools and more than another 2 million in obsolete or inadequate buildings. The 10 million figure is extremely conservative, because it does not include either urban high schools or rural schools.

In the opinion of some leading educators, the ideal class averages 27 youngsters in elementary and 20 in secondary schools.

If a class has 40 or 50 pupils, the education of every child in that room is being impaired, not just that of the additional pupils.

Even though the class size may be within the desirable limit, the youngsters are being short-changed if their teacher is substandard. And an even more serious crisis is developing in the shortage of trained teachers. Last year it was 135,000. When school opened in September it had grown to 195,000.

The only thing that has changed for the better is the fact that the States and local communities have made a tremendous effort, a magnificent effort, to meet the classroom and teacher shortage. They have made such an effort that they have physically exhausted their local resources. They have reached their statutory and constitutional debt limits, and they have reached a debt ceiling beyond which their tax system can no longer go without dire economic consequences. Evidence of this is the slackening of school construction and a downtrend in bond issues by school districts. During the first 11 months of 1959 voters of all States approved $1,230 million in school bonds as against $1,364 million in the same period in 1958. Last year, more than 70,000 new classrooms were built, a survey of future construction for next year revealed that 62,700 are planned, a decline of 10 percent.

The school population will increase by at least 1,200,000 next year. Just to take care of this increase, would require 43,255 classrooms. In addition, we will need replacements for the classrooms abandoned as obsolete. Exactly 16,400, the fewest in recent history, were so abandoned during the 1958–59 school year.

To house the increased enrollment and to replace obsolete classrooms, then, we need at least 64,655 more classrooms next year—or almost 2,000 more than the States report they are planning to build. As you can see, we won't even keep our heads above water next year—to say nothing of the backlog of needed classrooms.

Despite this gloomy picture it would not warrant the intervention of the Federal Government as recommended by the various groups that have studied the question unless there were a justification for Federal participation in the costs of education especially at the elementary and secondary level.

But it can no longer be denied that the national welfare depends upon the level of education. Our experience in two world wars concentrated our attention very forcibly upon the need for better educated soldiers. Indeed, the rejections in the draft of those disqualified by the mental test revealed great disparity among the States. For example, my own State of Montana led all the States of the Nation with only a 3.5 percent rejection while the two lowest ranking States had almost 50 percent rejection. That means that out of every 100 Montana boys called in a period of complete national emergency 96 would be sent into battle while another State with the same population could fill only half its quota. This fact and this alone has impressed Montana mothers with the importance of equalizing the required sacrifice by sending some of our tax money to help the States who cannot afford an adequate educational system.

The increasing mobility of our population means that a high percentage of tomorrow's adult citizens in almost every community will have been educated in some other community and some other State. Each year, one American out of every five changes his address. In many States only a fraction of those adults in penal institutions and of the youngsters in reform schools were educated in the States in which they are confined. The same is true of persons on the welfare rolls.

We pay for education whether we have it or not. And we pay more for it if we do not have it. We pay more in increased costs for penal and custodial institutions and for welfare. Today no State can escape its share of the high cost of inadequate education in any other State—nor can any State fail to share the benefits of good education.

In this age of missiles and satellites and cold war, the ultimate source of our security is the skill and technological competence and comprehension of our citizens. In the special field of missiles and space exploration the lead of the Soviet Union can only be overcome by accelerating research and technological advance, not only by highly trained specialists but by a greatly increased number of truly literate men and women at all levels. The Russian advances have only underscored our national shortage of developed brainpower. If the Soviet Union as a threat to our national security disappeared tomorrow, we would still be confronted by shortages of human resources in many fields which require high competence and extended training due to the ever-increasing technological complexities of our society.

Education is an investment in human resources from which we receive direct and positive gains in the form of higher productivity, more rapid gains in utilization of research, a better informed citizenry, as well as a stronger military. These are direct benefits that transcend State and local boundaries and involve our Nation's economic strength, our national growth, our prestige, as well as our national security and survival.

The mobility of our population, our dependence upon expanded education to maintain our economic growth are all items that prove a Federal responsibility for education.

Assuming a Federal responsibility, what is the role the Federal Government must play in a cooperative effort with the State and local governments to meet our educational crisis?

In the first place, a substantial increase in the Federal support for education is necessary. At the present time, less than 4 cents of each dollar expended for the

public schools comes from the Federal Government. I do not pretend to know what the exact proportion of the respective contributions of the Federal, State and local Governments should be—but I am convinced that at the present time, the Federal Government is shirking its responsibilities and not paying its just share. I am convinced that the Federal benefits are so great that the Federal Government should have stepped in and started greater participation in education before the States and local districts reached the point of exhaustion. But now that that point has been reached, it is imperative that the Federal resources be marshaled to assume an obligation that is overdue.

Actually this question of Federal aid resolves itself into a question of who shall pay for schools and what kind of tax shall be imposed to support them. Traditionally, on the local level, the schools have been supported by a property tax. In colonial times and pioneer days, this was an equitable tax on wealth. Today, when more and more wealth is in stocks and bonds and securities, and ability to pay is measured by income, a tax on property is neither equitable nor an accurate measure of ability to pay.

This is particularly true in suburban communities that have mushroomed around the cities. The residents of these communities are the young people with the most children to educate who live in homes that are heavily mortgaged. They educate their children in school districts that do not have the property tax base that is found in older communities where there are factories and transportation facilities and powerlines. This is one factor that has led to the development of foundation and State equalization programs. But even the States have to rely on sales and excise and consumption taxes, notoriously inequitable.

A whole different group of taxpayers contribute to the support of schools when that support comes from the income tax than contribute when the support comes from a sales tax or a tax on real property. This factor is an answer to those who contend that all money comes from the people and that the Federal Government must get the money from the people who live in the States, just as it is an answer to those who point out that certain States will pay in more Federal tax than they receive back in benefits. The tax burden in such States will be shifted so that those who have incomes of less than $10,000 per year in such States as Michigan and New York will pay much less tax for each dollar raised for schools than they would have paid if that dollar were raised locally. On the other hand, those with incomes of more than $10,000 per year in New York and Pennsylvania and other States that allegedly receive less than they contribute, will have to pay more in proportion and that is consistent with the basic principle of taxation on the basis of ability to pay.

An equally cogent argument for Federal support is that the tax base is national. States and local districts are haunted by threats that local industry will move if taxes are increased. Even if the local industry does not move, its competitive position relative to other States and localities is affected. In Montana, last year, the only national life insurance company located in that State announced that it was moving its headquarters from Helena, Mont., to St. Paul, Minn. And one of the reasons given was that the Montana Legislature had increased the gross premium tax. No such thing can occur, of course, when a life insurance company has to pay the same tax in St. Paul as it pays in Helena.

It has been suggested that local districts must bear at least half of the cost of education in order to maintain local interest and local control. At the present time, that ratio has not been maintained in many States. In Delaware, for example, 88.2 percent of the revenue for public elementary and secondary schools comes from the State government. In 20 States the local districts bear less than 50 percent of the burden. The experience in these States has not been that the additional State aid brought about any lessening of local interest or concern in the education of the children of the community. Likewise, a substantial aid program such as H.R. 22, which I have introduced, or the amended McNamara bill which passed the Senate the other day, would not upset the balance between the various levels of government. Even if the entire amount authorized were appropriated and expended, the Federal Government would be bearing less than 10 percent of the cost of elementary and primary education.

It may be that a just apportionment of the costs of education between the three levels of government would require that the Federal Government pay more than 10 percent. If we could put the present proposals into effect for 2 or more years, we could gain valuable experience that would help us ascertain the proper proportions. But in view of the need and the Federal interest, 10 percent of the cost is the least the Federal Government should bear.

At the same time that we are increasing the Federal share of the cost we should reappraise our position with respect to the question of Federal control.

After he had voted against the Clark amendment the other day, Vice President NIXON said, "In the field of education, we have two problems—attracting better teachers and raising their salaries and maintaining our traditional school system that operates without Federal control."

That statement is noteworthy because it completely disregards the problem of classroom shortages and because it brings up the tired old argument that Federal aid means Federal control in a context that has resulted in the most Federal control. The bill before the Senate was one for specialized aid, for construction. The Clark amendment would have added aid for teachers' salaries, so that the Federal support would have been general rather than specialized. This is the sort of traditional aid that operated without Federal control.

One of the current advertising campaigns of a machine tool company, a company that probably would not even be able to exist if it were not for Federal contracts and Federal subsidies, says that the Pilgrims didn't ask for Federal aid. Of course not, the small settlements established by the Pilgrims combined all branches of government as we know them today—Federal, State and local. And the Pilgrims marshaled all their resources to build churches and schools and homes for their families. They utilized to the fullest capacity every resource, public and private, to establish themselves in the new world and train future citizens to expand and develop their colony.

Probably here was born the unique American tradition of local autonomy in the management of schools. The conditions of pioneer and frontier life developed local responsibility and control. This has been taken as a matter of course and many people who are opposed to Federal support of education take the position that it is both unconstitutional and an innovation for the Federal Government to aid in education at any level.

As a matter of fact, the Federal Government has encouraged and aided education from pre-Revolutionary times. Prior to the Civil War, this aid took the form of general grants of land or money. There was no attempt to supervise teaching or regulate programs either directly or indirectly.

We are nearing the centennial of the passage of the Morrill Act in 1862. At the present time in Congress, bills are pending to commemorate the passage of the Morrill Act and to make the Morrill homestead in Vermont a national shrine. And the significance of this legislation is great. The Morrill Act marked the change of the Federal policy toward education.

The Morrill Act provided a grant of 30,000 acres of public land for each Senator and Representative to be used by the States for the establishment of agricultural colleges. The act carefully prescribed certain fiscal and administrative regulations and the Congressmen of that time had no hesitancy in restricting curriculums. Section 4 of the act says, "The leading object shall be, without excluding other scientific and classical studies and including military tactics, to teach such branches of learning as are related to agriculture and the mechanical arts, in such manner as the legislatures of the States may respectively prescribe."

Here was a grant of Federal land for the construction and establishment of colleges. In 1887, came the Hatch Act providing for agricultural experiment stations. This was a system of annual money payments instead of extending aid in lump sums of money and land. Indeed, the Hatch Act provided that only one-fifth of the first annual appropriation and only 5 percent of subsequent appropriations could be used for buildings.

In view of the interest in the so-called Powell amendment preventing the payment of Federal funds for segregated schools, the provision in the second Morrill Act in 1890 is of interest today. It declared, "No money shall be paid out under this act to any State or Territory for the support and maintenance of a college where a distinction of race or color is made in the admission of students, but the establishment and maintenance of such colleges separately for white and colored students shall be held to be a compliance with the provisions of this act if the funds received in such State or Territory be equitably divided."

In another area the Congress was busy making regulations specifically controlling the States' educational policies and restricting and regulating the State and local educational system. Between the end of the Civil War and the admission of Arizona to the Union in 1912, 12 States were admitted. In each case in the enabling acts, the Federal Government progressively required that certain provisions relating to education be incorporated into the State constitutions. Congress wrote 12 separate educational restrictions into the constitution of my own State, Montana. These conditions include stipulations as to the use of Federal land grants, the establishment of trust funds for the common schools, requirement that free common schools be maintained. And in order to gain statehood, the people of Montana gladly accepted these restrictions on local and State control of educational institutions.

The opposition of the senior Senator from Arizona to the acceptance of Federal funds provided by the National Defense Education Act and the refusal of the Governor of Arizona to request such funds make the provisions of the Arizona Enabling Act of 1910 of current interest. The act represents the extreme of Federal specifications as to use of Federal funds. It minutely provides for establishment of trust funds and subsidies and expressly sets forth not only the type of institution that is to be benefited, but the amount of benefit to be given each type of institution.

In other fields the extension of Federal aid departed from the historic pre-Civil War pattern of general aid without restriction

to aid for specific courses of instruction with complicated State plans requiring the approval of Federal officials before the money was granted. Such acts are still in existence and known to all of you, the Smith-Hughes Act, the Smith-Lever Act, the George-Barden Act, aid to impacted areas, and finally the National Defense Education Act passed last year.

Ten years of experience with Public Laws 815 and 874, which provide for support of schools in federally impacted areas, have demonstrated that Federal control need not be a consequence of Federal support. But nevertheless, inherent in Public Laws 815 and 874 are elements that might lead to Federal control of curriculums and textbooks and teachers. In both of these acts, the aid goes directly to the local school district without the intervening agency of the State school authority. In some districts, more than 50 percent of the support for operation and maintenance of the schools comes from the Federal Government. In fact, Uncle Sam is on that school board. An augmented Federal support program should avoid this by channeling Federal aid through the States so that the Federal money becomes intermingled with that of the State and local districts and there is never any direct connection between the Federal Government and the local school board.

Already, under the National Defense Act, we are seeing the dangers involved in specialized assistance. In order to encourage teaching of science and mathematics and foreign language, we have concentarted our Federal aid in those fields. A school that is badly in need of additions to the library and with funds to purchase books may decide to channel that same money into the purchase of scientific equipment because in the latter case the local tax dollar will be matched by Federal money. This is the case even though the need for the library is the greater.

In order to avoid this indirect control of curriculum, aid to education at the elementary and secondary levels should be by direct grants to the States, expendable as any other funds for any and all public educational purposes as the State itself may direct. Such grants will not interfere with our American method of keeping educational management close to the people and will return freedom of choice to the local school boards to decide under local conditions how best the Federal support can be utilized.

Now I use that word "grant" advisedly. Actually, it is not a grant at all—in the sense that a grant is a donation. When I use the word "grant" I mean Federal participation. I mean the assumption of the Federal Government's share of the responsibility for the education upon which a democracy rests.

I have been talking about direct Federal aid to education by an outright grant of tax money for support of specific educational programs or for specialized areas such as the help given in federally impacted districts. But there is another and equally important area of Federal aid. That is the indirect support given by our tax system. These include assistance to private educational and charitable institutions by means of deductions from the income tax for contributions, deductions to teachers for amounts spent in taking summer school courses in order to keep up with advancements in the subject matter and teaching methods, tax exemption on the income of State and local bonds for school construction and deductibility of State and local taxes.

Although these erosive concessions throw the entire income tax system out of balance, they continue to thrive and, indeed, to expand. The reason for their existence is a political one. It is frequently easier to go to the taxing committees of the Congress and get a back door subsidy labeled "tax relief" than go to the legislative committees, get authorizing legislation enacted, then go through the administrative agencies and the Budget Bureau to get budget recommendations and back to the Appropriations Committee and get a direct subsidy labeled "expenditures." The Eisenhower administration has this year come up with a third approach, that of the side door labeled "loans, guarantees, and insurance."

Involved here is a labyrinth of Federal benefits that are hidden from the public, that do not have the advantage of periodic review by congressional committees and administrative agencies. Such policies become fixed in the tax structure as vested rights impervious to change in economic conditions or tax policy.

I wonder if the time has not come for school administrators at the elementary and secondary level and for college presidents at the college level to reappraise and reevaluate some of these tax concessions and abandon the "back door" approach in favor of a frank and straightforward attempt at direct grants.

The Federal Government uses its taxing power to fix the income tax at a certain rate. The money raised from that tax is theoretically appropriated by the Congress on the basis of authorizing legislation regularly passed. If Congress recognizes that it is in the national interest to aid in the construction of school buildings, then a certain proportion of the national tax income is set aside for that purpose and allocated to the States on the basis established by statute. The tax deduction approach takes the decision as to where and how the money is to be spent away from the Congress and the administrative agencies and gives it to the individual who is taxed. This is not always in the public interest and is seldom in accordance with national policy laid down by the people through their elected representatives. It may be that educators of the Nation—or the admirals—have convinced the Congress that it is necessary to strengthen the science departments of the colleges and to train more doctors of philosophy in scientific fields. In order to do this, grants-in-aid are necessary to assist the colleges in establishing these expensive departments, and scholarships and fellowships are necessary to encourage students to continue their college work in order to obtain these advanced degrees. By a direct system of authorization and appropriation this policy can be carried out. But by a system of allowing deductions for contribution some of the tax money that would go to support this program is drained off. The person making a contribution to the college of his choice will prefer to endow a chair for history or build a chapel or plan for research into the tribal organization of the early American Indian, all commendable and worthwhile enterprises, but not in conformity with the national policy laid down by Congress.

A similar situation exists with tax-exempt bonds of school districts. The graduated income tax makes such bonds more valuable to those in the higher income brackets. So we have a regressive tax system for the construction of schools where those with the greatest income bear a lesser tax burden. This means not only inverted relief to the individual taxpayer, but it means that the Federal assistance goes to the school district that is in the best financial situation and those districts which have reached the limits of their bonding capacity cannot enjoy the benefits of the tax concession. There is mounting evidence that much of the benefit of the tax exemption accrues to the buyers of the bonds rather than to the local governments which issue the bonds. This would indicate that, at the same cost, the Federal Government could give more help to the State and local governments through direct grants.

Another proposal for Federal help is for the Federal Government to return a certain percentage of the income tax collected in each State to the State earmarked for educational purposes only. An example of this type of aprpoach is the Pelly bill which would return 2 percent of all Federal income taxes collected. There are serious administrative difficulties involved in such a proposal because large corporations pay withholding taxes on their employees at a central office, and the money collected in the State where the corporation had its headquarters would include income taxes earned in other States. But disregarding these difficulties, the bill has other disadvantages. It would provide for equalization in reverse. The bill would provide a return of about $1.1 billion each year. Under it, the State of New York would receive $71 per child while one of the neediest States would receive only $4 per child. My own bill, which provides for a flat grant of $25 per child, would have an equalizing effect. Instead of 2 percent as under the Pelly bill, the State of Alabama would receive 6.27 percent of the income tax collected in that State, Mississippi would receive 11½ percent, but in New York the return would be only 1.1 percent, in California 1¾ percent, in Pennsylvania 1.8 percent.

In addition to specialized assistance and Federal controls, the Eisenhower administration is insistent on State matching of Federal funds. If matching can come from either State or local sources and is for general educational purposes it is not very serious. The State and local communities will be spending far more money for education than the Federal Government anyway.

But matching of specialized funds distorts free and flexible management of State and local funds and when coupled with a requirement that matching be out of certain State or local funds then there is serious control and imbalance. Such a situation tends to create favoritism for certain types of education and forces States to alter their tax structures to conform with Federal requirements.

One other argument perennially used by opponents of Federal aid should be mentioned, that of the freight charge, the claim that somehow in the round trip to Washington and return, the tax dollar shrinks to 60 cents, or even less, due to Federal administrative costs.

A recent study of the functioning of 10 grant-in-aid programs by the House Committee on Government Operations has shown this is without foundation.

The 10 grant-in-aid programs analyzed by the House committee included the 4 largest and 6 smaller programs representing diverse administrative arrangements. For the 10 programs combined, the total of directly related Federal expenditures for administration, research and other associated activities was estimated to be 1.2 percent of the total grant payments to State and local governments in fiscal 1958. The addition of prorated indirect costs for other activities associated with these programs—costs including Federal tax collection and auditing—increased the total to 1.6 percent of the total grant payments. In other words, the total freight charge for the 10 programs accounting for four-fifths of all Federal grants is less than 2 cents on the dollar, even when we take into account what it costs to collect Federal taxes and audit agency books.

Now each of you has gone through special bond elections. You know the cost of raising this money on the local level. You know the cost of registration, of election judges and clerks, of the legal steps of clearing bond issues, the approval of forms. You know how expensive and time consuming the process is. Although no accurate figures are available, the best available estimate is that it costs somewhere between 5 and 10 cents per dollar to collect and administer a tax dollar at the local level. That, inci-

dentally, is the estimate of the American Association of School Administrators. In other words, collection and administration of a tax dollar on the local level costs 3 to 6 times as much as collection and administration of the same tax dollar on the Federal level.

The administration cost of such a proposal as the Murray-Metcalf bill would be infinitesimal. It requires only a simple mathematical calculation and notification of the allowance of the grants. If efficiency and economy in the administration of an educational program is what is desired this approach should appeal even to the chamber of commerce and the NAM.

Today there is pending in Congress legislation to accomplish the objectives of Federal aid within the framework of these principles. The bill that Senator MURRAY has introduced in the Senate and that I am sponsoring in the House is an example. The amended McNamara bill that passed the Senate last week is another.

More than any other group, yours is one that knows the problems of school financing. You know that the glib phrase, "Federal aid means Federal control" is a myth. You are the ones that meet with the taxpayers associations and the business community. You are the ones that belong to the luncheon clubs and the chambers of commerce. It is you that can bring the message of the need and justification for Federal support to the people of America more effectively than any other group. In doing so you will be performing a valued service for your profession. You will be helping your associates in the teaching profession to attain a higher standard of living and also a higher standard of professional capability. Even more important, you will be doing a great service to your Nation. It may well be that our national survival will depend upon the job you do in convincing your friends and neighbors of the need for better educational facilities. The passage of the pending legislation, as the result of the kind of popular demand your organization can generate, will help to do this important job.

OCAW-Sponsored Mental Health Center Will Stage Fund Drive During April

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to insert in the Appendix an article concerning a unique instance of a great labor union adopting a worthwhile public service institution and helping it with financial assistance.

The Oil, Chemical, and Atomic Workers International Union is giving support to the Mental Health Center of America, in Denver, Colo., which provides treatment for mentally ill borderline cases as well as does research on the causes of mental illness.

In April the OCAW will solicit each of its members for 1 hour's pay as a contribution to the Mental Health Center.

Recently we have heard so much adverse criticism of unions that I believe this is a wonderful opportunity to remind ourselves of the overwhelming good that unions do. The article from the Oil, Chemical, and Atomic Union News of February 8, 1960, outlines the campaign which this great union will conduct:

OCAW-SPONSORED MENTAL HEALTH CENTER WILL STAGE FUND DRIVE DURING APRIL

OCAW's support for the free, nonsectarian Mental Health Center of America will be put to the practical test during the month of April when the union's members will be asked to contribute 1 hour's pay each to this unique institution.

The 1959 convention unanimously adopted a resolution endorsing the center and authorizing and instructing the union's officers to put into effect a formal fundraising campaign throughout the union.

OCAW President O. A. Knight emphasized that this drive will in no way conflict with united fund or other local federated campaigns. "The Mental Health Center of America is an institution that serves patients from all over America and Canada while United Fund institutions are local in character," Knight said.

"This was one of the facts we looked at when the OCAW executive board was first considering support for the center. As a result of this difference in service, and because the Mental Health Center of America does not seek support from local United Fund drives, we determined that no conflict exists."

Knight announced that the MHCA campaign will be spearheaded by Ben Bezoff and M. Phyl Poulson. Bezoff, who will be project director, has taken leave from the board of the center on which he has served for some 14 years to devote full time to the OCAW fundraising campaign. He is a well-known Denver public relations man. Poulson, who is international executive board member from district 2, is on leave from his job in the Utah Oil Co. refinery in Salt Lake City and is serving as associate project director. Most of his time will be spent in the field, working with OCAW local unions, helping them set up the committees and procedures for the April MHCA campaign.

Already underway with the assistance of OCAW district directors and representatives is the organization of campaign committees in every local union. Cards are being distributed to local unions through the staff of representatives on which the names of committee volunteers can be sent into headquarters.

Committee members will be furnished with solicitation kits including brochures explaining the work of the center and enough pledge cards to cover the membership of their local unions. Each contributor will receive a special card acknowledging his donation and thanking him for his support of the institution.

The Mental Health Center of America is located in Denver and is an institution with a long and proud record of national service. In its early history it served as a recuperation and rehabilitation center for people recovering from tuberculosis.

In 1957 the board of trustees decided that with tuberculosis on the wane they had to evolve a new medical program if they were to continue to be of service. A thorough study of health needs showed that intensive psychiatric care and research in the field of mental illness would be most useful. In America and Canada, the survey showed, there are almost 20 million people suffering from some form of mental illness.

In July 1958 the center opened its doors as the only institution of its kind of provide free privately financed treatment for the borderline mentally ill on a nonsectarian basis. These are the cases of people who cannot any longer function in normal daily life, but who are not yet stricken with irreversible mental illness.

Inflation

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, February 17, 1960

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "We Can Stop Inflation if We Have the Courage To Try," published in the Saturday Evening Post of February 20, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE CAN STOP INFLATION IF WE HAVE THE COURAGE TO TRY

Inflation is commonly regarded as a sort of unavoidable disaster. Actually inflation is seldom accidental, but is the result of wrong decisions by governments which, in democracies at any rate, are made because pressure groups can outshout the rest of us. Everybody is against inflation, but everybody is for higher wages, more farm subsidies, and bigger welfare programs. In short, everybody wants to throw gasoline on the fire and rely on somebody else to put it out.

There are several devices which can be used to curb an inflationary boom in the early stages. Not necessarily in order of importance, these are: management of the national budget so that expenditures and income are in reasonable balance; sound monetary policies to prevent excessive credit expansion from causing inflation; and realistic management of the $290 billion public debt, including its reduction by any surplus which the Government is able to scrape together. To achieve these results the Treasury believes an increase of the interest rate on long-term borrowing is essential. This last item, which seems to generate more heat than light, is worthy of some analysis.

As of now the Government is required by a 40-year-old law to pay no more than 4¼ percent on all money borrowed for more than 5 years. This means that investors, able to get a better yield on their money in stocks, mortgages, and corporate bond issues, are unwilling to take the Government's long-term offerings. The Treasury has consequently been forced to get its money through short-term issues. In addition to piling up billions in debt which must be paid off during a brief period, too much short-term borrowing feeds the fires of inflation. This occurs because short-term securities are immediately salable, usually pretty close to the purchase price. A vaultful of short-term Treasury securities is the next thing to a vaultful of currency.

Actually the administration's proposal to remove the ceiling on long-term interest rates is not an effort to increase interest rates, as its critics have charged. As Secretary of the Treasury Anderson has pointed out, the effect could be just the opposite. "The rates we select," he said in a recent interview, "are determined * * * on the basis of what's been going on in the bond market. * * * Removing the ceiling would simply permit us to meet the market." By making long-term issues more popular, the average rate at which the Government could borrow money might actually be lowered instead of increased.

Of course, a technical device like an increase in long-term interest rates is not all that is needed to control inflation. Shortly after President Eisenhower's announcement, in his state of the Union address to Congress, that a $4,200 million surplus was anticipated

for the fiscal year ending June 30, 1961, the Treasury was able to float securities on better terms than have been possible for some time. This illustrates the importance of the Government's ability to keep its expenditures in balance. Tinkering with the mechanics of financing will avail little if Congress fritters away the prospective budget surplus by an unwarranted tax cut or unjustified spending.

The advocates of greater spending have developed what amounts to a theology of fiscal profligacy. For example, a group described as the Conference on Economic Progress has issued a report, written by economist Leon Keyserling, which deplores the grossly inadequate amounts of public spending in recent budgets, explaining that "every additional dollar of Federal outlays has a so-called multiplier effect, which results in 2 or two dollars of private consumer and investor outlay"—precisely the argument which those who fear inflation advance against unwarranted public spending. And some Members of Congress, eager for a torch to carry, denounce tight money as a scheme to enrich the bankers, despite the fact that any after-taxes profit the banks can realize from higher interest rates will be more than canceled out by the decline in the value of their present stock of lower yield Government securities.

Foreign holders of American dollar reserves are beginning to view the management of our finances—and particularly the refusal of Congress to remove the interest-rate ceiling—with some anxiety. This may partly explain the recent withdrawal of gold from this country. However, a too rapid or continuous gold loss might threaten the very existence of the international monetary system and the position of the United States as a world leader. The distress from a further decline in the value of the dollar among people who live on fixed incomes, retirement pensions, insurance policies, and so on, is easy to imagine. To a considerable extent it is being experienced already.

Even without unwise public spending, our gold reserve is under considerable pressure from an unfavorable balance of payments, arising from this country's international transactions, including investment of American dollars in overseas industry, foreign-aid advances, and money spent abroad by American tourists and servicemen. This problem can be taken care of, but if we insist on adding to the dollar's handicaps a loss of confidence in our financial commonsense, nothing but trouble should be expected.

What it comes down to is that inflation is inevitable unless there is patience and restraint on the part of the public. If every slight increase in prices is to mean a strike-enforced demand for higher wages, we might as well kiss stability goodby. L. Robert Driver, a statistician and tax expert who has been represented on this page in the past, has worked up some challenging figures on this matter.

"If the pay of all employed persons in the United States had been raised by 40 cents an hour, as the pay of the steelworkers was raised," says Mr. Driver, "the costs of goods and services in the country would rise by $45,800 million a year, or $270 for every one of our 170 million people." Leaving out the effect on our precarious competitive position vis-à-vis foreign producers, even a fiscal ignoramus can see the effect of such an addition to our already topheavy costs on the value of the dollar.

The essential element is what the first J. P. Morgan used to say he looked for in a man looking for a loan or a job: character. If we are really on a payola and tax-loophole economy, if we lack the guts to refrain from strikes and the intelligence to reject populist easy-money panaceas, then neither Congress nor the Treasury can do much for us.

If, on the other hand, the millions of Americans who know the score set themselves up as a sort of Inflationists Anonymous, pledged to resist the potions of the spendocracy, the news will get through to those who manage our affairs. They will know that the American people want their Government to protect the value of their money and their position in the world, and will accept short-term sacrifice for long-term security. On can bet on this possibility—either way.

Loyalty Oath Requirement of the National Defense Education Act

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. WALTER. Mr. Speaker, I found in my mail this morning a letter from a resident of Illinois, requesting me to explain to her why I allegedly do not intend to oppose the repeal of the loyalty oath requirement contained in the National Defense Education Act, which is Public Law 85–864.

This person attached to her letter a photostatic copy of a letter which she received from the distinguished Senator from Illinois [Mr. DOUGLAS], in which the Senator states that "Senator KENNEDY has introduced legislation to repeal the disclaimer section of the act and Congressman WALTER, author of the original requirement, has indicated that he will not oppose such action." I deem it necessary to correct two errors which have crept into Senator DOUGLAS' letters to his constituent.

I am not the author of the loyalty oath requirement of the National Defense Education Act although I am a strong supporter of the retention of this vital requirement. That requirement was not contained in the House bill. It was the Senate bill that did contain it and the managers on the part of the House agreed to the Senate version in conference. Of course, I was very happy to see that action taken. I am strongly opposed to the repeal of that requirement and my views have been clearly stated in a letter which I wrote on June 17, 1959, to Mr. A. H. Scouten, the secretary of the University of Pennsylvania.

My letter to Mr. Scouten reads as follows:

JUNE 17, 1959.

Mr. A. H. SCOUTEN,
University Secretary, University of Pennsylvania, Philadelphia, Pa.

DEAR MR. SCOUTEN: I have your letter of June 15, and I am pleased to note that you appreciate my frankness in discussing with you the Penn faculty senate's objection to the "disclaimer affidavit" required under the National Defense Education Act. You have induced me to proceed in the same spirit.

Obviously, the purpose of the "disclaimer affidavit" is not to expose Communist infiltrators who have wormed their way into our intellectual circles. You are correct in stating that real subversives would "sign or swear to any statement if it suited their tactical purposes." The purpose of the affidavit is to ascertain that the beneficiary of a Federal educational grant is either a loyal citizen of the United States, or—if he swears falsely—a perjurer, subject to criminal prosecution. I am sure that you are familiar with the basic tenets of our law enforcement system, and that I therefore do not have to amplify that point.

Next, your statement as to the "disclaimer affidavit" impugning the loyalty of the academic community. I disagree with you emphatically. For the Government to ask a person to state affirmatively that he is not guilty of any wrongdoing, does not mean at all that the Government suspects him of misconduct. The purpose of the classic affirmation formula appearing on the income tax return is certainly not an implication that every taxpayer is a cheat; some are, and therefore the affirmation formula is necessary. The same rationale applies to the disclaimer affidavit. The same applies to the loyalty oath required of every employee of the Government. All of them are not thereby placed under suspicion of disloyalty.

It is more difficult to discuss the balance of your letter as it is always difficult to continue a discussion in the course of which one of the debaters retreats from argument to sophistry. Please don't mind my use of this word. But, how would you call an argument comparing the use of governmental funds for farm price support with the use of such funds for the purpose of promoting the education of selected future leaders of our scientific defense effort under the National Defense Education Act? In an effort to avoid insulting the intelligence of both of us, I shall rest there and not belabor the even more spacious nature of your coal miners and John L. Lewis inference, a truly prize equivocation.

The last paragraph of your letter disturbs me profoundly, as it again attests eloquently to the insufficient perception and comprehension of the very nature of communism by many of our leading intellectuals. Even in using a lighter note as you say, equations between totalitarian, terroristic communism and any, American or foreign, ideological movement are inexcusable. Hoping that I may remedy this situation, in my capacity as the chairman of the House Committee on Un-American Activities, I am right now engaged in an attempt to publish certain materials which which might help to educate the educators.

Sincerely yours,

FRANCIS E. WALTER,
Chairman.

Defense: A Need for Perspective

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, February 17, 1960

Mr. WILEY. Mr. President, the maintenance of an adequate defense system to deter aggression—now and in the future—is one of the major challenges confronting the Nation. Recently, we have been hearing testimony from our scientific and military experts on the adequacy of our defense program.

Even among experts, there are differing opinions on:

First, what is an adequate defense; and second, is the U.S. program sufficiently strong—particularly in relation to the Soviet Union.

We recognize that the Soviets have developed tremendous thrust for launching its intercontinental ballistic missiles. However, in this complex technological age, an effective defense cannot depend upon a single weapon—even the powerful ICBM.

The intercontinental missile will—in all likelihood—be the workhorse by and large, around which will be centered the defense of the future.

However, there are a wide variety of other weapons for defense systems: for detection of enemy approaches—and capable of retailiatory counterattack that must be kept at the ready—if we are to be adequately protected.

These include an up-to-date radar system for detection of approaching enemy planes or missiles; maintenance of a well-balanced striking power, including jetplanes, ICBM's, intermediate-range missiles, air-to-air, ground-to-air, and air-to-surface, and other missiles; submarines equipped with rocket launchers; adequate numbers of aircraft carriers for launching of jetplanes bristling with nuclear weapons and missiles; mobile, atomic firepower for all air, ground, and sea forces: These are only a few of the major facets of a complex, modern defense system.

In view of the conflicting opinions, the task before Congress is to determine, to the best of its judgment: (a) Is our defense adequate for present threats, and (b) are we moving forward fast enough to meet the threats of the future?

The people of the country, I believe, deserve a well-balanced evaluation by Congress, as well as by our experts in the various military and scientific fields, of the adequacy of our defense.

Recognizing that this is a political year, we can of course expect distortions by those who seek to gain political advantage, for example, in isolating what they feel are weak spots in our defenses without putting the whole picture in perspective.

In view of honest differences, as well as what appear to be deliberate distortions, I understand that President Eisenhower is considering taking the defense issue to the American people. The purpose would be to provide them with a realistic picture of the adequacy of our defenses. Frankly, I believe this would be a good idea.

The survival of our country, as well as freedom in the world, depends upon our deterrent power.

The maintenance of a strong, balanced defense force, too, will require the outlay of more than $40 billion of the taxpayers' money. In the light of these facts, every effort must be made, not only by Members of Congress, but by leaders in the various military and scientific fields, to provide the American people with the realistic picture of our defenses.

Recently, the Christian Science Monitor published a constructive editorial entitled "Defense: A Need for Perspective."

Reflecting the need for such perspective, I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEFENSE: A NEED FOR PERSPECTIVE

If there is any subject on which people and statesmen should be able to take the long look rather than the narrow view, it would seem that it should be the subject of rockets in the verges of space.

Yet there is a persistent tendency, fostered by persons of great earnestness, to regard the missile race, and specifically the production of intercontinental ballistic missiles, as if this represented the whole or at least the crux of American defense.

Just as it takes more than one foot race to make a track meet, there is obviously more than one department of military defense and in fact more than a solely military aspect to national security.

This is what President Eisenhower seems to be trying to say in his press conference encounters against implications that the United States is being conditioned to a power position of second best.

Defense of the country is, as he has said, "a very wide and comprehensive problem." When he asserts that he knows more about it than any other one individual, this is not a claim of superior personal competence but a statement of the fact that the Chief Executive is at the focal point where data and recommendations from all the defense and diplomatic agencies come together.

The President more than anyone else is responsible for evaluating the needs of the various branches of the armed services, air, land, and sea, and for balancing them with civilian requirements and resources. Congress, to be sure, must have its coordinate part in providing financial sinews and directing the broad outlines of their use.

But it is doubtful whether any good purpose is served by the necessarily fragmentary leaks of material from congressional committee hearings which have heightened confusion as to whether America is beginning to close the missile gap or allowing it to be widened.

The people of the United States certainly do want to know that their Nation is gaining rather than losing in a competition which it has the wealth, skill and capacity to win for the deterrence of war. The administration should not underestimate either the Soviet ability to concentrate on specific accomplishments such as the ICBM or the moon rocket, nor dismiss the effect of these accomplishments in terms of world power.

But relative military strength should not be weighed solely in terms of ICBM's; for overseas bases and submarine rocket launchers enter into that equation, and the matter of mobility for brush-fire wars is of prime significance.

There are factors even outside the military which Premier Khrushchev fails to take into account when he boasts to Italian President Gronchi that a Soviet flag on the moon proves the superiority of communism over capitalism. The merits of a politicoeconomic system may reside not so much in whether it can put a tin spangle on the moon as in how often it puts meat on the kitchen table.

In short, the components of national security are so varied that they cannot be measured by one weapon system alone. Security depends upon a balanced defense establishment, on good international relations, and on a deeply based national morale.

Single Chief of the Military Would Imperil U.S. Defense

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. WILSON. Mr. Speaker, one of the perennial proposals that is just as regularly discredited is that of establishing a single Chief of Staff over the Armed Forces of the United States. Once again we are told that the panacea for virtually all problems connected with national security would be quickly solved if we could only junk our war-proven and demonstrably effective Joint Chiefs of Staff system and replace it with the alien single Chief of Staff and Supreme General Staff.

Some of the reasons why such a disastrous course of action should not be adopted by this country are contained in two editorials which I commend to the attention of the Members of this House. The first editorial, "Single Chief of the Military Would Imperil U.S. Defense," appeared in the San Diego Evening Tribune of February 4, and the second of the editorials, "Symington's Move—The Single Chief: No Bargain," appeared in the San Diego Union of February 5, 1960. These editorials discuss the dangers of one-man military control and the inherent deficiencies of the Supreme Staff system as compared with the repeatedly demonstrated strength and advantages of our Joint Chiefs of Staff system organization. As the second editorial so well points out, the distinguished chairman of the House Armed Services Committee, the Honorable CARL VINSON, is a vigorous opponent of the rigid and autocratic Supreme Staff system.

I would like at this point to repeat the statement made by Chairman VINSON in the course of his speech before the guests at the Veterans of Foreign Wars dinner February 9, at which time he received the highest VFW citation for contribution to the strengthening of our Nation. On that occasion, Chairman VINSON warned against junking the Joint Chiefs of Staff and adopting the single chief—supreme general staff scheme, and said:

Every additional step we take toward a single general staff is a move closer to military and political disaster.

The two editorials follow:

[From the San Diego Union, Feb. 5, 1960]

SYMINGTON'S MOVE—THE SINGLE CHIEF: NO BARGAIN

Senator STUART SYMINGTON, Democrat, Missouri, at last has made his move for more national attention to support his candidacy for the Democratic presidential nomination. He has introduced a bill to set up a powerful single Chief of Staff in the Pentagon—a sort of supreme uniformed commander over all U.S. Armed Forces.

The fact that this proposal already has been discredited thoroughly by most responsible military authorities and many Members of Congress has failed to cool Mr. SYMINGTON'S ardor for the single Chief of Staff concept.

He claims his experience as Air Force Secretary during part of the Truman administration makes him an expert on such matters. The Senator thinks a single chief with the powers now wielded by the Joint Chiefs of Staff representing all the armed services would halt interservice rivalry, put an end to the cumbersome command structure now in force in the Pentagon and save the taxpayers money. The record shows that Nazi Germany and Japan fared poorly with a single chief system.

Yet men like former Assistant Defense Secretary Wilfred J. McNeil, who served as top Defense Department fiscal boss in the Truman and Eisenhower administrations until last year, say the single chief idea would produce no real economies.

Mr. SYMINGTON'S bill would retain all the services in their present status. A single chief would have no more authority to halt interservice disputes than the Joint Chiefs possess today. But he would be able to keep these arguments from the scrutiny of Congress and the American people. And his would be the only voice heard from the Pentagon on defense matters. This is not the way of a democracy.

Perhaps the greatest danger inherent in the single chief concept is the centering of too much authority and power in one man. At the same time it would abandon the Joint Chiefs in their present role and thereby rob the Nation of the wisdom and experience of men who have made a career of our country's defense.

Who is to say, under Mr. SYMINGTON'S proposal, that the single chief of staff always would be a wise man, one who sought no power beyond that which he needed to do the best possible job?

Under the Joint Chiefs concept, the unwise and the power hungry are outvoted and overbalanced by their colleagues.

Fortunately, there seems little possibility that the SYMINGTON proposal will get a green light from Congress this year. Even if it should be passed by the Senate, which is doubtful, Chairman VINSON of the House Armed Services Committee would place the measure in its proper pigeonhole. The venerable VINSON long has warned that no such single Chief of Staff idea would get the time of day before his committee.

[From the San Diego Evening Tribune, Feb. 4, 1960]

SINGLE CHIEF OF THE MILITARY WOULD IMPERIL U.S. DEFENSE

It is discouraging to note that the tired, old idea of a single Chief of Staff for all of the Nation's Armed Forces has been dusted off again.

A bill to accomplish this dangerous change in the present Joint Chiefs of Staff system has been introduced in Congress by Senator STUART SYMINGTON, Democrat, of Missouri.

It deserves a quiet burial.

This idea has beguiled nations for a long time. Those who have succumbed to it have been defeated when the single chief concept had to meet the test of war.

The Prussian general staff was supreme when Germany was crushed in two World Wars.

Japan was led to war and defeat under a system of monolithic, centralized military control.

The Symington bill would clothe the proposed single Chief with enormous power of decision.

This awesome responsibility is now shared by the Chiefs of the various services, who can draw on wide experience and intimate knowledge of the capabilities of their respective branches.

The present Chairman of the Joint Chiefs has no vote. His function is to win agreement of the heads of the services through his influence. The final decision is made by the service Chiefs, who can vote.

SYMINGTON would reverse this proven system. His bill would, in effect, make the Chairman of the Joint Chiefs the supreme authority as the single Chief of Staff for the Defense Department.

The service Chiefs, under the bill, would be relegated to the role of advisers to the lone man at the top.

This one man would have the final say on spending about one-half of the entire national budget.

This one man—and nobody is infallible—would have the final say on what this Nation would do in a military crisis.

If he guessed right—well and good.

If he guessed wrong? There is no consolation prize for second-placers in war.

The Joint Chiefs of Staff is a workable system.

With its representation of the various services—Army, Navy, Air Force, and Marine Corps—it fits in with our tradition of checks and balances in the exercise of power.

It would be perilous to alter this system and substitute an alien concept that has demonstrated its fatal flaws.

This latest effort to undermine the Joint Chiefs would endanger our national defense at a time when we should be directing our energies toward strengthening it.

Congress can take the lead by shelving the Symington bill.

Opposition by Utah Wildlife Federation of Creation of a National Park in Area Known as Dinosaur National Monument

---

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, February 17, 1960

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by the secretary of the Utah Wildlife Federation explaining why the officers and members of that group do not feel it would be wise at this time to make the Dinosaur National Monument a national park.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UTAH WILDLIFE FEDERATION,
American Fork, Utah, February 12, 1960.

The Honorable WALLACE F. BENNETT,
Senior Senator from the State of Utah, Senate Office Building, Washington, D.C.

DEAR SENATOR BENNETT: The Utah Wildlife Federation, representing 29 sportsmen's clubs in the State, after due and timely consideration, offers the following protest:

We oppose the creation of a national park and the resultant closing of thousands of additional public lands to hunting in the area now known as Dinosaur National Monument.

We believe that until such time as the National Park Service can be composed of a more equitable representation of our sportsmen, and their policy changed regarding hunting within the boundaries of national parks, the area above mentioned should be left at its present status.

We are not opposed to the creation of national parks, as such, but we strongly feel that a more thorough investigation should be made of each proposed park to determine the effect on our wildlife and natural resources.

Respectfully submitted.

JACK ALLSHOUSE,
President.
EMERSON S. SMITH,
Executive Secretary.

The Uncertainty of World Trade

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. BETTS. Mr. Speaker, recently the Joint Economic Committee of the Congress issued a report dealing with the international effects of our Nation's economic policy. Much of this document was devoted to expounding freer-trade dogma, while ignoring or misinterpreting numerous economic realities.

In one instance, however, the committee's report faced up to the hard facts of international competition in the 1960's. With admirable discretion, the Joint Economic Committee refuses to embrace the preferential trade concepts adopted by the two rival trading blocs in Western Europe.

This, of course, is what many Americans have been counseling for months. Members of Congress from both sides of the aisle have noted the dangers to the United States that are implicit in the formation, objectives, and bylaws of the European Common Market and the Free Trade Association. Similar calls for caution have been sounded by certain business spokesmen, labor leaders, and organizations such as the Trade Relations Council of the United States.

So it is with a warm sense of gratification that I find these views now shared by the Joint Economic Committee, as evidenced by these excerpts from its report of January 25:

Six countries in Western Europe have now entered into an agreement to form a Common Market. Under this agreement, the participating countries will gradually reduce and ultimately eliminate tariff barriers against each other. They will, in time, have the same tariffs against all goods imported from outside the Common Market. In the meantime, seven other countries in Western Europe, having failed for the time being to reach agreement with the Common Market countries, have formed a Free Trade Association. Under the treaty, these seven countries would ultimately eliminate all tariffs on trade among themselves, but each country would retain its own tariffs against imports from outside the free trade area. In principle, these arrangements are a customs union authorized by the General Agreement on Tariffs and Trade and toward which the traditional policy of the United States is not unfriendly. For political reasons, it would be regrettable if the OEEC countries divided into three exclusive

groups—those inside one customs union or another and those outside both. For economic reasons, it would be regrettable if these customs unions were operated in a manner that would stifle multilateral trade and result in harsh discrimination against other countries.

The problems created by the establishment of one or two large preferential trade areas are far more complex than those arising from the association of two or three countries in a customs union. The members of the Common Market and Free Trade Association, excluding overseas countries associated with them, account for 43 percent of total world imports. This is an enormous segment of the world economy to be set aside as one to which other countries could export only under serious handicaps. It would be tragic if after the heroic and largely successful efforts to expand world trade on a nondiscriminatory basis, these new and enormous customs unions were to become the instruments for legalizing and perpetuating onerous discriminations on the other half of the world economy, including primarily the United States, Canada, Latin America, and other countries in Asia and Africa.

There is a heavy responsibility on the Common Market and Free Trade Association to follow policies that will avoid serious harm to the world economy. A generally low level of tariffs within the customs unions will let these countries benefit from the heightened competition within wider trading areas without imposing too severe a handicap on the countries outside these areas. Furthermore, under the fund agreement and the General Agreement on Tariffs and Trade, there is a prior obligation to remove quantitative restrictions against imports from outside the customs unions before increasing the preferences that these countries extend to each other. Above all it will be difficult to safeguard the trading interests of other countries unless the members of the customs unions make their currencies convertible in accordance with the fund agreement. Convertibility would provide a minimum assurance that if quantiative restrictions become neecssary in one country they would not also be imposed by surplus countries in a customs union solely to facilitate the restoration of the balance of payments of a deficit country.

In the trade negotiations with the Western European countries, through the reciprocal trade agreements and through the General Agreements on Tariffs and Trade, the United States has granted valuable concessions in the form of easier (lower tariff) entry into the U.S. market. In turn, we have been granted valuable tariff concessions by these countries which were intended to give us easier entry into their markets. The value of the concessions we have given remain unchanged—in fact, they have grown more valuable as the U.S. economy has grown. The concessions we have received will become much less valuable through the formation of the new customs unions after our concessions were granted. A tariff reduction by Belgium, for example, which was valuable to the United States when German exports paid the same tariff, is much less valuable (or may be entirely without value) when German exports can enter the Belgian market at a lower tariff than the same U.S. exports and ultimately without any tariff. The United States and other countries that have given tariff concessions to Western Europe are entitled to know that the reciprocal concessions to them are not going to be negated in the new trade arrangements that are being made in Europe.

Mr. Speaker, the uncertainty and doubt with which many observers regard the economic splitup in Western Europe was also underscored at a 2-day meeting of the Committee for a National Trade Policy only a few days after the Joint Economic Committee's report appeared.

The Journal of Commerce, describing the meeting, reported as follows:

Robert R. Bowie, Harvard economics professor who headed the European affairs round table, said the economist members indicated that it may be necessary for the United States to acquiesce in further trade disadvantages to help close the split between the six-nation Common Market and the Outer Seven of the Free Trade Association.

He said political considerations—interest in promoting free world unity—outweighed pure commercial factors in the opinion of the panelists.

This is disquieting news. The United States has been acquiescing, as Professor Bowie expressed it, to the demands of its trading partners for 25 years now, ever since the gradual surrender of foreign trade policies was launched by the Trade Agreements Act of the first New Deal administration.

Now the economists on the Committee for a National Trade Policy tell us we may have to start all over again or, at least, keep giving away trade concessions right and left, evidently with the hope that our country can make the best of a dangerous situation that developed in spite of our noble efforts of the past.

The fact is, however, that acquiescence—perhaps surrender or capitulation are better words—is the last thing we should do under the present circumstances. The situation calls for thoughtful, levelheaded study and careful observance on the part of this country.

We have been pushovers in the international tariff bargaining arena for a quarter of a century. It has not prevented our friends and allies in Western Europe, accounting for almost half of the total world trade, from breaking up into two economic camps, each of which is dedicated to advancing the interests of its own members at the expense of outsiders.

As one of these outsiders, the United States has much to gain from a policy which we should have been observing all along; namely, that of insisting that our trading partners comply in full with their trade commitments to the United States. We have much to lose from a policy of subservience and acquiescence. Further U.S. tariff concessions should not be granted until the air is cleared and we know for certain just where the rival camps in Western Europe are heading.

Red Party To Make Phony "Prosperity" Pitch

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I commend to the Congress the observations contained in an editorial which appeared in the Buffalo Courier Express, Buffalo, N.Y. This excellent editorial follows:

RED PARTY TO MAKE PHONY "PROSPERITY" PITCH

Strange as seems the belief of the Russian Government that the American car-buying public can be sold on the Moskvich car, even stranger is the attitude of the Communist Party in the United States in expecting that American industry and the American people can be sold on Communist "peace and prosperity."

The party is expected to make a stronger pitch to big business representatives in the future, adding "prosperity" to its familiar "peace" theme of the past, according to the House Committee on Un-American Activities in its annual report. Party workers are expected to show industrialists how peace could increase their profits, while the people at large will be told how peace and disarmament will make possible the spending of billions for schools, roads, hospitals, and housing, instead of defense.

Though at a low ebb numerically in this country, the party has great expectations of a soft sell of communism, assuming that the trusting American people, persuaded of Khrushchev's sincerity, are ready to take anyone—even a Communist—at his word. That is assuming a very great deal, indeed—even more than that the Moskvich is the American concept of what an automobile should be.

Currently the smartly taxed American people are being reminded that Russian power politics threatens to make life really tough for them in the sixities; but even the most trusting must become "sicklied o'er with the pale cast of thought" at the peril of Communist enslavement.

Greek Letters and Greek Press Week

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, February 17, 1960

Mr. CASE of New Jersey. Mr. President, His Eminence Iakovos, archbishop of the Greek Orthodox Churches of North and South America, has proclaimed the week of January 24–31 as Greek Letters and Greek Press Week. We all aware of the great contributions to our civilization by the Greek language, philosophy, culture, and democracy of ancient times and the great sacrifices Greece has made in our modern times to the causes of freedom in her fight against facism, nazism, and communism.

The Greek language is being revived in several universities and placed on the curriculum in many State schools throughout the country.

I wish to pay tribute to Greek Letters and Greek Press Week. I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from an editorial from the National Herald, a nationwide Greek-American newspaper daily, which is widely read in my State, entitled "Press-Letters Week," and dated January 31, 1960.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PRESS-LETTERS WEEK

In line with the standing policy of the archdiocese, His Eminence Iakovos, has proclaimed the Greek Press and Letters Week throughout his jurisdiction. Objective of this annual event is to impress upon our people the significance of the Greek-American press and Greek-American education in our development and progress as a cultural, racial, and religious group.

Our hope is that our people in every community will not pay lip service to the far-reaching objectives of this event, but utilize the opportunities it presents for some concrete action.

Governor Ribicoff Backs Programs To Help Commuters

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. KOWALSKI. Mr. Speaker, Connecticut's great Governor, Abraham A. Ribicoff, has been working long and diligently toward a solution of the problem facing commuters living in Connecticut and other States. The Governor is at present in Washington discussing this and other problems with Members of Congress and officials of the administrative departments.

It appears that Federal action is necessary if the railroad puzzle is to be solved. However, on the State level Governor Ribicoff has been working closely with the Governors of our sister States of New York and New Jersey.

The Hartford Times for February 15, 1960, reports on two new moves which Governor Ribicoff, a former Member of this House, has endorsed.

Following is the article from the Hartford Times:

RIBICOFF SUPPORTS TWO MOVES TO AID RAIL COMMUTERS

Governor Ribicoff today pledged Connecticut's support to two interstate moves designed to alleviate the problems to commuters who use the New York, New Haven & Hartford Railroad.

They were:

Interstate audit of the railroad's commuter accounts.

Establishment of a tristate agency to preserve existing commuter services.

The Governor gave his support after meeting with two transportation committee members of the Metropolitan Regional Council, which is made up of top elected officials of cities and towns in the metropolitan area of Connecticut, New York and New Jersey. They were First Selectman Herbert Baldwin of Westport and Maxwell Lehman, executive secretary of the council.

"The council," said Governor Ribicoff, "is skeptical about New Haven Railroad figures as to losses attributable to commuter traffic.

"It asked if the Connecticut Public Utilities Commission would join the Public Service Commission of New York in auditing the figures.

"The answer for Connecticut is, 'Yes.'"

Governor Ribicoff said that if the tristate agency is carried out, he will be "more than willing to endorse such an agency if the other Governors go along."

The Governor added he would, in that case, designate somebody to handle the preliminary stages until such time as necessary legislative action had to be taken.

Death of Mr. Vasilios I. Chebithes, Past Supreme President of Ahepa

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, February 17, 1960

Mr. CASE of New Jersey. Mr. President, Mr. Vasilios I. Chebithes, past supreme president of the American Hellenic Educational Association (Ahepa) passed away on December 10, 1959. He had served as supreme president from 1924–27 and 1935–40. He was considered a great leader of the Ahepa and the first supreme president who undertook a nationwide building program. His name is known throughout the world by those of Hellenic descent. I offer my sincerest sympathies to his family and to his many friends through the country, many of whom come from my State.

I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an editorial by the editor of the Ahepa magazine, Mr. Kimon A. Doukas, of New York, and an editorial by the editor of the English section of the National Herald, a Greek-American daily newspaper printed in New York with nationwide circulation.

There being no objection, the excerpts and editorial were ordered to be printed in the RECORD, as follows:

VASILIOS ISIDOROS CHEBITHES, SUPREME VICE PRESIDENT

(By Kimon A. Doukas)

It was in the early hours of December 10, 1959, when Supreme President Loucas despatched the following brief message about one of his most illustrious predecessors:

V. I. Chebithes passed away early this morning. Services Monday, December 14, 12 noon, at Saints Constantine and Helen Church in Washington, burial at Arlington Cemetery.

V. I. Chebithes was no more. The man who led the Ahepa since 1924 on to glorious victories and suffered bitter defeats but never laid his convictions aside or let his fellow Ahepans down was gone.

He had passed into the Great Beyond. The eight-term Supreme President—a distinction and a privilege no one else has enjoyed and nobody will ever hope to attain—was only a memory. The stormy petrel of Ahepa politics, he who generated love and affection and thrived on criticism and hatred equally well, had departed quietly from the scenes of his most turbulent life. Ahepa was orphaned of one man it could or could not do without.

V. I. CHEBITHES—THE APOSTLE

(By James Karabatos)

In every movement, religious, social or otherwise, there is an apostle. He formalizes the basic concepts of his faith, interprets and reinterprets them seeking at the same time converts. He is a dedicated man and it is he who gives substance to a movement and makes it stick.

A dedicated man is a wanderer always on the go, always on the lookout for new faithfuls. Personal welfare takes a back seat. He is out of place, a fool; wasting his time and the money of others instead of holding a regular job at so much a year. Yet, when it's all over, it is the zealot rather than those enjoying the good things of life and the prestige that goes with them whose memory stays on. Such a zealot was V. I. Chebithes, the man who dedicated himself to the cause of the Order of Ahepa.

There are various kinds of yardsticks in measuring or evaluating a man's record. The impact of a man's personality on his fellowmen is certainly our safest guide. If the Order of Ahepa exercises an influence of such vast proportions in Greek-American life and Greek-American affairs and if the architect of the Order of Ahepa was V. I. Chebithes, as he certainly was, it follows that this man, the son of a priest and an immigrant boy, was destined to develop himself into a personality whose memory and influence shall remain long after his passing into the Great Beyond. He belonged to everybody except himself. That's the mark of a true apostle, of a true leader.

Why General X Isn't Writing a Book

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. DEROUNIAN. Mr. Speaker, the following article by Charles Bartlett in the February 7 issue of the Chattanooga Times, gives refreshing perspective to the current "numbers game":

WHY GENERAL X ISN'T WRITING A BOOK

(By Charles Bartlett)

WASHINGTON.—A press conference with a retiring general who may not even exist:

Question: "Are you resigning, General, because you can't accept the administration's defense policies?"

Answer: "No, I'm quitting simply because my time is up and I want to shoot some golf and catch some fish."

Question: "Aren't you even mad at the Budget Bureau?"

Answer: "I've had some budget problems in my day, but I am not mad at anyone."

Question: "But don't you intend to write a book and tell the Nation how you really feel about the adequacy of our defense?"

Answer: "I'm certainly not going to write a book and I have no intention to join those who are writing that we have become a second-rate military power."

Question: "But don't you feel that your service needs more men and equipment to stand up to the Russian threat?"

Answer: "I certainly do and I wouldn't be much of an officer if I didn't. Since the day when I had my first platoon, I have regarded it as my solemn duty to fight to get everything in the way of supplies and equipment for my men that could possibly be available. There is a pie to be divided at every level in the Military Establishment and those who make the most noise and fight the hardest always seem to get the largest slice. This is the system and the officer who does not play the system, whether he is running a platoon or an entire service, is not doing his job."

Question: "But if you feel your service needs more, shouldn't you take that message to the public?"

Answer: "Look here—it is the very essence of the military nature to need more. We could absorb 100 percent of the gross national product in our service alone and still point out areas in which we might be deficient when the attack came. There is no absolute point at which you can say we have enough and relax. The good commander is always thinking of new threats and vulnerabilities which may confront his service."

Question: "But now that you are retiring don't you owe it to the public to make known whatever doubts you may have?"

Answer: "What could the public do with that kind of information? The people who could use it best would be the Russians and I personally would take little pleasure in telling them my weak points. This is an area of government activity that is totally beyond public judgment and I simply cannot see how the politicians hope to justify their positions by taking their arguments to the newspapers. How can Joe Doakes in Chattanooga decide how many missiles we should have in 1963?"

Question: "But the military services have always been ready to use political pressure when they thought it might help them to get more money. Are you becoming virtuous just because you're retiring?"

Answer: "You're absolutely right. We have played the political game and we have played it rough. We have encouraged individual Senators like STUART SYMINGTON to take our causes to the Senate floor when we thought we might get public opinion rolling behind us. It is a rotten game and if the President had made one of our heads roll for playing it, we might have stopped. But the best jobs have gone to officers like Arleigh Burke, who have played the game the hardest and so most of us have come to assume that it's expected of us. It has become another part of the system."

Question: "But why is the game rotten?"

Answer: "Because it puts essentially military decisions in the political domain. Most of these are issues which should be decided in terms of the balance between the East and the West and not in terms of the balance between Republicans and Democrats. Neither the public nor the Senate Armed Services Committee have enough facts available to decide, for example, whether the Navy should have 12 or 40 Polaris submarines. This is a complex question involving a wide range of considerations, many of them necessarily top secret, and it cannot be wisely settled in the newspapers."

Question: "But doesn't the public deserve to be informed on the crucial question of its military strength?"

Answer: "The public can be informed in general terms but I am sure it is confusing to them when the Democrats maintain that the U.S. military posture is inadequate and then cut, as they did last year, the defense appropriations. I do not think a man can wisely or successfully run for President on the issue of an inadequate military force because he can only be proven right by an enemy attack. He runs the risk, by hammering on the charge that America is a second-rate military power, of persuading the people in the uncommitted nations who may not realize he is a candidate for office, before he persuades the people in his own country. I personally suspect it is not good politics and I know that it is not good national policy."

Question: "But how can voters make sure that we do not become a second-rate military power?"

Answer: "They have their opportunity at the ballot box. First-class leaders do not produce second-class countries. In military affairs it seems to me that the people have simply got to trust the men they elect to their top offices. The decision must be made behind closed doors and the President must inspire the kind of bipartisanship which will in turn inspire public confidence."

Question: "You realize of course you have given us no news?"

Answer: "Gentlemen at this stage of my career, you will make me happiest by forgetting me forever. I just want to fish and I think the opportunity is at hand."

International Development Association
Use of Counterpart Currencies

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, February 17, 1960

Mr. JAVITS. Mr. President, the International Development Association, IDA, the charter of which is now being submitted to the World Bank for approval, provides another means of using judiciously the hundreds of millions of dollars in soft currencies we have accumulated through the sale of surplus foodstuffs and otherwise under Public Law 480 to many countries around the world. It also provides a vehicle for cooperative effort by the free world in extending economic assistance to the newly developing nations in whose future prosperity and viability we are deeply interested.

I ask unanimous consent to have an editorial from the Christian Science Monitor of February 13 printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INTRODUCING IDA

In a nation's banking and investment system there is need for several different kinds of financial institutions geared to various needs. The same sort of varied needs exist in the international community.

And a variety of international lending organizations are being developed to meet them. They include the World Bank, Export-Import Bank, Development Loan Fund, Special United Nations Fund, and Inter-American Development Bank.

To these soon will be added, if plans mature, the International Development Association. Its charter is being submitted to members of the World Bank for approval. Originated by Senator MIKE MONRONEY, the IDA would be empowered to make low-interest loans to underdeveloped countries on long terms and/or repayable in "soft" (unconvertible) currencies of the borrowing countries.

While the United States would supply nearly one-third of the billion dollar capital, a larger proportion would be supplied by other industrial nations, and the United States would find a way to use millions of dollars in soft currencies it has accumulated through sale of surplus foodstuffs.

This arrangement promises to accomplish several desirable purposes which were beyond the scope of the World Bank, set up as it is to handle "hard" loans on a commercial basis. It enlists the assistance of Britain, France, West Germany, Canada, Japan, and other nations in an undertaking the United States should no longer carry alone.

Also it breaks away from the bilateral aid mechanism under which some Americans have been inclined to impose political conditions on recipient countries; yet, it does not go so far as the United Nations programs which, while desirable to a degree, permit Communist-bloc participation in planning and execution. The IDA offers a vehicle for characteristically free-world cooperation since the Soviet Union has not seen fit to join the World Bank.

International Financial Agencies

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mrs. KEE. Mr. Speaker, two announcements were made recently which emphasize this country's increasing involvement in efforts to improve the economic position of nations in underdeveloped areas of the world.

Two new international financial agencies, in which the United States will play a major role, have been launched. The Inter-American Development Fund, to which this country has pledged $500 million, will make loans in Latin America exclusively. The International Development Agency will confine its activities to other underdeveloped nations. We have guaranteed $800 million of the $1 billion capital.

I supported these two agencies, chiefly on the theory that soundly conceived loan programs would lessen the need for U.S. foreign aid.

Yet this year Congress has been asked to increase foreign aid appropriations to over $4 billion. I believe this amount should and will be substantially reduced.

The chief responsibility for conducting programs to encourage economic development in Asia and the emerging new nations of Africa should be shared by all nations of the world which now enjoy economic prosperity.

Our European allies and Japan have talked a great deal about assuming a share of the burden. The time has arrived for the United States to make it clear that these other nations must assume their fair share of the burden.

I can understand the clear need for outside assistance to help new nations gain a sound economic footing. But I can no longer see any need for the United States to carry this loan alone.

The inconsistencies of the administration's position on foreign aid and urgently needed programs at home are becoming harder for me to understand. For years we struggled to get a coal research program approved. The President vetoed a good bill last year, but at the same time foreign aid funds, appropriated by Congress, were being used to conduct the same kind of coal research work in a number of foreign nations.

We are desperately in need of economic development work in West Virginia. The President has vetoed legis-

lation of this kind for West Virginia and other States at the same time he makes a plea for larger foreign aid expenditures.

This just does not make sense to me.

The United States will have to continue programs of this type. But it cannot carry the burden alone nor on as large a scale as in recent years.

I do not believe Congress will vote $4 billion for foreign aid this year. Substantial reductions will be made. Perhaps if Congress makes it clear that it wants a new approach to foreign aid, the State Department will step up its efforts to have our allies assume a proportionate share of the burden.

Overall Land Use Policy

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, February 17, 1960

Mr. WILEY. Mr. President in the light of far-reaching changes in our social and economic structure, the Nation needs farsighted planning, not only to properly utilize, but also conserve, our lands and other natural resources for the future.

Today the Nation is experiencing a population explosion.

In 16 years we will be a nation of 240 million, 60 million more than today.

The population explosion, together with expanded industrialization, homebuilding, and other types of construction, are creating ever-greater demands upon our land, soil, water, and other natural resources.

As a result, the question arises as to how we can best utilize such resources today, as well as to assure that there will be adequate resources for the future.

This is a local, State, and National challenge.

In an era when the tendency more and more is to look to Uncle Sam to resolve such problems, it is always gratifying to find realistic efforts to cope with such significant challenges at the local and State level.

Recently, Henry Ahlgren, associate director of agricultural extension at the University of Wisconsin, outlined some constructive recommendations for an overall land use policy at the annual meeting of the Wisconsin chapter of the Soil Conservation Society.

I ask unanimous consent to have the article reflecting creative thinking on a serious national challenge, printed in the Pure Milk Products Press, entitled "Overall Land Use Policy Is Ahlgren's Plan," printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OVERALL LAND USE POLICY IS AHLGREN'S PLAN

A University of Wisconsin agricultural leader has called for an "overall land use policy, complete in all of its ramifications, for Wisconsin."

Henry Ahlgren, associate director of agricultural extension, said to members of the Wisconsin Chapter of the Soil Conservation Society at their annual meeting that in the past "we have selected the easier course by proceeding on a piecemeal rather than on an overall basis."

Ahlgren pointed out that our supply of natural resources is not inexhaustible. Many resources are not renewable. Needs and demands on water, soil, trees, and minerals are increasing daily. If the population experts are correct these demands will pyramid in the future.

He said "the time has come when we should begin to put the pieces together for a more orderly development of our land use program."

Of all our natural resources, water is fast becoming the most precious, Ahlgren said. Today we are using six times as much water as in 1900.

Ahlgren said conservation and wise use of natural resources do not mean the same thing to all people. Farmers think in terms of grassland farming and soil conservation. Foresters think of protecting and managing our timber resources on a sustained basis. Fishermen think in terms of an abundance of fish in clear, unpolluted waters. Industry and suburbanites have other ideas.

The situation he said, is still further complicated by the fact that at a given time and place one type of land use may be dominant. But for the best long range effect it should be put to another use.

Ahlgren said the problems of land use cannot be solved through a committee meeting a few times to try to hammer something out. It would require pooling of resources and involving the people through the democratic process.

He listed major objectives of a land use program as: (1) provide for best use of land, (2) promote economy and efficiency in government services, (3) eliminate waste, (4) protect property owners, (5) safeguard public health, (6) promote orderly community growth, and (7) promote safety.

Also, (8) insure efficient location of public buildings and public uses, (9) foster wholesome neighborhood spirit and civic pride, (10) reduce fire hazard, (11) promote a safe balance in the use of all land resources, and (12) give stability to property values and promote permanent homes, business and industry.

Ahlgren closed by saying "we must realize land use planning involves more than anything else the resolving of conflicts between people in what are the best uses of land."

In a panel discussion following Ahlgren's speech, Henry M. Ford, Wisconsin director of regional planning, pointed to the tremendous growth in residential types of land use. From 1950–59 new residential plats covered some 20,088 new acres including nearly 50,000 residential lots.

Ford pointed out that in the heavily populated areas of the State the land is moving rapidly from the town form of government to either the city or village form. This urbanizing process has now absorbed all of Milwaukee County and has spread into Ozaukee and Waukesha Counties.

In another panel speech, Walter Rowlands, specialist in land use planning at the university, pointed out that recreation is now the third largest business in Wisconsin. Recreation as an industry is growing so fast throughout the Nation that it may become the No. 1 industry in the Nation.

Rowlands said Wisconsin should reserve the lands and waters best suited for recreation to that use. Potential recreation lands should be protected so they are not destroyed in the meantime, he said. Some lands which have a high priority for agriculture, forestry and wildlife, may also be used for recreation.

Above all, Rowlands concluded, we need careful, and realistic planning and zoning.

Party Heads and the Public Compare Tenets of Politics

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Council Bluffs Iowa Nonpareil, of Council Bluffs, Iowa, February 14, 1960:

PARTY HEADS AND THE PUBLIC COMPARE TENETS OF POLITICS

(Two major political philosophies will again confront the voters this year. And, chances are, a lot of average men in the street would have to ponder a moment to describe them. The Nonpareil posed the question to three sources with a large stake in the answer: John Q. Public, Harold Beckman, and Emmet Tinley. Beckman is chairman of the Pottawattamie County Central Republican Committee.) Tinley heads the county Democratic central committee. Read their replies and judge for yourself.)

(By Harold Beckman)

The Republicans want:

1. A balanced budget. We believe the public household, like the private household, should meet its obligations currently and not burden the future generations of Americans with an impossible debt.

2. A sound and stable fiscal policy. We feel the financial needs of the individual, young or old, sick or healthy, employer or employee, or self-employed, can be more adequately provided for through preservation of the purchasing power of his income than it can through ever-expanding inflationary Federal programs.

3. More local, less Federal, responsibility. Americans are responsible people who can and will satisfy many needs of government on the State and local level if they understand the Federal Government will not take over. We do not subscribe to the theory that practically all governmental needs can only be provided by an overbearing central authority in Federal Government far beyond the control of the individual citizen.

4. Adequate, not excessive, defense coupled with a firm, not vacillating, foreign policy. We believe the maintenance of an adequate defense force coupled with a firm foreign policy is our best guarantee of peace and freedom. With such policies the Republican administration has given America 7 years of peace.

The opposition, which has controlled the purse strings of national defense and kept our military leaders in almost constant session with their congressional committees the last 6 years, suddenly, in election year 1960, is uncertain of our defense stature. Its similar uncertainty as to our defense stature and as to where our lines of defense should be drawn when it was in control of the na-

tional administration engaged us in two wars in this generation.

5. Progress, not panic. We recognize that unless we continue to expand our economy we cannot retain our position of world leadership. We have accomplished this in an atmosphere of peace and confidence, not war and political hysteria.

6. Preservation of rights of the individual. We believe government has the responsibility of maintaining equality under the law for all, providing help for all who cannot help themselves due to circumstances beyond their own control, and providing for all the maximum opportunity to help themselves, without threats of physical violence and economic reprisal by ruthless and misguided governments, employers, or labor union bosses.

7. Calm, confident, and competent leadership. We do not subscribe to the theory that the American people must be subjected to a war of nerves to respond to their governmental needs. We feel that they are intelligent, responsible people who will answer the call of duty when facts are properly placed before them by a principled, well-informed and intelligent media.

(By Emmet Tinley)

The Democrats believe:

In the individual's rights. The first and foremost principle of the Democratic Party is the recognition of the inherent dignity, equality and independence of each individual and of his right to enjoy the same political rights and to have the protection and benefits of the same laws as all other persons. The purpose of this principle is to provide equal opportunities for all citizens who may freely accept or reject them.

Separation of powers. A traditional tenet of the Democratic Party emphasizes the constitutional provisions reserving certain political powers to the several States and granting others to the National Government. The Democratic Party supports congressional legislation enacted within the framework of those provisions which affects the general welfare of the United States and all of its citizens in various economic, political and social matters.

On foreign relations. In the area of foreign relations, the Democratic Party has fostered a bipartisan approach to all principles concerning our peaceful relationships with other nations, encouraged the use of all diplomatic means for solving international disputes, and stimulated the development of mutual understanding among all nations in order to avoid costly and bloody wars.

On the closely allied and all important issue of national defense, the Democratic Party sponsors those measures providing maximum military strength on a sound economic basis, without needless waste, reduplication and petty intraservice rivalries and jealousies.

Guiding precept. A guiding Democratic precept is based upon the interdependence of all segments of the national economy, agricultural, industrial and commercial, management and labor, producer and consumer, and advocates that problems relating to any one be resolved only by measures which recognize this interdependence.

A balanced budget. On fiscal matters, the platform of the Democratic Party calls for a balanced budget, revision of our tax laws to provide a more equitable structure, and a sound economic policy based upon the vast resources and capabilities of the Nation.

Applying the principles. On specific issues, the Democratic Party applies these basic principles in such a manner that the rights of individuals are fostered and protected and the political, economic, and social segments of the country are strengthened.

INQUIRING REPORTER: HERE ARE THE VIEWS OF JOHN Q.

What is the difference between the Democratic and Republican Parties?

The Nonpareil's Inquiring Reporter asked this question in downtown Council Bluffs. Here were the answers:

E. L. Carris, Clarion, railroad engineer: "I wouldn't know what it would be. I've voted both ways * * * for the best man."

William Johnson, 1314 Avenue D, hospital attendant: "Republicans are a little more saving and not quite so wild to spend as the Democrats."

Mrs. Melvin Brown, 269 Morningside Avenue, housewife: "I've been a Democrat because I had a lot of confidence in Franklin Roosevelt. I think the party lacks leadership now."

T. K. Ahlroth, 219 Turley Avenue, retired printer: "The Democrats are a little more on the radical order, but for average people. The Republicans are conservative, I usually vote Republican."

Mrs. Richard Claar, Woodbine, farmwife: "I don't think the party principles differ enough to be too important. You have to decide on the man."

Robert Blosser, 335 Hyde Avenue, telephone company employee: "The Republican Party tends toward less restraint of free enterprise. This is an important basic difference."

Mrs. E. C. Berry, 2319 Avenue C, housewife: "I really can't see much difference. I think they are all in there for the good of the country."

Russell Shipley, 2825 Avenue D, custodian: "It's pretty well a tossup between the parties. Sometimes it looks like they're both just interested in getting in office."

Statement of Committee for Collective Security

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, February 17, 1960

Mr. KEATING. Mr. President, at the request of the committee for collective security, I ask unanimous consent to have printed in the Appendix of the RECORD a statement signed by Mr. Goodhue Livingston, Jr., chairman of its policy committee, concerning certain basic foreign policy decisions.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

COMMITTEE FOR COLLECTIVE SECURITY,
New York, N.Y., January 12, 1960.

Hon. KENNETH B. KEATING,
Senate Office Building,
Washington, D.C.

DEAR SIR: Before President Eisenhower goes to the summit conference and in view of the recent meetings between him and the heads of other states, the United States must reach certain basic policy decisions. Although we may hope that Soviet Russia is sincerely seeking world peace, it would be foolhardy to accept its declarations at face value unless translated into deeds. Until enforcible international agreements for universal disarmament are made, the free world must continue to build its strength. For Communist propaganda and the economic contest are an ever-present threat to the free world.

This country should pursue the following courses of action:

1. Maintain our defense program at not less than its current level.

2. Provide conventional forces sufficiently strong to deal with limited wars, and continue to develop missiles and other advanced weapons.

3. Prevent budgetary considerations from determining the effectiveness of our military power, even if it is necessary to increase taxes.

4. Develop the exploration of space so that we may exercise leadership in this field until it becomes a cooperative international venture.

5. Continue the temporary suspension of atomic tests while there is hope of achieving a plan for effective control and inspection in which all countries, including Communist China, participate.

6. Confirm and convince the world of our determination to cooperate in the defense of West Berlin, Formosa, South Korea, Laos, and other possible targets of Communist aggression.

7. Seek to strengthen the United Nations and the collective security of the free world by adding power to the North Atlantic Treaty Organization and other regional defense arrangements.

8. Expand our mutual security program for military and economic assistance, encouraging our prospering allies to participate.

9. Initiate proposals dealing with problems which divide the free world and the Communist bloc, such as Hungary, Tibet, the Indian border, and the divided states of Germany, China, Korea, and Vietnam.

10. Enlarge our program of cultural, scientific, and educational exchanges with the peoples under Communist domination.

Adoption of these measures will strengthen the collective security of the free world during negotiations for easing the tensions of the cold war and consideration of proposals for universal disarmament.

COMMITTEE FOR COLLECTIVE SECURITY,
GOODHUE LIVINGSTON, Jr.,
Chairman, Policy Committee.

Forty-second Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. MILTON W. GLENN
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. GLENN. Mr. Speaker, I want to join with the people of the world in paying tribute to the brave Lithuanians in celebrating the 42d anniversary of the restoration of independence in Lithuania. I know that some of those, who are free, have the gravest concern over the fate of their kinfolk who cannot join them, but who are still struggling against complete enslavement.

I sincerely hope the time will come when they will be given an opportunity to celebrate their freedom, and to live together in a democratic world. My earnest wish is that the future years will be brighter for the Lithuanian people everywhere, who desire to live by the light of freedom.

The Splendid American in Israel

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, February 17, 1960

Mr. CASE of New Jersey. Mr. President, many complaints about U.S. technical assistance programs have been publicly aired, culminating, perhaps, in the recent best seller, "The Ugly American." In welcome contrast to these charges about the behavior of Americans on oversea assignments and the manner in which the American taxpayer's money is spent abroad, an article has recently appeared in the Newsletter of Hadassah, the Women's Zionist Organization of America, which I should like to call to the attention of my colleagues.

This article, "The Splendid American in Israel," describes the dedication and true value of a number of Americans charged with carrying out various technical assistance projects in the State of Israel. I ask unanimous consent that the article, written by Mr. Philip Gillon, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Hadassah Newsletter, January 1960]

THE SPLENDID AMERICAN IN ISRAEL—AN APPRECIATION OF U.S. TECHNICAL ASSISTANCE

(By Philip Gillon)

Hundreds of thousands of Americans have read a best-seller entitled "The Ugly American" and asked themselves anxiously whether their representatives abroad are really as obnoxious as the characters described by authors Lederer and Burdick. The book describes the imaginary land of Sarkham, somewhere near Laos and Vietnam, where, with notable exceptions, American diplomats and experts are foolish, fatuous, aggressive, opinionated, and arrogantly convinced that the American way is the only way and anything homegrown beneath contempt.

I cannot say anything about points east of Suez, but I have met and interviewed dozens of Embassy, U.S. Information Service and U.S. Operations Mission personnel in Israel, and have yet to meet an American who is not intelligent, unaggressive, and soft-spoken to a degree that makes an interview difficult. With their mild drawls, they are all almost excessively differential to the opinions of others and the view that the local man knows best is basic to their attitudes.

The International Cooperation Administration enlists personnel as "expert technicians" to serve with the U.S. Operations Missions as advisers to Israel. It is no exaggeration to say that Israel's rapid development over the last decade is in no small degree due to these mild-mannered men.

The opening of Israel's hinterland would have been impossible without a transformation of the existing means of communications. Road and rail transport were completely inadequate for the needs of an expanding economy. The railway system was obsolete, consisting of a small fleet of steam locomotives, the roads were built by methods which ignored the revolutionary techniques developed in the United States during the last 2 decades.

In 1954, Paul Oakes came from Lafayette, Ind., as adviser to the State of Israel Railways. Since finishing high school, Oakes had worked on railways for several decades: he served in Europe during World War II with the rank of lieutenant colonel in the Second Military Railway Service; afterwards he was railway chief mechanical officer in Japan and Korea. He advised Israeli railways throughout the 5 critical years during which the system was completely converted to diesels and the line stretched itself by 25 percent to reach down from Rehovot into the heart of the Negev. He helped with the building of new railway stations, sidings, workshops, repair shops, as well as advising on training techniques for personnel, on maintenance and management.

Paul Oakes minimizes his own contribution: "I'm well aware that the railways of Israel were running when I came and will be running when I leave." Moshe Savidor, general manager of Israel Railways, puts it quite differently. "All the credit," he says, "goes to Paul Oakes, whose valuable experience and wisdom in handling delicate personnel problems have contributed considerably to the achievements of Israeli railways. His guidance during the dieselization process, his advice and interest, coupled with the authority he commands and his balanced views on many complex subjects have greatly contributed to the progress of our system."

In the paving of roads there is a similar story to tell about modest, patient Harold Monson, who helped Israeli road engineers to revolutionize their techniques. "They were doing a very good job," he says, "but of course there are all sorts of modern methods they had to learn." In fact, Monson, who had worked on highways in South Dakta for 21 years, in his quiet and unobtrusive fashion changed Israel roadbuilding until today local road engineers are working with maximum efficiency. Fine new highways run from Beersheba to Dimona, near the Dead Sea; along the Mediterranean costline; down to Capernaum on the Sea of Galilee; up the Judaean hills to Jerusalem. All bear the imprint of Monson's advice.

Sam Barrash, adviser on automotive equipment and repairs, started working on automobiles as a mechanic in Baltimore in 1921: he rose steadily the hard way to become a service manager and afterwards ran his own repair business. During World War II he served in the U.S. Army at Fort Meade as principal automotive adviser and shop superinfendent, and later he joined the Department of Defense as an operations chief and shop superintendent.

Israel's vehicles come from the United States and every country in Western Europe; some of them have long since attained the age of man's legal majority. Keeping those wheels turning involves a nightmare of multiple languages, diverse systems of measurement, varied standards of training, every horror a mechanic can possibly conceive. One day Sam may advise the Government Department of Development on a giant automotive plant and equipment at the copper mines at Timna; the next day he will be asked to help a small repair shop for European midget cars. Trucks, buses, cars, whatever goes on wheels—it's all grist to Sam's mill.

One of Israel's proudest achievements has been the afforestation of hill-slopes eroded through 13 centuries of neglect. American experts advised on the planting program; today hundreds of thousands of trees are already yielding timber. One of the latest technicians to arrive, Roswell D. Carpenter, has been ranger logging superintendent, forest economist, and staff assistant in the U.S. Forest Service.

In the few months since he arrived in Israel, Carpenter has prepared forest management plans and logging projects. He devised a drum-type peeler for eucalyptus trunks from a secondhand cylinder two yards long which had been discarded as scrap. The peeler cost $1,000 to assemble and replaces machines operated by four men; it peels 40 trucks of different diameters in 9 minutes. As a token of gratitude, the Keren Kayemet honored him with a grove of 1,000 trees planted in his name in Israel.

In "The Ugly American" two bright free lance visitors suggest that the quality of cattle and chickens should be upgraded; their proposals are ignored. Israel's animal husbandry—indeed, all her agriculture—has been transformed with American help and advice. Take, for example Larry Short, an expert on range management with a background of years in the American prairie States, who looks rather like Hopalong Cassidy. Larry can claim a great deal of the credit for the success of "Operation Cowboy," by which the beef herds of Israel were increased several times and the type of animal upgraded through cross-breeding with Herefords, Brahmans and Santa Gertrudas.

One of the most picturesque of the American experts was John Stover Norris from Enid, Okla., who has just finished a 2-year term. When Israel turned to the Negev in search of valuable minerals, Norris went along as a drilling adviser at Sodom, on the Dead Sea; at King Solomon's Mines, near Eilat, on the Red Sea; at the Great Crater, that mighty cleft in the surface of the desert. Norris had cut his teeth on drilling machines; for 30 years he had worked with equipment in Kansas, Nebraska, and Oklahoma. Both Norris and his wife loved Beersheba, the new boomtown in the heart of the desert. He trained Israelis in the use of the latest failing drills, which work on either water or air and make desert exploration possible. Today the local technicians are carrying on where Norris left off.

Another interesting adviser is Emile Charroppin Freeland, a member of the Explorers' Club in New York and author of "Tales of a Sugar Tramp." An expert on chemical engineering, Freeland has helped in his time to establish industries in Chile, Peru, Colombia, Bolivia, Ecuador, Venezuela, Mexico—all kinds of industries, such as sugar, soap, vegetables, oils, paint, coffee, handling, alcohol distilling, sulfur processing, fertilizers. He is inspecting and advising Israeli plants at the rate of four a day; he responds happily to the rush tempo of a country in a hurry.

The latest field of American guidance in Israel is management. Most of Israel's managers came up the hard way from pick and shovel beginnings; many of them still think of themselves as laborers who have only temporarily abandoned overalls for white collars. The modern concept of management as a skilled occupation is only slowly taking shape.

Departments for providing graduate training for the country's future managers have been set up at the Hebrew University in Jerusalem and in the Haifa Technion. Karl Ferderer, who directed the project, together with Raymond E. Hartstein, provided seminars and courses for those persons presently active in management. "Of course, the techniques of management which are ideal for General Motors are not necessarily suitable for Israel," Ferderer emphasizes.

It is indicative of the American fear of giving offense that when an article recently appeared in the Jerusalem Post describing the American contribution to the management project, an American professor promptly wrote a letter to the editor saying that the importance of the Americans had been overemphasized and the role of their Israeli counterparts understated. This supersensitivity pervades the thinking of all the American advisers. Far from any ar-

rogant emphasis on their knowing better than the locals (a feature of most of the advisers in "The Ugly American") they bend over backwards to minimize their own contributions to Israel's development.

An interesting USOM innovation is industrial design. An office was opened in Tel Aviv by the Government of Israel with the help of two American ICA advisers, Paul Karlan and Mort Rothenberg, partner and staff designer respectively in a prominent Pittsburgh firm. Karlan set up a seminar in order to convince dubious manufacturers that the attractive design and packaging of industrial products was essential in capturing new export markets, particularly the American one. Today, the office is firmly established and the American advisers will leave in a few months' time.

Many of Israel's farm women are new immigrants coming from 70 different countries, with a wide variety of cultural backgrounds, most of them changing from a known urban life to unfamiliar farms. Israelis know that the successful settlement of immigrant families depends on the housewives. Nellie Watts and Velma Huston, two remarkable experts on home economics who will be long remembered in this country, are building up home economics for farm women into a vital social factor in Israel life.

Thus the story of American technical aid in Israel comes close to being a catalog of all the State's activities. It is safe to sum up by saying that there is hardly an aspect of the national life—apart from defense—which has not been enriched by American technical advice.

Israeli journalists are grimly independent and loathe patronizing and sycophancy. The spokesman for both Embassy and USOM, Bill Anthony, is as different from the self-satisfied and insensitive public relations type described by Lederer and Burdick as it is possible to imagine. He is quiet, unassuming, and prefers to explain rather than use high pressure salesmanship. The result is that the press is not only highly cooperative and appreciative of the American program, but also understands its objectives.

George Leroy Peterson, from Minnesota, Chief of the Agriculture Division of USOM is an ideal type of the amiable American abroad. He has been engaged in helping countries to rehabilitate or to develop themselves ever since 1944. He has held many posts in many lands during the last 15 years. He holds M.S. and Ph. D. degrees both in agricultural economics and in general economics. Yet he prefers service abroad to a lucrative post at home.

"The underdeveloped countries want to share a better way of life and it is up to the United States to help them to get it," Peterson says. "It's the right thing for us to do, the moral thing, since we enjoy so much plenty ourselves; it's our duty to help others to attain higher living standards."

John J. Haggerty, Chief of USOM, defines the ultimate goal of the Americans very simply: "We are working ourselves out of our jobs as fast as we can."

Veterans' Administration Medical Care Program

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mrs. KEE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include copy of my Keenotes issued today:

KEENOTES

(By Representative ELIZABETH KEE)

WASHINGTON, *February 17, 1960.*

On Monday, the Hospitals Subcommittee of the House Veterans' Affairs Committee, of which I have the honor to be chairman, began a comprehensive series of hearings on all phases of the Veterans' Administration medical care program.

We have 171 veterans' hospitals and domiciliaries. It costs an estimated $931 million each year to finance this program. In addition, we will begin spending July 1 $75 million a year for the construction of new facilities to replace older ones.

No one, I am sure, begrudges veterans the very best of medical care. Congress has been generous in its appropriations for this program. But our desire to care adequately for our veterans does not blind us to the need to make sure that the program is operating as efficiently and economically as possible.

My subcommittee has called in several of the area medical supervisors and general medical directors in the larger centers.

We want to get their ideas on operation and maintenance of present facilities and types of new installations which might be needed.

Perhaps these gentlemen can come up with suggestions that will not only improve service but will also enable us to make substantial savings.

I am highly honored that our distinguished chairman, the Honorable OLIN TEAGUE of Texas, has assigned such an important task to the subcommittee which I head.

Almost all congressional hearings are conducted away from the glaring lights of television. They seldom make headlines. But hearings such as our subcommittee will hold are indispensable to the effective operation of the legislative branch. We have to know how the various agencies of government for which we are responsible are operating.

It makes little difference what Congress does if the intent of Congress is not followed. It is only through periodic checkups that we can be assured our programs are being carried out as intended.

You possibly will not read about the hearings. But for five days we will be holding these sessions from which we hope can come constructive recommendations for further improvements in medical services available to our veterans.

At the same time, a number of other committees will also be holding public hearings. These hearings too, for the most part, will be unspectacular and will not make the headlines.

But from the standpoint of sound, efficient government, the information these hearings develop will be far more important than the sensational headlines produced by the investigation of payola among disc jockeys. I do not intend to discount the investigation of the Harris subcommittee one bit, but cite this only to show that other committees, operating quietly and in relative obscurity, also achieve valuable results.

The Discipline of Gold

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, February 17, 1960

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Discipline of Gold," published in the February 1960 issue of the Morgan Guaranty Survey.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DISCIPLINE OF GOLD

The loss of $3.3 billion of gold in 2 years has come as something of a shock to a people who for a quarter century have enjoyed the comfort of a more-than-ample gold reserve. But the shock can be a beneficial one. It already has done more to promote realistic thinking about currency soundness in the United States than years of theoretical discussion were able to do. The attrition of a nation's monetary treasure is a visible, measurable process which teaches its lessons in a practical way. Thus does gold continue to perform its historic disciplinary function, enforcing the rules of sound finance by imposing penalties and warnings when they are needed.

The concern aroused by the gold flow is not over the present size of the reserve. Even after the heavy drain of the past 2 years—representing an acceleration of a trend that has been going on for a decade, with a total net loss of $5.1 billion—the Nation's hoard is still very large. Some might even say too large, in terms of the optimum distribution to promote world economic health and growth. The $19.5 billion held by the United States is almost half the world's supply of monetary gold—exclusive of holdings of the Soviet Union, which are not reported.

The true significance of the gold outflow goes deeper, to the chronic deficit in the U.S. balance of international payments, and to the factors which cause that deficit: foreign-aid disbursements, maintenance of oversea military installations, American investment abroad, and—reflecting high domestic costs and prices as well as intensified foreign competition—the narrowing surplus of U.S. exports over imports.

By no means all of these factors are to be deplored. The great progress of foreign countries in rebuilding their economies and strengthening their currencies, for instance, is to be applauded; it has been an objective of official U.S. policy throughout the postwar era. But the harmful effect of the domestic wage-price spiral on U.S. exports—an effect accentuated by the foreign improvement—is to be deplored, and this is one of the lessons that the movement of gold is driving home.

During a long period, because of various circumstances, there was no apparent reason for this country to feel anything but complacent about its gold supply—the jokes about Fort Knox had connotation of smugness. Both before World War II and after it, the economic and political problems of other countries so greatly overshadowed ours that the United States was the natural repository for gold. The direction of flow was reversed temporarily during the years of our participation in the war, but by 1949 our holding was up to $24.6 billion, its alltime high. This compared with the $6.8 billion we had held just after devaluing the dollar by writing up the price of gold from $20.67 to $35 an ounce in 1934.

That such a great increase had occurred during a period when this country was almost continuously pursuing essentially inflationary monetary policies—first to fight a recession, then to fight a war, and finally to maintain artificially high prices for Government bonds—merely testifies to the even greater difficulties which were besetting the other principal countries of the world. Their currencies were under much stronger inflationary pressure and, in the years immedi-

ately after the war, their productive facilities were not yet able to offer strong competition in international markets.

RESERVES VS. CLAIMS

Back in the 1934–41 period, while our gold stock was increasing, our need for gold as statutory reserve against currency and central-bank deposits also was rising as recovery from recession brought expansion of the money supply. Our active entry into World War II accelerated the growth of the money supply, calling for more gold reserve at the very time gold was flowing out of the country. In 1945 Congress acted to widen the narrowing spread between gold on hand and the required domestic reserve. It reduced from 40 and 35 percent, respectively, to a uniform 25 percent the backing for Federal Reserve notes in circulation and deposits of the Federal Reserve banks. This move reduced from $15 billion to $10 billion the amount of gold tied up as required monetary reserve. In the intervening years this amount has increased only gradually, standing today at about $11.7 billion.

Since 1949, however, while our gold store has been declining, the claims against it from another direction have been rising sharply. Foreign holdings of short-term dollar assets—in a sense the demand deposits of an international banking system—have increased from $7.6 billion in 1949 to $19 billion at present. The increase in these dollar claims represents, for the most part, deferred settlement of the unfavorable U.S. balance of payments which has been cumulating over practically all of the last 10 years.

Theoretically, the entire amount of foreign short-term dollar holdings is presentable, directly or indirectly, for redemption in gold. Actually, a considerable part of the total—precisely how much can only be guessed—constitutes working balances which foreign individuals, banks, central banks and governments need to maintain here to facilitate day-to-day commercial dealings. The total also includes $3 billion of U.S. subscriptions to the capital of international financial institutions such as the International Monetary Fund. These are potential, but hardly imminent, demands.

Since domestically held Federal Reserve notes and deposits are not redeemable in gold, the statutory reserve requirement against them does not represent a potential drain. In fact, Congress could release part or even all of the $11.7 billion thus committed simply by reducing or eliminating the requirement, although the probable psychological effects of such action are open to debate.

The real exposure is in that part of the foreign holdings over and above needed working balances, the part that is at the optional disposal of the owners to place where they think it can be most safely and most profitably employed. Because investments earn money and gold does not, and because the dollar has held a preferred position among currencies, the preponderant share of the dollar balances gained by foreigners has been retained here in dollar form. Of $16.4 billion acquired in the past 10 years, only $5 billion has been taken in gold, with the rest allowed to remain in dollar assets.

RECENT TREND A WARNING

The figures for the last 2 years viewed by themselves, however, are less favorable. During 1958 and 1959 foreigners earned a net surplus of about $7.3 billion, took $3.3 billion in gold and left $4 billion in dollar assets. The payments disadvantage has been intensifying, and so has the inclination to withdraw gold. The latter development can be explained partially by the desire of other countries to rebuild their own gold supplies. But it must also be read as a warning that the balance-of-payments deficit has been going on too long, and that the dollar is now in competition with other strong currencies. What has happened thus far, in other words, is a hint of what may happen on a much more drastic scale unless certain actions are taken to correct the payments imbalance and affirm to the world our determination to prevent further erosion of the dollar.

The necessary steps are well known. They include the arresting of the wage-price spiral which has so badly hurt American exports, tighter control of government expenditures, legislation to permit sensible management of the Federal debt, and an unmistakable casting out of the soft-money bias which for a quarter century has haunted the U.S. economy like the mark of some unexpiated sin. There is nothing new about these requirements—advocates of monetary soundness have been urging them through the whole long period when outside circumstances masked the need to abide by them. Now gold, that ancient disciplinarian, is reasserting the lesson—in a way that can escape no one's attention.

Selling or Buying, SBA Offers Help

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. EVINS. Mr. Speaker, under leave to extend my remarks, I would like to include in the CONGRESSIONAL RECORD an article by Mr. S. Oliver Goodman, financial editor of the Washington Post which appeared in the February 11 issue of the Post. This very informative article is under the heading "Selling or Buying, SBA Offers Help."

It is gratifying to note this cooperation being received from the press in notifying the financial world and the small business segment of the Nation that the Small Business Administration, established by the Congress, is in a position to aid small business not only in making loans but in the procurement and property disposal field. Appreciation should be extended to Mr. Goodman for this fine public service, and the Small Business Administration is also to be commended for making this information available to him and to the public.

It is hoped that this will establish a pattern which will be followed throughout the Nation in making small business firms aware of the services to small business available under the Small Business Act. It is felt particularly that a large segment of the small business concerns of the Nation is not fully aware of the Small Business Administration's procurement and technical assistance programs. In House Report No. 1252 of Subcommittee No. 1 of the Select Committee on Small Business, of which I have the honor to serve as chairman, there is a recommendation that special attention should be given by the SBA to publicizing their property disposal program in order that small business firms will be advised that set-asides are made in this property disposal field so that Government surplus property and merchandise are made available to small business. The Honorable WRIGHT PATMAN, chairman of the House Small Business Committee submitted this report—House Report No. 1252—to the Speaker and to the House on February 8, 1960 last. Copies are now available, upon request, to the Members and others.

The article by Mr. Goodman in this connection follows:

CAPITAL · COMMERCE—SELLING AND BUYING, SBA OFFERS HELP

(By S. Oliver Goodman)

Want to buy Government surplus property and merchandise? Want to sell your goods and services to Uncle Sam?

It's not as hard as you think. The Washington field office of the Small Business Administration in the Lafayette Building has a wealth of free services and information available.

Arthur H. Doll, manager of the local SBA office, yesterday announced that small business firms here received $235,517 in Government contracts during January.

These contracts, he explained, were made as a result of SBA's cooperative set-aside program with Government purchasing agencies. Under this program, civilian and defense agencies reserve proposed contracts for exclusive competitive award to small business firms.

During January, local firms getting contracts on low bids included Southern Oxygen Co., $81,191 for oxygen; G. & G. Co., Inc., two contracts totaling $34,041 for clothing; National Scientific Laboratories, Inc., $65,753 for engineering services, and Test Club Co., $28,209 for spare parts.

The local SBA office also is now providing help for small business firms in locating property available through Government surplus sales. Doll added that a want list has been established and business firms wishing to be listed may contact his office at room 438 in the Lafayette Building, 811 Vermont Avenue.

Catalogs of current sales at all major Government installations in this five-State area are available in the Richmond regional office of SBA. Firms that cannot conveniently visit the Richmond office may have this review made for them through the want-list procedure, Doll said.

The SBA also has prepared a "Sales Information Handbook," available upon request at the local office. This handbook lists all major Government selling installations in this area and provides the information needed to buy at Government sales.

Other SBA services include financing. Federal procurement, marketing, research, management, and technical assistance.

The first step is to contact Doll at the address mentioned above. Let him know you're alive and what you want to sell or buy.

Proposal To Remove Deterrent to U.S. Foreign Trade

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, February 17, 1960

Mr. JAVITS. Mr. President, the inability of the United States to bring cases before the World Court, involving the rights of American business in foreign countries, because some of these

countries make use of the same escape clause of the Connally reservation may well be a deterrent to the growth and expansion of American investment abroad at a crucial time in our history. This escape clause consists of a six-word amendment added to America's adherence to the World Court in 1946. These six words were added to an article of the resolution stating that the authority of the International Court did not apply to matters essentially within the domestic jurisdiction of the United States, "as determined by the United States."

President Eisenhower, Vice President NIXON, the Attorney General of the United States and the American Bar Association, support the repeal bill on our reservation to the World Court adherence statute which will withdraw the reservation I have quoted. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on the subject which appeared in the Christian Science Monitor on February 12 and a dispatch to that newspaper from its Washington correspondent, Richard L. Stout, on February 11.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, Feb. 12, 1960]

PROCRASTINATION ON WORLD COURT

The familiar sound of dragging feet is beginning again to be heard in the Senate when the subject of rescuing the World Court is brought up.

Apparently some Senators still are fearful of risking a vote on it.

The international tribunal at The Hague has remained in a state approaching suspended animation ever since the Senate attached the so-called Connally amendment to its ratification of Court use in 1946. This amendment left the United States free to determine whether or not it would allow its position to be litigated in any given case. Other nations followed suit. There was a general breakdown in use of the Court.

For years the American Bar Association has been pouring on the logic supporting participation in this system of international justice by law. Last year the movement to repeal the Connally amendment received high-level bipartisan backing—from Democratic leaders, the President, Vice President, and Republican Party planners.

This year President Eisenhower and his Attorney General both have again backed the movement, which centers on Democratic Senator HUBERT HUMPHREY'S repeal bill.

But despite this phalanx of supporters, some Senators reportedly wish to procrastinate. They say privately that to have to vote either way might hurt their election chances.

This kind of thinking is ostrich politics. The bar association, the President, and other leaders have handed these foot-dragging Senators, ready made, the best kind of practical arguments for turning a "yes" vote on the Humphrey bill into a campaign asset.

The case for an unleashed World Court is clear. It would be no immediate panacea, forcing Moscow to play by ground rules. But in time it would tend to build up such ground rules, and put more force behind treaties signed by Washington. As a nation dedicated to an orderly world, the United States would be profited more often than hampered.

[From the Christian Science Monitor, Feb. 11, 1960]

WORLD COURT'S ROLE STRIKES U.S. SNAGS

(By Richard L. Strout)

WASHINGTON.—The move to extend jurisdiction of the World Court at The Hague is in trouble. A new chapter of the ancient American struggle between internationalism and isolationism is being written in the Senate.

In 13 years the World Court has had only 13 cases. In a world threatened by nuclear war, the tribunal that might apply the rule of law to international disputes is only a sideshow.

One reason for the Court's impotence is the six-word Connally amendment added to U.S. adherence to the Court in 1946. Under this amendment the United States declares what cases it will and will not allow to go before the Court affecting it. Other nations have written similar qualifications, and since each potential litigant is suspicious of the other, the lack of jurisdiction has reduced the court to a shadow.

AMENDMENT ATTACKED

The administration wants the Connally amendment repealed. Spokesmen of the American Bar Association urge it strongly. Twice President Eisenhower has asked repeal in state of the Union messages.

Vice President RICHARD M. NIXON has made a practical case for repeal: How can U.S. investors hope to protect interests in foreign countries—Cuba, for example—if there is no international law worth the name to protect them?

Again, William P. Rogers, Attorney General, backs repeal, as do other top White House advisers.

The move has strong backing from Democrats, too.

After waiting for months for the administration to introduce its own motion, Senator HUBERT H. HUMPHREY, Democrat of Minnesota, put in his version. The fight in the Senate today centers round the Humphrey motion, a motion which President Eisenhower supports.

In an election year to find Messrs. HUMPHREY and NIXON on the same side of an international issue would seem to be final evidence of its nonpartisan nature.

But there are powerful forces against action. More important, perhaps is simple inertia. The history of the United States is against yielding sovereignty except under pressure. The League of Nations was rejected, and only a Second World War brought the United States into the United Nations.

Theoretically, law instead of war sounds fine, but there is something ominous and sinister to many in letting an international court substitute for national decision.

Representatives from the American Legion, the Daughters of the American Revolution, the State Bar of Texas, the Southern Industrial Council, and the like express opposition.

CAMPAIGN FIGHTS REPEAL

Only one hearing has been called by Senator J. W. FULBRIGHT, Democrat, of Arkansas, chairman of the Senate Foreign Relations Committee. Originally the administration proposed to send up second-string spokesmen, but ultimately Christian A. Herter, Secretary of State, and Mr. Rogers came up to back the Humphrey resolution.

There is a tendency by Democratic Senate leaders to ask if the administration has thought through the significance of the step involved and the degree of leadership it must offer. They urge educational propaganda by President Eisenhower himself and a willingness to step into the fray.

Some skeptical Democrats attribute Mr. Eisenhower's popularity to his alleged unwillingness to write checks for unpopular causes against his enormous bank account of prestige.

Argument against the repealer is that it would let foreign judges decide domestic" matters.

Advocates of repeal point out that the Court is specifically prohibited from interfering in domestic matters. The question is: Who shall decide what is a domestic matter? The crucial six words added by former Senator Tom Connally, Democrat, of Texas, settled this question—"As determined by the United States."

ESCAPE CLAUSE NOTED

The United States is unable to bring cases before the World Court involving rights of American business in foreign countries because the latter use the same escape clause which Senator Connally invented.

Southern Democrats tend to oppose the repeal because they fear that foreign countries will bring cases involving treatment of Negroes in the United States. Thus, there is a tendency for Southerners and Old Guard isolationists to unite.

Some observers feel that isolationism is still latent in the United States, though it has been obscured during President Eisenhower's incumbency.

Some Observations on Current American Life

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. AUCHINCLOSS. Mr. Speaker, it is always an inspiration to read the words of Herbert Hoover and his address on February 13 to the National Council of United Presbyterian Men in the United States is no exception. If anything it is his best contribution to his high standard of thinking which he has displayed on many occasions. In his speech he reviews the achievements of our country during his long and eventful life, he warns us all about the perils that beset us, and he submits suggestions how we can overcome those forces in the world that would destroy us. In conclusion he emphasizes the fundamental strength of America and points out how this strength may be sustained and expanded "from growth of religious faith; from our devotion to freedom of men; and from a determined staunch stand against the evils which beset us," and he goes on to say "with these forces in motion, there can be no decline or fall in this Nation." There is the philosophy of a great and good American with a heart as big as the universe and a faith as mighty as truth itself.

The text of his address follows:

SOME OBSERVATIONS ON CURRENT AMERICAN LIFE

(Address by Herbert Hoover to the National Council of United Presbyterian Men in the United States Saturday, February 13, 1960, New York, N.Y.)

The minds of thoughtful Americans today are greatly troubled. It ill befits these times,

or you and me, that I should try to entertain you with the usual afterlunch quips and humor. It is more fitting that I speak bluntly of our difficulties, and try to give you some assurance of the fundamental strengths of America.

We are in the midst of six dangerous crises.

We have in the Communist nations implacable enemies, whose determination—despite their disguises of peaceful cooperation—is to destroy and dominate the free world. And they are succeeding at our very doorstep.

We are not only plagued with their conspiracies but with the infection of Karl Marx in both the thinking of our people and the actions of our own governments.

We are in a crisis of inflation, which steadily saps the earnings and savings of our people.

We are in a crisis in our foreign trade—in which competition and an unfavorable trade balance cause the flight of our capital from fear of the stability of the dollar.

We are in a crisis of the domination of some labor unions by hoodlums; and the use of their gigantic funds to influence elections.

We are in the midst of an increasing moral slump as witness the increase in major known crimes. From 1946 to 1957 the increase in these crimes was three times greater than the increase in population, and in 1958 these crimes increased over 9 percent. In 1958 over 12 percent of those arrested for these crimes were under 18 years of age.

We can hardly believe that integrity and moral steadfastness are increasing when we witness the daily exposure of municipal corruption, the operation of some television and radio programs, and even the operation of meat, fuel oil, and retail shops.

I could dwell upon this half dozen tribulations at great length—but it is happier to convey some comfort to troubled minds by recalling some of the great strengths of America.

This Republic is now 184 years old. It is older than any other great representative government in history. We have gone through seven wars, with series of crises before and after each one. We have gone through three great inflations with crises before and after. We have gone through the inevitable depressions from these inflations, with accompanying crises. We have gone through a dozen crises of corruption in government.

Yet today we still possess most of the Bill of Rights, as handed down by the Founding Fathers 169 years ago. We are well fed, well clothed, fairly well housed; and we have the right to kick about any crisis.

This American way of life has proved to be pretty tough. But it needs to be even tougher right now.

THE GROWTH OF NATIONAL STRENGTH

I have lived a long life, and I have seen our Nation rally, exert its strengths to surmount dangers as great as those which beset us today.

Among the signs of our moral and spiritual strength, I have witnessed the outpouring of compassion which saved the world from two gigantic famines that followed the two great wars. During 45 years we provided the necessary margins of food, medical care and clothing to 1,400 million human beings—who would otherwise have perished. And included among them were millions of people in our implacable enemy—Communist Russia.

And in these efforts we have restored healthy minds and bodies to over 16 million children—who would have died from famine and disease—or would have become a danger to the world with their degenerate minds and dwarfed bodies.

Within my span of years, I have seen our voluntary organizations and institutions—devoted to religious service, charity, education, and community welfare—increase by tens of thousands in numbers and by billions of dollars in support.

I have witnessed elementary education expand to include practically all our children. Whatever complaints may be made about the system, it has practically abolished illiteracy; and it has embedded in children's minds the inspiring names and events of our history.

I have witnessed the growth of higher education until today our institutions of learning are turning out more instructed men and women each year than the rest of the world combined.

I have witnessed great discoveries from scientific research. With the advance of medical science, our youth are taller than their fathers, and the span of life has been greatly extended.

We can well respect the accomplishments of Russian technicians. But let us not forget that they obtained the telegraph, the telephone, the electric lamp, the speaking sound track, the radio broadcast tube, the airplane, atomic and nuclear power from us.

But with all these evidences of the future strength of America, I cannot say to you that we may be without fear.

A WORD TO THE CLERGY ON THE SLUMP OF NATIONAL MORALS

A major crisis I have mentioned is the slump in morals. From the pulpit you strive, hourly and daily, to mend these evils. But the Nation is in need of something more.

It needs to awaken from apathy. It needs a great stir of conscience, that certain evils be ended.

For instance I could prove to you by authorities and statistics that our law enforcement machinery has become deplorably weakened. Something is terrifyingly wrong in our law enforcement system when in 1958 there were 2,340,000 persons arrested for major crimes, and only 88,780 of them landed in State and Federal prisons. This number does not include our county and city jails which hold mostly pending cases and minor offenses.

I know of nothing in the teaching of the Scriptures which advocates the release of mad dogs onto the streets. In fact, I interpret Christ's words on "casting into outer darkness" to include effective sentences in prison.

The constant exposure and demands of the press for reforms in law enforcement needs the impassioned force of the pulpit.

TEENAGE DELINQUENCY

I will detain you with only one more example where there is urgent need for a stir of national conscience.

J. Edgar Hoover stated that in 1957 an estimated 740,000 youngsters under 18 years of age were arrested.

Those youngsters arrested in 1958 accounted for about 49 percent of all arrests for burglary and 64 percent of auto thefts. Their crime rolls include repeated murders, assaults, and rapes.

We are told that the remedy is the job of the parents, the schools, the press, a cessation of corruption through our mass communications and that it is the job of the religious denominations.

But we cannot ignore the fact that with the growth of slums and congested areas in our cities a new problem has arisen which cannot be reached by these remedies. These kids outside their school and waking hours are forced to the streets for air and play. It is here where teenage gangs and crimes are born.

The remedy is by prevention—not by a policeman. And prevention can only come from alternatives to life on the streets. The many agencies working to these ends are not simply alternatives to the street. They give the kids a chance in life. They build character. They awaken moral conscience, which is the sure guide in life. They need the organized support of the whole clergy of the United States.

A WORD TO THE CLERGY ON THE INFECTIONS FROM KARL MARX

Another crisis which haunts us justifies a further word to the clergy of America. This also is within your particular concern.

That is the spread of the Karl Marx virus. More leaders of the Christian faiths need realize the ultimate end of this infection among us. The real meaning and purpose of socialism is the governmental operation of all commerce and industry, and the reduction of life to pure materialism. This infection creeps through our Nation by deluded and misled men and by disguised organizations, fronts, and cults. These agents of infection are like hermit crabs which crawl into such terms as "liberal," "progressive," "public electric power," "managed economy," "the welfare state," and others.

Yet we have before our eyes, both in the preaching of Karl Marx and in the exhibits of government in one-third of the world, the fact that commerce and industry cannot be taken over from the people by the government without dictatorship and the destruction of all independent thought, including religions. They have ostentatiously proclaimed that "religion is the opiate of the people."

The clergy can perform a great spiritual service to the American people if they would tear away the disguises and expose the meaning, the ultimate consequences, and the destinations of this infection.

IN CONCLUSION

In conclusion, in looking over the current scene in our national life, if we take a worm's-eye view of the crises and forces which surround us, we may worry that we are approaching the decline and fall of the greatest Nation in history.

If we take a bird's-eye view, we see the fundamental strength of the American people.

And how can this strength be sustained and expanded?

It must come from growth of religious faith; from our devotion to freedom of men; and from a determined stanch stand against the evils which beset us. With these forces in motion, there can be no decline or fall in this Nation.

But we have need to exert all the strengths which God has given our Nation.

Coal Research

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mrs. KEE. Mr. Speaker, I want to express, on behalf of the people in my congressional district and in other coal areas, as well as for myself, our very deep and sincere appreciation of the action of the House on Monday in passing legislation authorizing the Secretary of the Interior to contract for coal research. This legislation is of the utmost importance to coal-producing areas and to the hundreds of thousands of people dependent upon coal for a livelihood.

It is no secret, Mr. Speaker, that coal has undergone a great technological revolution in the last decade. Machines

have replaced men. The result has been widespread and has created much unemployment in coal-producing areas.

Mr. Speaker, we hope, through this legislation, to insure that the Nation's great coal industry continues to progress. We did not ask for special treatment for coal. We were merely asking for an opportunity for this great industry to improve its efficiency and value to the Nation.

It is with truly grateful hearts that we say "Thank you" to all who helped in our longtime efforts to secure passage of this urgently needed legislation. While the bill does not go as far as we would like, it is certainly a wonderful start in the right direction.

The Late Honorable David McKee Hall

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, on this date the Committee on Science and Astronautics agreed to a resolution in memory of our departed colleague, David McKee Hall, a Member of the House of Representatives from the 12th District of the State of North Carolina.

Under leave to extend my remarks, I submit the following resolution:

RESOLUTION IN MEMORY OF A CHARTER MEMBER OF THE COMMITTEE ON SCIENCE AND ASTRONAUTICS, THE HONORABLE DAVID MCKEE HALL, MEMBER OF THE HOUSE OF REPRESENTATIVES, U.S. CONGRESS, FROM THE 12TH DISTRICT OF THE STATE OF NORTH CAROLINA

Whereas he was nominated to serve with the initial membership of the Committee on Sciene and Astronautics and was designated by his party as the ranking new member thereon; and

Whereas he fulfilled his mission on the committee with perception, diligence, force, understanding, and high integrity; and

Whereas he was able to convey, with dignity and simplicity, a unique wisdom to the affairs and proceedings of the committee; and

Whereas he represented the committee in important relations abroad with distinguished international figures of government and science; and

Whereas he accomplished the foregoing despite laboring under the most difficult and trying personal handicaps, yet did so with unfailing humor and humility: Now, therefore, be it

Resolved, That the Committee on Science and Astronautics hereby expresses deep gratitude and thankfulness for its association with David M. Hall, and that the Committee on Science and Astronautics also expresses its profound sorrow and sense of irreplaceable loss at the passing of David M. Hall in his beloved native State, January 29, 1960; and be it further

Resolved, That this resolution, signed by the members of the committee, be presented to the immediate family of David M. Hall; that a copy of this resolution be made a part of the permanent archives of the committee; and that this resolution further be placed in the RECORD of the Congress of the United States.

Distinguished Nevadan, Ty Cobb, Honored by B'nai B'rith

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. BARING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Las Vegas Review-Journal issue of Tuesday, January 26, 1960, which relates to the honor conferred upon my fellow Nevadan Tyrus Cobb by the Sports Lodge of B'nai B'rith:

DISTINGUISHED NEVADAN HONORED BY B'NAI B'RITH

(By George King)

In case you didn't notice, one of Nevada's most distinguished residents was singularly honored Sunday night in New York by the Sports Lodge of B'nai B'rith, an organization of Israelites of German extraction founded in America in 1843 and dedicated to the moral elevation of its members.

There probably are many Nevadans who do not even realize that Tyrus Raymond Cobb is a bona fide citizen of this State, with a home in Glenbrook hard by the shores of Lake Tahoe, much less that he was named Man of the Age in baseball by the noted sports group.

But neither of these little details have been overlooked by George Maines, an authority on the life and accomplishments of the Georgia Peach. It should be mentioned here that Maines is also an authority on the life and accomplishments of one Gene Austin, a singer of songs.

Maines was elated to see his old friend Ty selected by B'nai B'rith as baseball's outstanding personality during this century over the likes of Babe Ruth, Frank Chance, Pop Anson, Home Run Baker, Honus Wagner, Nap Lajoie, George Sisler, Rogers Hornsby, Tris Speaker, Eddie Collins, and such modern upstarts as Johnny Mize, Joe DiMaggio, Hank Greenberg, Stan Musial, and Ted Williams, just to mention a few of the greatest.

Sharing the limelight with Cobb at Sunday night's B'nai B'rith banquet were eight other Men of the Age in sports—Jack Dempsey in boxing, Bobby Jones in golf, Red Grange in football, Bob Cousy in basketball, Maurice Richard in ice hockey, Jesse Owens, in track, and Eddie Arcaro in horse racing.

That's pretty fast company, but Maines insists our fellow-Nevadan is right in his proper element. And we might point out that George, a great booster for Nevada, brushes aside the fact that Ty also maintains residences in his hometown of Royston, Ga., and Atherton, Calif.

Maines recalls that during Austin's recent engagement at Harrah's Club in Reno—shortly before he took over the center of the stage at the Nevada Club here in Las Vegas—Ty and Gene were hashing over old times when Freddy Martin, the band leader, happened by with Nick Lucas, the old "gittar" man.

"Now there's two stars in different lines who hung up more records than any other two performers in history," Freddy admiringly remarked to Nick. Anyone who disputes this statement will get a powerful argument from Maines, who can quote chapter and verse on the achievements of both to back up such an accolade.

Cobb will be accorded a new honor on January 31 at the annual dinner of the New York chapter of the Baseball Writers' Association of America. He will belatedly receive the Player of the Year Award for 1911, no such awards having been made by the writers prior to 1924. Maines can quickly tell you why Ty is getting this award.

"In 1911, Ty batted .420 for Detroit, drove in 144 runs, collected 248 hits and stole 83 bases," quotes the encyclopedic-minded George. "And during his 24-year major league career, 22 of which were spent with Detroit, Ty compiled a batting average of .367 and stole 892 bases."

Maines spent some time with Cobb at both Glenbrook and Atherton recently and reports that Ty, now 73, has apparently licked the ill health that plagued him through much of last year.

"Ty was a very sick man and tortured by back and leg pains resulting from old baseball injuries. But he's recovered nicely and I'm glad to see he was able to make that New York banquet last Sunday," Maines said yesterday. "He richly deserves such honors, not only because of his great record as a ballplayer, but because of the unpublicized financial aid he has made to less fortunate oldtime athletes and needy present-day college students through the Ty Cobb Foundation."

Being familiar with these humanitarian activities of a great old warrior who has, on occasion, received the worst of it in the public prints, we heartily agree with Mr. Maines. Nevada may well be proud of Tyrus Raymond Cobb—a legend in his own lifetime.

Proof of Need for U.S. School Aid Collapses

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. GROSS. Mr. Speaker, evidence continues to mount to refute arguments that there is need for a massive program of Federal aid to education. For example, I point with pride to the record in my State of Iowa, where citizens are meeting their responsibilities in this field with determination and success.

The record shows that Iowa school districts are spending more on school construction than the Department of Health, Education, and Welfare said would be required during the 5-year period from 1956 through 1960.

As the Waterloo (Iowa) Courier points out in a recent editorial, this should collapse any argument that Federal aid is needed in order to meet the school building needs of the State. I commend to the attention of my colleagues the Courier editorial, which follows:

Back in 1955 the U.S. Department of Health, Education, and Welfare prepared figures in showing the school construction needs for each State in the following 5 years. That report declared that Iowa should spend $113 million by 1960; and the advocates of Federal aid shouted that the money could not possibly be raised from local tax sources.

But the Iowa Taxpayers Association reports, with subdued and dignified glee, that Iowa school districts actually spent $114 million on school construction during the first 4 years of that 5-year period. If 1960 spending continues at the 1959 rate, the association declares, the total spending for the 5-year period will be at least $30 million

greater than the sum which the Federal Government said would be required.

This should collapse any argument that Federal aid is needed in order to meet the school-building needs of the State. Those who rate public issues on a selfish basis might be interested in whether Iowa would probably gain or lose from a Federal-aid program. Here are the figures:

	Iowa	U.S. average
School enrollment as percent of total population (1957)	19.5	19.8
Per pupil expenditure in average daily attendance (1958–59)	$346	$340
Per capita personal income (1957)	$1,896	$2,027
Personal income per child of school age (1957–58)	$7,707	$8,591
Percent change in school-age population (1950–57)	Up 22.3	Up 31.4

Thus, while Iowa has slightly less income than average to apply to educational needs, it also has had less of an increase in school-age population, thus reducing school-building needs. Depending upon what formula is used, it is unlikely that Iowa would either lose or benefit much from a Federal aid program. Iowa dollars would be taxed out of our pockets and returned in approximately the same number to our schools—minus, of course, the usual administrative deduction.

And let no one assume that Federal aid would reduce reliance on the property tax. The taxpayers association points out that generous Federal aid is already available in the welfare field. Yet, although the total Iowa increase in the property tax for all purposes last year was 8.5 percent, the increase for public welfare (despite the Federal aid) was 9.7 percent. By making spending seem easier and because of the strange illusion that Federal aid is free, Federal matching aid for local governmental purposes only increases local spending from local tax sources.

Any sensible and public-spirited citizen would energetically support Federal aid for education if it can be proved that States and local governments are unable to do the job. But no such proof has ever been offered.

The South and Its 1960 Course

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. COLMER. Mr. Speaker, in the mad scramble for votes of certain minority groups in the November presidential election by both political parties, apparently the most powerful potential minority, the South, has been overlooked. No doubt this is because that section which has traditionally been solidly Democratic is considered to be in the bag.

For the past decade and a half the South has resented its unenviable position of this being taken for granted. With ever-increasing numbers our people, dedicated as they are to constitutional government, have begun to question the wisdom of supinely following the modern leadership of the party of its fathers where the NAACP, the ADA, and other left-wing groups call all the signals and even threaten to drive them out of the party.

Now, when the South is again threatened with punitive legislation reminiscent of the Reconstruction days of the War Between the States, there are potent omens that the traditional yoke of political serfdom may be thrown off.

In that connection, Mr. Speaker, I submit herewith an article from the pen of that mighty champion of conservative government, David Lawrence, which appeared in yesterday's Washington Daily Star. The article follows:

THE SOUTH AND ITS 1960 COURSE—SENATOR RUSSELL INDICATES PROTEST VOTE THROUGH STRICT STAND ON CONSTITUTION

(By David Lawrence)

The big political news of the coming months of 1960 is not just the struggle between the various aspirants for the Democratic nomination for the Presidency but what the South may be preparing to do at the polls next November.

The South has it in its power to take 128 electoral votes away from the Democratic Party and to refrain also from giving them to the Republican nominee. This means that, unless one nominee or the other got 269 of the remaining 409 votes, the House of Representatives would have to select the next President.

What will the South do? A hint has just come from Senator RICHARD B. RUSSELL of Georgia, chairman of the Senate Armed Services Committee and one of the most outstanding men in Congress. He said something very significant on this issue a few days ago in addressing the Georgia Legislature, but somehow it wasn't noted in the press generally. He declared:

"I confess I do not know how much longer the South must serve as the doormat for the ambitious leaders of both national parties.

"Certainly, there is no comfort for us in the ranks of the Republican Party. The heir apparent to the GOP crown already has taken his stand with the NAACP. He is, in fact, one of their most prominent honorary members.

"Our own party has virtually deserted us. The proud democracy of Jefferson and Jackson has become the captive of a leftwing element that is barely Democratic even in name, but which is trying to recast the party in its image.

"Many of this gang of phony liberals and party wreckers have publicly advocated driving the South from the house of our fathers.

"The South is entitled to better treatment from the party that it has nurtured, supported, and revered for almost as long as it has the Constitution. We are entitled to the measure of respect and influence within the party that our years of loyalty have earned.

"No section of the country can rival the South's long record of Democratic loyalty. But party loyalty is a two-way street. Those who kick the South in the teeth at every opportunity must not expect us to keep turning the other cheek forever.

"The South has no intention of abandoning its loyalty to the democratic principles that it has ever held. But it owes no loyalty to self-styled Democrats who flout and despise the true Democratic faith.

"The patron saints of the democracy—giants like Jefferson, Madison, and Jackson—built the party upon the solid rock of the Constitution.

"That is where the South stands today. Others may seek to subvert that fundamental premise of the Democratic Party, but the South will keep the faith.

"We have taken our stand on the Constitution of the United States. And there we propose to remain."

The first test will come in the next 2 or 3 weeks. Upon Senator LYNDON JOHNSON of Texas, the Democratic leader, will fall the burden of getting some kind of civil rights bill through the Senate. To win support of northern Democrats at the nominating convention, he has to get a bill passed now that will make him appear at least as satisfactory on this issue as Senator KENNEDY or Senator SYMINGTON or Adlai Stevenson. If, on the other hand, the Texas Senator steers a compromise bill through that satisfies the South, he will, of course, retain the support of his fellow southerners, but doing this might cost him the support of northern Democrats.

There has been a tendency in the North to write off the Southern opposition as of no political consequence. The assumption has been that the people of the South will not vote for the Republican nominee and hence will be compelled to vote for the Democrat, no matter who he is. But the experience in 1948, when 39 electoral votes in the South were taken away from President Truman, indicates how the South operates when it wants to bolt the Democratic ticket. This wasn't quite enough to throw the election into the House of Representatives, but it would have taken only 38 more electoral votes from the South to have brought that about. For Mr. Truman got 303 electoral votes, and 266 was necessary for a majority. The agitation on civil rights and States rights had not been carried on at that time, however, to such an intensive degree as it has been since the 1954 Supreme Court decision on desegregation in the schools.

This year it would not be as difficult as it was in 1948 to mobilize the protest vote in the South. In fact, even if the professional politicians in each Southern State feel they have to stay "regular" and support the "regular" set of Democratic Party electors on the ballot, the write-in technique is still available. This was how South Carolina elected STROM THURMOND to the U.S. Senate in November 1954. The same thing can happen also in other Southern States in November of this year in support of an independent set of electors.

Pentagon Setup

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mrs. KEE. Mr. Speaker, there is growing concern among responsible legislative leaders of both parties that the present organizational setup in the Pentagon is not adequate to meet the threat posed for this country by the revolutionary techniques in weapons and warfare.

Former Army Chief of Staff Taylor, a highly respected military leader, is the latest expert to call attention to this problem. He believes the division of our Defense Establishment into three separate services is outdated. He proposed a single service and a single uniform.

This is pretty much in line with the thinking of President Eisenhower when unification was first considered by Congress. At that time, Congress refused

to go as far as Mr. Eisenhower and other military leaders recommended.

What has prompted the latest discussion of our military organization is a continuation of bitter interservice rivalry, which has been intensified by the struggle over the development and control of missiles.

There can be little doubt that we have failed to make as much progress in the missile race as Congress and the people had hoped for. When our recent moon shot failed, the public was advised that a shortage of powerful Atlas missiles would probably delay another try at hitting the moon for a year.

Whether we like it or not, we are engaged in a race with the Russians on missiles. Every time they pull off some spectacular achievement in space it serves to dramatize for the rest of the world the amazing accomplishments of the Russians. This means that the rest of the world listens respectfully when the Russians brag of their great accomplishments and of their intention to overtake us economically and industrially within a few decades.

Management and control of our space program has been widely dispersed. We have had the three services engaged in duplicating and in many instances competitive work. The creation of the National Aeronautics and Space Administration last year should go a long way in putting the civilian phases of our space problem on the right track.

But the interservice rivalries still exist. Despite numerous administrative changes and the appointment of a succession of missile czars we do not seem to be able to narrow the lead which the Russians enjoy in the adaption of missiles and rockets for military purposes.

There is little doubt that interservice rivalry is costly in terms of money as well as time. How to achieve greater efficiency through further unification will be a major problem facing this Congress.

The American people and the Congress are fearful of creating a military Frankenstein. In this country, the military must be subordinate to elected civilian officials. Creation of an all-powerful military that could intrude itself into top policymaking decisions could change complete the basic concepts of our Government.

Yet, we must have a military that is capable of swiftly adapting itself with new weapons systems and the changes in strategy and tactics which these new weapons demand. The big question is this—How can we attain this needed organizational efficiency without creating a two powerful military?

It is a difficult problem. But it is one the American people and the Congress must face up to. During the coming months undoubtedly the question will be debated more and more in Washington by dedicated men and women whose only interest is the security of the United States of America.

Fear Destroys a City

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. EVINS. Mr. Speaker, the First Methodist Church in Shelbyville, Tenn., one of the fine towns I have the honor to represent in the Congress, is privileged to have as their minister one of the most able and distinguished ministers in the entire Methodist conference—the Reverend H. T. Tipps.

I have been provided with a copy of one of Dr. Tipps' truly great sermons by Attorney Edwin T. Nance, of Shelbyville. This sermon is so powerful and stirring as suggested by Mr. Nance that I wish to share it with my colleagues and others and, therefore, Mr. Speaker, I ask unanimous consent to have this sermon reprinted in the Appendix of the RECORD.

The text of the sermon, entitled "The Death of a City," follows:

I want to take you back this morning to an old, old story, found in the Book of Joshua. It is the story of the siege and fall of the city of Jericho. Many of you are familiar with it from your childhood—you remember the old lithograph pictures of the march, with the priests blowing their long golden trumpets; but it has a mighty lesson for grownups today.

Moses had led the children of Israel to the border of the Promised Land when he was taken from them. Well before his going, however, he had bestowed upon Joshua the mantle of leadership. (You remember that Joshua was one of the two from among 12 who had been sent out to spy out the land, who believed that it could be taken. It is surprising that the writer to the Hebrews, although he mentions the incident never mentions Joshua by name in the roster of the great men of the race. It is, perhaps one of the ironies of history that few men who follow very closely upon the heels of a very great man come in for their true recognition. Small wonder it is that Joshua was overshadowed by Moses.)

Joshua was a past master in the role of taking over command of a people. He began early to make plans for taking possession of the land. One of the chief obstacles to any planning, however, was the strong city of Jericho, which was just inside the border. It had to be taken, albeit it was well fortified and surrounded by mud-baked walls. This fortress had to fall before looking to the land beyond. Joshua knew, moreover, that untrained warriors were no match in military strength for the enemy, so he devised an ingenious plan—one of the most amazing pieces of strategy imaginable. He devised a campaign of nerves—you of our day know what is meant by a war of nerves. Joshua used the tactic of wearing down the morale of the enemy.

His plan was unorthodox and unpredictable. He simply moved a small army up to within sight of the city walls, but out of arrow shot, and encamped. Then he began a routine. Each day the Hebrews deliberately had a religious ceremony, then lined up; marched so as to encircle the city, carrying their ark of the covenant, and having the priests blowing their trumpets—and after that, simply retiring to their camp. You know the progress and end of the story. For 6 days this identical performance took place; and then on the seventh a change: instead of encircling the city once they marched around it at faster pace seven times. On the seventh the priests blew the trumpets, and all the Hebrews, as previously instructed sent up a mighty shout of triumph—and with the blast and the shouting the walls of Jericho fell down.

(Now there is much that the architects tell us about the power of vibration; also there can be much speculation as to what may have been done secretively both inside and out—but the walls fell—and the faith of an ancient people in their God and their leadership was sustained. They gave the glory to God.)

What we have said is the actual Scriptural account of the happening—for the rest we have to depend upon our imagination. Yet it does not take too much, for the same thing is happening around us today. When the guards had caught sight of the Israelite Army of siege on the first day they no doubt reported immediately to their king; and the court was thrown into consternation and fear because of the tales of terror they had heard concerning the wars of the Israelites—their annihilation of the Amorites, and the like. The king ordered the gates bolted and forbade any person's coming in or going out. The defenses were mobilized; a state of emergency was declared, and the sharpest vigilance ordered. (You can imagine how everybody who could do so crowded the city wall to see what the enemy looked like.) No one slept much, what with the wild rumors circulating. Mornings came and went, finding the people of the city weary from loss of sleep and anxiety. In the nature of things the panic somewhat subsided, but the anxiety for fear of an outbreak persisted. The city waited, paralyzed with fear, watching every move of the Israelites. Always they were the same: a service of worship, a parade around the city with the ark of the covenant and the priests blowing the trumpets—no sign of preparation for hostilities for 6 days in a row. Then came the seventh day: the first activities were the same; but this time the Hebrews did not stop with circling the city one time, but quickened their pace, and began another and another until seven. Imagine the pandemonium that broke loose in the city when the pattern was broken. Panic brought acts of violence of all kinds. The garrison crowded the city wall for anything that might happen. Then the final stroke—in the seventh round, the blast of the trumpets and a prolonged shout—and Jericho fell, without as we should say, the sound of a shot. (Students of Tennessee history can point to an incident in the Civil War which shows how a city's population can be thrown into a frenzy: When it was reported at Nashville that Fort Donelson, at Dover, had fallen to the Federals all control was lost. The lawless ones among the people made a wild dash for supplies against a long siege. They seized meat supplies and other foods ruthlessly to prepare to save themselves from possible starvation. Probably old Nashville never suffered such a battle of nerves.)

The strange situation in the ancient city of Jericho is this, that at any moment during the week the army of the city could have opened the gates, challenged the Israelites to open combat, and, so far as military prowess was concerned, defeated them. The reason this was not done is obvious: Jericho was already defeated within before she was conquered from without. Did not

Joshua's spies who went in to seek out the city prior to operations have to consort with a harlot? Had she not already turned in treachery against her city? Arnold Toynbee, the great British historian of our day has said that there are on record the accounts of the rise and fall of 16 civilizations. "There is not one" says he "that perished from outside force until it had decayed within."

Internal decay alone can account for a war of nerves. A nation with moral and spiritual courage will have no part in such a war, yet we are seeing in our day at least the beginnings of wars of nerves. World War II began as a war of nerves. Adolph Hitler must have known the story of the fall of Jericho by heart, because his early victories were won by its tactic. Long before his armies crossed the borders of Poland, Belgium, France, and Norway he had sown seeds of fear and treachery and distrust in the hearts of certain of the people. And the same could happen again if there is not moral and spiritual preparation to forstall it.

Never was there such a challenge to positive thinking and acting as in our day—never such a time to demand people of moral and spiritual stamina. With so much that is controversial to hear, so much that is deluding to see, so many half-truths afloat, one wonders how his nation would stand up in a crisis. We know that it is important to keep abreast scientifically and militarily with our would-be enemies—but how to keep the heart of the nation pure and unassailable, that is essential, too. What puzzled Jericho was that there were no weapons. Have we too forgotten that the inner weapons are our stronghold. Do we remember that the outer without the inner are futile. Do we still remember that, "Except the Lord build the house they labor in vain who build it; except the Lord keep the city the watchman waketh in vain?" When we consider the corruption that infests so many areas of our political, industrial, social, and economic life, we could well take thought for the future of our Nation. We have recently brought to light a Harry Gold, a Greenleaf, the Rosenbergs. There are probably thousands more like them, who have no love nor devotion for God or country—people who would sell their birthright "for a mess of pottage." Yet we are a Christian Nation: and a Christian should be able to win those people who are beleaguered with problems they do not understand. It is a time for the individual Christian to take upon himself the yoke of his responsibility.

That is just where the Gospel of Christ comes in—at the point where weakness and healing are needed. This Gospel is penetrating—invigorating: "Whosoever heareth these words of mine and doeth them shall be likened unto a man who built his house on a rock. The rains descended, the floods came, the wind blew upon that house, and it fell not, for it was builded upon a rock," said He. Likewise He said, "Let not your heart be troubled, ye believe in God, believe also in me."

You should be saying in your heart now, if you are beleaguered, afraid, distraught, "Let me find my way to this Saviour." If you do not know the first step I will tell you—"It is prayer—the mightiest force in the world." You have opportunity to make yourself a channel through which God can send His strength and blessings into your life, and into the lives of those around you.

I witnessed an example of how men and women may save themselves and their land from the plight of Jericho. At the turn of the year 1959–60 there came together men and women from all over the United States in Knoxville to declare their stand for Christ, and await the power of God to be poured out upon them. Their intent was to meet a new era, not waiting for its portent, but rather launching a new one. The movement is called A Decade of Prayer. The plan is for Christians to take the initiative, not wait for defensive action. Testimonies of the power of prayer were given by Stanley Jones and other great spirits. At midnight the great delegation was upon its knees taking the Holy Sacrament as a pledge to launch a decade of prayer, rather than to meet a new era waiting to find what it would bring.

Where do you begin to fortify against a defeating situation? Answer: "Right where you are." Not after it breaks, but now. The habit of coming to God immediately when you feel uncertain will introduce you to the habit of coming to Him for everything. With God on your side you cannot know defeat. Even a war of nerves cannot assail your citadel.

Wait not for the enemy to come near—rather, have God with you first.

Commemoration of the Battle of Aiken

EXTENSION OF REMARKS
OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I salute a magnificent address made by the Honorable William D. Workman, Jr., author, news reporter, and columnist of Columbia, S.C. Mr. Workman is the author of the book "The Case for the South," and has a bright history of literary compositions and contribution. Recently, on the occasion of commemorating the Battle of Aiken, fought at Aiken, S.C., of February 11, 1865, he made a significant address which I include herewith. I preface his address with the introduction of Hon. John A. May, of Aiken, S.C., distinguished lawyer, historian, and legislator, and I include at the end of his remarks a poem by Hon. John A. May on the Battle of Aiken. I call attention to the significant remarks of Mr. Workman which I was not privileged to hear, but which I have read with great interest and appreciation and which I attach here so that his thoughts may be spread abroad:

ADDRESS OF REPRESENTATIVE JOHN A. MAY, INTRODUCING WM. D. WORKMAN AS PRINCIPAL SPEAKER, BATTLE OF AIKEN MEMORIAL, FEBRUARY 13, 1960, AIKEN, S.C.

Mr. Chairman, ladies and gentlemen, to me this is a great day. For many years I have cherished the thought that some day the battle of Aiken would be given the recognition it so justly deserves. Today a dream of years has come true.

After Sherman's march to the sea, he crossed the Savannah River and headed toward Columbia. When he reached Blackville, he halted long enough to burn Barnwell and to continue to tear up the South Carolina railroad, as well as to pillage all the countryside. It was here that he ordered Maj. Gen. Hugh Judson Kilpatrick to destroy the Graniteville mill and the Augusta arsenal, both so essential to the Confederacy.

Kilpatrick camped at Johnson's Turnout, now known to us as Montmorenci. As he entered Aiken on his way to Graniteville and Augusta, he was surprised by his old West Point classmate, Maj. Gen. Joe Wheeler. It was a complete route. Kilpatrick was decisively defeated and forced to retreat to Montmorenci. Wheeler, himself, chased Kilpatrick and almost caught him. Kilpatrick rode so fast that he lost his hat in making his escape. Throughout the years there has been an effort on the part of Sherman and Kilpatrick—and other Union generals—to minimize the battle of Aiken. They prefer—if they mention it at all—to call it a skirmish and even today some of their admirers still try to belittle the battle by referring to it as a skirmish. This is not true. It was a full-scale battle. Thousands of men on both sides took part. Many brave men on both sides paid the supreme sacrifice. It is estimated that approximately 75 Union soldiers and 50 Confederates were killed. Some of them lie buried just across the street in the Baptist churchyard.

The Battle of Aiken was not only a great Confederate victory—probably the last or certainly one of the last Confederate victories—but it had a far-reaching effect.

Every place that Sherman and Kilpatrick had been before had been left in flames and ruin. Here a battle was fought which resulted in the saving of Augusta, the arsenal, the Graniteville Mill, and our own little town from complete destruction.

Yes, the man of vengeance, the man who made war on women and little children, was stopped right here where we stand today.

Today we are honored to have as our speaker a true son of the South, a man who recognizes our problems and one who has the ability to portray them truthfully and unbiased to the world. So I present to you a South Carolina boy who speaks to us today of our great birthright, and who has so nobly presented the "Case for the South." A man who fought for his country in time of war; a man who defends our principles in time of peace—W. D. "Bill" Workman.

ADDRESS BY WILLIAM D. WORKMAN, JR., AT AIKEN, S.C., FEBRUARY 13, 1960, ON THE OCCASION OF COMMEMORATING THE BATTLE OF AIKEN

We are assembled here today to commemorate a time and place where southerners fought to defend themselves and their ideas against outside domination. They fought to safeguard what to them was a basic right—the right to form their own government. That fight was lost, and the Government of the United States triumphed over that of the Confederate States.

Today, southerners once more are fighting, this time in the realm of politics and law; but they are fighting now to defend the United States and those concepts of constitutional government for which this Nation stands. In the long roll of history, it may well turn out to be that the Supreme Court's desegregation decision of May 17, 1954, was every bit as dangerous a threat to the Union as was the firing on Fort Sumter 93 years earlier. In a very real sense, the southerner today is fighting not only for the South, but for America, when he rallies to defend the Constitution of the United States.

The southerner once more finds himself in what has been described, under other circumstances, as "a thoroughly orthodox English revolution, seeking to conserve rather than destroy."

A South Carolina historian, the late Dr. D. D. Wallace, used that description in portraying the attitude of the early colonists who rebelled against the inept and dictatorial rule of the lords proprietors. It could be as well used to describe the reaction against the British Crown as the War of the Revolution developed; and, later still, as the South rebelled against the northern aggression which provoked and sustained the War Between the States. And it can be used today, when southerners once more seek to conserve rather than to destroy a way of life

which they have evolved to their own satisfaction.

What basically is at stake here is the right of freemen to govern themselves—a right woven into the long tapestry of English history from which our own fabric of government has been cut. The threads go back to the meadow of Runnymede, where English demanded—and got—a royal acknowledgment of their rights and liberties. In that Magna Carta of 1215 they got no new system of government, no radical departure from accepted practices, but a detailed reaffirmation of what had long been the law of the land—yet a law which was beginning to erode under autocratic and despotic practices. And they also got in that great charter a pledge that the Crown would "only appoint such men to be justiciaries, constables, sheriffs, or bailiffs as know the law of the land and will keep it well." Note that language—"as know the law of the land and will keep it well"—a commitment of conservatism, not of radicalism; a pledge to preserve the law, not to change it.

And so it went through the years—down through the Petition of Right, the English Bill of Rights, and into our own Declaration of Independence, wherein was set forth the American proposition that governments among men derive their just powers from the consent of the governed. But even here, the struggle was, to use Wallace's phrase again, "a thoroughly orthodox English revolution, seeking to conserve rather than destroy." Had the colonists of 1776 had the same rights and privileges accorded to their contemporaries in England, it is doubtful that there would have been an American Revolution. But they were being deprived of those rights—as the Declaration of Independence documents in considerable detail—and they reached the point where they could and would fight for their liberties.

Thereafter came open warfare—which ended in a peace treaty wherein "His Britannic Majesty acknowledges the said United States, viz., New Hampshire, Massachusetts Bay, Rhode Island and Providence Plantations, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Virginia, North Carolina, South Carolina, and Georgia to be free, sovereign, and independent States."

And then came the drafting of a constitution of the United States to replace the old Articles of Confederation. It sought to weld the new States into an entity which could "establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty." Yet even as the States agreed to join hands for those and other specified purposes, they insisted that they be safeguarded in other rights retained by the States. Too few of us realize that 7 of the Original 13 States—more than half—refused to ratify that constitution until they were assured that the rights of States would be safeguarded in all areas except those granted to the Central Government. And these were not all Southern States, for they included New Hampshire, Massachusetts, New York, and Rhode Island—in addition to the Carolinas and Virginia. Here, for example, is what the people of the State of New Hampshire proposed should be put first among the "alterations and provisions" to be embodied in the new constitution:

"That it be Explicity declared that all Powers not expressly and particularly Delegated by the aforesaid Constitution are reserved to the several States to be by them Exercised."

That concept—or precept, if you prefer—represents one of America's distinctive contributions to political science, and it embodies in itself a safeguard for the perpetuation of liberty. It grew out of observation of the abuses which had continually crept into the government of other nations, even including that of Great Britain, and it was written into the American Constitution as the 10th amendment of the Bill of Rights. And—mark this well—it undergirds southern political thinking today as it once undergirded that of this fledgling nation of ours.

The South holds, with Francis Lieber, that "the more a constitution partakes of the character of a solemn compact, the closer its construction must be." It holds, with that great Michigan jurist of a later year, Judge Thomas Cooley, that: "A cardinal rule in dealing with written instruments is that they are to receive an unvarying interpretation, and that their practical construction is to be uniform. A constitution is not to be made to mean one thing at one time, and another at some subsequent time when the circumstances may have so changed as perhaps to make a different rule in the case seem desirable."

The point to be made here is that the position of the South with respect to States rights is not peculiarly southern, but is peculiarly American—and that only in the South has that concept been nourished, cherished, and preserved. Elsewhere in the Nation, the principle of States rights has degenerated into a nerve-sapping willingness to submit to the ever-present eagerness of the Central Government to grow larger by the cannibalistic practice of feeding on its lesser parts. And in this process of governmental degeneration there has come about a distortion, a perversion, of political values. Today we are rapidly approaching, and may well have reached, the point where political control of the Nation lies in the hands of what might be called the concurrent minority—the opposite extreme of that state of political tranquility envisioned by John C. Calhoun as a natural consequence of rule by his concurrent majority.

Instead of having the various elements of the American community united in a common undertaking to promote the welfare and progress of the whole, with each of its individual parts assured of protection against oppression or maltreatment at the hands of the others, we have achieved a state of balance between the two major political parties wherein an imbalance can be effected by a numerically insignificant portion of the populace. Thus, what Calhoun feared as the tyranny of the numerical majority actually has evolved into an even more distressing tyranny of the numerical minority.

This state of affairs has developed, perhaps inevitably, from a combination of circumstances which characterizes the American Government. The emergence of the two-party system had its inception in an understandable difference of policy and governmental philosophy between segments of the population which gravitated together out of political like-mindedness. Then followed a consolidation of power in the hands of the relative few who came to control the machinery of the respective parties, whether overtly or covertly. Simultaneously, out of the natural propensity of American citizens to choose up sides, a situation developed wherein each of the two major political groupings achieved a virtual parity of strength in many areas of the Nation. One exception was the South, where the regional heritages tended to bind the people together in a common bond of sympathy with one party and of hostility to the other.

But, with the achieving of comparable political strength between Republicans and Democrats elsewhere in the Nation, and more especially in the big States with many electoral votes, self-serving politicians realized that those electoral votes could be tipped into one party basket or the other by the simple expedient of maneuvering the uncommitted minorities which were chiefly concerned with their own special interests.

Out of this realization on the parts of both the politicians and the leaders of the minority groups came this control by the concurrent minority. In city after city, and State after State, there gradually were developed combinations of racial, religious, and occupational minorities which together provided political schemers with the means of influencing the outcome of elections on local, State, and National levels. And since the consuming interests of these minority groups transcend (in their minds) the broader considerations of the general public welfare, it became a simple function to manipulate such groups as voting blocs. Appeals to their minority consciousness and promises to serve their minority interests did the trick. And just so long as the major parties remain in positions of relative political balance, the minority combinations can be employed as the balance of power to tip the scales—and the votes—to whichever of the major parties caters most abjectly to the minority demands.

The concurrent minority, therefore, thrives upon discord and disunion. Instead of promoting a harmony which would bind together diverse elements of the majority in the joint and amicable exercise of political control, the militant minority bloc—in order to preserve its own influence—seeks to pit one faction of the majority against the other. Only thus can the minority retain its status as the balance of power, and exercise its disproportionate power to bargain and to intimidate. It naturally follows that the concurrent majority and the concurrent minority are in fundamental and continual opposition to each other—the first seeking peaceful coordination of effort with the aim of political tranquility, the second thriving on incessant agitation with the view of forestalling and thwarting any likelihood of agreement between the majorities.

A corollary of the brazen maneuvering which has accrued from this set of circumstances is the evolution of the white South as the target for abuse from both national parties. The South, less the carefully distinguished and constantly seduced Negro population, can be safely attacked without risk of offending any of the minority groups which exert such tremendous influence in the critical cities and States of the non-South. Consequently, there is ever-increasing exasperation in the South with both major parties, but with it is a sense of frustration stemming from the South's inability to adequately defend itself against such politically motivated attacks.

Nevertheless, there remain hosts of southerners who feel earnestly, if none too optimistically, that the States of the South have more in common with each other than with either national party. Bound together by their joint adherence to State rights, constitutional government, and racial integrity, these southerners reason that only by collective political action can they protect themselves against exploitation by both Democrats and Republicans. Thus arises the recurring consideration of third party movements.

This third-party talk in the South is not born of any desire to break up the traditional two-party pattern of American politics. It stems, rather, from a sense of political desperation on the part of southerners who find no haven in either national party. The Democratic Party has long since abandoned the fiction of championship States rights (the fact fled during the thirties). The Republican Party's lip service to the cause of State sovereignty, voiced overmuch in 1952, stands exposed as political hypocrisy of the worst sort. And, in between this disillusionment with the Democrats and this disenchantment with the Republicans, stands the southerner—beleaguered and belligerent.

He is beleaguered because the odds seem against him in this midcentury alinement of leftwing liberals and pseudoprogressives who sneer at the legacy left by the framers of our Constitution. He is beleaguered, too, because he finds a paucity of regional political leadership. True enough, there are

spokesmen of and for the South, but too many of them suffer from national political aspirations. Then there are others who speak for the South, but whose influence barely reaches beyond the borders of their home States. And always there is the political jealousy which constrains and restrains public officials in cooperative undertakings which involve areas where they cannot hope for votes. Indeed—and I hate to make this acknowledgement—the South suffers somewhat from its very excess of States rights. In today's political battles, as in yesterday's conflict during what we choose to call the War of Northern Aggression, the States of the South find it difficult to achieve coordination on a policymaking level, despite the community of interest of the rank and file on the lower levels. Yet as we look about at the crop of new young governors on the southern scene, there is hope that mutual trust and mutual interests will bring about greather southern cohesion than we have witnessed in recent years.

The South is a sleeping political giant, possessed of untold and well-nigh unlimited potentiality, awaiting the day when a leader—or group of leaders—will emerge with a plan of action and a sacrifice of self which will fuse southerners into an amalgam of resurgent Americanism. Those things to which the southerner clings—love of the land, pride of family, resistance to tyranny, insistence upon self-government—all these are things which Americans everywhere can cherish. When the southerner extols the constitution of Washington, Madison, Franklin and company in preference to that of Earl Warren and associates, he does so not just for the South, but for America. In all conviction, and in all truth, the southerner looks upon the South as the homeguard of the Nation.

THE BATTLE OF AIKEN, FEBRUARY 11, 1865

(These words are contributed by John A. May, Aiken County legislator and chairman of the South Carolina Confederate Centennial Commission to commemorate the Battle of Aiken. On February 13, 1960, the Aiken County Historical Commission unveiled a monument where the greater part of the famous battle was fought.)

Fresh from the sea march and Savannah's surrender
Sherman pressed on, the South to dismember.
On his way to Columbia, the proud capital to destroy
He stopped a moment for Kilpatrick's deploy
To complete the pillage, more people to kill
To destroy the arsenal and the Graniteville Mill.
He began his mission entering Aiken town
Not expecting to find any rebels around,
But he soon discovered to his sad dismay
Joe Wheeler's cavalry were here that day.
Able and strong that Confederate band
All willing to die to save their land.
Kilpatrick halted near the east of town
When Wheeler's men began to bear down.
Up Richland Avenue he began his search
And found his foe near the Baptist Church.
And all that day they fought and died
And neither stopped 'til eveningtide.
And then at last, the Federal blue
Fired a few wild shots and then withdrew.
Kilpatrick left in such a hurry
He lost his hat amid the flurry.
Joe picked it up and smiled with glee,
"That's one Yankee hat, that Columbia won't see."
And so the Battle of Aiken ended
And now, Thank God, all scars are mended.

—JOHN A. MAY.

(Dedicated to my grandfather, John Salles Randall, who as a boy of 16 served under General Wheeler at the Battle of Aiken.)

Johnson Alone Fits All Demo Leadership Needs

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. THORNBERRY. Mr. Speaker, there are many reasons why Senator LYNDON B. JOHNSON would make a great President of the United States.

In an editorial appearing in the American Statesman, of Austin, Tex., one of the important daily newspapers of our Nation, on Sunday, February 14, 1960, these reasons are presented ably and brilliantly.

I ask that the editorial be included in the RECORD. It is as follows:

JOHNSON ALONE FITS ALL DEMO LEADERSHIP NEEDS

Repeatedly we have heard and read, during the current nationwide speculation on Democratic Party presidential nomination possibilities, something to this effect:

"Of course, the ablest man in the Democratic Party this year is Senator LYNDON B. JOHNSON of Texas, but because he is from Texas he won't stand a chance to be nominated for President."

If this attitude is to prevail when the national Democratic convention meets in Los Angeles this summer, then it is safe to predict that the Democrats will lose another national election this fall. For this attitude reflects to a large extent a parochial frame of mind, an outlook based on the sectionalism and factionalism that has riddled the ranks of the Democratic Party in recent years.

The fact is that LYNDON B. JOHNSON has demonstrated his national stature repeatedly under the most trying circumstances ever since he became Democratic leader of the U.S. Senate in 1953. His remarkable skill in holding together in the national interest an extremely diversified group of U.S. Senators has prevented what otherwise would have been a deadly stalemate of the kind that brought the government of France to its knees 2 years ago.

Most of the comment on JOHNSON's performance as Senate Democratic leader has centered on his personal talents in human relations. We think the really important fact aspect of what he has done is the broad-gaged vision it revealed in LYNDON B. JOHNSON. He has been a man of destiny for the United States and the free world.

In more than an academic sense, LYNDON JOHNSON has been a man of destiny also for the Democratic Party in Texas.

Consider for a moment the history of this majority group of Texans over the past 8 years. In two presidential elections, Texas voted strongly for a Republican President, which means that Texas Democrats jumped the party fence in large numbers.

Without LYNDON JOHNSON as a rallying point, the effect of these consecutive defeats for the party might well have been by this time chaos and confusion in Texas political ranks.

The strong figure of LYNDON JOHNSON has made it possible, instead, for the State organization to hold itself together in respectable strength and thus to serve the people of Texas.

The point is that LYNDON JOHNSON already is approaching this lodestone role in the national party. If the Los Angeles convention wants to perfect an organization that has a chance to win the Presidency, LYNDON JOHNSON is the only man who has demonstrated at all political levels the capacities to head it up as nominee.

LYNDON JOHNSON has imagination, perceptiveness and a tireless zeal to serve the United States and the cause of liberty. His outlook on the national and international scene is one of sound, practical, courageous vision. He would be a powerful Democratic candidate if nominated, and a great President if elected.

People

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mrs. KEE. Mr. Speaker, all of us know that the months ahead promise to be crucial ones for the United States and the American people.

We should discover before the end of the year whether the Russians are really sincere in their professed desire to ease tensions in the cold war and arrive at some understanding whereby the threat of war will be eased.

If there is one thing which unites the American people it is the desire for peace. That is why everyone, regardless of political affiliation, approves the President's good will visits to other countries of the world.

The summit conference this spring will pose the first test. Mr. Khrushchev will have an opportunity to prove that he is sincerely interested in easing the cold war. He can do this by relaxing some of the rigid demands of the Russians, especially as applied to Berlin.

Also, Mr. Khrushchev, if he is really sincere in his desire for peace, can restrain the Chinese Communists. The Chinese appear on the surface to be much more aggressive at this point than do the Russians.

Mr. Speaker, I am confident that foreign policy will not become a political issue during this session of Congress. This does not mean there will not be disagreements. There will be, but the arguments will come over emphasis and direction, rather than the policy itself.

We know that foreign aid will be argued at length. Some Members will want to downgrade military aid and emphasize economic assistance to nations such as India. Others will want to abolish foreign aid and concentrate on military assistance.

Our defense program, which cannot be separated from foreign policy, will also be widely debated. Some Members of Congress, with considerable background information at their disposal, will want to step up the missile program. They fear we are allowing the Russians to widen the present gap. Others will insist upon more emphasis on conventional arms, arguing that if we depend entirely upon atomic weapons it will be an invitation to the Russians to start small-scale local engagements which cannot be met with the hydrogen bomb.

Arguments over defense will not be partisan bickering. Sincere, dedicated and patriotic men will take issue with the President's position that our defense setup is adequate.

Bipartisanship in foreign policy was never intended to stifle debate. We need to discuss issues of such importance as foreign policy and defense. It would be tragic if the people, because of their great confidence in Mr. Eisenhower, resented legitimate debate of these issues and branded everyone who asks pertinent questions a political opportunist. I am sure Mr. Eisenhower would be among the first to insist upon the right of anyone to debate these questions in a logical, dispassionate manner.

But after all the debate is over and the policy on both foreign affairs and defense is agreed upon, the country will remain unified.

The people want peace. But they do not want peace at any price. That is why our people will continue to insist upon a strong defense, backed by the latest in new weapons, until the Russians prove by deeds, and not words, that they are ready to make fundamental changes in their policy.

America's New Frontier of the Sixties

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. TRIMBLE. Mr. Speaker, on February 8, 1960, in an address at the Mississippi Valley Association meeting in St. Louis, Mo., our colleague from Oklahoma, the Honorable ED EDMONDSON, of Muskogee, did himself proud with a message on the development of the Arkansas River Basin. He deals realistically with this great project and I wish to commend him for it. It is my great hope that we can move forward rapidly on this project and that planning funds for Ozark Dam and others of the great project can be secured this year.

It would take much time and space to give credit to all those, living and dead, who have done so much to make the dream of the Arkansas Valley a reality in the near future. At this point I wish to insert the remarks of our colleague, the gentleman from Oklahoma [Mr. EDMONDSON], in which I concur completely:

AMERICA'S NEW FRONTIER OF THE SIXTIES

Four years and four months ago a man who was then a stranger to many in the Arkansas Valley stood before a large number of Oklahomans and Arkansans in the Sky Room of the LaFayette Hotel in Little Rock, and said:

"The improvement of the Arkansas River for navigation was authorized by Congress in 1938. Since then there have been other authorizations for some of the flood-control reservoirs which will contribute to navigation. I submit to you it is time something happened to bring this authorization to reality. I can promise you the wholehearted support of the Mississippi Valley Association, which I represent."

The speaker was Everett Winter, executive vice president of your great association.

The time was October 28, 1955, a few short months after the great breakthrough on the floor of Congress in 1955.

In the session of Congress which had just concluded at that time, we had succeeded in securing appropriations to begin construction on three major dams of the Arkansas Basin program—Oelogah and Eufaula in Oklahoma, and Dardanelle in Arkansas.

The amount of money appropriated was not large—less than $2 million of construction money in all—but the mandate of the Congress was clear and decisive.

In that mandate, in both the U.S. Senate and House of Representatives, the support and help of legislators from the Mississippi Valley States had supplied the vital difference between defeat and victory.

The helping hand of 1955 was followed by further strong support in 1956, when supporters of Arkansas River navigation won for the first time the official backing and sponsorship of the House Committee on Appropriations.

Among my treasured souvenirs of the 1956 battle is a resolution adopted here in St. Louis at a most opportune time by the Mississippi Valley Association, which reads as follows:

"We recommend that Congress appropriate sufficient funds to expedite the authorized program for the Arkansas River Basin for flood control, bank stabilization, navigation, and incidental hydroelectric power.

"The Keystone, Eufaula, and Oelogah Dams in Oklahoma, and the Dardanelle and Ozark Dams in Arkansas, are key installations for this program, and we recommend that funds be especially provided for these installations. * * * We urge that construction funds be appropriated to continue the Toronto Dam on the Verdigris and for the planning of the Elk City on the Verdigris, and the Twin Dam on the Neosho.

"We recommend that the Corps of Engineers provide the Congress and the Bureau of the Budget with data showing as nearly as possible a specified period of years for the completion of the entire program, and the annual amount of appropriations necessary for such completion; and upon receipt of this data, the Bureau of the Budget include the funds for each year indicated in the data, but in any event, Congress provide the funds necessary to so progress the program."

Those were welcome words, my friends, in 1956—the words of a friend indeed, for a friend in need.

With your splendid and tremendous help, the battle was won again in 1956, and we have seen the banners of progress steadily go forward in 1957, 1958, and 1959.

Last year, of course, we fought a new battle on the floor of the House and the floor of the Senate.

It was the battle of "No New Starts," and for a few uneasy weeks in Washington, water resource development hung in the balance while Senators and Congressmen debated the vital issue of "Procrastination Versus Progress."

The enemies of progress insisted that our great Nation could not afford any further new starts in navigation, flood control, and reclamation. Because of inflation, we were told, provision for future water supply would have to be delayed.

There was even unfriendly talk, in high places, about "raids on the public treasury" and the "pork barrel" character of water legislation.

On the other side of the question, the opponents of procrastination reminded the Congress that even President Coolidge had defended the basic soundness of water development projects, pointing out that such projects "do not require so much a public expenditure as a capital investment which will be productive."

An even more famous quotation on this subject—appreciated by Democrats as well as Republicans—is the well-known statement of former President Herbert Hoover, made while Secretary of Commerce in 1925:

"We have learned that expenditures on great reproductive works are neither a waste nor a burden upon the community. They bring a rich harvest in increasing wealth and greater happiness. They tend directly to strengthen the foundations of agriculture and industry. Even from the narrower view of taxation, they are an economy, for it is by such works that we increase the income available to taxation and thus reduce individual burdens."

In the final showdown of 1959, the weight of your progressive association was once again felt on the floor of the Congress. Once again, it was on the side of progress, and we won the battle for new starts in water development.

While the final appropriation bill adopted for civil works in 1959 contained a total figure slightly below the Presidential request, it also contained the money for an important series of new starts in navigation, flood control, water supply, and reclamation projects.

An inspiring feature of this victory was the willingness of water project sponsors all over the United States, voluntarily to accept reductions in the money provided for their projects, in order to continue the forward march of water development through the funding of new starts.

It was this spirit, my friends—the spirit of cooperation for mutual objectives, the spirit of willing sacrifice to advance common goals—which made possible the victory for new starts in 1959.

And it is this spirit, ladies and gentlemen—vitalized and personified by your great association—which will be needed to continue our progress in the years ahead.

Today, in 1960, we in the Arkansas Valley are both proud and humble in the knowledge that our river—so long neglected and forgotten on the American continent—is now the location of one of the greatest multipurpose development programs under way on any continent.

A few short years ago, we were fighting hard to secure our first million dollars for navigation construction. Our first construction amendment, in fact, provided the total sum of $900,000, to be divided equally between two great dams—one in Arkansas and one in Oklahoma.

For the fiscal year beginning July 1, 1960, the President's budget calls for $20,700,000 on Eufaula, $17,400,000 on Keystone, $6,100,000 on Dardanelle, $3,700,000 on Oologah, $3,800,000 on John Redmond, and $2 million on Council Grove. In addition, the sum of $5 million is recommended for bank stabilization.

This total, of more than $58 million will make it possible to continue orderly progress toward completion of these major dams on schedule, and some of the largest construction contracts in the history of our valley are now being negotiated by the Army Engineers.

The Toronto Reservoir is scheduled for completion this year; final completion of Oologah will follow in the summer of 1962; Keystone, Eufaula and John Redmond will be completed in 1965, if orderly appropriations continue during the next 5 years.

In addition, my friends, the need will soon be upon us for further new starts in the Arkansas Valley. Studies are now underway on the Bird, Caney, and Verdigris Rivers, on other Oklahoma and Kansas tributaries of the Arkansas, and along the navi-

gation channel in Oklahoma and Arkansas.

New techniques in construction, and improved engineering methods, have resulted in substantial reductions in Army Engineer estimates for two of these major dams—and additional millions may well be saved if the permanent bank stabilization program can be initiated at once along the river.

The inauguration of the permanent bank stabilization program, to take the place of emergency measure now underway and provided for in the budget, will be a major objective of the Arkansas and Oklahoma delegations in this session of Congress.

In that effort, which we believe will not only save millions of dollars but also advance the completion date of the navigation project by many months, we are once again counting upon the stalwart help of the Mississippi Valley Association.

If the sustained effort and cooperation of the last 5 years can be continued for the next 10—I strongly believe that navigation can be underway along the Arkansas, from the Mississippi River to Catoosa on the Verdigris, before the autumn leaves are falling in 1970.

Navigation on the Arkansas River.

The constant goal and objective of Arkansas and Oklahoma legislators, for more than half a century, is now within the sight of all of us. For these two States, and their economic future, it means the rising of a new sun, the dawning of a new day, the bright and glorious beginning of a new and better tomorrow.

For all of you who have helped to bring that dream within sight, I want to express the profound and heartfelt thanks of nearly 4 million people who live in the Arkansas Basin.

We thank you for what you have already helped to accomplish—and for what you stand ready to help us accomplish in the future.

By your efforts, America is a stronger Nation today than it was in 1955—a stronger Nation, and a better place in which to live.

And by your continued efforts, along America's new frontier of water development in the 1960's, a great dream of our Nation's landlocked Southwest is now approaching reality.

My hope and prayer for that dream, as we move forward toward that new frontier, can best be expressed in the words of Edwin Markham:

"Ah, great it is to believe the dream
As we stand in youth by the starry stream;
But a greater thing is to fight life through
And say at the end, 'The dream is true.'"

Castro

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. POFF. Mr. Speaker, on the editorial page of the February 15, 1960, issue of the Roanoke World-News, the editor addressed an open letter to Dr. Fidel Castro which, under permission to extend my remarks, I quote herewith in full:

AN OPEN LETTER TO PREMIER CASTRO

DR. FIDEL CASTRO,
Premier, Republic de Cuba,
La Habana, Cuba.

DEAR MR. PREMIER: Today is an important anniversary to both Cuba and the United States and thus provides us with appropriate opportunity to make some observations and to ask some questions.

It was 62 years ago today, February 15, 1898, that somebody—we never learned who for sure—blew up the U.S. battleship *Maine* in Havana Harbor, killing or drowning 266 Americans.

For us this meant war with Spain as our country moved quickly from mere sympathy for the downtrodden Cuban people to active conflict against the oppressor.

In the swift succession of events which followed, the American Navy struck hard on two sides of the world to annihilate the Spanish Navy. U.S. ground forces linked with Cuban patriots to complete the victory in a matter of months.

In that war for Cuba's freedom, 274,717 Americans rallied to the colors and of these 290 perished in battle and 2,365 died of disease while preparing to fight.

True to the principle that it did not covet territory, the United States gave full freedom to the Cuban people within 2 years—as soon as they could be prepared for it.

Ever since then, American might and prestige have stood between Cuba and possible foreign interference just as that strength has guaranteed the freedom of all South American and Caribbean countries from aggression.

Americans and their Government have not always liked the regimes which came into control of Cuba, but they have refrained meticulously from interference as, indeed, you are certain to be aware.

Now, Mr. Premier, we might explain that Roanoke is an average medium sized city and is, we like to think, rather representative of American communities. Our beliefs, our aspirations, our sympathies and our loyalties are about the same as those you would find in any city or town of the United States.

Among the men who hastened to volunteer in the war which brought Cuba freedom was a company from Roanoke, some of whom did not get back. Since then our people always had a warm spot in their hearts for Cuba. Our city has attracted Cuban students for many years.

Together with the overwhelming majority of 180 million citizens of this country, Roanokers despised the Batista regime. There was joy here, as everywhere else in America, when he was overthrown and you were welcomed to power. Seldom has any man or movement enjoyed the vast reservoir of good will that you had a year ago.

Today that reservoir has dried up. Rather, it was destroyed when you removed the dam that held it there in store.

Why?

Frankly, we are mystified why anyone would want to do that.

Today all of us are terribly offended when you denounce our country, vilify our President and attack our Congress.

Perhaps you do not understand although you should. We American people are the Government of the United States. When you attack it you attack each and every one of us.

Under trade agreements, as you know, our Government has given preference to Cuba in the purchase of sugar. The price of that commodity is subsidized by each American taxpayer.

There is some talk that because you have denounced our country so much and for no justifiable reason we should retaliate by cutting the sugar quota. Most Americans do not feel that way because they are tolerant and because they continue to hope that you will relent.

Perhaps you wonder, although it should be perfectly clear, why Americans—Roanoke people included—are no longer in sympathy with you. Here are just a few of the reasons:

Our people, who were so outspoken in their approval of your revolution at first, were alienated immediately by the wholesale executions which gave your suffering country a blood bath more like those of Nazi and Communist triumphs.

Americans will never be convinced that it was necessary to condemn and execute hundreds simply because they might have supported another regime or differed with you in thought.

Americans know that the hated Batista spared your life when your previous revolt failed. They think you have much to learn about the quality and practice of mercy and the magnanimity a principled victor should possess.

Americans cannot understand why you imprison men who have been your friends and comrades in arms because they differ with you on policy and have the courage to speak their minds. This is tyranny rather than patriotism in our lexicon.

Americans cannot understand how anyone who based his revolution upon a demand for freedom of expression can turn about and seize or suppress newspapers, drive their editors out or permit workmen to nullify editorial opinions of their employers. That means the press is no longer free.

Americans are unable to justify your seizure of property without legal process or true payment. Many citizens of Roanoke, for example, own stock in companies which established and ran industries in Cuba. They are not capitalists. This is money taken from their life savings. Expropriation and seizure are two different things and they believe you should learn the difference.

All of us are aware that your revolution could not have succeeded without some of the clandestine and even open operations of sympathizers in this country. You sponsored and encouraged it. Yet, now that the shoe is on the other foot, you have cried with rage about our "lack of neutrality." Our Government, as you are aware, is trying hard to block every leak of arms, ammunition, supplies, and men that might be used against you.

Americans remember, even if you do not, that when you took over the Government you promised without reservations that there would be free elections within the year. The elections have not been held. Is not this dictatorship and the denial of democracy—the same thing against which you inveighed before Batista was overthrown?

Americans are especially offended because, in your seemingly endless harangues, you encourage the Cuban people to believe we Americans and our Government are their enemies.

Most of all, Mr. Premier, Americans are shocked and injured of spirit because you and those about you are consorting with, even encouraging, the Communists who are sworn enemies of the United States and of true freedom wherever it exists. They are not your friends any more than they are our friends. They are using you and unless you awaken to the danger they will dispose of you when their evil purpose is served.

These are things we think each American would tell you if he could, Mr. Premier. They are things he would say because he is still a friend of Cuba and of the Cuban people even though he is disillusioned with you and your revolution which went astray.

Do not underestimate us, sir. Because the United States is a great nation and is accustomed to being kicked in the shins and spat upon by upstarts and minors does not mean that it will permit this to continue indefinitely. There comes a time when patience ends.

If there is any one thought we should like to convey to you, it is this: please halt the excess of language and action, sit down and take stock of where you are leading the Cuban people—our friends—and try to get back on course.

That great reservoir of good will which we mentioned in the beginning can be refilled to overflowing.

But you, Dr. Castro, are the only one who can do that.

We invite a reply and will be happy to print it on this page for wide circulation.

THE EDITOR.

Mr. Speaker, it goes without saying that this letter will never see the light of day in the Cuban press. Castro would not permit it. Will Castro extend the courtesy of a reply? Castro would not dare.

Evidence Grows of Support for H.R. 10350 To Abolish Farm Subsidies

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. PELLY. Mr. Speaker, each day since I introduced H.R. 10350 I receive more evidence that the majority of American people favor ending the farm price support program which has reduced the income of farmers and increased the amount of Government surplus agricultural commodities.

My daily mail overwhelmingly expresses support for my proposal to cancel the present outmoded laws which have proved such a costly failure.

A typical letter from a constituent reads as follows:

I want you to know how much we approve of your action in your proposal to repeal the price support farm subsidies.

We are well aware that you will meet with much opposition. There are more fringe beneficiaries who wish to see the farce of farm support program continue than there are full-time farmers who support it. There are many also who feel the political gains may be had by supporting the farm support program. You may be bucking a stone wall presently, but you are taking a step toward sound government.

We have one small example of an acquaintance who lives on acreage in the Arlington-Darrington area who makes no bones about receiving $600 a year under the soil bank plan. This is for acreage that he says never was under cultivation. He has always been too busy logging, commercial fishing, and so forth to have time to farm.

Also, Mr. Speaker, I might cite a rancher in eastern Washington who telegraphed me:

Congratulations on your stand on farm subsidies according to today's AP release. No contracts, no supports for 1961 wheat crop. Remove present surplus from domestic market.

The president of Independent Farmers of Indiana, Inc., from Albion, Ind., wrote:

Yesterday's Indianapolis Star ran a UPI article about congressional proposals to solve the farm problem. The only hopeful bit in the rather lengthy story was the mention that you had introduced a bill to repeal the entire farm support program and restore a free economy for farmers.

Would you please send us a copy of your bill? Rest assured that the Independent Farmers of Indiana, as well as independent farm organizations of other States will support any bill that will get the Government off the backs of the farmers and make them freemen again.

Here are excerpts from other opinions which I have received:

This program has long ago served its usefulness and has been one of the most abused programs and it should definitely be discontinued at once and not permitted to continue.

Why should the farmers be paid for not producing? Why single them out? Why should we be paying millions a day for storage and the foods rotting in warehouses. They should give this surplus if surplus it is to these so-called friendly nations.

You will have the Nation's support in any action or law to abolish the farmers racket.

The small farmers are getting the short end of the stick.

Would rather see some of our staple goods, such as surplus wheat, for example, be given to some of the starving peoples of the world rather than see it in storage at a very high cost to the taxpayer and not helping anyone.

I think that if price supports were reduced and the regulations on the farmers were relaxed that it would be a big help to them.

There must be a sound farm program passed through Congress.

I would abolish all price supports.

Agricultural price supports are wrong.

I get mad.

Price supports should be done away with entirely.

We are vitally concerned.

These supports should be discontinued.

Let's stop buying the farmer's vote and let him stand on his own feet, the same as the rest of us.

I am in favor of reduced agricultural price supports.

We need a new farm program.

They have never helped the vast majority of real farmers one iota, as far as I have been able to learn.

I strongly favor your stand on reduction of agriculture price supports.

A poor price-support program, which encourages crop surplus, which benefits the larger farmer.

Highway Safety

EXTENSION OF REMARKS

OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. DADDARIO. Mr. Speaker, the Hartford Times is conducting a vital campaign in the interest of highway safety. I have been happy to support that campaign and have forwarded the following remarks for publication:

Motor vehicle traffic accidents now rank among the leading causes of death in the United States, but we pay far less attention to them than we do to such factors as heart disease, cancer, and other illnesses. A major effort of research is needed if we are going to meet the issue posed by a rising population, more and faster cars, increased highway mileage and our standard of living. I do not think we should ever accept the death toll as a blood sacrifice in return for greater convenience and comfort.

I am happy to see the Hartford Times stimulating citizen research into means of fighting the accident problem. We have been making progress in highway safety ever since the record year of 1941, when the national toll of 39,969 deaths set an alltime high. Under the vigorous leadership of Governor Ribicoff, Connecticut has been in the forefront of recent efforts to control the pattern of highway fatalities.

We need, however, to bring to bear upon this issue the brains and talent of all our people. Whatever the practical output of suggestions, the increase in public consciousness of the importance of highway safety and how to secure it would represent a major gain. It has been my feeling that periodical re-examinations of all licensed drivers would be a great step toward safety. Such examinations, if given every 10 years and if set up in an efficient manner, would be of no burden to either the State or to the licensees.

Highway safety begins at home. It begins with the driver and the pedestrian. From the proper maintenance and upkeep of today's powerful automobiles to the observance of weather and driving conditions, the human factors in the accident record are statistically provable. Youth and advancing age both affect the rates of accidents. The courts, the police, the governmental agencies can do their part, but safety is everyone's business, and it deserves the resourceful thought of all our people. I wish the Times campaign the best of fortune.

One Thousand Dollars a Minute—$1,500,000 Every Day

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. CANFIELD. Mr. Speaker, "$1,000 a Minute—$1,500,000 Every Day" is the caption of a leading editorial appearing in the Passaic (N.J.) Herald-News on Tuesday, February 16, in support of President Eisenhower's request that Congress enact a constructive and sensible farm program.

Passaic County, N.J., farmers whom I am proud to number among my constituency have never asked me to support the crazy-quilt farm programs which are so costly to our taxpaying public, programs which have never had my support. I hope all my colleagues will read this editorial, especially those who serve on the House Committees on Agriculture and Appropriations. The editorial follows:

President Eisenhower is making another attempt to persuade the Congress to end the incredible follies of the farm price support program. All who live in Metropolitan North Jersey have a personal stake in his effort.

The program, by holding up the price the producer receives for certain basic crops, also holds up food prices that the consumer must pay. In addition, we are taxed to pay for the farm program. The annual cost is so

high that the figures have virtually no meaning for the average person. President Eisenhower, in an effort to illustrate part of the cost in comprehensible terms, put it this way:

"The Government sustains a net cost of more than $1,000 a minute—$1,500,000 every day—the year around, to stabilize wheat prices and income."

Please note, this is for wheat only:

Even worse than the cost is the effect the support program has in Mr. Eisenhower's words again: "Inexorably it generates even larger surpluses which must be expensively stored."

We cannot even give away the surplus to less fortunate people, because that would wreck the world wheat market, bring ruin to farmers in friendly countries, and create grave political unrest.

The most galling part is that the little American farmer is not the largest beneficiary of the program. Big farming corporations are the ones who do real well. In 1958, for example, one cotton producing corporation, English-owned, received $1,442,595 in price-support loans. Another received $1,216,669. A total of 250 cotton producers received $100,000 or more each.

Mr. Eisenhower says he will approve any constructive program that Congress offers him. "The important thing for farmers, and for all Americans, is for us to act sensibly and to act swiftly," he says. Tell your Representatives in Congress that you want them to support Mr. Eisenhower's efforts and come up with a workable solution to the problem.

Worldwide Story—Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. LINDSAY. Mr. Speaker, in the magazine section of the New York Times, February 14, there appeared a well-written article by Gertrude Samuels entitled, "Worldwide Story—Juvenile Delinquency." The article described the problem which countries all over the world are facing, increasingly, in the area of juvenile delinquency.

The writer points out that not only has infection spread throughout the prospering, industrialized countries of the Western World, but also to less developed countries where urban growth has accelerated since the war. The article is too long for insertion in the RECORD, but I thought it important to draw attention to it, and also to state in full Miss Samuels' conclusion, which appears as follows:

The diagnosis of delinquency is difficult, they say, let alone the cure. At one time people thought only poverty was to blame; at another time, war. But today we see that the more advanced a nation becomes—such as the United States, Britain, West Germany—the more delinquent the children may become.

The technical answers usually are: establish schools, provide jobs, provide playgrounds, get parents to behave. But, while all this is important, it does not go to the root of the disease. At the root is the disregard for the eternal values of life: truth, honesty, and integrity, the love (or fear) of God. Many believe these values are leaving the modern age.

Corruption in high places, materialism, the aggressive striving for success—all must naturally have an influence on children.

In the less advanced countries, urbanization, industrialization, and social change are inevitable. What U.N. experts think is not necessarily inevitable is the social disorder which has been identified with change in the past.

Their task, as they see it, is to focus on the forces in the old order which prevented delinquency. These were the social control of the family which, in Asia, has always been paramount; a single code of morality, honoring everyone's property as being sacred; fealty to law and order; and the desire to maintain one's dignity. They want, in short, to devise ways of preserving traditions while progress is brought within reach.

One official summed up the problem—and its solution—in this way:

"Of course, juvenile delinquency is a symptom of our times—but that does not mean that we have to sit back passively and wait for the epidemic to pass.

"We have gone through many years of pouncing on the individual delinquent as being maladjusted to his society and putting the microscope on him. But many youths are having normal reactions to a total social setting that is delinquency-breeding in its selfishness, materialism, petty prejudices, and animosities. Delinquency results not only from the absence of social control, but also from exposure to organized adult delinquency and crime.

"What we need," he went on, "is a sense of public morality to permeate all of our ways of life. It may sound a little ridiculous and puritanical, but it is not really. The cult of the rugged self-centered individual—a man responsible only to himself and perhaps to his own immediate family—doesn't necessarily engender any great spirit of group responsibility.

"Somehow, there has to be a renaissance of public and private morality. If we want a solution, somehow we have to strengthen the social responsibility of the whole people. Only then is there hope for a solution to the children's problem."

Supplemental Congressional District Population, Etc.

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, and, Mr. Speaker, because I received recently from the Library of Congress in answer to my inquiry certain congressional reapportionment and population figures which I inserted in the CONGRESSIONAL RECORD on February 4, 1960, I wish to state that I have now received from the U.S. Department of Commerce, population estimates for March 26, 1959, dealing with the reapportionment of the number of Congressmen by States, together with the accompanying letter dated February 10, 1960. I respectfully submit, therefore, that this supplemental information will be found very valuable and pertinent to the subject matter:

HON. CLYDE DOYLE,
House of Representatives,
Washington, D.C.

DEAR MR. DOYLE: I have just seen the material concerning congressional reapportionment which you inserted in the CONGRESSIONAL RECORD of February 4.

The material includes a table showing the States "which will lose seats in the House of Representatives after the 1960 census has been taken." While this list is based on a projection which was made by the Bureau of the Census and issued in March 1959, I think it necessary to emphasize that the apportionment as based on the official census returns may be different from that shown in the Census Bureau projections. The projections were based in part on conjecture as to future population changes and, as was pointed out in our release, "* * * it is not unlikely that several of the congressional delegations may prove to differ by one member from those shown in the table." For example, another computation that has been made using slightly different assumptions on population growth of individual States finds that on that basis California would gain only six instead of seven seats.

I am enclosing a copy of the Census Bureau release to which reference has been made.

If we can be of any assistance to you in this matter, please call on us.

Sincerely yours,

ROBERT W. BURGESS,
Director, Bureau of the Census.

PROJECTED REAPPORTIONMENT OF NUMBER OF CONGRESSMEN BY STATES

(This report, which supersedes series P–25, No. 180, reflects the effects of the imminent admission of Hawaii as a State and a revision of the projections of the population of the States to April 1, 1960.)

Under present law a reapportionment of the House of Representatives will be made by means of a stipulated computational procedure based on the population of each State as it will be found by the population count of the 1960 census. Since this reapportionment will become effective unless Congress takes specific action to change it within 15 days of the date the figures are passed along by the President, it is of interest to compute the apportionment based on the projected population by States for April 1, 1960. This projected apportionment is shown in the following table. It is emphasized that this apportionment is based in part on conjecture as to future population changes and that it is not unlikely that several of the congressional delegations may prove to differ by one member from those shown in the table.

In view of the admission of Alaska to the Union and the imminent admission of Hawaii, the computation for the apportionment for 1960 includes the Members allocated to these States within the present limitation of the size of the House of Representatives to 435 Members.

If population developments follow the course outlined in the projections of the State populations to April 1, 1960, Hawaii will receive 2 seats, Alaska 1, and 18 States will have a change in the number of Representatives to which they will be entitled. Of the 18 States with changes in the number of Representatives, 5 will gain and 13 will lose. The 1950 census returns led to losses in 9 States and gains in 6. The largest gain between 1950 and 1960 would be that of California, with 7 seats, the same as the gain for the preceding decade. Other States with gains of more than 1 Representative would be Florida 4, Michigan 2, and Texas 2. Arizona would also gain a seat. The largest losses would be suffered by New York and Pennsylvania, which would each lose 3 seats. Massachusetts and Arkansas would each lose 2 Representatives. Nine States would suffer a loss of a single Representative.

The West will be the only region to have an increase in the number of Representatives. It would have 65 seats in contrast to the present 57. The Northeast would lose 9 seats, and both the North Central region and the South would lose a seat. Alaska and Hawaii have not yet been allocated to any region.

The figures for 1960 are based on the estimated population of the States shown in Current Population Reports, Series P–25, No. 189, "Provisional Estimates of the Population of States and Selected Outlying Areas of the United States: July 1, 1958," as projected to April 1, 1960.

In addition to the uncertainties connected with the projections of the population by States, is should be noted that a shift of a relatively small number of persons between two States competing for the 435th Representative may result in a change in the number of seats assigned to each. In the apportionment based on the 1960 projections, for example, a shift of 1,000 people in the estimated population of the State assigned the 435th Representative to that of its closest competitor would have resulted in the loss of a Representative to this competitor.

Legislative procedure of apportionment: The 1960 census of population will be taken as of April 1, 1960. The Bureau of the Census has 8 months from the start of enumeration to determine the total population of the States. Upon completion of this tabulation, the Bureau will transmit these totals and an apportionment of the present number of Representatives (435) by the method of "equal proportions" to the President of the United States. The President in turn will transmit this information to the Congress within the first week of the first regular session in January 1961. Within 15 days of the receipt of the message from the President, the Clerk of the House of Representatives will inform the executives of each of the States of the number of Members of the House of Representatives to which his State is entitled in the following Congress. Thus, the reapportionment of seats among the States made as a result of the 1960 census will become effective in the elections for the 88th Congress in November 1962.

Membership in the House of Representatives as based on the 1950 census, and hypothetical membership as based on projections of the populations of the States for 1960

On Law and Order

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks I wish to include an article written by Rabbi Dr. Julius G. Neumann of the Congregation Zuchron Moshe in my district.

The article follows:

ON LAW AND ORDER

(By Julius G. Neumann)

It was first on Christmas Day, 1959 that the world learned of the reappearance of the vile form of the swastika on the walls of the rebuilt synagogue of Cologne, Germany. A few days later news of desecrated houses of worship came from many parts of the world. In no time the plague spread to our own backyard.

Are these the deeds of juveniles who know not what they do, or is it the fruit of a concerted effort highly organized? Over a month has passed since we learned of the desecrations and the news remains continuous with policemen posted at our doorsteps. The latest, painted swastikas over 70 tombstones in a Staten Island Jewish Cemetery.

It is well that all these be seen in proper perspective, that the wall scrawls of a backward child not be viewed as comparable to the recurrence of the Nazi disease in Germany. But it is also important that both children and adults learn that there is nothing funny about such behavior, that the community has no patience with those who play with racial or religious fire, that out of small prankish prejudice larger flames can be ignited.

We cannot know at once—and for some time it will remain speculation—whether the act was perpetrated by a Nazi or a nitwit or both, but it is a reminder that the plague of intolerance still haunts every land, not excluding our own.

For a few days I myself was of the opinion that space given these outrages in the press may well help induce other new outbreaks. But this very same thought, I reminded myself, was advanced when Hitler first sought power in Germany and those who then advocated the silent treatment have since had mortal cause to rue their advice.

While I concede that newspaper reports of the incident in Germany had something to do with triggering outbreaks elsewhere, it has been also found to be true that hate groups have an active, though informal communication system of their own. It would be wrong for editors to decide that outbreaks of this sort were not of great enough concern to merit larger space. The press must reflect conditions as they appear, and if it fails to do this, freedom will not have long to endure. When such acts of desecration are fully publicized, the public is informed that an evil virus is afoot and has a chance to react against it. When we keep such events secret, we allow the cancer to grow.

Who is using the weapon of these passions and why? Hitler used it with success as a black magic to swell his power as does Nasser today. The little imitators to be found in America use it as a small-time racket. Their acts have the reverse effect of that intended, and will only impress upon our people the necessity of cherishing the precious heritage they have in freedom of worship. They find it a weapon neither for conquest nor massive resistance. It represents a feeble scattered terrorism of despair. The majority of humanity rejects it. Even German leaders abhor it.

The question is, as far as our own America is concerned, what legal means will be taken to make these swastika outrages too perilous to repeat. Even a racist fanatic will hesitate, when there is considerable risk. We need stronger laws here against defacing places of worship, not as offenses against property but as outrages against religious liberty. In speaking with Assemblyman Joseph J. Weiser, I was gratified to learn that he was ready to introduce such bill in the now opening legislative session, only to be told that such bill had been introduced already. On the national scene we find our Representatives FARBSTEIN and LINDSAY studying the matter thoroughly and advising the use of existing statutes to avoid repetition of such terroristic acts. It should compel the Attorney General of the United States to recognize the growing menace of hate mongering and use the powers of his office to deal with it.

Anti-Semitism is not a Jewish problem, it is primarily a Christian problem, and as far as my Jewish brethren and I are concerned, I would like to quote: "Don't ask the Jews what they are going to do," said Rabbi Asaria of Cologne's desecrated synagogue, "go to the Christians and ask them what they are going to do."

I still hope and pray that Christmas will be known by its eternal prayer of peace on Earth and good will toward all men, that the words of the Prophet Micah (IV: 3–4) will yet come to be,

"And they shall beat their swords into plowshares and their spears into pruning-

hooks; nation shall not lift up a sword against nation, neither shall they learn war anymore. And they shall sit every man under his vine and under his figtree; and none shall make them afraid; for the mouth of the Lord of hosts has spoken."

Boland Favors Early Civil Rights Debate

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. BOLAND. Mr. Speaker, the civil rights issue was presented before the Senate this week and I certainly hope that this legislation will soon be brought onto the floor of the House. In view of this, I recommended to my colleagues that they read the following editorial from the Boston Herald on February 11, 1960, entitled "Enforcing a Right":

ENFORCING A RIGHT

The 15th amendment is one of the shortest and clearest articles in the Constitution. Its first section provides:

The right of citizens of the United States to vote shall not be denied by the United States or by any State on account of race, color, or previous condition of servitude.

The second says simply:

The Congress shall have power to enforce this article by appropriate legislation.

Yet in the 90 years since its adoption the article has never been obeyed in the section of the country to which it was particularly addressed, the 11 States of the southern confederacy, and Congress has been unable to devise appropriate legislation to enforce it.

In 1871 the national lawmakers tried. In one of the "force bills" (based technically on another section of the Constitution) they authorized the appointment of "election supervisors" by the Federal courts in districts where two or more citizens requested Federal oversight of the registration of voters for congressional elections.

But political administration of the law resulted in so many abuses and so little improvement in Negro registration that the whole scheme was dropped in 1894.

Now, with civil rights again a major political issue and with the Civil Rights Commission reporting flagrant interference with Negro voting in several Southern States, new efforts are being made to carry out the mandate of the 15th amendment. But the going is still sticky.

The problem at the moment is to get the proponents of civil rights legislation to agree on a bill.

The Civil Rights Commission proposes that the Federal Government appoint its own registrars in areas where Negroes are denied the vote. But this, being a purely administrative process, would apply only to Federal elections.

The administration supports a plan under which the courts would appoint referees to investigate registration holdups in both State and Federal elections and order individuals to be placed on the rolls in appropriate cases.

Others are agitating for still more sweeping and effective enforcement.

It is far from certain now whether the various civil rights group can get together on a bill and pass it over the bitter-end objections of the southern bloc in Congress. It is even less certain whether such a bill, if passed, will prove more effective than the old "force bill." Custom is strong and apathy is even stronger.

Yet the times call for a determined effort to meet the problem. Voting discrimination violates a basic principle of our democracy. And in a world where democracy itself is fighting for survival we cannot let this flaw in our own system go unchallenged.

The spirit of the 15th amendment will prevail in the long run because the country as a whole is determined that it shall. But education may have to play a greater role than force in bringing it about.

Capitol Hill's Robin Hoods

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 16, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the February 11 issue of Suburban Life, a community newspaper in my district, is, I believe, a most thought-provoking commentary on the subject of Federal aid to education, and I am including it in the RECORD for the consideration of the Members of the House and Senate:

CAPITOL HILL'S ROBIN HOODS

Federal aid to education proposals are flooding Congress once more with most of them ranging from the impractical to the ridiculous.

A notable exception is President Eisenhower's recommendation that funds be made available for school-building purposes where the need is evident. Matching funds should be provided by the benefiting districts, as the financial responsibility is primarily theirs.

Because of its comparatively high per capita income, Illinois stands to give far more than it receives in many of the Federal aid to education plans under discussion. These range from programs to help only the neediest States to those calling for National Government subsidies on a per pupil basis.

The great weakness in such schemes is the refusal of these spenders to go below the State level in their analyses. Illinois, for example, rates among the States in least need of Federal assistance on a State basis. Yet there are many Illinois school districts that are strapped for funds and many property owners being taxed to the hilt for educational purposes.

The same shallow thinking prevails when comparisons are made between the amount of money spent annually for liquor and tobacco and the amount spent for educational purposes. These scattershot statistics make it look like the average American puts out more for alcoholic beverages and smokes than he does for schools.

If they were collected on a local basis here, however, the picture would be far different. The average family here contributes far more for education than it spends for the other items.

Furthermore, these deceptive national figures fail to take into account the great personal sacrifices many families make in order to enable the children to obtain college educations or special training.

It takes a minimum of $6,500 to send a youngster to college for 4 years. The average family doesn't spend this much on liquor in 30 years.

Also ignored are huge sums spent for the operation of parochial and private schools.

Catholic schools in Chicago have invested $3 million in sprinkler systems as a fire safety measure in the last 12 months, and another $5 million must be spent for that measure in 1960. Suburban parishes have been given individual assessments ranging as high as $25,000 this year for an archdiocesan high school expansion program.

Lutheran, Seventh-day Adventist, Christian Reform, and other denominations which prefer their own school systems also spend millions of dollars annually for their operation.

No matter what the Federal aid to education program, there is one inescapable fact: it must be financed by the taxpayers. Furthermore, such national programs are a bureaucrat's dream; they take men and money for administrative purposes.

There is no such thing as free Federal money, whether it be for schools or other purposes. The Federal funds that may dribble back to school districts here would be substantially less than the amount sweated out of local taxpayers by the Government in Washington.

We have no Santa Claus on Capitol Hill. Instead we have many Robin Hoods with a common psychosis; they would take from all the people to give to some of them. Chicago's western suburbs could lose plenty under such an arrangement.

We would be far better off with a reduction in colossal Federal expenditures on all fronts and a realistic increase in school taxes where necessary on a local basis. In that way we would get 100-percent return for our educational investment.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. ROGERS of Texas. Mr. Speaker, a letter has just come to me from an old and valued friend, Mr. Ralph E. Randel of Panhandle, Tex. The contents of Mr. Randel's letter is similar to many which come to me from others in the 18th Congressional District of Texas which I have the honor to represent. Mr. Randel's communication expresses simply and succinctly the thinking which is prevalent in homes all over our great country. His letter reflects a situation which has been echoed by me for several years in this august body, and I commend the studied comments of Mr. Randel to the Members of the Congress:

RANDEL MOTOR CO.,
Panhandle, Tex., February 1, 1960.

Mr. WALTER ROGERS,
Washington, D.C.

DEAR WALTER: At breakfast this morning my wife and I read that we were contemplating a $40 million loan to Poland. The paper said that this would be the third one of a similar size in the past year. I don't believe this needs any comment. It is so small in proportion to the billions we have loaned and have given outright that it is hardly worth of notice. The reason why it hit us wrong was that we had just decided that we would have to wait until later to paint our house because we had to borrow money to pay our income tax. Our house needs painting but we can't paint it. We are thrifty people and do not throw money away. We have a daughter in college and she gets by on a minimum we feel. The sad economic fact is that we cannot quite keep

even with the board and pay the very high cost of living today. We don't, then, feel very good when we see that we are giving money away all over the world and at the same time raising our national debt as well.

The American taxpayer cannot continue to work long hours and pay high taxes to subsidize people of the world that make fun of us for being money grabbers or money mad. It seems to me that the Congress must establish a program for "relief" of the taxpayer. We are bankrupting ourselves by playing like there is no end to what we can spend and give away. We are there now, Walter, and God help us if we don't realize it before it's too late.

Very truly yours,

RALPH E. RANDEL.

Sewer System Seen Most Urgent South Kingstown Need

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Westerly (R.I.) Sun of January 7, 1960:

SEWER SYSTEM SEEN MOST URGENT SOUTH KINGSTOWN NEED

The construction of a sewage disposal system is South Kingstown's most urgent need and the conditions which it would alleviate become worse yearly, the South Kingstown Sewer Study Committee said today.

The statement was made in a letter to the Municipal Planning Board which replied to several comments made by the board in a review of the sewer committee's report on the proposed Wakefield-Peace Dale disposal system.

At the request of the town council the planning board reviewed the report of the sewer study committee. Its comments were contained in a letter sent to councilmen December 31.

Points made by the planning board in its review of the sewer report were:

1. The sewer system is one of many needed projects which should be ranked on a priority basis.

2. If the system is to be constructed, the initial stage should serve only the critical areas.

3. The board is concerned with the assessments and rates proposed by the study committee. These should be considered in the light of the ability of the residents of the community to pay and the value of the property connected to the sewage system.

The sewer study committee letter, signed by Donald A. Campbell, chairman, says the committee agrees with the planning board on the need for a plan for meeting long-range community needs.

But it adds, "we firmly believe that a sewage disposal system is our most immediate need, since it has been under consideration for 65 years and conditions which it would alleviate become worse yearly.

"Any new municipal improvements in this proposed area, such as a consolidated elementary school, a police station and jail, should be serviced by adequate sewage facilities," the letter continues.

In its opening statement the committee says the sewage system is an important step and merits "a full and frank discussion of all questions raised by such a project."

"The assessments and rates as proposed in our report are the result of several months' study, during which other means of financing a sewage system were given careful consideration," the committee says.

The committee attempted to tailor a flexible system suited to the needs of the town. "Methods of financing sewer systems vary greatly and there appears to be no standard method. We firmly believe that we have presented the most equitable and feasible plan for South Kingstown," the committee says.

"Other sewer systems in Rhode Island were studied and Walter Shea, chief sanitary engineer for the State, and Carleton Maine, the senior sanitary engineer, were consulted," the committee says.

"The size of the proposed system was carefully considered by your board (the planning board), the town council, and Metcalf and Eddy before this committee began to study the financial aspects. This recurrent question of the possibility of a reduction in the size of the project was discussed again in our committee's ocnference with C. G. Hammann of the engineering firm. At that time he reiterated their firm conviction that attempting to reduce the proposed works in any significant manner would be impractical and uneconomical," the committee says.

"We hope that our report will be studied further by the community as a whole, so that the town can make a decision before construction costs become even higher," the committee concludes.

A public hearing on the sewer proposal is scheduled for Monday night at 8 at the town hall.

Aid, an Arm of American Diplomacy

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 15, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, on November 12, 1959, the Honorable William E. Warne, former aid mission chief in Iran, Brazil, and Korea, described for the third annual World Affairs Institute at the University of Oregon in Eugene, the U.S. foreign-aid programs as an arm of America diplomacy.

Mr. Warne will be remembered as a longtime employee of the Bureau of Reclamation and the Department of Interior, he having completed his 16 years of service there with 4 years as Assistant Secretary for Water and Power Development. After more than 7 years abroad for the International Cooperation Administration and its predecessor agencies, Mr. Warne returned to California, his home, at Gov. Pat Brown's call to become director of the department of Fish and Game on April 1, 1959. On January 4, 1960, Governor Brown moved him to the State department of agriculture, where he now serves as director.

This background will give additional weight to the very thoughtful discussion that Mr. Warne has presented on one of the most important problems before the American people.

The address follows:

AID, AN ARM OF AMERICAN DIPLOMACY

(By William E. Warne, director, California Department of Fish and Game, formerly Director of Foreign Aid programs in Iran, Brazil, and Korea [1])

Since World War II, the United States has developed as an arm of her diplomacy a group of programs commonly called foreign aid. This is without previous parallel in history.

Conquest, colonial envelopment, and subversion have given way before this new instrument, well designed to support the traditional foreign policy of the U.S. Government. The old programs have as their objectives, though the various authorization acts state them in different terms, the assistance of friendly and cooperating nations to realize their own aspirations. The technical cooperation program, for example, is designed to assist friendly peoples to do for themselves the things that are needed to advance them toward their own personal and national goals. Aid provided under this banner, seeking no short-term political ends, and given without strings attached, is an embodiment of the longstanding policy of the United States to refrain from interfering in internal affairs of her friends and neighbors, to help nations to remain independent and self-determinant.

There is considerable confusion in the public mind with regard to American foreign aid programs. Much of this confusion grows out of the constantly changing nomenclature, organization, and legislative enactments that have prevented the development of any easily recognizable image of foreign aid. In one 6 months' period, with exactly the same organization, doing exactly the same thing abroad, I had three titles, my staff had three designations, and the organization three letterheads in quick succession. If this had been the only instance of rapid reorganization, the resulting confusion would not have been so deep. Unfortunately, almost every year, there has been a major element added, a major element dropped, a new name given, or a new agency created.

If you can, I will ask you today to consider our foreign aid programs as a single and undivided effort, the exertion of the energy of a new arm of American diplomacy. If you will, please consider with me the generous rehabilitation of Italy, West Germany, and Japan, the Marshall plan, the aid to Greece and Turkey under the Truman doctrine, the technical cooperation programs organized under the spur of point 4 of the President's inauguration address in January of 1949, the programs for distribution abroad of surplus agricultural commodities, special economic assistance programs, economic programs in defense support, military assistance, the development loan funds, President Eisenhower's Atoms for Peace, and additional miscellaneous projects and programs—such as the Fulbright scholarships—as constituting a single program of foreign aid.

These different and sometimes disparate programs have all been parts of one effort, although it at times has been inadequately coordinated, to support American diplomacy. As time has run on, a strong tendency has developed to bring all of these programs together at a single point abroad. A pattern has developed in the field of a country team, of which the Ambassador is captain, of which the Aid Mission Chief, the Military Adviser, and other representatives of Washington agencies with programs in the field, are members. The country team seeks field coordination of all efforts for maximum effectiveness. This pattern is almost universally applied at this time, although the facility of the country team is still in the

[1] Presented at the University of Oregon, Eugene, "World Affairs Week," Thursday noon, Nov. 12, 1959.

process of development, and has some remaining weaknesses.

The act of placing the Ambassador in the position of captain of the county team, has done more than almost any other event to crystallize an understanding of the fact that aid is in support of diplomacy.

While the foreign aid program is brought together at a single point of application in the field, there is no unity among the agencies which administer the separate programs in Washington. Efforts have been made to equip, through organizational processes, the State Department to direct and coordinate these programs in Washington, but these efforts have been fitful and largely ineffective. Paralleling them in time have been other movements that have resulted in additional fractionalization and division. The Foreign Operations Administration was renamed by the Congress the International Cooperation Administration and placed in the State Department as a semi-independent agency. At almost the same time, however, administration of the surplus agriculture commodities used in foreign aid was returned to the Agriculture Department. When the Development Loan Fund was created a short time ago, it was made separate both from the ICA and the State Department. Efforts have been made to centralize policy direction in the State Department, but this has suffered the fate of all attempts to gain unity of policy at the hands of multiple agencies with dispersed authority and operational control. It has worked poorly.

Those of us who spent many of these difficult years working abroad in the program, frequently felt such frustration growing out of this changing background as to question whether in fact progress was being made toward a solution. The remarkable vitality of the foreign aid program is demonstrated by its survival and continuing effectiveness under all handicaps.

I, personally, was in Iran from November 1951 to March 1955, in Brazil from May 1955 to June 1956, and in Korea from July, 1956 until March 1959 as the head of aid missions. Despite all, I assure you that the sometimes hectic things that we were doing were beneficial, effective and appreciated. Now that I have been home long enough to observe the forest without bumping into all of the rough-barked trees, I see that the foreign aid program generally has been successful in supporting American diplomacy.

What have been the results? Western Europe has political stability and economic revival and growth. Greece and Turkey, once under savage attack through subversion, have recovered clearly independent status and have grown in strength and determination to adhere to compatible free world principles. Iran, dragged to the brink of destruction, has been enabled to resume her traditional independent position, and has restored her economy and national integrity. South Korea and South Vietnam have been reconstructed and stabilized. The free Asiatic nations remain free, and while constantly threatened have made some advances toward security. In Africa and Latin America relatively modest programs have underscored the insistence of our Government that our neighbors and friends be permitted to work out their own destinies.

Trouble spots have developed and do exist. It might be concluded without close examination that the new arm of American diplomacy did not have strength to support the American position in these instances. Syria, which became a part of the Arab Republic with Egypt, never received American aid. Iraq, which was the scene of disquieting political changes, was organized typically from the point of view of the American aid program. Efforts to extend effective assistance in Egypt early encountered the obstacle of rampant Arab nationalism. The foreign aid program has difficulty or cannot operate effectively in possessions of colonial powers such as some notably disturbed ones in Africa. In some areas at the periphery of the Iron Curtain, the contest has been indecisive with the U.S.S.R. adding a facsimile of our own aid program to others of her own in order to gain ascendency, which, as yet, she has not been able to achieve.

American diplomacy, even with the added strength of its new arm, cannot be expected to prevent political eruption. What is hoped of it is that it will prevent such eruptions from becoming conflagrations. This, of course, has been achieved.

Critics of the foreign aid program attack it as being more than we can afford, wasteful, unrealistic, gratuitous, and ineffective.

"This foreign aid is bleeding us white," an acquaintance said to me as I helped him hitch his boat trailer on the back of his station wagon.

There has been no time in our history when the standard of living in the United States has risen so high as that since the Second World War, the identical period during which the foreign aid program has developed. I think in the light of this we can dismiss allegations that our aid is more than we can afford. If the disparity between the level of living in the United States and that of other countries, now friendly to us, continues unameliorated or deepens, I think it will only be a question of time until we suffer the fate of Imperial Rome.

Charges that the program is wastefully administered have discomposed me most. Most of the aid programs are carried out by the host government or an agency within the host nation. The projects are not the work of the American technician and administrator who is sent abroad. These well-qualified Americans work with and through host nationals in effecting the projects. Usually the influence of the Americans is not in depth. In such circumstances, obviously, the projects will be shaped by the local customs, methods, and practices. Each aid administrator abroad endeavors to assist his counterparts to improve methods of operation. Nevertheless, the fact that the work is done by the local national means often that it is not done as efficiently as it might have been done in the United States. In Korea, each of the 300 Americans on my staff when I was the economic coordinator, including stenographers and the mission director, on the average had supervision over the expenditure of $1 million a year of American aid funds. At the same time, an average of program expenditures divided among total staff available to supervise those expenditures in the Bureau of Reclamation, an agency which I once knew intimately, gave a factor of only $17,500. In which agency is it reasonable to expect the closer supervision and the more efficient operation? I certainly never would condone waste of public funds. My own experience abroad convinced me that the aid funds were being used as carefully as possible under the circumstances.

Another one of my friends said to me, "They are just making suckers out of us; taking our aid we thrust upon them and doing as they please." This gentleman was reflecting a reaction that frequently develops when the leader of a friendly nation does something that might be described as plucking a feather out of the tail of the American eagle, or as tweaking the beard of Uncle Sam. Our policy is one of encouraging self-determination. We are not being naive when we assist a country, the leader of which from time to time takes an action which affronts us. We must try to understand that such actions may have different aspects half a world away. Also, the cultural and political background against which the act was taken might give it quite a different interpretation in the country in question. We must also realize that some things that we do, completely understanding them here within the borders of our own country, seem utterly inexplicable and highly offensive to some people abroad. The foreign aid program should not be used at any time for short range political purposes. In other words, American aid should not be a reward for some immediate act on the part of a friendly government. Likewise aid should not be diminished as punishment for isolated unfriendly actions, which affront our pride. Aid programs are long term. The execution of projects requires much time. Just as our foreign policy is long range and unchanging, just as it is held above partisan strife, so its new arm, foreign aid, must be long range in its objectives. It must be supported by a constancy of purpose. The annual uncertainty of authorization and appropriation mitigates against its full success.

Still another friend of mine said to me, "I was abroad, and, from what I saw, I thought that they did not appreciate at all the sacrifices we make to give them foreign aid." In most of the countries where our aid is being given, making a living, keeping body and soul together, is a real and earnest job. Likewise, the preservation of internal security and the maintenance of peace are serious assignments for the governments. Our aid frequently contributes to the success of the efforts of the population and the government to achieve these immediate goals. This contribution, however, does not lift their burdens, but at best only eases them. The tasks at hand still require all of the energies of the people and their officials. We should not continuously seek expressions of gratitude and appreciation. It seems so unbecoming of a great people. Even with our massive assistance, the Korean gross national product still is less than $150 per capita as compared to about $2,400 in the United States. Our reward for our aid should be taken in the mutual respect and friendship between our nations and our peoples.

"You have been giving Korea about $300 million a year for 5 years," one of my friends said to me. "Why isn't the job done?"

Long-range jobs cannot be completed in a short time. The fact that aid, even of substantial amounts, does not cure all of the recognizable ills immediately, should not be a reason to call it ineffective. Many have been most unrealistic in their appraisal of the need. The Communist war in Korea destroyed more than $3 billion of property in South Korea. Our aid in Korea since the war ended, has enabled a resumption of orderly functioning of the Government and a restoration of the level of living of the people. Reconstruction has been completed and a development era is being entered. With the military commitments that Korea has in behalf of herself, the United States, and the whole of the free world, it is not likely that viability can be achieved in her economy without long continuation of outside assistance. It would be most unreasonable to expect anything other than this. Our aid to Korea has been phenomenally successful. It has not, however, resolved the problems of Korea. These problems are coextensive with the problems of the free world. The country is divided as the world is divided and for the same reasons. Only when it will be possible to lift some of the restrictions placed on Korea by the cold war can final solutions of the problems of Korea be found.

The richest experience of my life has been to have participated in this unique experiment in international relations that is represented by the foreign aid program. Those who would really like to know what some of our aid activities mean to the people

abroad should have been with me on occasions that moved me deeply. I believe they would have felt more than satisfied with what their tax dollars were buying.

In Iran in 1952, at a village called Khoshkrood, virulent typhoid fever broke out. Twenty-three of the few hundred residents had died by the time the messenger reached our headquarters in Teheran, some 50 miles away. A mobile health unit was dispatched. I went with the Minister of Health, Dr. Ali Maliki, to visit the unit a few days later. It was dark when we came to the turnoff in the desert that led to the town. It was bitterly cold as we more or less felt our way along the trail toward the village gate. We were met by what seemed to be the whole of the population of the village. There in the dark, men and boys, women and girls, were drawn up on either side of the road, lit by a few dim lanterns.

"There have been no more deaths," one reported.

Another said, "When, in the eternal night that soon will follow this one, you reach the bridge before the gate of heaven, we will testify for you and let no one turn you aside."

Far up the Amazon at a health center set up by a cooperative project under the direction of the Brazilian Government and our foreign aid, one may see any day mothers with their babies brought for inoculation. Since this program began, 10 years have been added to the expectancy of life for those who live in the Amazon Basin.

In Korea, along almost any road, if the word got out that an American was coming, boys and girls of the 4–H Clubs probably would appear, wave Korean and American flags made with crayons on scratch paper and hold up their chickens or rabbits, or now and then a young pig to be seen.

"Hello," they would shout, grinning and frantically waving, "OK, Miguk"—(OK, America).

How much is it worth to you as an individual to have these boys and girls around the world excitedly yelling "OK, America"? It is costing you less than 5 cents of your Federal tax dollar today to support the whole structure of foreign aid and all of its components, including military aid, plus contributions to multilateral programs, to boot.

If this new arm of our foreign policy continues to help underpin peace and to make the world a safer place in which to live, it will be worth whatever it costs. The foreign aid program deserves our earnest study and support. It is a bold, an American, a Christian experiment in strengthening diplomacy. In my view, despite all, it has succeeded.

Protection of Vanishing Wildlife in Illinois, a Vital Program

EXTENSION OF REMARKS

OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. COLLIER. Mr. Speaker, as one who is vitally interested in the conservation and the preservation of wildlife, I present for the consideration of the House, an article reprinted from "Illinois Wildlife," which I believe has great significance. I feel sure that every Illinois Member of Congress shares my concern in perpetuating the life of the Illinois prairie chicken which may well become extinct on the American scene.

Certainly there are other Members of this body who have a genuine interest in the preservation of wildlife in other areas of the country and who may find this article of particular interest, too.

The article follows:

ILLINOIS PRAIRIE CHICKENS NEED YOUR HELP

"Old soldiers never die, they just fade away." These words from any old Army song later made famous by General MacArthur can well be applied to our Illinois prairie chickens.

Since settlement of Illinois began a century and a half ago, these magnificent birds have tried to hold their ancestral booming and nesting grounds. In the 1850's, after the settlers had cleared much forest land and when they had begun to plow down the prairie sod, prairie chicken populations reached a peak. Waste grain and weed seeds provided a new, more plentiful supply of food and there were still large acreages of wild grassland for nesting and rearing young. Today, the native grassland has long since been plowed under, but prairie chickens have held on in some less intensively cultivated parts of the priarie region and, at times, have been very numerous there. Since World War II, however, mechanized agriculture and new farming practices have weakened the last strongholds of the prairie chicken. The resonant booming of the male prairie chickens is gradually being lost in the drone of tractors.

Only 1,000 to 3,000 prairie chickens can now be found in the State. Yet field studies conducted by the Illinois natural history survey during the past 25 years have given evidence that if permanent grassland refuges are provided for them in a few strategic places, there is a good chance that colonies of these birds can be preserved indefinitely for future generations to enjoy.

An example of an effective man-made environment can be found near at hand. About 1875, farmers in a dozen south-central Illinois counties began to raise seed crops of domestic grasses, redtop and timothy, and until World War II, such grass seed was the principal cash crop of this region. The cultivated grasses were harvested late in the season and thus they provided relatively safe places for prairie chickens to nest and rear their young. They effectively took the place of the native prairie vegetation. Sporting journals published in the 1880's pointed out that although prairie chickens were very scarce in central and northern Illinois they were still numerous in the south-central counties. Until recently, prairie chickens continued to thrive in that region. Often the birds ranged over ground frequented by domestic poultry and livestock, and often they lived in small colonies on isolated prairies for many years.

It is evident that wild prairie chickens in good environment have the capacity to produce large enough numbers of young to compensate for losses caused by hunters, predators, and many other decimating factors. However, prairie chickens have a relatively short breeding period, chiefly from April to mid-June. They are not well equipped to withstand severe nesting losses such as occur in grain farming districts where hay is harvested in late May or early June. Thus, when farmers of the redtop region, about 15 years ago, found it was more profitable to lime and fertilize their land for grain crops than to produce redtop and timothy seed, the nesting cover almost disappeared and the prairie chicken population began to decline sharply.

In 1953, the National Wildlife Federation recognized the prairie chicken as a threatened species and was instrumental in establishing a national committee on the prairie chicken. This committee is now engaged in setting up a national prairie chicken refuge in the Flint Hills region of Kansas. It also has attempted to stimulate interest in the conservation of prairie chickens in the States where they are still present.

Although a few of the Plains States still have prairie grouse in large enough numbers to permit limited hunting, in most cases, conservation measures are based on the esthetic appeal of the prairie chicken. The first report of the National Committee on the Prairie Chicken stated, "The prairie chicken is not only a magnificent bird, a prime example of native wildlife, it is an inseparable part of American tradition. Its colorful courtship antics on the booming grounds were adapted in the dances and pageantry of the American Indian. It flushed in whirring flocks ahead of the covered wagons as the pioneers pushed from Ohio toward the Rockies. It provided food for the pioneers and its friendly booming dispelled the solitude of the lonely prairies. It must not be permitted to pass from the American scene."

Friends of the prairie chicken in Illinois for several years have attempted to alert the public to its alarming decrease since World War II. These warnings led to the establishment in July 1959 of the Prairie Chicken Foundation of Illinois. The Prairie Chicken Foundation is a nonprofit organization dedicated to the task of preserving for future generations some representative colonies of Illinois prairie chickens. Parent organizations of this foundation were the Illinois Audubon Society, the Illinois Federation of Sportsmen's Clubs, the Illinois Division of Izaak Walton League of America, and the Illinois Chapter of Nature Conservancy, Inc. The officers of the new foundation are J. W. Galbreath, chairman, of East St. Louis; Ralph Smith, vice chairman, of Chicago; Mrs. Madeline Dorosheff, secretary, of Springfield; and George B. Fell, treasurer, of Rockford.

The Illinois Natural History Survey, Illinois Department of Conservation, and the Prairie Chicken Foundation of Illinois are cooperating in an effort to locate the remaining colonies of prairie chickens and to find areas that promise to be most effective as prairie chicken refuges. The accompanying map summarizes the reports of prairie chicken colonies received as a result of questionnaires sent in 1957 to about 1,000 rural mail carriers throughout the Illinois prairie chicken range. Prairie chickens were reported to be still present in slightly more than 100 localities in 24 counties. Although these colonies were widely distributed in south-central Illinois and a few other places, in almost every case the birds were reported to be decreasing steadily.

One reason for the remarkable tenacity shown by Illinois prairie chickens in their present unfavorable environment is the fact that since ancient times they have undergone natural selection which gave them a high adaptability to this region. Prairie chickens, probably indistinguishable from those of today, roamed the grasslands of the Mississippi Valley during the Ice Age. They were able to cope with climatic changes, natural enemies, and in later centuries, with human hunters. Dr. Paul Parmalee of the Illinois State Museum has identified the bones of prairie chickens from Indian midden heaps at the Modoc site in Randolph County which date back as far as 4000–3000 B.C., and many more prairie chicken bones from the Cahokia site in Madison County which were left there by Indian hunters probably during the period A.D. 1200–1550.

To establish adequate grassland refuge areas in one or more places within the remaining range of prairie chickens in Illinois will require much work by interested individuals, as well as many financial contributions toward a fund for purchasing or leasing refuge land.

The Farm Message

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following editorial from the State Journal, of Lansing, Mich. I feel that this is an excellent article on the President's recent farm message and one which merits the attention of the entire membership of the Congress.

The editorial follows:

THE FARM MESSAGE

President Eisenhower's 1960 farm message was clear as to the need for changes in the system under which the country is continuing to pile up crop surpluses which must be stored at a staggering cost to the taxpayers.

There is no difficulty in pinpointing the need for changes in a system under which the Government, as Mr. Eisenhower said in his message, is spending $1,500,000 each day—$1,000 a minute—in an effort to stabilize wheat prices alone.

The President warned that unless constructive action is taken promptly "the danger is very real that this entire program will collapse under the pressure of public indignation."

In stressing need for elimination of the obvious evils of the farm program, Mr. Eisenhower said that "it defies common sense to continue to encourage, at the cost of many millions of tax dollars, the building of ever larger excess supplies of products that, as they accumulate, depress farm prices and endanger the future of our farmers."

It also might have been said that the farmers are not the only ones whose future is involved but that all taxpayers have a vital stake in action based on economic soundness rather than political advantage.

But while the President found it easy to emphasize the need for changes he did not attempt to lay down a specific program for Congress to enact.

Instead, the whole tone of the election-year message was to put it squarely up to the Democratic-controlled Congress to do something about solving the problems the President outlined.

Mr. Eisenhower said he would approve legislation that "will eliminate production controls or make them really effective or allow the farmers themselves to choose between realistic alternatives." He also said he is willing to gear supports to market prices of previous years or to establish supports in accordance with provisions of law or to relate price supports to parity.

The President repeated his recommendation for a wheat program which would eliminate acreage allotments and marketing quotas beginning with the 1961 crop.

This raises the question, however, of whether the farmers should expect any form of payment from public funds without subjecting themselves to controls needed to keep the present situation from becoming much worse than it is.

This question seems to have been recognized by the President when he said elsewhere in his message that it must be recognized that the higher the support the more the farmer must be regimented. It would seem to follow that when there is any Government support there must be some control.

Among Mr. Eisenhower's recommendations was a proposal for a three-year extension of the soil bank land retirement program and an expansion from the present 28 million acres to 60 million acres. The President proposed that the Government be permitted to make rental payments on retired land in the form of crop surpluses as well as cash.

The Agriculture Department has estimated ultimate cost of the expanded soil bank program at $875 million a year compared with the present spending level of $375 million.

If there were assurance that such increased soil bank spending would result in commensurate curtailment of overproduction the President's recommendation would appear to be sound. But there has been criticism of the soil bank operations by those who charge that much of the land placed in the soil bank and rented by the Government with tax money had not been used regularly for crop production and therefore did not serve the proper purpose of the soil bank.

The President has called on Congress to overhaul the farm program and make it "sensible and economically sound." Such an overhaul is long overdue. There is a serious question, however, as to whether the overhaul will come in an election year in which both parties will be bidding for the farm vote.

Congress has the duty of enacting a sensible and sound program. But until it does so, the executive branch of the Government has the duty of exerting every effort to see to it that all operations under the present program are managed in a way that will prevent any unnecessary drain on the public purse.

Report by Hon. Malcolm Wilson on Progress Made Under Gov. Nelson Rockefeller's Administration

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. BARRY. Mr. Speaker, at the annual 1960 dinner of the Westchester County Republican Committee, which was recently held at the Hotel Commodore in New York City, we were privileged to have as main speaker, Lt. Gov. Malcolm Wilson, a distinguished son of Westchester County, N.Y.

It was with intense pride that I listened to the report by the Honorable Malcolm Wilson on the great progress that has been made by the Republican administration of the Empire State, under the combined leadership of Gov. Nelson Rockefeller and the Lieutenant Governor.

Under leave to extend my remarks, I hereby include in the RECORD Lieutenant Governor Wilson's presentation which outlines the significant achievements that have been attained during the past year.

Every American who is interested in a sound, orderly and efficient government that has the heart and soul of the people's welfare as its foremost concern, will be greatly impressed by Lieutenant Governor Wilson's excellent documentation of the progress made by a new Republican team in the initial year of the Rockefeller administration.

The report follows:

Since we last met on a similar occasion almost a year ago to the day, much has happened of interest to all of us. In our local elections—despite a vigorous campaign by our political opponents—and although in several areas of the State our party did not fare as well as formerly, it is a source of gratification that the government of Westchester County remained firmly in Republican hands—and that among other gains in local government we recaptured the mayoralty of one of our six cities.

Our victories reflect credit not only on our candidates who waged such effective campaigns, but also—and even more importantly—on the men and women who as district leaders, canvassers, fund-raisers, envelope-stuffers, doorbell-ringers and in myriad other ways performed the drudging and often thankless tasks which are indispensable to success in any campaign. You who are here tonight—and the thousands of other loyal Republicans of our county whom you represent—are the muscle and sinew of our organization—and I want to pay deserved tribute to you and to them for the characteristic dedication and devotion which brought victory to our Republican standard once again.

Since a year ago, much has happened in your State government too. Then, our Republican State administration was only three weeks old—and there was relatively little to report on a stewardship so newly begun—except that we had made a good start in coping with the dubious legacy of vexatious problems which we had inherited from the late but unlamented administration of Averell Harriman. Within the narrow compass of the few moments of your time I propose to occupy, I will not undertake to recite the litany of accomplishment of our administration—but I should like briefly to touch upon something which is especially significant to all of us here who share a common interest in the growth and future of our State—a common interest in the responsibility of the Republican Party in terms of serving the welfare of our fellow citizens—and a common interest in the continued success of our party.

Surely it is needless for me to remind you that when Governor Rockefeller took office he found that during the recent years of Democratic administration the State was living well beyond its means—spending much more than it collected in revenues and covering up its deficit by dipping into reserve funds and selling bonds. Now actually this practice could have been continued for a few years more but, at the end of that time, would come a frightful moment of reckoning—our State plunged so deeply into debt that at the very least it would take years of stifling austerity to climb back to solid ground. And in the meantime, while the State would be continuing its headlong plunge into the abyss of virtual bankruptcy—we would be guilty of perpetuating the same pattern of Harriman fiscal irresponsibility which cost us so dearly in terms of loss of job opportunities for our growing population.

Believe me, ladies and gentlemen, this is no mere exercise in semantics. The fact of the matter is that fiscal integrity in State government is an indispensable ingredient in the formula by which good economic climate—and the jobs which it produces—is compounded.

The irresponsible thing—the essentially cowardly thing—and yet, many counseled, the politically expedient thing to do would have been to continue in the same way and let others worry about the future. The alternative was to take the politically precarious course of reducing expenditures, minimizing borrowing and raising taxes to produce more revenue. This was the tough choice, the

courageous choice, the honorable choice, our Governor's choice. Despite the uproar raised in many quarters by the Governor's decision, he adhered to principle—and we in Westchester can be especially proud that every member of our delegation to the legislature—our six assemblymen and our three senators—stood shoulder to shoulder with Governor Rockefeller in his fight for fiscal integrity—and the battle was won.

Through this combination of additional revenues and strict economy, the Governor expects to restore the State budget to a truly balanced basis beginning with the new fiscal year—without any new taxes or tax increases. This in itself is a monumental achievement in so limited a time. But the very determination by your administration to restore fiscal integrity has contributed substantially to increased jobs and economic growth through restoration of business confidence.

Now, ladies and gentlemen—I'm not complaining, mind you—I really enjoy the opportunity for service which you have provided me in the office of Lieutenant Governor—but frankly, after 20 years in the assembly, I cannot help but bridle occasionally at the constitutional curb on the tongue of the presiding officer of the Senate, especially when I have an almost irresistible urge to join my Republican colleagues in responding to the Democratic opposition in the legislature. I hope you will indulge me, then, if I avail myself of the opportunity of making some observations here.

To put it as charitably as I can, the Democrats have engaged in the worst sort of flagrant demagoguery and political fakery. Singing the siren song of the something-for-nothing line, they not alone opposed the tax program which was needed to produce our revenue, but at the same time have urged vastly increased expenditures. All of us here know that government does not spend a dollar which it does not first either get in taxes or bond for future payment in taxes collected from the people. This basic fact is not exclusively the knowledge of Republicans—and yet our Democratic friends—possessed of the same knowledge—simultaneously advocate a reduction in taxes and a multimillion-dollar increase in State aid of virtually every form.

Of course, I suppose we should not be too surprised—because the Democrats are old hands at the something-for-nothing line. I recall that during a recent session, for example, we added up their various bills and found that they proposed to cut taxes by $252 million and, at the same time, increase spending by $1,300 million.

Just as the leopard does not change its spots neither does the tiger change its stripes because the same pattern continues. "Responsibility" is a word and a concept with which our Democratic opposition appears to have not even a nodding acquaintance. In their frantic effort to be all things to all men, it seems to me as though they go dashing hither and yon all over the New York landscape with political geiger counters. Every time they get a bleep, even a little one, they shift position. They stand up in the legislature and declare themselves for thrift and economy in government, yet they virtually break their necks rushing into print to oppose every economy move announced by the Governor. In their 1958 platform the Democrats pledged a balanced budget. Yet they persist in advocating tax reduction while at the same time opposing economies and demanding higher spending.

Their latest line is the one which involves the greatest peril for our State and its future, because the Democrats now urge, with renewed vigor, that we issue hundreds of millions of dollars in bonds and run the State on borrowed money.

To run on borrowed money, ladies and gentlemen, is to operate on borrowed time. You can't solve State problems with a credit card. The Democrats with their so-called pay-as-you-use policy, as distinguished from our pay-as-you-go policy, would have our State resume the Harriman pattern and follow the Tammany example of the city of New York, where the annual debt-service item alone is about $350 million. To give you some idea as to what sort of things are included in this item—unless it was recently discharged—taxpayers in the city of New York are still paying interest at 7 percent and amortization on bonds issued in Boss Tweed's day—about 1870—for the purpose of building a plank road in the Bronx.

You cannot build a sound government—city or State—on a foundation composed of the quicksand of debt. It is our responsibility today to meet the problems of today and not to shift them to future generations. All of us love babies—including our Democratic friends—but you don't do baby any favor when you chuck him under the chin with one hand and toss a mortgage into his bassinet with the other—and yet that is what we do every time we issue a bond. A dollar spent from the avails of a bond issue costs almost $2 by the time it, and the interest on it, is repaid.

The real question is—shall we follow our sound Republican policy of "pay-as-you-go" or the Democratic policy of "pay-twice-as-you-go."

Unfortunately, the concept of enjoying governmental services presently—with payment deferred to the future—appeals to some people who don't think things through. And the Democratic leadership—knowing its fundamental unsoundness—urges the course, callously disregarding its obligation of responsibility and refusing to raise its sights from the next election to the horizon of the next generation. I am confident that the vast majority of the people of our State will not be fooled. But because some of them may be, it is up to all of us as responsible citizens to expose these tactics and combat this Democratic demagoguery wherever it may take root.

We are progressing on many fronts with exciting, imaginative, sound programs in all proper areas of State concern, each of which alone would be worthy of more time than either your patience or any reasonable respect for your tolerance on this occasion would permit. I bespeak your earnest interest and active support of those programs as they unfold and develop—for most of them will meet the same type of irresponsible opposition.

There is just one more observation I should like to make and then I am done. At the outset of my remarks I mentioned the strength of our Republican Party in our county. It is so because the voters of Westchester know that the Republican record of good government both assures a secure present and presages a bright future.

I hope that all of you, as I did, read the excellent and complete business review section recently distributed with all their papers by Westchester County publishers, with its impressive forecast of our county's future in the decade immediately ahead. I need not tell you that growth and change of this magnitude will require government of vision and flexibility and that our Republican Party cannot remain static but must measure up constantly to its greater responsibility in the face of this growth. No matter how securely we seem to rest in the public favor, we cannot actually rest—for we can never afford complacency.

This was brought forcibly to my mind recently when I glanced over some figures showing graphically the relative strength of the Republican Party in various States of our Nation now as against the strength in those States 4 years ago. In State after State, once considered strongholds of Republicanism, Republicans lost governorships, Senate seats, congressional seats, and one or both houses of the legislature formerly held by our party. Except for an isolated gain here or there, the dreary pattern of loss was relieved only by the result in New York, where during the same period we regained both the governorship and a Senate seat from the Democrats and, at the same time, held the other Senate seat, both houses of the legislature, and a majority of our delegation to Congress.

Ours is the most Republican State in the Nation today—and not by accident—for in this State—and our own Westchester County is a prime example—Republican officeholders have been alert to the wants of the people and—by and large—Republican leaders have presented to the electorate men and women who are sensitive to the needs of our time and the bright promise of our future. Our party must remain vibrant and responsive here—and must become vibrant and responsive elsewhere—if it is to continue to meet the challenge of responsibility. We must constantly strive to keep and to place in positions of political leadership men and women who are dedicated to the principles of our party and the success of its candidates—men and women who constantly encourage new people to become active in our Republican organization—rather than men and women whose prime interest is their own perpetuation in party office for selfish reasons, while our party fortunes decline in their areas of responsibility.

In short, wherever they may be we must rid our party ranks of the honorary pallbearers.

For in this critical time—as our country increasingly bears unique responsibility for the final fate of freedom everywhere in the world—I am persuaded that our party, too, must bear increasingly heavy responsibility. With this awareness—and with each of us recognizing his individual obligation—pray God we will prove worthy of this challenge and of this opportunity.

Labor Looks at Current Developments in Atomic Energy Commission's Regulatory Program

---

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following address of Mr. Leo Goodman, secretary of the Atomic Energy Technical Committee, Industrial Union Department, AFL–CIO, delivered to the Atomic Energy Committee of the Federal Bar Association at their annual convention in Washington, D.C., on September 26, 1959. Mr. Goodman's remarks follow:

STATEMENT OF LEO GOODMAN, SECRETARY, ATOMIC ENERGY TECHNICAL COMMITTEE, INDUSTRIAL UNION DEPARTMENT, AFL–CIO TO ATOMIC ENERGY COMMITTEE, FEDERAL BAR ASSOCIATION ANNUAL CONVENTION, SEPTEMBER 26, 1959, WASHINGTON, D.C.

Mr. Chairman, fellow panel members, and friends, I would suppose my inclusion on this panel is due to the fact that certain organizations with which I am associated have been carrying on proceedings under the Administrative Procedures Act before the Atomic Energy Commission and now an ap-

peal from the decision of the Commission is pending in the Circuit Court of Appeals for the District of Columbia.

Unlike some members of this panel, I am not prepared to discuss the full benefits which have accrued from this case. It is still pending before the proper tribunal and those of us associated with it as petitioners will discuss our views regarding merits of our position before that tribunal. Here I will confine myself to a few quotes of statements made by others regarding that case and a review of the present regulatory functions of the Commission as they appear to us who are associated with organized labor.

Our concern about regulation is not exclusively that of a party of interest. If it were, I believe the facts, in many cases, would justify extensive challenge of a number of the activities of the Commission. We do not ever associate ourselves with the extreme position taken by Dean Spilhaus. You will recall in a speech to the American Society of Newspaper Editors, he said:

"The overall consideration is whether the Atomic Energy Commission has outgrown its usefulness."

In that speech he made the recommendation that:

"Congress move(s) positively to apportion out the operational and fiscal control of the AEC functions to the several appropriate permanent agencies of the Government."

He continued:

"And that, if this is done, the tremendous impact of nuclear energy on our whole society would not be subject to the inevitable hazards that accompany over-centralized control, over-centralized control which otherwise may have adverse effects on education, based on free, flexible and varied patterns, economy based on fair imaginative competition and government based on an informed public."

While the situation upon which Dean Spilhaus based his conclusions has changed in some regards, the central thesis, I believe, continues to prevail today and would justify serious consideration for some aspects of his recommendations. This central thesis, I will repeat from his statement and adopt it as my own. He said:

"The trouble comes I think from the Atomic Energy Commission having too many functions under one head, a centralization of authority which is contrary to the principle as demonstrated in the separation of judicial and executive powers in government."

Illustrating this central thesis and indicating concern by others regarding it, is the quotation from the Bulletin of Atomic Scientists which said in connection with the proceedings in the PRDC case:

"This case brings to light the multiple role played by the five-member AEC in the development of atomic power. The AEC has been a promoter of the project; it has financed the bulk of the research and development work on the fast breeder reactor; it will become a partner in the project when the contract is signed by waiving the fuel lease charge for 5 years and providing about $4 million for further specific research and development. It is also the agency which licenses the project and regulates it, and is now performing a judging role upon its own actions. It has become a party to the proceeding by setting up a 'separated staff' of attorneys to participate in the hearings with freedom to take positions note binding on the Commission. If the project proceeds, the AEC will be the fuel supplier and will buy the plutonium produced, and may also have to reprocess the spent fuel at a price to be negotiated."

One student of administrative law, after a review of the hodge-podge which this situation presented, concluded in an article in the Georgetown Law Journal (vol. 47, p. 87):

"It becomes apparent that the crux of the matter lies in the body of law that governed the conduct of the hearing in the PRDC case—the Commission's rules and regulations. These obviously were drawn with great care and with meticulous attention to preserve the unfettered freedom of action so uniquely an attribute of the Atomic Energy Commission since its birth. It is as though they constitute a protective shield surrounding the actions of the Commission, making them almost as impervious to attack as are the various containments that shield the reactor itself. But this armor is not impenetrable. Rules and regulations promulgated in furtherance of the national desire to forge ahead in the development of nuclear power through private enterprise may not take precedence over the need for caution in matters involving atomic energy, and over the paramount duty of the Commission to protect the health and safety of the public."

The failure of the AEC to separate its promotion functions from its regulatory functions has caused many knowledgeable authorities to question the continuance of the existing procedures. One such group, the National Advisory Committee on Radiation appointed by the Surgeon General of the U.S. Public Health Service, after extensive discussion, adopted a draft report entitled, "The Regulation of Radiation Safety in the United States" which contained the following language:

"The dual role of the Atomic Energy Commission in the promotion and development of atomic energy on the one hand and its regulation of radiation safety on the other is an interesting one. Generally, the vesting of both promotional and regulatory functions in the same agency is unwise and may be expected to present a number of serious difficulties. Foremost among these is the possibility that the agency in its zeal to carry out its promotional activity may lose sight of its responsibilities in operational safety.

"During its lifetime, the Atomic Energy Commission on a number of occasions has indeed been accused of subordinating radiation safety to economic advantage when several of its nuclear reactor installations have been planned."

Subsequently this language was softened because of the embarrassment it might cause to the Atomic Energy Commission. Nevertheless, the National Advisory Committee on Radiation recommended a change in responsibility for radiation protection and thereby started a chain of events which, in my opinion, will bring about a fundamental revision of AEC's regulatory powers in at least one aspect of its activities in the direction of the changes recommended by Dean Spilhaus.

On March 25, 1959, Dr. Russell H. Morgan, Chairman of the Surgeon General's National Advisory Committee on Radiation released the Committee's report to the press. The Committee's recommendation No. 1 said that:

"Primary responsibility for the Nation's protection from radiation hazards be established in a single agency of the Federal Government. The Committee believes that this agency should logically be the U.S. Public Health Service, Department of Health, Education and Welfare, and urges immediate legislation to achieve this objective."

On April 4, 1959, the White House issued a press release which stated:

"In view of the considerable public attention which has been focused recently on radiological health studies of the Federal Government, the President has asked that current plans of the executive branch be made clear."

On August 14, 1959, the President issued a statement which announced:

"Organizational arrangements aimed at centralizing responsibility for providing general standards and guidance to executive agencies for their use in developing operating rules and regulations for radiological health protection. In order to obtain assistance in the discharge of this function the President has issued an Executive order establishing a Federal Radiation Council."

Thus, for the first time since enactment of the Atomic Energy Act of 1946, the absolute jurisdiction of the AEC to provide for the health and safety of the public from atomic radiation was superceded. The Chief Executive of the United States took complete power unto himself to establish standards of radiation protection and subordinated the AEC into membership on a new Federal Radiation Council. The members of the Council included the Chairman of the AEC, but also included three Cabinet officers—the Secretary of Commerce, the Secretary of Defense, and the Secretary of Health, Education, and Welfare. Congress subsequently added the Secretary of Labor. The President has appointed the Secretary of Health, Education, and Welfare as Chairman of the new Federal Radiation Council.

This is only a first step in the transition of responsibility from the AEC to other branches of Government. Thus we see the separation of the promotion functions and the regulatory functions into different arms of Government. It is interesting to note that the President designated his own special assistant for science and technology as primary adviser to the Council rather than relying exclusively on existing staff, either of the Bureau of Standards or of the AEC. The Federal Radiation Council was instructed to take steps designated to further the interagency coordination of measures for protecting humans against ionizing radiation, and to that end will consult with all Federal agencies which have radiological health responsibilities.

Meanwhile, on the same day, the Congress took steps to provide the necessary funds to implement this transfer of responsibility. Appropriations for radiological health activities in the Department of Health, Education, and Welfare were increased from approximately $500,000 to $2,500,000.

On August 21, 1959, the Bureau of the Budget submitted its recommendations in behalf of the administration to the chairman of the Joint Committee on Atomic Energy of the Congress. I do not believe that the recommendations of the Bureau of the Budget have yet been made public. I would like to read the recommendations made by the Bureau of the Budget to the Joint Committee on Atomic Energy:

"(1) The President provide general standards and guidance to executive agencies for their use in developing operating rules and regulations for radiological health protection.

"(2) The President be advised by a Federal Radiation Council, established by the President to advise him regarding the general standards and guidance to be issued by the President, as well as other matters pertinent to radiological health, the council to be composed of the heads of the agencies principally affected—AEC, HEW, Defense and Commerce; and that the President's Special Assistant for Science and Technology serve as an adviser to the council.

"(3) The Department of Health, Education and Welfare intensify its radiological health efforts and have primary responsibility within the executive branch for the collation, analysis, and interpretation of data on environmental radiation levels such as natural background, radiography, medical and industrial use of isotopes, and X-rays and fallout, so that the Secretary of Health, Education and Welfare, may advise the President and the general public.

"(4) The Atomic Energy Commission have the principal Federal responsibility for preparing the States for the proposed transfer of certain of its regulatory responsibilities.

"(5) The training programs necessary for such transfer be financed and planned by the Commission, and, in order to make maximum use of existing facilities and competence, such programs be conducted under cooperative arrangements between the Atomic Energy Commission and the Department of Health, Education, and Welfare.

"(6) At the termination of this special training program, any training of State personnel be conducted within the continuing programs of the Department of Health, Education and Welfare and other Federal agencies.

"(7) The Department of Health, Education, and Welfare, continue as the Federal focus point for guidance and assistance to the States with respect to radiation sources not now under control of the Commission."

It is clear that the President's Executive order of August 14, 1959, implemented the first three points of this recommendation while the latter four points were the subject of legislative activity by the Joint Committee on Atomic Energy.

The following day, the President designated the Secretary of the Department of Health, Education, and Welfare as Chairman of the Federal Radiation Council and, directed that the Department of Health, Education, and Welfare intensify its radiological health efforts and have primary responsibility within the executive branch for the collation, analysis and interpretation of data on environmental radiation levels such as natural background, radiography, medical and industrial use of isotopes and X-rays, and fallout so that the Secretary of Health, Education, and Welfare may advise the President and the general public.

On August 26, 1959, the Joint Committee held executive hearings for the AEC on the proposed legislation. The Bureau of the Budget made its position strong in an additional communication to the chairman of the Joint Committee and on September 1, 1959, the Joint Committee reported the AEC and administration's bill implementing the four latter points of the Bureau of the Budget's recommendations while giving legislative sanction to the establishment of the Federal Radiation Council.

Labor strongly disagrees with the efforts to assign responsibility for protection from radiation hazards of isotopes, or any other part of this science to the States at this time. They are simply not prepared to assume this burden. It is clear that this aspect of the bill also runs directly counter to the recommendations of the knowledgeable members of the Surgeon General's National Advisory Committee on Radiation. The AEC has long sought to divest itself from this responsibility. Under the impetus of the administration's action, the Joint Committee finally bestirred itself and paid the price exacted by the AEC to bring about legislation in the 1959 session.

During the course of floor action on the bill, Senator ANDERSON approved the need for action at this time because it would take the AEC 6 to 8 months to draft the regulations to implement the section making possible transfer of responsibility to the States.

We of organized labor shall participate in this process to assure maximum protection of health and safety of the workers employed in the presence of radiation sources.

Only Federal Aid Can Strengthen Schools

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mrs. GREEN of Oregon. Mr. Speaker, there has already been legislative action taken, in another body, on legislation regarding school aid through the use of Federal funds. It is strongly hoped that the Education and Labor Committee of this body will soon report another school aid bill to the House. In the expected debate surrounding that issue, no doubt the old dusty arguments against such aid will be dragged out, polished a little by adding the Presidential blessing to them, and used to persuade some of our colleagues that school aid is unnecessary.

But, Mr. Speaker, educators are by no means the only people interested in such legislation. Organizations which have long fought for the public interest in every kind of legislation are adding their voices to the demands for action in this field—action before it is too late. To this chorus is now added the words of Mr. Peter Schoemann, president of the United Association of Journeymen and Apprentices, or the Plumber's Union, to make a long title short.

Mr. Schoemann, in a very few words, sets forth the issue plainly. That issue is, Are we, or are we not, going to provide adequate funds to do this vitally needed job? Under leave to extend my remarks, I ask that this article be printed in the Appendix of the RECORD:

ONLY FEDERAL AID CAN STRENGTHEN SCHOOLS
(By Peter T. Schoemann, general president, United Association of Plumbers and Pipe Fitters)

We all know the United States gives billions to foreign countries each year to strengthen them in their fight against communism. But did you know that last year we agreed to pay $237,000 to improve teaching in Philippine schools?

Did you know we earmarked over $1.18 million that same year for better schools and vocational training for youngsters in Thailand, which is the modern name for Siam? And that the little country of Korea was slated to get more than $2.1 million to improve its educational system?

In varying amounts, every year we've assured Federal aid to education in Burma, Cambodia, Free China, India, Indonesia, Laos, Vietnam, Afghanistan, Ceylon, and a host of other countries in Asia and Europe and Africa and South America. We even allotted $112,000 to Yugoslavia, an admitted Communist but anti-Russian nation, to boost vocational training and teach English.

Year in and year out, we are tabbing between $30 and $53 million for educating young people in nations throughout the world. For health, sanitation, and social welfare we are yearly devoting even much greater amounts.

This aid is well worth it. This is a vital part of our continuing struggle. Every dollar we spend to educate and train and help our neighbors to stand on their own feet is a dollar well spent.

But what about education right here at home? Granted we're in a race with Russia, in which knowledge and know-how may be vital to our existence, what are we doing nationally to improve grade and high schools locally?

The answer is almost nothing.

For 15 years since the end of World War II we've done practically nothing nationally to aid our local grade and high schools, except where the Federal Government itself created overcrowding by new or enlarged military posts or Government agencies. Yet the need for Federal aid is overwhelming.

Take classrooms alone.

Every year the Secretary of Health, Education, and Welfare dismally announces the continuing classroom shortage. This past year HEW Secretary Arthur S. Flemming sent his usual Christmas message to the school children of America. He said loftily:

"I can come to only one conclusion. The Nation is not moving fast enough to reduce the classroom shortage."

Then Secretary Flemming added a few facts:

Last year the number of classrooms needed for pupils rose again. We now need 66,400 classrooms where we needed 65,800 a year ago.

Number of pupils above normal size classes also rose. We now have almost 2 million children who can't fit into our classrooms.

At the same time, the number of classrooms built fell for the second straight year. We fell more than 10 percent behind the previous year and built less than we did in the school year 1955–56.

Bond issues for new classrooms dropped. Most bond issues were limited to seven States.

"In short," he concluded, "we have made very little progress over the year in dealing with the huge backlog of need for classrooms which developed during the war years, when school construction was virtually at a standstill."

But what did Secretary Flemming's Christmas message propose?

Nothing.

He said nothing about what to do on this shortage. He left this matter open until after Christmas for President Eisenhower's state of the Union message to Congress.

This brings us to the second scene of this little act in our current national tragedy. President Eisenhower went up to address the Congress. He took a very high level approach to Federal action helping our schools. In fact he left them high and dry:

"We cannot be complacent about educating our youth," he announced. "But," he carefully added, "* * * the educational process, essentially a local and personal responsibility, cannot be made to leap ahead by crash centralized Government action."

The President then proposed "to stimulate classroom construction, not by substitution of Federal dollars for State and local funds, but by incentives to extend and encourage State and local efforts." In other words, he proposed that Uncle Sam should guarantee payment of local bond issues where local tax efforts fail.

There is only one thing wrong with this proposal. It won't work.

Last year I took the time to apply the Eisenhower proposal to my own home city of Milwaukee where I served on the school board for more than 20 years.

In Milwaukee, we would first have to get the State agency to submit to the Federal Government a plan for our local bond issue. Then we would have to convince the Federal Government we were making "a reasonable tax effort" to support our schools and pay off our debts. New taxes, if needed, would require new taxing authority from the State legislature.

Next, Milwaukee has just about reached its present debt limit. For a new bond issue the board of education would have to get the approval of the common council and then go to the legislature to raise our debt limit by the amount of the new issue. The next regular session of the legislature does not occur until 1961.

Having obtained authority for further indebtedness and a guarantee from the State that it would stand behind one-half of the new issue, then Milwaukee would have to conduct a popular referendum to approve the bonds.

Anyone can see that, at this rate, it would take 2 or 3 years to get even a promise by the Federal Government to pick up the tab on a local bond issue just in case the city of Milwaukee defaults. It doesn't take a financial wizard to figure we can't build badly needed classrooms this way.

This is the story in Milwaukee and it is the same story in one community after another across the Nation. Underwriting local bond issues simply won't meet the classroom shortage. And the Eisenhower program proposes absolutely nothing to overcome the steadily growing shortage of teachers, as well.

Local financing can't do the job. Right now we need to invest several billions of dollars for school construction and teachers' salaries, leaving the problems of how and what to build and teach strictly up to local control. Yet bills in Congress authorizing adequate Federal aid along these lines (without Federal control) have got nowhere.

In the Senate, the Murray bill, S. 2, quietly lies before a subcommittee of the Senate Committee on Labor and Public Welfare. The Metcalf bill, H.R. 22, is doing the same thing in the House of Representatives. I testified for both bills at hearings last year.

If history repeats itself, however, these bills will be defeated as in the past. The White House, the special interests and the false cry that Federal aid means Federal control kill these bills every time they come up.

To show how mistaken is this fear of Federal control, let's just take a look at history. We've been aiding higher education with Federal funds ever since the Civil War. Land-grant colleges—State owned and operated—have, thanks to Federal aid, provided higher public education for almost a hundred years. Yet no one has said a word about Federal control and, in fact, there has no Federal control at all.

During the past 10 years, Congress has appropriated about $1.5 billion to build, maintain and operate grade and high schools where increased Federal activities, like Navy bases, or defense plants, have created a local burden on the schools. This includes teachers' salaries.

Yet no one has even hinted that these federally aided schools or teachers might or should be subject to Federal dictation or control. What they teach and how they teach is strictly a local affair. The same goes for longstanding Federal aid to vocational training under the Smith-Hughes and George-Barden Acts and for new aid to higher education under the National Defense Education Act of 1958.

Federal control is to me a poltergeist—a ghost dreamed up to throw a monkey wrench into the works. For when we get down to facts, we have, in every school board and in every educational institution and organization, a sleepless watchdog over the U.S. Office of Education and the Congress. One move to dictate how or what to teach and some of the most politically effective forces in this country will be up in arms. Federal control is a political impossibility.

Despite this fact, the future of Federal aid to education remains dim. Unless those in the administration who really see the classroom and teacher shortage really want to do something, we won't have much chance to put through an adequate program.

But this is an election year. We might get a piece of this program, such as the modest bill, confined to building classrooms, known as S. 8, introduced by my fellow member of the United Association, and good friend, Senator PAT MCNAMARA, of Michigan. This bill would make $500 million available this year and the same amount next year to build schools. Even this much at this late date would be a very substantial accomplishment indeed.

Frankly, I'm tired of defeat after defeat on this very important issue. We need Federal aid for construction on School Street as well as on the Burma Road. Let's take our own children and their teacher out of the furnace room and put them in the classroom where they belong. And let's do it this year.

Noise—A Threat to Aviation

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. MACDONALD. Mr. Speaker, a major problem in our country today is the increasing air traffic with the accompanying noise nuisance, as well as danger from low-flying airplanes.

This problem is especially important at the major airports in the United States. I would like to point out that while it is not a new problem, it has become more acute with the advent of the commercial jet airliners.

Aircraft noise obviously is annoying. We know of people living in the vicinity of large airports whose night's sleep is broken time and again throughout the night by planes passing closely over their dwellings. The noise from planes disrupts classroom work in some localities. We all realize, of course, that there is no total solution for the noise problem, but there are steps that can and should be taken to lessen its effect.

With this in mind, I wish to bring to the attention of my colleagues an editorial which was published in the February 1960 issue of Business/Commercial Aviation, a Conover-Mast publication. This excellent editorial entitled "Rx for Noise Control—Put Up or Shut Up" describes very clearly how aircraft noise has become not only a nuisance for the community, but a detriment to aviation progress as well. In a special report in the same issue of Business/Commercial Aviation, Editor William B. Osmun and the staff analyze the noise problem and suggest a sound course of action which in my opinion, if adopted, would go a long way toward solving the problem.

The material follows:

RX FOR NOISE CONTROL—PUT UP OR SHUT UP

It's about time we recognized the noise problem for what it is—a major threat to all aviation.

We can protest all we want—point out that a lot has been done already to reduce aircraft noise, that it's costing us in payload, in performance, in operating efficiency, and that our willingness to shoulder this burden should be proof enough of our good faith. Every one of these claims is true. But that's the point. The point is that our claims won't make the noise problem go away—for the simple reason that the public protesting against noise doesn't believe them.

Right now, the people suffering from aircraft noise don't believe anything we say. They are convinced the airlines are trying to evade the issue, and that the airport operators and FAA are in cahoots with the airlines. Communities that have long complained about aircraft noise are proceeding on the assumption that the aviation industry has no intention of making any serious efforts to cope with the problem. For their residents, they see no relief other than by political pressure, legislation, or court action.

We ourselves are to blame for much of the public attitude about aircraft noise. The antinoise procedures were forced on us by public pressure or the threat of it. Not surprisingly, we got little credit for something we did only grudgingly. In any case, what with bigger planes, more powerful engines, and steadily increasing air traffic, there hasn't been so much progress on noise, no matter how you look at it.

Naturally, we can go on waiting for antinoise pressure to build up before we move. The pressure will build up all right, and the longer we wait, the stronger the pressure will be. There's always the grim chance that a large transport will plunge into a heavily populated area near one of New York's airports. Of course, such a crash objectively would have nothing to do with noise. But tell that to the people who wake up at night to hear the roar of jet engines and immediately think of several thousand tons of metal that might drop down on them out of the sky. If there ever is such a crash, the noise problem will be solved right away—and we'll have precious little to say about how it's solved.

Let's tackle noise reduction boldly. Let's look at every possible way to relieve the nuisance. We cannot give up so much that aviation is hopelessly crippled. But neither can we hold back from a solution just because it will cost money. Conversely, the communities cannot sit back and look on while we try to do the impossible.

What we need is leadership—of a kind that neither the airport operators nor the airlines can give. Only the FAA can give it (with something better than local rules).

Let the FAA move on noise reduction as vigorously as it moved on air traffic control. Make noise-control regulations where they are needed. Get research projects going on ways to cut noise—from suppressors to high-lift wings. Look into the possibilities of making "noiseworthiness" a part of airworthiness. Promote runway construction and airport design for minimum noise. Push for enforceable national standards of land-use control to keep the communities from encroaching on airports.

If all this takes new legislation, ask for it. If it takes more money—as it surely will—say so. Then we'll see who's really in favor of noise reduction.

Above all, let's seize the initiative. If we keep dragging our feet, waiting until we're forced to move, then we'll deserve the pushing around we're sure to get.

THE WAY OUT

We are deadlocked on airport noise because no party to the conflict can resolve it going it alone. Neither the airlines, nor

the airport operators, nor local civic and political units have the authority or the technical competence to solve the problem. Only the Federal Government has anything approaching the necessary competence and authority needed. And even FAA may need more authority from Congress before an all-out attack on noise can be launched.

Fundamentally, there are three ways to reduce noise: by muffling or suppressing it at the source; by muffling it at the receiving point; by making use of the fact that sound pressure falls off rapidly with distance.

Everyone of these approaches offers a number of possibilities, every one has advantages and disadvantages.

For noise that is generated on the ground, suppression techniques are fairly well advanced. Engine test cell design now includes adequate sound suppression as a matter of course. For engine runups during maintenance checks, noise can be baffled by fences, by doing the runup in a place where buildings will baffle the sound before it reaches airport neighbors, or by the use of portable sound suppressors. Engine runups also can be limited—or prohibited—during the night hours. But this procedure would run counter to the current trend of doing most maintenance at night, when planes are least needed for scheduled service.

Los Angeles International Airport has made what is probably the strongest attack on jet ground noise. Airport general manager Francis T. Fox has barred jet engine runups in the airline maintenance areas between 10 p.m. and 7 a.m. unless a suitable suppressor is used—one that will reduce the noise to about 60 PNdb at the airport boundary. Fox admits the 60 PNdb figure is a "stiff requirement;" but likens it to "what the human ear registers from average daytime background noise levels in residential areas." The big question is whether this much suppression can be achieved with portable suppressors, the only ones that the airlines can use economically.

Intelligent planning and effective use of known techniques are probably all that is needed to keep ground noise within acceptable limits. For flight noise, the solution is neither so easy nor the technique so well advanced.

The noise of turbojet engines is suppressed by breaking up the flow of exhaust gases. This reduces the shear between the gases and the surrounding atmosphere. The shear is what makes the noise, while the gas flow is what gives the engine its thrust. So the principle of noise suppression works against the very purpose for which the engine was designed. Besides this direct assault on engine performance, suppressors further lower jet performance by adding both drag and weight. The J57's 21-tube suppressor adds 420 pounds weight and loses 700 pounds thrust. Suppressors and thrust reversers cut the 707–120's range by 5.5 percent and the speed 6.7 percent.

The J57 suppressor is effective: Bolt, Beranek & Newman, in their report for the New York Port Authority compared the noise of a 707–120 with that of a KC–135 using the same, but unsuppressed, engines. Their measurements showed "that the overall sound pressure level (at maximum dry thrust for each airplane) is reduced by 10 decibels. We calculate that the perceived noise level is reduced by 5 or 6 PNdecibels * * * This is highly significant * ** Without the suppressor the noisiness of the 707–120 would be about 50 percent greater."

Work continues on refinements in suppressor design. Some may be possible, but engineers and FAA officials see little hope for much drastic improvement. The limiting factor will aways be that noise suppression also means thrust reduction and loss of performance.

There is another design approach which promises noise reduction without loss of thrust. It is represented by the "fan" and "bypass" engines (See B/CA, December 1959, p. 36). Both are variants of the same principle: air entering the engine is separated into two flows, one that passes through the combustion chamber and one that does not. The latter flow is compressed before being expelled from the engine, increasing the mass flow of air without a corresponding increase in speed. The lower the speed of the airflow through a turbojet, the less shear there is. This design principle gives less exhaust noise for a given amount of thrust. Its drawback is that designers must be very careful they don't end up with a noisy, whiny compressor instead.

Suppression of sound at the listening point cannot be overlooked. It is a well-known fact that the greatest incidence of noise complaints is in the summer when house windows are open. Some residents have already cut down summertime noise by air conditioning their homes, keeping windows shut all the time. Part of Los Angeles attack on the noise problem includes research into the effect of home attic and roof insulation on noise reduction.

Increasing the distance between noise source and listener is the oldest and still the most promising method of noise suppression. It is the basis of the system of preferential runways, routings, and altitude restrictions that has been the most common method of noise abatement used until now. The possibilities of this method are by no means exhausted, but all the easy and quick cures have been pretty well used up.

For instance it is possible to put more vertical distance between aircraft taking off and communities under their path by steepening the takeoff path. An increase of thrust, such as that promised by the retrofitting of "fans" to the J57 would make such steepening possible. Historically, increases in power have gone into upping takeoff gross weight, giving greater range and payload. The Airport Operator's Council has asked the airlines and manufacturers to use some of the extra thrust provided by fan engines for noise abatement, rather than putting it all into gross weight increases. FAA has made it clear that it likes this idea.

Other possibilities for steepening the takeoff path include aerodynamic refinements in wing design. Just how much these can do and how soon is hard to say. Undoubtedly, research in this field would be pushed harder if steeper takeoffs became a requirement for the airworthiness certification of new aircraft. But whether this would be a step in the right direction and, if so, whether FAA has the authority to take it without a clear congressional mandate, remains to be seen.

Steepening the approach path is even more difficult. Many industry observers question the wisdom of raising the glide slope at Los Angeles from 2¾° to 3°. They claim this is just about the upper limit for a safe approach angle for large, sweptwing jets.

AIRCRAFT DESIGN IS A LIMITING FACTOR

Making the takeoff or the approach steeper are solutions that are limited by modern aircraft design. Progress can be made, but it is likely to be slow and modest. Therefore, whatever we do about noise control for many years to come, people who live under approach or takeoff paths, or within 2 to 4 miles of the end of the active runway will continue to hear noise.

There are two answers to this problem: use runways that don't take aircraft over nearby residences, keep houses from being built that close to the runway. To be effective, both of these methods must be considered at the time airports or runways are planned.

We are making progress in building noise reduction into airport design. Washington's Dulles International Airport has a 4-mile buffer zone between residences and runway end. The New York Port Authority, in its planning for the New York area's fifth major airport near Morristown, N.J., suggests that 5 miles is a better figure.

Idlewild's new runway 4R–22L, is oriented so approaching aircraft pass over a park instead of residences. Runway 31L is being lengthened to 3,000 feet more than is needed for full-gross-weight takeoffs just to make it possible for departing jets to be higher by the time they are over Howard Beach at the airport's edge. Runway extension for similar purposes is also underway at Los Angeles.

Cross-wind landing gear has been mentioned as a possible help, since they would allow the use of preferential runways at higher cross-winds. Some airline engineers feel the jets' tolerance for cross-wind would be increased just as much by improvements in aircraft handling characteristics.

One of the most obvious, and most neglected, methods of noise control by distance is to control the use of the land nearest the end of the runway. This land can be controlled by zoning, purchase of easements, or air rights, or outright purchase.

Zoning has limitations. If land is zoned to a less lucrative potential use, there's a legal issue to resolve—you might be taking away property without adequate compensation. Also, zoning is a function reserved to local governments, this makes for untold complications. Easements, by which rights to some of the airspace over a property are acquired, probably offer the best answer when outright purchase is too expensive. Possibly they could be used in combination with zoning.

Whatever steps are taken to insulate airports from communities by control of the use of land near runways, they will be effective only to the extent that runway lengths are kept reasonably constant. If land purchased for noise control is used for runway extension to accommodate new, more powerful transports, little progress will have been made. The age-old battle between airport operators and the airlines over making the airport fit the plane or vice versa hasn't yet been fully resolved. There are signs, though, that FAA is edging towards giving more weight to making the plane fit the runway.

Discussions of land use control as a noise abatement technique have a way of degenerating into an argument about "Which came first, the airport, or the community?" It is true that airports like Idlewild were largely superimposed on an already existing neighborhood. And at places like Los Angeles, the community's encroachment upon the airport is of such long standing that the question of who got there first is now purely academic.

Still, there are undeveloped areas near today's airports where houses, schools, and even hospitals, are going up with complete disregard of the nearness of the airport and the paths flown by aircraft using it. For example, a church and new houses are going up right now within sight of the approach lights to LaGuardia's runway 4—a scant two-thirds of a mile from the runway's end.

This sort of thing should never have been permitted to happen. It cannot continue, or it will make a mockery of even the best noise abatement efforts. Here is an area where constructive help from the community and local governments is greatly needed.

Technically speaking, it shouldn't be any more difficult to whittle the noise problem down to size than to solve the air traffic control problem. All that is needed is the will to tame aircraft noise—and the time, manpower, and money to do it.

Money is the biggest hurdle of all. Each party to the noise problem—airlines, airports, local communities, Federal Govern-

ment, and the public—will have to contribute before the problem is really licked. Yet no one wants to be the first to make the effort. This is understandable. As long as there's no clear-cut fixing of responsibilities in the noise abatement effort, to volunteer is dangerous. For the volunteer is likely to be considered to have tacitly admitted that he's at fault. He risks being saddled with the lion's share of the responsibility for curing the problem.

Leadership, therefore, is essential. Every possible approach to noise reduction must be explored. Every proposed solution must be weighed in the balance to see that no party to the problem pays an unfair share of the price. But each party must take some part of the responsibility and bear some share of the cost.

Progress in reducing the annoyance caused by aircraft noise is possible. But it can only come as the result of a comprehensive, vigorous, all-out attack on the problem. This calls for leadership such as only FAA is competent to give. Whether FAA will move far enough and fast enough and whether the public, through Congress, will back FAA sufficiently with money to pay for the effort, are the big questions of airport noise control.

The Question of the Captive Nations

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. DAVIS of Georgia. Mr. Speaker, on December 22, 1959, Dr. Nuci Kotta delivered a splendid address to the Kiwanis Club of Savannah, Ga., on the subject of "The Question of the Captive Nations."

Arrangements for this address by Dr. Kotta were made by Hon. Hugh G. Grant, of Augusta, Ga., a former U.S. Minister to Albania.

Dr. Kotta is a young man, of exceptional ability and knowledge of European affairs, especially the Communist activities in the nine nations under the Iron Curtain. Dr. Kotta is a lawyer, a graduate of the University of Paris, and in his official capacity as Deputy Secretary General of the so-called captive nations has a wide knowledge of the European situation. He is a son of the late Prime Minister of Albania.

I have obtained permission from Dr. Kotta to insert his address in the CONGRESSIONAL RECORD, and pursuant to unanimous consent previously obtained, I insert the address herewith:

THE QUESTION OF THE CAPTIVE NATIONS

Mr. Chairman, gentlemen, I wish to begin by thanking you, Mr. Chairman, and the Savannah Kiwanis Club, for the honor you have done me in inviting me to address you today on the question of the captive European nations. I wish also to express my gratitude to my respected friend, Mr. Hugh G. Grant, former U.S. Minister to Albania, and great friend of my country, for having suggested that you invite me.

I will divide my talk in three parts. In a first part, I will speak briefly about the exiles from central-eastern Europe and their main organization, the Assembly of Captive European Nations, which is the spokesman in the free world of the Soviet-enslaved peoples of central-eastern Europe. Secondly, I will try to give you a picture of the true situation in our captive countries. Thirdly, I will endeavor to project the question of the captive European nations in the broader framework of the present international situation. Afterward, if you wish to ask me any questions, I will try to answer them to the best of my knowledge.

During the last stages of World War II and in its wake, through aggression and subversion, or both, the Soviet Union enslaved 100 million people in eastern Europe and imposed upon them Communist regimes completely subservient to Moscow. As a result, there were other dreadful results which we will examine later—a number of patriots escaped to the free world where they joined the ranks of the older exiles who had been forced to leave their countries following the Fascist and Nazi aggressions.

There exiles organized themselves in national committees or councils and undertook to work for the restoration of freedom and independence to their homelands. Several years ago, these committees and councils joined their efforts and created the Assembly of Captive European Nations.

The Assembly of Captive European Nations is composed of the democratic representatives in exile of the following nations: Albania, Bulgaria, Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Poland, and Romania and acts as the spokesman in the free world, of our silenced peoples. Our assembly gives voice to their aspirations to freedom and independence and defends their inalienable right to live under governments of their own choosing, through free and unfettered elections under international control. In other words, the main goal of the assembly is to work for the liberation of our peoples from Soviet domination and Communist dictatorship. The assembly also considers it as its duty to warn the free world of the danger of Soviet imperialism.

In order to keep alive interest in the fate of our enslaved peoples, the Assembly of Captive European Nations endeavors to inform the free world on the true situation prevailing in the capitive countries. This brings me to the second part of my talk.

It is, of course, impossible, in the course of a short speech, to give a comprehensive picture of the situation of the Central-Eastern European countries under Soviet rule. I will, therefore, limit myself to a panoramic view which I will, here and there, illustrate with examples taken from my own country, Albania, whose situation I know a little better. I wish to make it clear, however, that the situation is basically the same in all the Soviet-dominated countries, independently of their geographic position or the degree of economic development.

After the Soviets gained control over our countries, they reduced them, for all practical purposes, to the status of colonial possessions although, with the exception of Estonia, Latvia, and Lithuania, which have been annexed by the Soviet Union, our nations have retained nominal independence.

The Soviet political and economic structure has been imposed to our countries. Their constitutions are patterned upon those of the federated republics of the Soviet Union. The ordinary laws are the replicas of those of the Soviet Union, but, because of the resistance of the peoples, criminal legislation is often harsher than in the Soviet Union.

What characterizes the Communist regimes in our countries—and in the Soviet Union as well—is the total suppression of political, religious, and economic freedom; the violation of all human rights and a ruthless economic exploitation. What makes communism even more unbearable in the captive countries, is the fact that this inhuman, abnormal system has been imposed by a foreign power: Russia.

The Communist constitutions pay lip service to democracy, although they establish discriminatory privileges for the Communist Parties. In fact, however, all parties, other than the Communist Party, have been suppressed and, with the exception of those who have escaped to the free world, their leaders have been killed or imprisoned. Thousands upon thousands of average citizens have also been murdered, imprisoned or deported.

Religious persecutions have been characterized by an extreme brutality and ruthleasness. A great number of the clergy have been murdered or sent in concentration camps. In Albania, for instance, one-third of the Catholic clergy, regular or secular, have been shot and another third have been imprisoned. The head of the church, Archbishop Prennushi, died in prison. Most of the churches have been closed. Although perhaps not as totally suppressed, the Moslem and orthodox churches have not fared much better. Their rightful leaders have been replaced by subservient tools of the regime. I met the other day an American of Albanian descent who has visited Albania recently. He told me that only old people dare go to church. The younger do not lest they be fired from their jobs and when one is fired for such a reason, in a Communist-dominated country, he not only loses his job but the right to work as well.

The economic exploitation of the population would be unbelievable to free people, like you. All means of production are owned by the state which in turn is owned by the party that is in fact by the Soviet Union. The former owners were expropriated without any compensation and, quite often, they were killed or sent to concentration camps. As for the land—and you must keep in mind that, with the exception of Czechoslovakia and Eastern Germany, Eastern Europe is basically agricultural—after a fake agrarian reform which took place in the beginning, it is now being collectivized against the will of the peasants.

Soviet Russia exploits the captive nations as never a colonial power in the past has exploited its colonial possessions.

In the beginning of her rule the Soviet Union took from our countries whatever she needed, giving little if any compensation in return. As a result, the standard of living of our peoples fell well below that of any previous period, even periods of war or natural disasters. Now, the Soviets are proceeding to the economic integration of the captive countries which may not appear to be as crude an exploitation as that of the first period of plain plunder but which, nevertheless, is just as ruthless and even more dangerous.

However, the most horrible aspect of the tyrannical system imposed to the captive countries by the Soviets, is undoubtedly the perversion of justice. The aim and purpose of Communist justice is, as stated by the Communists themselves, to protect the political and economic structure of the regime and not to serve what they call the bourgeois ideas of justice. Everything that serves the state is good and permissible. You all have read, I am sure, about showcase trials at which the accused have confessed to anything their torturers wanted them to confess to. You remember, for instance, that Cardinal Mindszenty was forced to confess that he had indulged in blackmarket operations.

I said a moment ago that criminal legislation in the captive countries is often even harsher than in the Soviet Union. Let me mention only one example: the penal code in Albania. An article of this code, promulgated in 1952, stated that penal responsbility for political crimes begins at 12. A boy or a girl, a child of 12, could have been sen-

tenced to prison in Albania for crimes against the state, until December 1958, when the age was changed to 14.

You may ask what are the crimes against the state which could justify the imprisonment of a child. Anything practically. The judges, the people's judges as they are called, are not professional judges. They are party men; they do whatever the party tells them to do. The lawyers, themselves, who by the way are collectivized, are forced to be accessories of the Communist justice. They must assist the prosecution. They must inform the prosecutor of whatever secrets they have learned from the accused they are supposed to defend. As a result of such justice, only in my country, in Albania, according to conservative estimates based on reports by escapees—the Communists, of course, do not publish statistics of their crimes—about 10,000 people have been killed with or without trial while approximately the double of this number are in prisons or in concentration camps. For the United States this would mean over 1 million killed and over 2 million imprisoned. This is the face of communism. This is what communism has done to our countries. This is what it plans to do to the countries of the free world.

I wish now to try to expose a fallacy that is spreading in the free world since Khrushchev started in his dove-calls for relaxation of tension and peaceful coexistence. Some well intentioned but naive westerners have been misled by a skillful propaganda and made to believe that, since Khrushchev took power in the Kremlin, a liberalization of the regimes has taken place in all the captive countries. These and others also contend that the economic policy of the Soviet Union towards the captive nations has changed and that the captive countries have now become economic liabilities for the Soviet Union.

I wish I could devote more time to this. Since I cannot, however, I will explain briefly why both above mentioned assertions do not correspond to the true situation.

I believe that the affirmation that there has been no liberalization in Hungary after the repression of the Hungarian Revolution needs not to be demonstrated. The United Nations has established that fact and condemned the new wave of Communist terror.

It is true that in Poland the people succeeded, 3 years ago, at a difficult time for the Soviets and the Polish Communists, in imposing some restrictions to the tryranny of the regime. But Gomulka is now bringing back the Stalinists and tightening again the screws. As for the other countries, the very fact that the terror-backed drive for collectivization of the land has been accelerated during this so-called period of liberalization shows that it exists only in the Communist propaganda and in the credulous, optimistic imagination of some well-intentioned wishful thinkers.

I have no time to deal with the assertion that the captive nations have become economic liabilities to the Soviet Union. I wish, however, to point out that the integration of the economies of the captive nations into that of the Soviet Union with a view to their ultimate absorption, represents nearly a 40-percent addition to the economy of the Soviet Union and thus serves the Soviet plans for world conquest.

This brings me to the third and last part of this lecture, namely to the importance of the captive European nations in the present East-West conflict.

The Soviets have made no mystery of their determination to conquer and communize the world. Lenin has said it, Stalin has said it after him and many lesser Communist leaders as well. Not so long ago, Khrushchev stated that the Communists will abandon their goal when shrimps will whistle on a mountain top.

The free world did not in the beginning take these threats seriously. However, when, after World War II, Soviet-led international communism enslaved in a few short years 700 millions of people, the free world was forced to take such defensive measures as could contain communism and NATO, SEATO, and the Baghdad Pact—whose name was changed recently after Iraq abandoned the Western camp—were set up. Later, the successes of the Soviet Union in the field of modern weapons, and particularly in rocketry, convinced the free world that the Soviets were indeed to be taken seriously. Unfortunately, while making efforts to strengthen its defenses in the eventuality of a hot war, the free world did not fight the political and ideological struggle which the Soviets had forced upon it. In the political field the West has only reacted to Soviet moves without taking initiatives of its own. It has accepted to be placed on the defensive and has never undertaken to exploit the weaknesses of the enemy. True enough a policy of liberation of the captive nations has been proclaimed, but nothing has been done to implement it.

Yet, the Soviet Union has far greater difficulties and weaknesses than the free world. One of these weaknesses is the resistance of the enslaved peoples—and even the hostility of the Russian people themselves—to a regime which rules by theft, terror, and murder.

The Soviet leaders are very much aware of the importance of the hostility of the captive peoples. They know it to be one of the major obstacles to further expansion in Europe. This is why, ever since they took control over our countries, the Soviets have endeavored to convince our peoples that their only hope to improve their wretched condition is to resign themselves to their fate or better to become active partners in the Communist drive for world conquest. It is in order to convince our peoples that no alternative is left to them, that the Soviets have pressed the free world to establish diplomatic relations with the Communist regimes of the captive countries, that they asked, and unfortunately obtained, the admission of these regimes in the United Nations—a fine organization in many respects, but an organization that needs to realize one day that she must either abide by its present charter or change it for, as things stand now, with the foreign-imposed regimes of our countries in its midst, the United Nations violates its own Charter every day of the year.

The captive peoples have so far refused to let themselves be deceived by the Communists. Their hatred of communism and their will to resist are as strong as ever, but their confidence in the free world has been shaken. Now that, with its ultimatum over Berlin, the Kremlin has succeeded in resuming its dialog with the free world and is making another bid to obtain from the free world the recognition of the status quo in Eastern Europe, our peoples are seriously disturbed. They cannot fail to see that the new Soviet tactics of alternated threats and sweet talk about relaaxtion of tension and peaceful coexistence are making inroads in certain circles in the free world.

It is worthwhile, therefore, to try to see what the Soviets offer in exchange for the renunciation by the great Western Powers of their right and their obligations, deriving from wartime and postwar agreements, to concern themselves with the fate of the captive nations.

The Soviets say that they offer a relaxation of the international tension. This is fine, but how could international tension be relaxed if the causes of that tension, i.e., the subjugation of the captive nations and of Eastern Germany and, above all, the determination of the Soviets to conquer the world, are not removed? Tension is not a phenomenon in itself. It is only the consequence of a certain situation. It is like fever—the symptom of deeper trouble.

The Soviets say also that they offer peaceful coexistence. What is peaceful coexistence? No lesser authority than Mr. Khrushchev himself, at Novosibirsk on October 10, shortly after his visit to the United States, thus defined peaceful coexistence: "Coexistence means continuation of the struggle between the two social systems—but by peaceful means, without war, without interference by one state in the internal affairs of another. * * * We consider it to be an economic, political, and ideological struggle, but not military."

This is Mr. Khrushchev's peaceful coexistence. Thanks to a clever Soviet propaganda, the very words "cold war" have become anathema in many circles in the free world. Yet, what Khrushchev defines as peaceful coexistence is a declaration of war by all means short of military action or, if you prefer, cold war whether some wishful thinkers want to admit it or not. If the free world were to buy this Soviet brand of peaceful coexistence, it would buy, in fact, surrender by installments or war when it is at its weakest.

Until now, despite many serious concessions such as the establishment of diplomatic relations with the Communist regimes of the captive countries or their admission in the United Nations, the West has refused to recognize the status quo, as a matter of principle and of moral obligation. The great democracies were not convinced in the beginning that their interests were at stake in this question. This is why their stand was moral, honest but passive. Too many people believed that the Soviet Union had enslaved Eastern Europe to provide for her security and not to use it as an advanced base for further expansion. Now, however, many western leaders recognize that the occupation of the captive countries and the exploitation of their economies to the benefit of the Soviet's economic machine is both a tragedy and a danger to the free world. This was stated in the clearest terms in the political resolution adopted last month in Washington by the NATO Parliamentarian's Conference.

The important question is now whether the free world will translate this awareness of the importance of the captive nations to its own security into practical policy. Personally, I do not believe that the great Western Powers will recognize the status quo at the coming summit conference. I know that they do not want to do this and that they cannot afford to do it. The question, however, is whether they will raise the problem of the captive nations at the summit conference and press for a speedy solution in conformity with the principle of self-determination.

In the past, the Western Powers have been particularly timid when negotiating with the Soviets. While the latter have always insisted on negotiating only a question affecting the interests and rights of the West, the great Western Powers have reluctantly agreed, but agreed nevertheless, not to initiate or press negotiations on all the unlawful gains of past Soviet aggressions. It is, therefore, imperative that, in any future negotiations, the great democratic nations do not accept that the discussion be limited to specific crisis artificially created by the Soviet Union, such as the Soviet-engineered Berlin crisis for instance, but raise the question of the captive European nations and insist that it receives a speedy and equitable solution.

Based on a firm policy, such new western approach to negotiations could produce results which might remove the danger of war with which the world is faced today. A constant western pressure thus put into ac-

tion, added to the resistance of the captive European peoples—not to speak of the resistance of the Chinese people, which, if assisted, could also produce tremendous and perhaps even greater results—might force the Soviet Union to give up its goal of world conquest and, thus, might spare the free world of the dreadful alternative of nuclear war or surrender.

For what is in stake in the present struggle is not only the physical survival of humanity, but also the survival of freedom and western civilization. On one side we have a world which has inherited and developed a civilization that goes back over 2,000 years. A world immensely enriched in spiritual values by the ideas of the philosophers of the 18th century among whom the Founding Fathers of your country were not the least distinguished. A world based on freedom for man and on the corollary principle of the right of self-determination for peoples which we owe to the most authentic statesman of the 20th century, President Woodrow Wilson. On the other side we have a world in which the mass of the people is subjected to a cruel and arbitrary tyranny and to a ruthless economic exploitation by a small minority of privileged individuals who have thrown overboard whatever idealism their abnormal unnatural ideology may have contained in its beginnings to keep only its slogans of world revolution and its apocalyptic formulas of universal panacea.

The Western World has every advantage in this struggle. It enjoys economic superiority. Because of its superior justice it can count on the support of the great majority of the people. Most of all, it enjoys freedom which, if it dares make use of it, could become a Trojan horse of irresistible and devastating effectiveness in the enemy camp.

What the West needs in order to survive and to win is a renewed confidence in its spiritual values and the political determination to translate it into action.

Should the democratic powers fail to show the necessary resolution, they might lose. They could be defeated with or without war and over the rubble of our civilization, our enemies would build a new world from which freedom and human rights would be banished, a world in which there would be no room for any of us.

Indeed so much is at stake that one cannot but hope that those who are entrusted with the defense of democracy must not and will not fail to save it.

Summerfield Hits Dems on Postal Appointments

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. CHAMBERLAIN. Mr. Speaker, it has now been more than 2½ years since I nominated for permanent appointment the acting postmaster at Flint, Mich. This gentleman has been a leader in the civic life of that community and has an excellent administrative and governmental background in city and county government as well as experience in private industry. He is a veteran of World War I and has been awarded the Purple Heart.

He has passed all the civil service requirements, been carefully investigated by the Post Office Department and nominated by the President of the United States for this responsible position.

I am aware of no reason whatsoever in his background, reputation or present service which should cause the Senate to withhold confirmation of his appointment. In my opinion, the Postmaster General, Arthur E. Summerfield has ably summarized the Michigan postmaster situation in an article which appeared in the Flint Journal of February 12, 1960. I ask unanimous consent that it be reprinted in the RECORD.

The article follows:

SUMMERFIELD HITS DEMS ON POSTAL APPOINTMENTS

Postmaster General Arthur E. Summerfield blasted Michigan's two Democratic Senators today for blocking Senate confirmation of 38 postmasters in Michigan.

Summerfield, in Flint for tonight's Republican Lincoln Day program, took the recent resignation of Robert C. Miller, acting postmaster at Pontiac, as a springboard for his new attack on the policies of Senators PAT MCNAMARA and PHILIP A. HART.

"The news (of the prospective resignation) is a truly sad commentary on the extent to which Senator MCNAMARA will play politics irrespective of its damaging effects on the postal service for the people of Michigan," Summerfield said.

He praised Miller, and explained that the resignation comes because Miller is tired of waiting for Senate action. The nomination was left pending in the Senate last year and was sent back last January 11.

"On both occasions, the nomination of this able man was blocked for purely political reasons by Senator MCNAMARA, who refused to give any explanation for his actions," Summerfield continued.

"Senator MCNAMARA's position, aided and abetted by the concurrence of Senator PHILIP A. HART, who takes his cue from Senator MCNAMARA, does great damage to the postal service. It impairs the effectiveness of its operation, causes lack of confidence in men appointed to serve as postmasters and makes it very difficult to get competent men to accept these important appointments.

"It is extremely unfair, and not in accord with our best American traditions, to permit this great misuse of senatorial power. This is particularly true since Mr. Miller and others like him already have demonstrated their unusual abilities to capably serve in the position of postmaster for which they were nominated."

He cited action by the Michigan chapter of the National Association of Postmasters last June calling on the Senators to approve appointment of deserving postmaster candidates.

"Unfortunately, this appeal to reason has had no effect upon Senators MCNAMARA and HART," he concluded. "There are currently pending before the Senate the nominations of 38 postmasters for Michigan, several of which go back to 1955.

"Almost without exception these men are war veterans, and a number of them are also experienced classified postal employees with long years of postal service. All have satisfactorily passed civil service examinations for these jobs, and all have been carefully evaluated by the Post Office Department and nominated by President Eisenhower."

Summerfield attached to his statement a list of the 38 nominees, including Flint's Charles H. Pratt, who became acting postmaster in 1956 and was nominated for the permanent appointment in 1957.

Senator MCNAMARA has been holding up nominations since he took office in 1955, allowing a few to trickle through each year after his office has spent months investigating them.

HART has said he will follow MCNAMARA's lead on the appointments. One Democratic Senator is enough to block confirmation, as the Senate is organized by the majority Democrats.

Summerfield will speak tonight at the IMA Annex at Genesee County's Lincoln Day dinner. Principal speaker will be Frederick H. Mueller, Secretary of Commerce in President Eisenhower's Cabinet. Representative CHARLES E. CHAMBERLAIN will introduce the Washington guests. The program begins at 6:15 with a reception in the lobby.

Is Space a Way to Peace or War?

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of an address I delivered before the National Secretaries Association, Presidential Chapter, at their "Boss Night" dinner at the Broadmoor here in Washington on Tuesday evening, February 16, 1960:

IS SPACE A WAY TO PEACE OR WAR?

(By the Honorable VICTOR L. ANFUSO, of New York, at the National Secretaries Association, Washington, D.C., February 16, 1960)

It is a pleasure for me to talk to you today about the prospects for cooperation in international relations and the dangers of unbridled competition among nations in the new realm of outer space.

As you know, the leaders in space research and exploration are the United States and the Soviet Union. Last year a deadlock arose between these two countries, both in the United Nations and the International Council of Scientific Unions (ICSU) on the issue of representation on space committees. This deadlock seemed to result from long-standing cold war antagonisms without any particular relation to science or the exploration of outer space. I am happy that agreement had now been reached and the Soviet Union has expressed its willingness to join the space committees of both ICSU and the United Nations.

But the fear still exists: Will outer space be used for war or peaceful purposes only? Satellites and space probes have already become major factors in the cold war. Hot war, if it ever comes, is likely to be decided by a space weapon—a truly fantastic and terrible weapon—the intercontinental ballistic missile (ICBM), with a nuclear warhead.

Since outer space seems bound up with our future as a nation and as individuals for good or for ill—in peaceful pursuits, cold war or hot war—I should like to discuss its implications in all three respects.

Nuclear missiles have brought about a complete revolution in warfare. For most of us, the nature and extent of this change have simply not "sunk in." Are people in Cleveland or St. Louis, for example, concerned today about attack from submarines? Hardly, I think. Yet attack from submarine-launched missiles on most inland cities is technically possible. Perhaps you're thinking that there will be no great cause for concern as long as the policy of deterrence continues to work and we have enough power to retaliate. Quite true, but some pretty big "ifs" are involved. Just the other day, General Power, who heads the Strategic

Air Command, stated in public that some 300 ballistic missiles, half of them of only intermediate range, could knock out our nuclear striking force in a matter of 30 minutes. Now, I don't know how many long-range ballistic missiles the Soviet Union will have in, say, another 3 years. If I had any secret information on that subject, I would not let it out in public. But I do know that some very well known columnists, including the Alsops, Hanson Baldwin and Roscoe Drummond, have been guessing that by 1963 the number of Soviet ICBM's could be about a thousand. Let's hope their estimates are too high.

In any case, it is indisputable that the United States no longer has the military superiority over the U.S.S.R. that it enjoyed during the late 1940's. What is less often understood is that the U.S.S.R. has not acquired such a superiority either. The situation is correctly described as an uneasy balance or stalemate. In the calculations of theorists, at any rate, each side can maintain equality by being able to strike back so hard that the other side's decision to attack in the first place would be irrational. This kind of equality is well within the reach of both the United States and the Soviet Union. Some observers even argue that it would be wasteful to build up our striking power beyond a relatively low point. If our retaliatory forces are invulnerable, they need not be large.

It seems to me, though, that the conclusions I have just described, while valid for war games and strategic theory, ignore the significance of the cold war. Since the theorists themselves believe that no thermonuclear hot war will occur, if both sides keep their guard up, the cold war is likely to be decisive. It is a war of science, economics, espionage and subversion, politics and diplomacy—above all, a struggle for men's minds. To the average person, talk of thermonuclear parity seems unreal. The nation that can strike the hardest, or that leads in some significant and representative activity, is regarded as superior.

It makes no difference that superiority is meaningless in terms of deterrence, or that neither side aspires to rule a world in ashes. The average person still jumps to the conclusion that one side or the other is superior—not on the basis of analysis, but from what are taken to be symbols of superiority. This very belief, regardless of its foundations, becomes a potent factor in the cold war.

I frankly believe that the Russians see no advantage to themselves in a full-scale war. They feel that they can eventually conquer the United States and the rest of the world with the minimum of risk by tying in political objectives to scientific objectives. The more spectacular they make their scientific achievements, the greater propaganda effect they will have of the rest of the world.

While on this point, may I say that I cannot understand why this great country of ours which got to its present position of leadership by pioneering, must follow the Russians now. Why can't it do something spectacular on its own and have Russia and the rest of the world follow America for a change? Surely we have the resources and the brains to do it with.

From my personal observation on the tour that I took last fall—through the British Isles, Ireland, Scandinavia, the Soviet Union, Poland, West Germany, Austria, France, and Italy—I got the feeling that other countries see the U.S.S.R. as eventually overtaking the United States in all fields, unless something is done now to stop her.

To return for a moment to the ever existing possibility of a hot war, Soviet space achievements and particularly the power of Soviet rockets have given rise to some interest and concern.

On January 7, 1960, the Soviet Government announced that it would test fire a new rocket into the mid-Pacific, between January 15 and February 15, and for that purpose would reserve a large impact area of nearly 45,000 square miles, lying approximately 1,100 miles southwest of Hawaii. Then on January 20, according to our own Defense Department, "an object which had certain characteristics of a ballistic missile" landed in the sea area reserved by the Soviet Union.

If this Soviet missile was launched from a known base, such as Kapustin Yar or Tyuratam, it must have traveled about 8,000 miles. This is a sobering fact. The Soviet Union announced that the missile had gone 7,766 miles to within 2 kilometers (1.24 miles) of its target.

As you know, two requirements for a good military missile are guidance and propulsion. On the matter of guidance, the recent Soviet sharpshooting exhibition in the Pacific should settle any doubts. Soviet guidance is good enough. While it may not be quite so good as ours, the difference seems more academic than practical. As for propulsion, Dr. Glennan, the Administrator of the National Space Agency, has testified that the Soviet space lead "is based principally on the possession by the Soviets of one or more reliable launch vehicle systems having perhaps twice the thrust of our own first-stage booster rockets." The weight of informed opinion accepts the fact that the Soviet tests in the central Pacific are being made with an even more powerful rocket booster than the one that launched the sputniks and luniks.

Wu Yu-Hsun, vice president of the Communist Chinese Academy of Sciences, has said that "the propulsive force of the rocket (launched by the Soviet Union into the mid-Pacific) reached about 1 million pounds." Compare with this the 360,000-pound thrust of our own Atlas. Our Saturn rocket, which is expected to produce a thrust of 1½ million pounds, will not be available until 1964. It seems a safe prediction that by 1964 the Russians will have developed a superrocket of their own, even more powerful than Saturn.

The acknowledged superiority of the Soviet Union in rocket thrust is no minor matter. It makes possible the accomplishment of missions in outer space that we cannot even hope to emulate today. It shortens the lead time in vehicle development from concept to launching. It increases the reliability of Soviet rockets and missiles.

From a military point of view, greater rocket thrust brings all the advantages just enumerated plus several more. Rockets of greater thrust can carry heavier and hence more powerful warheads, delivered as accurately (if Soviet announcements on this point are believed) as our own Atlas.

More than a year ago, Khrushchev said that the Soviet Union had an 8,700-mile missile with a 5-megaton warhead. At the time, President Eisenhower expressed his disbelief. I wonder if he has since been convinced. Suppose the new Soviet rocket can hurl such warheads a distance of 8,000 miles or more. We would then be outgunned, outranged—as the Allies in World War I were outgunned for a time by "Big Bertha", exposed to its fire but helpless to strike back. Could we have prevented Russia from obtaining this gigantic lead? The answer is: "Yes."

At this point, I wish to be fair to both the administration and Congress which is probing this entire defense program. Some say that the apparent feud between the President and the Congress is confirming weaknesses in our Government structure and giving the Communists another propaganda victory which they can exploit to strengthen their allies, weaken ours, and convert undecided peoples.

Let us first admit that we have no choice under a democracy. We cannot live in a vacuum and we cannot function in secrecy, unless we change our form of government. For my part, I think the debate is good. It is healthy. I have the greatest amount of confidence in the American people. I believe that they, like a jury, if given all the facts will arrive at the right decision. The question is when to alert the American people—after the fire starts or before? Congress, I think, is doing a tremendous service by trying to stir up the American people now, before it is too late.

You, the jury, may want to consider whether it is wise to have the leadership in the White House different than that in the Congress. Perhaps a government should stand or fall on its record, without being able to pass the bucket to this or that branch. But that is an election campaign issue and unnecessary for me to go into now. It is food for thought, though, is it not?

Now enough on this somber side of the picture. Let us look at the other side where its brilliancy holds a hope and a promise that space research will transform our daily lives and our patterns of cooperation with other countries, bringing peace and abundance to everyone on earth.

It seems almost certain, as Dr. James Van Allen has said, that the progress of space science and technology will bring "• • • a large and continuing harvest of important practical application." Many specific practical uses of outer space have not only been predicted but are actually planned or under development. They include weather forecasting and control, television, and radio relays, navigation, and geodetic measurement, and even mail service. As you may remember, in June of last year mail was delivered from a submarine at sea to a city on the Florida coast. The Navy is also developing a navigation system using an artificial satellite. Information provided by the satellite is expected to be made available for unrestricted civilian use, so that ships and travelers everywhere can quickly find their exact positions on the earth's surface. Communication and weather satellites, too, are currently undergoing development and testing by the U.S. Government.

Satellites and other space systems should not belong to any particular country. They are worldwide by nature. Certainly, nonmilitary space systems will be far less effective without international, and in some cases universal, cooperation. For example, a communication satellite can hardly provide the worldwide radio and television coverage of which it is capable unless other countries cooperate. A single uncooperative government, in fact, might even deprive other countries of its benefits by disabling the satellite or jamming its equipment by radio.

The international character of outer space holds out the promise of bringing all countries closer together in their peaceful pursuits. Can there be any doubt that one result will be to change our attitudes toward other countries? Think for a moment about worldwide radio and television. National television has created new ties and greater understanding among people in different parts of our own country. If Ivan and Sonya could watch the same program as Johnny and Susan, this would be a different world, would it not? The chances are that it would be a better and safer place to live.

Ever since I became a member of the House Committee on Science and Astronautics I have personally advocated greater international cooperation in space research. To that end I have labored as diligently as I knew how to do, visiting a number of foreign countries, communicating with the President and other officials in this country, and talking and conducting correspondence on the subject with Khrushchev himself.

There are signs that my efforts and those of others, both in the Government and in private life, are beginning to bear fruit. Russia, which had refused to join the temporary committee on the peaceful uses of outer space, has now joined the permanent committee recently formed.

Beyond the immediate practical uses already described, the exploration of outer space will add to our knowledge of the earth and its environment. Space research has led to the discovery of the Van Allen radiation belts and to new knowledge about such matters as the shape of the earth, high-energy particles and cosmic rays, the proper use of which they say some day can prolong your life a couple of hundred years. Sooner or later, the scientific knowledge derived from space research is bound to prove useful in our daily lives, even if we don't get to live to 200 years or more. We know that this has been the result of every systematic line of scientific inquiry in history. Some applications are already apparent. For example, our growing knowledge about high-energy particles in outer space will improve our radio communications here on earth. Research on materials for the nose cones of military missiles has led to the development of a plastic which is now used in home refrigerators.

My remarks would not be complete without a reference to the influence of space exploration on the human mind and spirit. It is plain that the challenge of outer space appeals to man's curiosity and thirst for adventure. I believe it will also stimulate our moral sense, our capacity for wonder, our faith in God and reverence. In the realm of the stars, I hope we may at last lose our selfish interests and petty bickering (political and otherwise), refine our sympathies, strengthen our moral fiber, expand our spiritual understanding, and lift up our eyes to higher and eternal goals.

If a Roman Catholic Were Elected President

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. OSMERS. Mr. Speaker, on January 22, 1960, a sermon entitled "If a Roman Catholic Were Elected President" was delivered by a distinguished clergyman in my district, Dr. Irwin M. Blank, rabbi of Temple Sinai, at Tenafly, N.J.

As we all know, much has been written and spoken in public and in private over the years for and against the desirability of a Roman Catholic as President of the United States. Many of the points expressed in Dr. Blank's sermon, however, are original and thought provoking.

While I do not necessarily agree with all of the statements Rabbi Blank makes in his sermon, I am in hearty and complete agreement with his final conclusion, which is:

Every citizen of this country, if he is eligible under our Constitution, has the right to run for, and to be elected to, any public office and to be judged on his record and on his stated policies and attitudes.

In my judgment, to hold otherwise would not be in accord with the Declaration of Indepedence or the Constitution of the United States.

Let us hope, Mr. Speaker, that in November of 1960 and at every future election throughout the land the voters of America will vote for the candidates best qualified for office on the basis of their merit and their policies. The electorate should never be influenced by the race, religion, creed, or color of any candidate for any public office in our great Republic.

Mr. Speaker, under leave to extend my remarks, I include Dr. Blank's interesting sermon in the Appendix of the CONGRESSIONAL RECORD:

IF A ROMAN CATHOLIC WERE ELECTED PRESIDENT

(Sermon by Dr. Irwin M. Blank)

One of the oft-repeated incidents concerning the history of the Jewish community in America revolves around the actions of one Asser Levy. It was in July 1655 that the question arose in New Amsterdam as to the right of the Jews to defend the community. In August of that year the council ruled that "owing to the disgust and unwillingness of the train bands to be fellow soldiers with the said nation and to be on guard with the same at the guardhouse * * * Jews cannot be permitted to serve as soldiers, but should be exempt. For such exemption each male person should pay a monthly contribution of 65 stivers."

It was Asser Levy who fought this ruling and won for the Jewish community of his day the right to serve in the military of New Amsterdam and freedom from special taxation. Had it not been for the heroism and courageousness of Asser Levy, who knows but that the United States today, as many countries in Europe, would have a concept of second-class citizenship which limits the ability of a segment of the population to participate fully in the affairs of government.

Certainly we know that even at this late date our Government is not free from such restrictions, either in law or in fact. If this were not so we would not require the establishment of Government agencies whose function it is to guard against discrimination. We would not still be concerned about poll taxes and Sunday laws if we had arrived at the utopian state in which all citizens were treated fairly and equally under the law.

Of immediate concern and interest to us is the discussion and reaction which has been generated by the possibility of an American citizen of the Roman Catholic faith running as a candidate for the highest elected office of our land, the Presidency.

First, a word to those members of the Jewish community who harbor the illusion that we are living in a Christian nation. Apart from what Christians mean when they speak of our country as Christian, when most Jews use the term they seem to mean that it is a sort of "we against they" situation in which Jews are the underdog. If any issue should disabuse Jews of this impression it is certainly the one of the likelihood of a Roman Catholic citizen serving as President.

The recent statement by a minister of a local Unitarian church to the effect that under no circumstances would he consider voting for a candidate of the Roman Catholic faith coupled with the results of a survey of Presbyterian ministers, recently published in the New York Times indicating that there is a similar feeling held amongst members of this group as well, should serve to underline the thought that there are many issues on which the Christian community is not united. To succumb to the belief in the myth that this is a Christian nation is to weaken the fabric of democratic life.

If we agree that neither in law nor in fact is this a Christian nation then within the framework of our consideration of the problems, imagined or real, concerning the likelihood of electing a citizen of the Roman Catholic faith as President, we must ask ourselves whether this is a Protestant nation, whose highest office is to be restricted to a Protestant and whether this is a country whose pattern is to be limited to that of the Protestant ethic.

Here again history and the theory of democratic society will not permit us to answer in the affirmative. A democracy depends for its very survival upon its ability to keep its policies and its laws free from the domination of any one sectarian influence.

Perhaps more than any other religion, Roman Catholicism's doctrines seem to be clear cut and unequivocal. Most citizens would find themselves hard put to cite what this or that Protestant denomination believes with reference to specific questions or for that matter what this or that Jewish group believes. Yet, with reference to Roman Catholics we seem to be able, in most situations, to indicate what the nature of the Roman Catholic commitment is.

This is largely because of the clear cut hierarchy which exists within the Roman Catholic Church which restricts the issuing of policy to specific officials within the church. Thus, the situation is quite unlike the Protestant Church in which it is virtually every denomination for itself, or within the Jewish community where it is virtually every Jew for himself.

The principles and practices of the Roman Catholic Church are proclaimed by the Pope or an authorized official. Therefore, theoretically, the principle and the practice are clear and binding upon every Catholic who wishes to remain within the good graces of the church.

But, the truth of the matter is that these principles are not necessarily crystal clear nor is the practice binding under every and all circumstances.

A few illustrations will suffice to demonstrate this point.

With reference to the schooling of the young, some time ago the principle was established that only in a church school could the young receive that kind of education which could be sanctioned by the church. Now, the truth of the matter is that not every Roman Catholic child is being educated in a Roman Catholic parochial school even where such schools are available and to the best of my knowledge although there may be pressure exerted on the parents of these children they are still considered to be within the good graces of the church.

It is also well known that despite the church's stated position against divorce that divorces have been granted by permission of the church, even if we say after great effort, nevertheless granted they have been.

The Roman Catholic Church, as is true of most individuals, will avoid a display of overt hostility against it if it can avoid it and will not be rigid in its attitude unless the issue is joined. It seems to be that when the Roman Catholics' position on a specific matter has prevailed it is because the rest of the community is divided in its attitude.

This has certainly been true in the case of the constant attempt to revise the divorce laws of New York State. Repeatedly Jewish and Protestant legislators have voted in accordance with the Roman Catholic position. The same would hold true on the issue of Federal aid to church schools. Many Protestant Churches have pressed for

such aid along with the Roman Catholic Church. The same would hold true for Sunday laws. I am certain that not every car that had a sticker on it urging that one vote for the Sunday law was driven by a Roman Catholic.

The truth of the matter is that any religious group if it finds itself in the majority is sorely tempted to play fast and loose with the democratic structure. The question was once put to me by a Protestant minister as to what I thought would happen in a community where there was a Jewish majority. I could not be as reassuring as I would like to have been, because I suspect that we would be guilty of the same errors.

Those who fear that a Roman Catholic would be too bound to his sectarian doctrines are really expressing their doubts concerning the strengths of a democratic system. They are fearful because they know how large a percentage of our citizenry are ill informed concerning public issues. So much so that many citizens would not even know whether a public official was following a sectarian doctrine or not. They are fearful of putting into high office a man who is committed to the principles of a religion whose adherents are in a numerical minority because they know that it places great responsibility on the adherents of a faith whose members are in the majority to keep sufficiently well informed to know when their own doctrines are being challenged. The truth of the matter seems to be that all too many of our citizens do not care to be well informed.

It is clear that whoever assumes public office must swear loyalty to the Constitution of the United States. It is also clear that the Pope or perhaps one should say the Roman Catholic Church does not exert any temporal power. It is not likely that a President of the Roman Catholic faith would consult the church with reference to the signing of treaties, trade agreements, or what have you. And even if he did we still have a Congress, a free press, and an articulate citizenry. And if, in the final analysis, adequate safeguards are absent for the protection of the democratic process then, by all means, let us have those safeguards.

Our Constitution clearly bars the possibility of using any kind of religious test for those desiring public office. As Jews we know the nature of these religious tests and surely we should be amongst the first to exert every effort so that this principle is observed in practice.

It is legitimate to require that any candidate state himself clearly on the vital issues of the day. It is also known that only the very few ever do. Some of our ablest statesmen and politicians are also our ablest evaders of the direct answer.

If this is so then we shall have to try to evaluate the nature of the evasion. If a man expects to hold public office then his views cannot be kept secret.

In any event we do not have the right to prejudge any candidate because of his religious commitment. We do have the right to judge him on his record and on his convictions vis-a-vis the issues of the day.

It is for him to square his answers with his religious convictions not for us to reject him without knowing what those answers are.

Surely, no one will understand me as insisting that we must have a President who is of the Roman Catholic faith. But, it is my hope that everyone will accept the thought that every citizen of this country, if he has the qualifications as stated by our Constitution, has the right to run for and to be elected to office and to be judged on his record and on his stated policies and attitudes.

U.S. Nuclear Policy

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. MOELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I recently received from a distinguished surgeon in my district, Dr. Charles E. Holzer, Jr., of Gallipolis, Ohio. Dr. Holzer describes what I consider to be one of the gravest threats ever to confront our Nation. I urge my colleagues to give this matter their full consideration. I firmly support the proposals advanced by Dr. Holzer and I have called them to the attention of the President:

THE HOLZER CLINIC,
Gallipolis, Ohio, February 13, 1960.

The Honorable WALTER H. MOELLER,
House of Representatives Office Building, Washington, D.C.

MY DEAR MR. MOELLER: I write to urge and plead that you immediately and emphatically declare your support to the following:

(1) A continuation of our policy that nuclear weapons not be distributed to our allies.

(2) A declaration by the United States of our intention to permanently abstain from testing nuclear weapons.

Wider distribution of nuclear weapons should be opposed because:

(1) It is a truism that the probability of the use of these weapons increases in direct proportion or perhaps even in geometric proportion to the number of nations possessing them and the number of persons responsible for their handling.

(2) Distribution of nuclear weapons to our allies destroys any moral argument available to us in protesting the furnishing by the U.S.S.R. of such weapons to her allies and satellites.

(3) Fear and distrust of us by the U.S.S.R. her satellites, and the uncommitted nations can be only greatly enhanced.

(4) No possible purpose can be served by a reversal of our policy in this regard.

(5) Wider distribution of these absolute weapons belies our posture of peace-making in the world.

(6) The possession of nuclear weapons by any smaller, potentially unstable government could in the rapidly changing world cause such a nation to assume a course which would be irreversible and lead to total thermonuclear disaster for the whole world.

Testing of nuclear weapons should be banned unilaterally by the United States because:

(1) Such a declaration would help to convince the world that we mean business when we talk about peace-making. I fail to see, looking at us through the eyes of a foreign nation, how we could be regarded with any great amount of trust at the present time. By now we must have in our possession many times the thermonuclear power required to kill all the people in the world. If we never intend to use it why try to improve on it?

(2) Despite the assurances of Edward Teller and the like, the contamination of our atmosphere and the resultant radioactive fallout cannot be anything but harmful.

(3) Our stalling on agreements at Geneva, because of the statements by Teller and others that underground explosions cannot be monitored, can only be regarded as evidence of insincerity about genuine approaches to peace and disarmament. A declaration of a unilateral ban would help to mend the damage done by such stalling and would put the U.S.S.R. in the position of having to take the next step to show that she really wants peace.

Sometime—by somebody—something must be done to stop this mad competition between the nations of the world. Step by step—block by block—a structure of relationship is being built in the form of an inverted pyramid, becoming less and less stable with each added block. To any rational person who can look at the situation in perspective it appears certain that there can be but one outcome. One of us will add just one more block and then—mutual suicide. May we remove at least a few of the blocks and render the structure just a bit more stable.

I do not accept the dictum that only a few informed people at the top are in a position to make decisions. In these unprecedented times we are engaged in the "politics of eternity." There is no experience or principle on which to rely except the fundamental moral principles on which all relationships of men to each other should depend. Therefore, I submit that any of us who are concerned and who will attempt to be informed may have an opinion as valid as any "expert" or "high authority."

I quote from an article, "The Anatomy of Deterrence," by Bernard Brodie, published in World Politics in January 1959. Mr. Brodie, no pacifist, but a Rand expert concludes his technical article in which he analyzes the psychology and mechanics of deterrence as follows:

"Technological progress is pushing us rapidly and inexorably toward a position of almost intolerable mutual menace. Unless something is done politically to alter the environment, both sides will before many years have numerous missiles accurately pointed at each other's hearts and ready to be fired literally at a moment's notice. Nothing which has any promise of obviating or alleviating the tensions of such situations should be overlooked."

Respectfully,
CHARLES E. HOLZER, Jr., M.D.

Senior Citizens Week

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. DORN of New York. Mr. Speaker, the excellent sermon delivered by Rabbi Arthur Schneier, spiritual leader of Congregation B'nai Jacob in Brooklyn, N.Y., on Saturday, February 13, 1960, set forth the needs of senior citizens. Since he felt that a Senior Citizens' Week would help call attention to their problems and, in turn, lead to their solution, I have introduced a resolution to authorize the President to set aside such a week each year. The President, as you know, has called a White House Conference on Aging to be held in Washington in January 1961, and I think it entirely fitting and proper that the interest of the Nation be focused on this subject.

I believe Rabbi Schneier's words should be read by all, and I include them herewith:

"Cast me not off in time of old age, when my strength faileth, forsake me not"—resounds throughout the length and breadth of our land. Strangely, this plea by the psalmist is now uttered by men and by women whose earthly pilgrimage has been prolonged by scientific and medical research. It would seem that this miraculous achievement instead of assuring the rich harvest of a lifetime has given them futility, remorse, and despair. The overemphasis on youth, and the social ostracism of the aged have done much to deprive our elders of dignity and self-respect. They are but the unfortunate victims of society in which there is little cultural valuing of old people.

Regrettably, our values of the aged is determined in part by the ever-increasing fiber of materialism prevalent in our society. Productivity has become a prerequisite for status and self-respect. A lifetime of toil and hard labor is forgotten like a passing wind. Past performance is not relevant unless it has resulted in a continued state of productivity, marked by an accumulation of wealth. The damaging effects of a youth-oriented society seem to offset the advances of geriatrics and gerontology. The discriminating employment practices against persons above the age of 45, the magic qualities attributed to the aggressive young executive and professional, the concerted effort by our advertising media in suggesting ways and means to stay young are indicative of the cult of youth that America has embraced. One does not grow old gracefully in our country. Even our churches and synagogues have primarily become youth oriented. This manifests itself in the concentration on the building of youth centers and religious schools, the liberal budget for youth activities as against the limited number of golden age clubs and the almost complete void in congregational programing for the aged.

Our total commitment to the Moloch of wealth and plenty has translated itself into a drive for new things; we tire easily of clothes, household appliances, and automobiles. Yearning for the new is not only limited to consumer goods; it is quite apparent in our family and social life. The high rate of divorce may be attributed to a feeling of obsolescence that overcomes the marriage partner. They just seem to get tired of each other. "Obsolescence" well describes our impatient and discriminating attitude toward our aged population. In a society that places much stress on material wealth, man and his creators are easily discarded as obsolete. We seem to forget their experience and maturity are inherent qualities of the hoary head and not the young. It may be judicious to replace old machinery but it is not wise to dispense with experienced manpower at a time when the preservation of our American heritage requires the mobilization of all our resources.

Our society has lost the Judeo-Christian reverence and respect for elders. At present, the burden of adjustment is placed upon the old person. He is expected to accept social conditions as he finds them. Although the individual must prepare himself for the process of aging, it is society which must adjust its social norms, standards, and institutions to changed conditions in such a way that they would provide more fully for the satisfaction of the needs of the old. An adjustment to ease the economic plight of our aged has seen the introduction of social security by our Federal Government. Special housing, city and State support of needy oldsters in nursing homes, retirement benefits by industry and labor, the communal effort or golden age recreation centers, all represent a further accommodation to the needs of our aged, we must admit that these undertakings have met only with limited success in guaranteeing a respected role for our senior citizens. The problem as it confronts our Nation today is precipitated by the negative attitude of our culture and can only be remedied by a process of reeducation the clear responsibility of government, our school system and religion. We must embark upon a course of action that will assure love and recognition for our aged so that their autumn years of life may become golden days of self-fulfillment. Selfish motives require our close examination of this problem, for any improved social climate will primarily benefit us in our latter years.

The first White House Conference on the Aging is a good beginning in the establishment of an awareness of this social challenge. It requires the prestige of the President and Congress to stimulate a bold and imaginative program that will capture the hearts of the American people. We have set aside various days in our calendar to remind us of the noble principles and ideals of our heritage. We have designated Brotherhood Week to foster the spirit of brotherhood among people, we remember the men and women who gave their lives for the prescrvation of democracy on Veterans Day, and we pay homage to our teachers on Teachers Day.

It would serve as a source of motivation to designate a week or a day in honor of our senior citizens, when all the spiritual and educational forces could be marshalled to restore the Judeo-Christian reverence for our aged.

The problem of the aging is primarily an American one, achieved by the ingenious advances of medicine and the prosperity of our Nation. In the underdeveloped countries of Asia and Africa where the average life span is about 35 compared to 68 in the United States. The problem of aging is relegated to wishful thinking. We are indeed fortunate to be confronted with the challenge. The Almighty has shown his loving kindness and mercy to our Nation. He has truly blessed us with long life and prosperity. It remains our pleasant task to transform this gift into a blessing for our aged.

What About Underground Detection?

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. COHELAN. Mr. Speakef, within the present general agreement that an international ban on nuclear testing is imperative, there are two distinct points of view developing, differing largely in their responses to the problem of detecting certain underground explosions.

The arguments of that group which holds that this problem should not be regarded as too strong a reason for holding up a testing ban are pointedly stated in the following article by Columnist Walter Lippmann which appeared in the Washington Post, February 16, 1960.

Under permission to extend my remarks in the RECORD, I submit Mr. Lippmann's article which follows:

TODAY AND TOMORROW—NUCLEAR TESTING
(By Walter Lippmann)

The explosion in the Sahara Desert, which shows that French science and technology are as good as anyone else's, is notice to all of us that there is no monopoly and not much mystery about nuclear weapons. What France can do today, China will be able to do tomorrow, not to speak of Germany and Japan. This would not necessarily mean the end of the world. But it will certainly mean that as the test explosions are multiplied, the air will become polluted, and the consequences to future generations are horrible to contemplate.

For 14 months the U.S.S.R., the United Kingdom, and the United States have been negotiating a treaty designed to put an end to test explosions. These negotiations have progressed marvelously, and they represent something quite new and unexpected in the relations between the Soviet Union and the Western World.

To be sure the three of us, who now have nuclear weapons, cannot impose our treaty, even if we reach final agreement, on the rest of the world. But if we are agreed on a treaty, we shall set an example, we shall create the machinery, around which world opinion will surely rally. There is little reason to doubt that France, for example, if her rights are respected, would join in and contribute valuable help in making the test ban workable.

Yet for the time being the negotiations are stalled. The issue arises out of experiments conducted by the Atomic Energy Commission in a salt mine in Louisiana. These experiments showed our experts that relatively small underground explosions cannot be detected by the existing instruments. They cannot surely be distinguished from earthquakes. Our difference with the Soviet Union is over the size of the underground explosions which can be detected. Our experts say that the underground explosion can be nine times as big, and still go undetected, as the Soviet experts say it can be.

The administration has taken the position that we will not agree to abandon underground explosions if our experts say they are too small to be detected. We propose, therefore, to authorize such small nuclear testing. As it happens, these authorized explosions would be just the ones which the Atomic Energy Commission and the Pentagon regard as desirable in order to perfect a number of weapons they are working on. The Soviet position, on the other hand, is that all tests must be banned, even those which cannot be detected.

The abstract logic of our position—ban only what surely can be detected—is perfect in itself. But there is a very good reason to think that it is unrealistic and that, if we hold to it inflexibly, refusing to work out any one of the many compromises which are quite conceivable, it will prove to be an unwise position. For it is based on the assumption that no treaty is better than an imperfect treaty.

I think this assumption is miscalculated. The miscalculation is a failure to realize the significance of the concessions which have been made by the Soviet Union in agreeing to an elaborate worldwide inspection system, of which a large number of stations, manned by foreigners, would be on Soviet territory. In the perspective of Russian, not to speak of Communist, suspicion, and dislike of foreigners, the Soviet concessions promise a political breakthrough of historic significance.

Our policymakers have not, it seems to me, taken into account the full consequence of the Soviet concessions. It is that the Soviet Union is by way of convincing most of the world outside this country that it is sincere about ending nuclear testing. We have been told by the experts of the Atomic Energy Commisison not to worry about fallout. But mankind is terrified by it, and the Soviet Union is buying world support by agreeing to be inspected by foreigners in order to end the testing.

The President and his advisers should bear this in mind when they talk about resuming

our own testing. The President has said that "we consider ourselves free to resume nuclear testing" but that we shall not resume it without announcing our intention to do so.

What does the President think would happen if he did announce such an intention? There would be an uproar around the world. Quite competent and cool observers believe that the uproar would bring about a special meeting of the General Assembly of the United Nations to protest against our action, and that if the question were put to a vote, we should be lucky to get 10 votes out of 80.

In any event the damage to our influence and our prestige would be enormous.

Moreover, and this is the point that the administration should not overlook, if the treaty fails because it is not totally perfect, the Soviet Union will have won a sweeping diplomatic victory. The Soviet Union will not have to admit foreigners to carry out inspection on her territory. At the same time the United States will not really be free to continue testing. For the more we test, the more we shall be denounced and opposed as having failed to show a decent respect for the opinion of mankind.

When these negotiations started, the Russians wanted to ban testing without any inspection. If we hold inflexibly to our present position, there is likely to be no treaty, and the Russians will get for nothing most of what they wanted in the first place. They will have no inspection and they will have made it almost impossible for us to do much testing.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

In Defense of State Colleges and Universities

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, one of the Nation's greatest universities is Rutgers University, New Jersey's State university, located in the friendly and hospitable town of New Brunswick. Rutgers University's greatness is due both to the support given to it by the education-minded people of New Jersey and, equal in importance, the distinguished Americans who have served as its presidents. This post has been held in recent years by Dr. Robert Clothier, Dr. Lewis Webster Jones, and Dr. Mason W. Gross in that order.

Those familiar with State colleges and universities know that the charges leveled at them by their critics, that they have become too swamped with students to pay proper attention to quality, are simply not true. Another charge, equally fallacious, is that such State institutions are on the verge of becoming trade schools, not really educating, but offering easily available training in skills which could be acquired in 6 months of hard work in the world outside the campus.

As a member of the New Jersey State Legislature's education committee I had a close and intimate relationship with Rutgers University over a period of some years, and my experience at that time, and before and since, has convinced me that these great colleges and universities are making a unique and vital contribution both to our own country and to the world.

I am pleased to include here, as part of my remarks, an excerpt from an article from the Saturday Evening Post of February 13, 1960, written by Dr. Paul Engle of the State University of Iowa, which is one of the most informed statements I have seen and which sets forth the high purposes and great contributions which these State-supported institutions are making to our time and to our leadership of the free world.

An outstanding American editor, author and poet, Dr. Engle studied at Oxford University as a Rhodes scholar, and in more recent years won a Guggenheim fellowship. Dr. Engle has taught English at the State University of Iowa since 1937.

The excerpt follows:

IN DEFENSE OF THE STATE UNIVERSITY

(By Paul Engle)

For the last few years I have read with increasing alarm many gloomy articles about American education and its pitiful condition. In particular, the charges being made against our State colleges and universities are both impressive and depressing. State schools, critics assert, have become too swamped with quantity of students to pay proper attention to quality. Our tax-supported colleges have become playgrounds and marriage mills, more devoted to athletic spectacles, beauty queens, fraternity high-jinks, and other immature horseplay than to the dedicated pursuit of the scientific knowledge that is vital to our survival—such is the accusation. Or perhaps even more damning to the whole idea of the State university is the allegation that such institutions teeter on the edge of turning themselves into trade schools, not really educating, but offering easily available training in skills which could be acquired in 6 months of hard work in the world outside the campus.

Many of these accusations have some truth in them, and I—a college professor with my whole life invested in education—have shed as many tears as anyone over that portion which is true. But then one day the first American satellite soared into space. When the steady beat of its signals came back to earth, I was excited to read that the first communications this country had received from outer space came from miniature instruments designed and built for the most part in small rooms at the State University of Iowa, rooms which I pass almost every day. The instruments were the work of Dr. James Van Allen and his assistants—many of whom were still students working for degrees. Later the great belts of intense radiation which circle the earth were revealed by his instruments, were interpreted by him and his assistants, and were named the Van Allen belts, in his honor.

Not long after this I read a book on stuttering, edited by Wendell Johnson, a fellow faculty member who had been a next-door neighbor of mine for a year. And I learned that our university was the world's center for study of that shattering handicap in communication endured by more than 1 million people in the United States. At about this time I visited New York and went to see the new play Sweet Bird of Youth, written by Tennessee Williams and I remembered well the poetry Williams had written as a student on our campus poetry as intense as the plays he later wrote.

It become obvious to me that the university where I teach simply was not a hall of horrors, proving the decay of State education. I began to look around me. Over the next year or so I visited many State universities, talked with scores of faculty members and students. I collected and read about 800,000 words of reports. And from all this emerged an exciting composite of the State university, like American society itself, fumbling its way toward new greatness in an organized but sometimes loose-jointed way.

In brief, the amazing contributions of our universities in the arts, in science and in social thinking are so vital that it seems likely that our country's future security, as well as its future greatness, is bound up with them. In the ideological jungle of the twentieth century we have an absolute dependence on that unique combination of practicality and vision—and yes, even some of the supposed foolishness—which the State university has brought together in a single institution. This country will survive its passage through this perilous century because of its brains, and the State university is our most important mechanism by which that essential intelligence—scattered everywhere among our people—is given a chance to develop in every corner of the United States.

The campus of a typical State university sprawls over a lot of land in a curious collection of buildings from Victorian vile to modern capsules of aluminum and glass. Some are small cities to themselves—the University of Minnesota counts 26,500, for example. Money in astonishing amounts is needed to keep such institutions running—the University of Illinois budget runs more than $79 million, of which two-thirds comes from tax revenues. Thus has grown one of the extraordinary ideas invented by the American people, the notion that they should tax themselves in every State to provide the facilities for giving their children a look at the total knowledge of the world. This is in exact opposition to the view expressed in so charmingly an unpleasant way by the Oxford man who believe in education for only the so-called elite:

"We are the chosen few—
All others will be damn'd.
There is no room in heaven for you;
We can't have heaven crammed."

The view of the State university is: expand heaven. Bring the people into a larger room. These institutions as we know them in their astonishing range today are largely the result of their growth and development over the last 75 years. A few can claim that they began life in the 18th century—Rutgers of New Jersey dates from 1766; the University of Georgia goes back to 1785; the University of North Carolina to 1789. But in the beginning these were schools with primitive facilities, not fully developed universities. The concept of tax-supported State schools was given its most powerful impetus by the Morrill Act, which set aside Federal lands for school development. Timid President Buchanan vetoed the measure when it was first proposed, but in 1862 Congress passed it and President Abraham Lincoln put his name on it—one of our country's great acts of courage and vision in a year when the Civil War had powerfully shaken the unity and security of the Nation. Thus from the start of their major growth our universities had their roots quite literally in native American soil—in 17,430,000 acres of public lands that were given to various States for a State educational system.

The State university is a powerful cement in American society. Proportionately 10 times as many boys and girls go to college in the United States as do in the United Kingdom. The appalling catastrophes of European nations in this century surely have been due in part to the wide separation between the elite—a tiny educated group—and society at large. Such a sharp break does not occur in our country because of that additional nine-tenths who go to college—and a large number of them go only because the State schools offer them the opportunity close at hand.

The State university is the most massive attempt in the world's history to make higher education available to any qualified young person who wants it. As a result some shocking things happen. In a single year Ohio State University flunks out 2,000 students, many of whom never should have been allowed to enter. Yet look at the progress there. When Dr. T. C. Mendenhall lectured on physics at Ohio State in 1873, his only laboratory apparatus was his own lunch pail suspended by a rope from the ceiling—the

pail presumably swung in an arc which varied according to whether or not the professor had eaten his lunch. Today Ohio State's radiotelescope records the collision of galaxies of stars 200 million light-years away.

One of the best defenses of the State university has come, properly enough, from the Ivy League with its largely private schools. When he was president of Harvard, James B. Conant, speaking at the inauguration of a new president of Ohio State, said that the State university had been added to the medieval and Renaissance universities as "the new comprehensive American type." He felt that the tax-supported universities, as they grew toward maturity, had become the dominant theme of education in this country in this century. "This growth," he argued, "will be recorded by historians as clear evidence that the optimistic intellectual courage born of the 15th century Renaissance was, 5 centuries later, still driving westward with undiminished vigor."

Some critics, hearing the immense football stadiums howl on a Saturday afternoon as if Christians had suddenly attacked lions with their bare hands, cannot believe that the intellectual vigor is still on the campus. However, the one great, provable and proud fact about State universities is this: excellence is everywhere. It may exist in the midst of superb foolishness. But the excellence is there, standing clean and solid in the honest daylight, and it is expanding.

For years Yale and Harvard graduates led all others in numbers included in Who's Who in America. But in recent decades more graduates from the University of Michigan have been listed in this volume than those from any other school, public or private. The University of California leads all others in number of Guggenheim Fellowships awarded its faculty. From the years 1906 to 1932, 15 Nobel prizes were awarded to American citizens—2 of these had their education entirely in Europe, and one had no college education at all. Of 12 who were native American citizens, 10 were from private institutions of higher learning and 2 from public institutions. Now, observe this excellence: from 1933 to 1958, 46 Nobel awards were given to American citizens. (This excludes from the total six who had their entire education in Europe and two who attended no college.) Thirty-two out of the 46 received degrees from, or taught at, public institutions and 14 were affiliated with private institutions.

With almost savage zeal the State universities have taken up the ambition of Ezra Cornell when he founded the great university in New York that bears his name. He wanted a truly universal university, where any student could find instruction in any subject. Thus it was natural that in the early days of what is now Iowa State University of Science and Technology, Prof. Isaac Roberts, instructor in agriculture, should dig up buried horses, keeping the head and any diseased parts for instructional purposes, thoughtfully placing his students to the windward. There must have been learning at its ripest. Now the University of Indiana each year presents the opera "Parsifal," and undertaking musically far beyond the resources of most, if not all, private universities. The University of Arkansas has built a $1 million art center, designed by Edward Stone, architect of the American Exposition building at the Brussels World's Fair. The University of Nebraska not only has one of the finest living American poets, Karl Shapiro, on its staff but also has an outstanding museum of prehistoric life in that part of America.

It is easy to be misled at a State university basketball game, where students display poor sportsmanship—a world which offers some startling examples—by shrieking their doubts of the referee's ancestry. But think of the plaintive remark of an Oxford University physicist: "When Oxford finally gets its own electronic computer, we won't have to send certain kinds of data to California for processing." The development of the cyclotron on the Berkeley campus of the University of California by Prof. E. O. Lawrence, Nobel prize winner in physics, made that school one of the world centers for nuclear study. It led to the discovery of 11 of the 13 synthetic elements made in atomic reactors or atom smashers, including the atomic energy fuel, plutonium. If you have read about missile development, you know the initials BOMARC. The last four letters stand for Michigan Aeronautical Research Center, where the land-based guidance system for the missile was developed. Or consider that the midwestern universities are getting together to build, in a fine joint effort the largest high-energy particle accelerator in the world—and it will be built on some campus where it is no interference at all to have high-energy girls twirling their batons and accelerating their particles at football games.

Some of our State universities do look like warehouses and tend to regard students as objects to be stored there for a few years in a grand total that will impress legislators into voting larger appropriations. As any professor knows, there are classes in which the student's mind is scratched much less than his head. There will be young men and women writing the expressive English language with less grace than a child finger painting on a wall. There will be some male graduate students whose most enthusiastic research concerns the courtship habits of female undergraduates. But if you think such things are the heart of State university education, you are heartlessly wrong.

The fact is that our great State-supported universities and colleges support our society. They teach it, reflect its varied needs, refresh it, help it solve its problems. The University of Minnesota, for example, came to the rescue of the great Mesabi Iron Range when the rich ores were becoming depleted. By developing a process by which low-grade iron ores could be converted into concentrated pellets of taconite, vast, previously uneconomical iron resources were made economical.

That same university produced what is believed to be the largest audience ever to bear a poet when T. S. Eliot spoke there. At that university the American Legion of Minnesota has endowed a research professorship; show-business money has built the Variety Club Heart Hospital; the Veterans of Foreign Wars has given a cancer research center, and the Masons have contributed the Masonic Memorial Hospital. Banks and labor unions offer scholarships. Here are splendid examples of the mutual relationship between our State universities and the good human society in which they live.

Another ambition of the State university is the creation—coast-to-coast—of those practical and indispensable professional colleges without which our society could not long endure. The graduates of State colleges of law, medicine, nursing, commerce, engineering, dentistry, architecture, and education build our homes, heal our bodies, teach our kids, take us to court and get us out, design our highways and bridges, give us injections with the caressing needle when pain shakes us, fill holes in our teeth, and examine the holes in our head.

Our country's geography is vast and varied. It is crucial to our cultural development that in every State there should exist large and rapidly growing libraries, symphony orchestras which sustain the musical imagination, exhibits of paintings, visiting lecturers, many plays performed by university casts, regional magazines, and university presses. Year after year, in every State, universities bring into contact with the gracious world of pure knowledge hundreds of thousands of students who otherwise would never recognize it.

Then there are the service aspects of State education—a fertile source of good for all. An early supporter of State education and research asked, "Of what use is it when a man can say 'I am hungry' in six or seven languages, but cannot earn his own bread and butter?" Largely through agricultural research and education offered by these institutions, hunger has disappeared from our lives and we now are learning to say "I have a surplus—would you want some?" in most of the world's languages.

Michigan State University has come a long way from the time when lady students refused to hoe in the same row with male students who used tobacco. America's first State agricultural college, it now is turning itself into one of the country's first universities in total service to the world and in pursuit of total knowledge. Its Kellogg Center for Continuing Education is the finest building of its kind at any university, bringing to the campus more than 500,000 persons a year for over 500 conferences. It offers courses in Arabic, Hindi, Chinese, and Japanese by day, and by night provides a rich sequence of visiting ballet companies, orchestras, and its own theater. It is inconceivable that any alert human being could not find his interest at this university where one can study anything from artificial insemination of cattle to astrophysics.

Investment Guarantee Agreement Between United States and India

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, February 18, 1960

Mr. JOHNSON of Texas. Mr. President, a signifiant event occurred recently in Washington, involving the United States and the Republic of India, which passed almost unnoticed, coming as it did at the time President Eisenhower was in India and attention was focused there. This was the signing of the Investment Guarantee Agreement between the United States and India and the reaffirmation of India's attitude toward private capital made at the time by the Honorable D. N. Chatterjee, Indian Chargé d'Affaires.

Many persons have thought of India only in terms of a recipient of American aid. They are perhaps not aware that India has taken many positive steps to encourage private investors to cooperate in the development of the Indian economy.

An editorial published in the Erie (Pa.) News shortly after the signing of the agreement summed up forcefully the significance of this development. I ask unanimous consent that the text of this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INDIA WANTS U.S. CAPITAL; PEACE IS KEY TO DEVELOPMENT

While most of last week's international news centered around President Eisenhower's peace mission, particularly in India, an item concerning India and the United States passed almost unnoticed.

This was the signing last week of the Investment Guarantee Program between the U.S. Government and the government of India.

Under provisions of this agreement, our Government joins with India in assuring the safety of American private capital investments in India.

India's Chargé d'Affaires D. N. Chatterjee made this statement following signing of the agreement in Washington:

"We regard this agreement as another affirmation of our longstanding policy of encouraging private initiative at home and attracting private investment from abroad to assist in the development of our economy.

" • • • further, may I point out that it was because we have always welcomed such investment from the United States that we signed in 1957 the United States-India Currency Convertibility Agreement. That guarantees the American investor full convertibility into dollars of his investment and income from this investment."

Other features of India-United States investment agreements signed previously include elimination of double income taxation by the United States and India.

Among investment incentives are tax holidays up to 5 years on investments not returning more than 6 percent income.

To further show that India is taking steps to encourage investment are plans to establish an investment center to bring together facilities for locating and attracting foreign capital.

Most foreign capital invested in India is from the United Kingdom. Of the $1.2 billion in foreign capital invested in India, U.S. capital since 1957 has been relatively small—it totals about $120 million.

India's Chatterjee concluded his statement last week by saying: "It is our hope that with increasing contacts between India and the United States and the various measures which we have taken, including the agreement we are signing today, there would be a considerable increase in the flow of private capital from the United States into India."

From this it seems clear there is a growing bond between India and the United States. While present U.S. investments in India are small, taken on a broad scale, it is obvious India hopes to obtain much additional financial aid from private American capital.

From Chatterjee's statements, it is obvious India is attempting to attract investments which will boost her economy—to give the Indian population something above the present extremely low living standard.

To attract investments, India must have peace.

It is certain this new agreement, which received little notice last week, was a topic of conversation between the President and Nehru.

Bureaucratic Shortcomings

EXTENSION OF REMARKS

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. HOFFMAN of Michigan. Mr. Speaker, the Bureau of Land Management—BLM—under the Department of the Interior—Interior—has charge of the management and disposal of 481 million acres of Federal land.

Recently, complaint, principally by realtors, was made to Chariman Dawson of the House Committee on Government Operations, which has jurisdiction over the spending activities of the executive departments, that BLM's appraisal of Federal lands was subject to criticism.

realtors, was made to Chairman Dawson wrote Interior that preliminary studies indicated that in a number of instances appraisals by BLM may be highly questionable, and that it would be advisable to suspend action on all cases involving land appraisals by BLM for a period of 60 days.

Complying, BLM suspended action in more than 3,000 cases then pending, though the subcommittee was investigating some 13 cases. Other applicants protested the delay.

As one of a special subcommittee of three—two Democrats and one Republican—it was my privilege to attend hearings in Arizona—where but 15 percent of the land is privately owned—where testimony involving three cases was heard—only witnesses approved by the subcommittee's investigators were heard—others denied a hearing. That procedure was in conflict with proper committee procedure. A report will later be made, giving Interior's centention.

A WORD TO CONSTITUENTS

Returning from the hearing, opportunity was given to stop off at Benton Harbor to have dinner with—I had assumed—2 or 3 friends. Much to my surprise, 60-odd were present and, after a little conversation about national affairs, it was suggested that, inasmuch as Berrien County cast more than a third of the total vote of the district, it was only fair that Berrien be advised as to when, if ever, I would not be a candidate for Congress.

My reply was that I knew of no reason why anyone should not be a candidate if he desired. Inasmuch as one or two of my Republican colleagues, who lack seniority; who, it may be, do less work than falls to my lot, and one or two State politicians whose pointed suggestions I have failed to follow, subtly indicated that I was getting too old to serve, it became my purpose to learn whether there was any substantial support to such an opinion.

An extensive inquiry was made through third persons and, in a roundabout way, to get an expression of opinion. It was extremely gratifying to learn that, while some might and some did question my political views, all expressed the opinion that there was no reason why I should not again be their candidate.

Many added that, because of my experience, I was in a position to better serve the district than would a newcomer. That, if last year's policy is followed, some 40 Members, mostly conservatives, will retire, it might be well to have me continued in office. Then, too, some economy-minded individuals suggested that, as long as I had, generally speaking, represented the sentiment of the district, there would be no particular advantage in retiring me on the pension which I had earned and helped pay for, while at the same time paying a new succeeding Congressman.

Much to my gratification, representatives of a rather large group, which has never before enthusiastically supported me, assured me of vigorous support.

Those of you who have seen or heard me recently are fully capable of forming your own opinions as to my ability to serve. So far, no one to my knowledge has arrived at the conclusion that I am not physically and mentally able to understandingly and vigorously express the views of the people of the district or perform my work.

It naturally follows that, inasmuch as I enjoy the work, having nothing else to do except fish or hunt—and of both I tire in a week or two—I know of no reason why I should buy a pipe, tobacco, a rocking chair, sit on a porch and rust out. Many have suggested that I submit my candidacy for your consideration. Never a shrinking violet, that is just what I am now doing.

Papers write I was 83, 84, 85, my last birthday. Even the most liberal Congress does not approve of three celebrations for one birthday. The record shows I was born September 10, 1875. How old am I?

Allies in Brotherhood of Youth

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 18, 1960

Mr. KEATING. Mr. President, an interesting and heartwarming aspect of the Boy Scout movement in this country has been its close bonds of friendship and cooperation with groups of all faiths which are working for common goals. A case in point is the manner in which Jewish Community Centers, the National Jewish Welfare Board, and the Boy Scouts of America have worked closely together over the years as allies in brotherhood.

Mr. Bernard Postal, director of public information of the National Jewish Welfare Board recently wrote a very interesting article on the manner in which these fine groups have promoted their mutual ideals. The article points out that as part of their activities nonsectarian Boy Scout programs are promoted to serve the needs of all youths, regardless of religious affiliation.

Mr. Postal's article also pays tribute to the great figures in this field who have given so selflessly of themselves and their talents for this great cause. Their example could well serve as an example for other organizations interested in promoting the spirit of brotherhood and interfaith understanding. Mr. President, I ask unanimous consent to have this interesting piece printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALLIES IN BROTHERHOOD OF YOUTH—JEWISH COMMUNITY CENTERS, JEWISH WELFARE BOARD, AND THE BOY SCOUTS

(By Bernard Postal, director of public information, National Jewish Welfare Board)

During Brotherhood Week in 1941, the Jewish Community Center of York, Pa., organized a Boy Scout troop and invited Rabbi Alexander Goode to be its scoutmaster. He accepted on one condition: "I will serve only if the troop is open at all times to boys of all faiths."

In 1952 this troop set a unique record: its Scouts of various faiths won awards from all the major religious groupings in the United States—the Ner Tamid Award of Judaism, the Pro Deo et Patria Award of the Lutherans, the Ad Altare Dei Award of the Catholics, and the God and Country Award of the Protestants.

This Scout troop, sponsored by a Jewish community center and meeting in the center building, reflected something of the profound faith of the late Rabbi Goode, now immortalized as one of the four chaplains of World War II who sacrificed their lives on a sinking troopship during World War II so that other men of all faiths might live.

This Scout troop also epitomizes the unique relationship that has existed between the Boy Scouts of America, now celebrating its golden jubilee, and the Jewish community center movement and the National Jewish Welfare Board from the very beginnings of Scouting in this country.

In June 1910, when a number of leaders of youth activities met in New York to launch the Boy Scouts among those present were William Mitchell, executive director of New York's 92d Street YM-YWHA, the oldest existing center in the country, Mortimer H. Schiff. Later in the year Oscar S. Straus, former Secretary of Commerce and Labor, and one of the founders of the 92d Street YM-YWHA, was added to the first national council of the Boy Scouts.

When scouting was born in this country half a century ago, there were already more than 100 Jewish community centers and YM-YWHA's. Regional associations of Y's existed in Pennsylvania, New England, and Greater New York.

Three years before the Boy Scouts was founded, Jacob H. Schiff, Mortimer Schiff's father, who had given the 92d Street Y its first two buildings, proposed the establishment of a national league of YWHA's. In response to this suggestion, Felix M. Warburg, Schiff's son-in-law, who was president of the 92d Street Y took the initiative in convening a series of conferences out of which there developed in 1913 the National Council of Young Men's Hebrew and Kindred Associations.

This council—the first permanent national association of YMHA's and Jewish community centers—became part of the National Jewish Welfare Board in 1922. From its very first days this counsil became active in scouting. In 1913 the 92d Street YM-YWHA founded the first Scout troop in a YMHA.

The late Frank L. Weil, for a decade president of the Jewish Welfare Board and a longtime leader in the Boy Scouts and chairman of the National Jewish Committee on Scouting, was an assistant scoutmaster of this troop. The first New York City Boy Scout to win the coveted Eagle badge was Milton D. Lowenstein, of the YMHA troop, who received it in 1917.

In 1915 the National Council of Young Men's Hebrew and Kindred Associations created a scouting committee whose aim was to encourage Y's to organize Scout troops. This committee published a manual on the Boy Scout movement and the YMHA, written by Samuel J. Blout, who was the first scoutmaster of the 92d Street Y's troop.

As a result of these efforts the Boy Scouts reported in 1917 that slightly more than 1 percent of the 7,319 Scout troops were sponsored by YMHA's. By 1936 the number of Jewish-sponsored troops, including those related to Jewish community centers and YMHA's, had risen to 3 percent of the total of 15,599.

The kinship between scouting and Jewish Welfare Board and its affiliated Jewish community centers and YMHA's was zealously encouraged by a unique group of personalities active in the leadership of all three groups. The first of these was Mortimer Schiff, who was both a founder of the Boy Scouts of America and of the Jewish Welfare Board. During World War I he headed Jewish Welfare Boards Army and Navy work which provided religious, recreational, and morale services for Jewish military personnel. It was he who took the lead in sponsoring scouting among churches, synagogues, and Jewish community centers.

Schiff served on the executive board of the Boy Scouts from 1910 until his death in 1931. Shortly before he died he had been elected president. Some years later he was succeeded by his son, John, who had also headed the Jewish Welfare Board's Armed Services Division in the early days of World War II.

It was Mortimer Schiff who helped develop scouting's field and training programs, promoted the local council systems and encouraged the growth of scouting's international work. In his memory, his mother, the late Mrs. Jacob Schiff, gave the Boy Scouts the Mortimer L. Schiff Scout Reservation in New Jersey, a 480-acre reservation where Scout executives and volunteer leaders from all parts of the country come for advanced training. Mortimer Schiff's name is on the charter granted the Boy Scouts by Congress in 1916.

In 1926, Schiff, the late Dr. Cyrus Adler, who had succeeded Schiff as head of Jewish Welfare Board's military welfare and religious program, and the late Harry L. Glucksman, then Jewish Welfare Board's executive director, took the initiative in organizing the National Jewish Committee on Scouting. The first executive of this committee, Philip W. Russ, now a member of the Jewish Welfare Board professional staff, prepared a brochure entitled "Scouting and the Jewish Boy." There was also a brief Yiddish version of this publication.

Dr. Adler was the first chairman of this committee, which embarked on a nationwide campaign to encourage Jewish groups to organize Scout troops. Although handicapped by lack of funds for many years, this committee not only stimulated the growth of scouting in centers, YM-YWHA's, synagogues, and other Jewish groups but aided in the establishment of kosher kitchens at Scout camps and in obtaining rabbis to serve as Scout chaplains. In 1935 Frank L. Weil succeeded Dr. Adler as chairman of the National Jewish Committee on Scouting.

In 1947 the committee established the Ner Tamid Award for Scouts who continue their Jewish studies after Bar Mitzvah. Since then 4,125 boys have earned this award which recognizes knowledge of Jewish festivals, attendance at synogogue, familiarity with Jewish life, service to the Jewish community and attendance at a Hebrew school or study of Hebrew at a public high school for 1 year after Bar Mitzvah.

In 1949 Jewish Welfare Board expanded its efforts on behalf of scouting by creating a National Committee on Scouting headed by Isidor Schifrin of Cincinnati. A survey by the committee in 1950 revealed that 79 percent of Jewish Welfare Board's affiliated centers and Y's sponsored Boy Scout troops and that 76 percent of these were supervised by center professional staff. This study showed that scouting was well integrated with the total center program, with 479 Scout troops sponsored by 176 centers.

At the end of 1958 there were 871 Boy Scout units sponsored by all kinds of Jewish groups, and nearly half of these were sponsored by centers. Jeffery L. Lazarus, Frank Weil's successor as chairman of the Jewish Committee on Scouting, has said that the Jewish community centers are among the best sponsors of scouting.

Scouting's 50th year finds Jewish groups of various kinds—centers, synagogues, B'nai B'rith, and others sponsoring 1,300 Scout troops with a combined enrollment of nearly 100,000 boys.

The 50-year-old tradition of Jewish community center and Jewish Welfare Board leaders assuming active roles in scouting has never been broken. The work of the Schiffs, Adler, Glucksman, and Weil has been continued by Irving Edison, Charles Aaron, Walter E. Heller, Solomon Litt, Louis Kraft, and Samuel D. Gershovitz through active participation in scouting programs and in the National Jewish Committee on Scouting. Before his death, the late Lloyd W. Dinkelspiel was also active in scouting.

Since 1947, Jewish Welfare Board has also played an important role in scouting's international jamborees and in scouting's camp chaplaincy program. At the sixth jamboree in Paris Jewish Scouts from the United States were able to obtain kosher food through the efforts of Jewish Welfare Board. At the seventh jamboree in Vienna in 1951 Jewish Welfare Board again arranged to provide kosher foods for American Scouts who wanted it and also furnished Jewish songbooks and prayer articles.

Since World War II, Jewish Welfare Board has been actively participating in all national Boy Scout jamborees. It has made available the services of Rabbi Aryeh Lev, director of its Commission on Jewish Chaplaincy, to help the National Jewish Committee on Scouting and its executive, Rabbi Harry Lasker, organize religious programs at the jamborees. Rabbi Lev, who has served as Jewish chaplain general at every national jamboree since 1950, has been responsible for recruiting Jewish chaplains in various Scout regions so that religious services and counseling could be provided to Jewish Scouts from the time they left home until they returned.

Jewish Welfare Board also handled the orientation of the Jewish chaplains, patterning it after the kind of guidance given rabbis who enter the military chaplaincy. Jewish Welfare Board efforts were also instrumental in getting the Army, Navy, and Air Force to provide ecclesiastical appointments such as altars, arks, candlesticks, etc., which are used for the large open-air Sabbath services at the Scout jamborees. From Jewish Welfare Board, too, came prayer books, prayer shawls, and kosher food for distribution to the chaplains who in turn made them available to Scouts who observed the dietary laws.

Throughout its 50 years then, the Boy Scouts of America, a unique brotherhood of youth, has had active allies in the Jewish community center movement and Jewish Welfare Board because each sentiment and injunction expressed or implied in the Scout oath and law finds its sanction in Jewish tradition, the perpetuation of which is at the core of the purpose and program of Jewish community centers and Jewish Welfare Board.

Agriculture

EXTENSION OF REMARKS

OF

HON. J. ERNEST WHARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. WHARTON. Mr. Speaker, under leave to extend my remarks in the

RECORD, I am very pleased to submit the views of one of my constituents, an educator by profession, and one who seems to reflect the majority opinion on the problem of farm legislation. While I am not in complete agreement with him as to the replacement of the small farmer, many will subscribe to his views on the general situation.

Congressman J. ERNEST WHARTON,
Member of Congress, 29th District, New York, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN WHARTON: I think this type of questionnaire is an excellent idea. I think you, as a Representative of this area, should find out what we want, rather than be guided by the newspapers, or by Gallup polls, etc. (the validity of which I question).

On the subject of farm subsidies, I would like to expatiate on this more than your questionnaire permits. When the Federal Government collects taxes from people to provide military defense, to provide necessary services, etc., that is fair and moral. When the Federal Government collects some of my precious dollars (I have a wife and five children to support) to give to a farmer to raise food that neither he nor I nor the U.S. Government want, that is grossly immoral. I spent the first 15 years of my life in a small farming community in Wisconsin, and I have worked on farms occasionally, so I know the farmer has problems, but so does everybody else. When the small businessman can't make ends meet, he goes out of business. I hate to see this happen, but if the man's services aren't sufficiently in demand, I don't think we should subsidize him to build things we don't want. The farmers would raise a howl if their local board of education hired 10 extra teachers, to sit in 10 empty classrooms, "because these poor teachers couldn't find a different job." Or if Federal Government laid out a highway half a mile wide from New York to California, the farmer would shout that this is unnecessary. It is just as unnecessary that we have mountains of food piled all over the country, much of it to be wasted and spoiled, all of it expensive to store, all of it to be sold at a loss or given away.

Many many farmers overinvest in machinery, like combines, which they cannot afford to buy in the first place and which they cannot afford to maintain in the second place. Is it wise to spend $5,000 to $6,000 for a machine that will be used perhaps 20 days a year. If five or six farmers went into company on one that would be a different story.

Perhaps it is just as well that many of the small farmers be allowed to go out of business, to be replaced by bigger, more efficient units. Or if it is felt that our country needs these little farms badly enough, I believe it would be economically sounder to give each owner of a small farm an annual subsidy—let's say $500. Then let the law of supply and demand operate. Those who have to go out of business then would prove themselves not worth retaining as farmers.

Yours truly,

CLETUS SCHILLER.

World Peace by Law

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Thursday, February 18, 1960

Mr. GOLDWATER. Mr. President, I am sure all my colleagues will receive a great volume of mail in regard to Senate Resolution 94, which in effect would destroy the Connally reservation as it applies to the World Court. Many good editorials and columns have been written in support of the Connally reservation, but I came across one this morning in this week's Newsweek which I think is particularly applicable. It is entitled "World Peace by Law," written by Raymond Moley. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Newsweek, Feb. 22, 1960]

WORLD PEACE BY LAW

(By Raymond Moley)

As an ideal, "world peace through law" has moved enlightened minds over many centuries. There were many prophets even before Dante wrote his De Monarchia in the 14th century. Three hundred years later, Hugo Grotius became the founder of modern international law. There have also been many judicial bodies of an international nature, the latest of which is the United Nations' International Court of Justice. The U.S. Senate by resolution in 1946 recognized its jurisdiction.

At that time, however, wise people recognized that under modern conditions many domestic concerns might be construed to be international and that we would need some protection against having our internal affairs dragged before a tribunal dominated by other nations. Senator Tom Connally then succeeded in having added to our recognition of the court's jurisdiction the words, "as determined by the United States." That was the Connally reservation. We were not alone in specifying a reservation. Twenty-two other nations have made such limitations of their own.

CONNALLY RESERVATION

But now the effervescent Senator HUBERT HUMPHREY has before the Senate a resolution to repeal the Connally reservation. This idea, born of a current flush of optimism, holds that since we are strong—which HUMPHREY frequently denies—we can attain peace by unilaterally submitting our domestic affairs to the caprice of others. An unusual group of bedfellows supports the Humphrey proposal. There are, of course, his fellow "liberals" in the Senate, also many global societies, and, strangely enough, the Secretary of State and the Attorney General. The State Department in an official policy statement has stated that "there is no longer any distinction between 'domestic' and 'foreign' affairs." This doctrine would apply to such subjects as immigration, tariffs, and the Panama Canal, which we have regarded as vital to our internal affairs.

The court to which we would assign such interests under the Humphrey self-denying act is composed of 15 judges selected by the United Nations. We, as well as other countries, have one judge. The U.S.S.R. and Poland have one each. Several small countries are also represented.

But while the Communist bloc thus outnumbers us in the court, no Iron Curtain country has agreed to submit to the compulsory jurisdiction of the court. This is indeed a strange situation, in which people sit on the court to administer law which they themselves refuse to recognize as binding.

CONSENT, KEY WORD

In their zeal for an ideal, those who propose unilateral legal disarmament forget the true nature of law and its capacity to command obedience. Woodrow Wilson sacrificed popularity, health, and life itself for the ideal. But he understood the reality of civil obedience and the substance of courts and judges. In his four-point speech on July 4, 1918, he summed up the matter in a sentence:

"What we seek is the reign of law, based upon the consent of the governed and sustained by the organized opinion of mankind."

"Consent" has a long history and deep meaning. It is real only when those involved freely, knowingly, willingly, and with a part in creating the situation, enter into the benefits and responsibilities of the decision. It is not present when a virile and sizable minority disagrees. "Opinion" is not created by law. Opinion creates law. Opinion, not a mere majority in the U.N. or in a township. We learned that when we tried to enforce sumptuary laws here. The overwhelming majority must see law as the embodiment of what it deems just. After law, there must be courts.

There is no such world law now, with great Communist nations in defiance of what other nations believe to be justice and sacred obligation. We should, however, seek for such consent and the law that defines it. The International Court of Justice is useful to remind us of the ideal and to adjudicate what minor matters come before it. But we must not alienate our responsibility to stay strong and thus through weakness dissipate our moral influence in the world. Legal disarmament would be as disastrous as military disarmament.

Our State Colleges and Universities Are Rich in Scientific Curiosity—Their Motto Is "The State Is Our Campus"

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, our State universities are rich in scientific curiosity and are dedicated to the total life of man. We all benefit from the results.

It was while studying the science of soils at Rutgers, the State university of New Jersey, that Dr. Selman A. Waksman discovered streptomycin which is so effective in the treatment of tuberculosis and some other infectious diseases.

I include here the second part of an article in defense of State colleges and universities written by Dr. Paul Engle of the State University of Iowa. The article appeared in the Saturday Evening Post of February 13, 1960:

Our State universities are rich in scientific curiosity and we all benefit from the results—sometimes from those unpredictable ricochets of that curiosity which lead to amazingly valuable targets. It was while studying the science of soils at Rutgers, State University of New Jersey, that Dr. Selman A. Waksman (born in a thatched hut near Kiev, Russia) noticed that while many groups of microbes lived in harmony with other groups, certain microbes destroyed others. This led to his search for a made-by-microbe enzyme or antibiotic that would attack disease germs, and to the discovery of streptomycin with its effective treatment of tuberculosis and some other infectious diseases.

The motto of these schools has been: "The State Is Our Campus." State extension pro-

grams—extending education beyond the campus itself by means of county agents, traveling specialists and correspondence courses—reach every county; they bring hundreds of thousands of people to the college every year for short courses; they immensely affect the lives of the people. This is unheard of in Europe, and too often in America the extension system is derided as not being "true education" in the traditional sense. This it certainly is not, but it gives our society a coherence and a steady, practical progress—the best possible basis for any sort of education.

For some years the University of Wisconsin has given more Ph.D.'s in science than any other school. When we hear so much about the pressure to turn out scientists, let this State university's remarkable contribution be praised. Or, if you have ever poisoned a rat with a substance called Warfarin, so deadly and subtle that the Medici would have rejoiced in its use, recall that the first four letters of that name stand for Wisconsin Alumni Research Foundation, which holds the basic patents. The same substance, processed as a drug called Dicumarol, saves human lives as a blood-thinner, useful in preventing or treating embolisms. When Wisconsin's Dr. Harry Steenbock discovered a process for irradiating food to increase its vitamin-D content, he not only helped banish rickets among children but also helped devise a mechanism, through the research foundation, by which some of the financial proceeds from such discoveries could be fed back into more research. The fellowships and facilities which this State university offers make it one of the world's great research centers.

In brief, the State university is dedicated to the total life of man, not only to his mind or his knowledge of classical culture. These latter are of constant importanc, but there is no inconsistency in a university's offering every subject which provides a heightened understanding of man or at least adds to his comfort and security. The same school can teach the blinding Greek tragedy of Oedipus, of that doomed king's punishment for his pride and his violation of his mother, and at the same time can offer a psychiatric recognition of the emotional complex to which Oedipus has given his name. It can also offer courses on marriage, on the family, on every aspect of human relationships, normal and abnormal. The State university holds that it is important to read the text of the classical tragedy, but that it is also proper to help the child with vitamins, the right psychological atmosphere and the appropriate preschool chances to grow. This surely is the whole sort of place which Dr. Conant meant when he spoke of the new comprehensive American type of university.

There are still some problems, of course. The heavy practical emphasis of the State universities was anticipated long ago by one of the first fighters for such schools, Jonathan Baldwin of Illinois: "When I have taught a boy merely to hold a plow," he said, "I have only taught him to be a two-legged jackass, twin brother to the four-legged team in front of him. But when I have taught him, truly and scientifically, the mighty mysteries of the seas, stars, oceans, lands and ages that are concerned in the act of plowing, I have made a man of him—had we not better say an angel?" Such reminders are needed; the State university all too often teaches the boy his basic skill and neglects the angel in him. Of Greece's magnificent culture, for example, all that our boy may know after 4 years of college is an invaluable collection of telephone numbers of the Greek-letter sorority houses.

Still, some of the foolishness on the campus will fool you. Look at a street in Bloomington, Ind., some afternoon and you may be shocked to see girls racing bicycles or even tricycles. What nonsense. Not so, however, for this performance is the Little 500—a takeoff on the Indianapolis auto races—a competition put on by the Indiana University students to raise money for scholarships, a total of 426 such grants of $100 each in the last 5 years. At the same university Nobel Prize Winner Dr. Hermann Muller makes studies in genetics which argue for greater care in creating new life for this lively globe, whether animal or human. His efforts would produce girls with legs far better adapted for riding in the Little 500.

The really serious problem of the State university is not the natural tendency of young folks to have fun, but rather it is a mysticism of mediocrity that has resulted in some unrealistic policies. Counting enrollments without regard to quality of the individuals is a deceptive occupation—and it could be a disastrous one. For the rest of this wicked century, only supreme intelligence will save us. One Einstein probing the essential order of matter, which we must understand, is more necessary than 10,000 minds devoted to probing the best way to slip brand names into the TV viewer's unsuspecting consciousness.

There is an absurd suspicion of the word "elite" in many State universities, as though it were proper to praise outstanding talent and guts in football but wrong to praise the same level of talent in activities of the brain. The University of California admits roughly the top 15 percent of the State's high-school classes, and Michigan's average is the top 40 percent. These are unique exceptions, however, to the general level of admissions. Not only do State universities tend to admit the incompetent student and go to the wasteful necessity of giving him housing, food and wasted instruction, they also tend to demand too little of him. Too often the result is a neutral person, with no richness of cultural experiences to sustain him after he leaves the university—a bland product which had attended elementary classes and advanced parties without coming into contact with the greatness inhabiting the same campus.

Because of their flexibility and their size, both of which allow some appalling things to be done in the name of education, State universities can also do some very original things. The new America operas "Susannah" and "Wuthering Heights" were composed by Carlisle Floyd at Florida University. He says: "This university afforded me an invaluable laboratory for learning whatever I know about the art of music and also the opportunity of hearing what I have written in performance." This notion of the university actively encouraging both the creation and the presentation of all the arts is a brandnew invention, native to this country. The University of Illinois has developed the first combination of sound with sight on film, improved railroad rails, corn, and soybeans—and it also produced Kurt Weill's "Threepenny Opera" before its successful New York run. It regularly offers work in the arts which would amaze a European: a large exhibit of contemporary American paintings and sculpture, new music in premiere performances, a string quartet performing difficult music by such modern composers as Alban Berg, an exhibit by students of city planning of a whole town ordered and landscaped. Such breadth of activities is new to the educational scene.

On balance, the State universities are cause of hope, not despair. The fact is that these schools—a unique American invention—have become distinguished institutions faster than any group of educational places ever has before. After all, most of them are only 50 to 75 years old in terms of being major universities. Remember what the poet Holmes wrote about Harvard:

"And who was on the catalogue
When college was begun?
Two nephews of the President
And the professor's son."

In many ways the State university now has taken the entire world for its campus. It is the sustainer of the Western tradition of free inquiry. Only at the University of Michigan Press is Boris Pasternak's novel, "Doctor Zhivago," published in its original Russian. That noble press is helping to keep Russian literary tradition alive by printing a selection from every worthwhile Russian writer who has been silenced in the past 30 years. Two-thirds of the personnel recruited for technical assistance abroad has come from the land-grant institutions. Michigan State has the only dean of international programs in the world. Its faculty members go out to Brazil, Okinawa, Vietnam, Pakistan. When Michigan State started, more than 100 years ago, its first students attended chapel at 5:30 a.m. and spent 3 hours after breakfast logging land to build a place to study. Now the Michigan State faculty is clearing the corners of the earth for a more abundant and democratic development. Tides of foreign students are coming to our campuses from all over the world, and not just to study our practical sciences. To the University of Iowa come poets from Japan, Formosa, Ireland, England, fiction writers from South Korea, the Philippines, Sweden. At the same time tides of university-trained specialists are flowing out, carrying to emerging nations all around the world the modern techniques of agriculture, health, education, industrial development. The all-American idea of extension has become global.

The pay of a full professor in the United States is one and a half times as much as the wage of the average factory worker. In Russia, it is eight times as much. This is a comment not only on the miserable pay scale of the Russian worker but also on the importance Russia's rulers attach to education. Agreed, that Soviet intelligence is not a free one by our standards, but we must not overlook the essential challenge of that intelligence, free or not. Our State universities are making a great effort to attract and keep distinguished minds—and they must succeed if our society is to meet the competition it surely faces.

Society has shaped these universities, and now the universities will increasingly shape society. They must bring to their campus that 47 percent of high school seniors with a high IQ who do not get to college—any college—and they must search for them as hard as they search for quarterbacks who can handle the pass-run option. This terrible erosion of our brainpower must be stopped for our very survival, and the State universities can stop it. These universities will enchant you and disappoint you. They will offer the mediocre and the marvelous on the same campus, in the same buildings, in the same hour. But their virtue will triumph, because they exist in a free country, reflect its freedom and will be great instruments for keeping it free.

Korea's Misfortune

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 18, 1960

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed

in the RECORD an editorial entitled "Korea's Misfortune," published in the Washington Post of February 16, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KOREA'S MISFORTUNE

Twice in 4 years fate has intervened to deprive Korea of effective opposition in a presidential election. The sudden death at Walter Reed Hospital of Chough Pyong-ok leaves the Democratic Party, which is vying with the Liberal Party of President Syngman Rhee, without a candidate for the top office in the election on March 15. There is a sad and remarkable parallel between Dr. Chough's death and the death just before the 1956 election of another Democratic presidential nominee, P. H. Shinicky, for whom nearly 2 million votes nonetheless were cast.

An equally odd coincidence is that when President Rhee took advantage of Dr. Chough's illness and trip to this country for medical treatment to advance the election from the usual May 15 date, the filing deadline was set for February 13. Thus Vice President John M. Chang, who contested the Democratic nomination with Dr. Chough, presumably cannot replace him on the ticket. Dr. Chang, who has been almost totally isolated by the Rhee government, remains the vice presidential nominee against the Liberal he defeated in 1956, Lee Ki-poong.

Dr. Chough, a graduate of Columbia University, was Dr. Rhee's personal emissary to the United States at the time the Republic was established in 1948. Like so many other Korean leaders who had once associated with Dr. Rhee in the independence movement, however, Dr. Chough broke with the aged President over his arbitrary and authoritarian qualities. Even though the Rhee government had stacked the cards heavily against the Democrats in the forthcoming election, the tough-minded Dr. Chough had been expected to make a good race.

What makes the death so poignant is that Dr. Rhee and his colleagues had been using every device to disadvantage the opposition, from intimidating voters in byelections and suppressing critical newspapers to misusing the national security law. The outlook for a fair election was dismal enough before Dr. Chough's death; now that the case of the Democrats is hopeless, perhaps Dr. Rhee can afford to moderate his dictatorial tactics.

Editorial Response to a Suggestion by Senator Hennings for a "War on Hunger"

EXTENSION OF REMARKS

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mrs. SULLIVAN. Mr. Speaker, the senior U.S. Senator from Missouri, the Honorable THOMAS HENNINGS, has long been in the forefront of those in Congress who believe that our great abundance of food is a blessing enjoyed by America rather than the headache and curse so many people associated with farm policy seem to regard it. Senator HENNINGS is an advocate of the food-for-peace proposal to use our abundance of food to help the less fortunate people of other countries to achieve a decent minimum diet.

He has also always been one of the strongest supporters of the food-stamp plan for assuring a more adequate diet for the millions of our own citizens here in the United States who now are forced by economic necessity to live on less than a decent minimum diet. I appreciate the support Senator HENNINGS gave me in the long fight to have the food-stamp plan enacted last year after 5 years of effort. I know he joins me now in hoping that the President will finally agree to utilize the authority now provided under the food-stamp law for putting the plan into operation.

In the meantime, Mr. Speaker, I think there will be general interest in an editorial which recently appeared in the Chattanooga (Tenn.) Times, discussing Senator HENNINGS' views on food for peace, as follows:

[From the Chattanooga (Tenn.) Times, Feb. 8, 1960]

THE WAR ON HUNGER

Senator HENNINGS, of Missouri, produces some food facts. He points out that when all the wheat harvested last fall is finally totaled up, the United States "will find that it has produced just over a billion bushels." He figures that 500 million bushels would be ample for the needs of the 170 million Americans.

By way of contrast, says Senator HENNINGS, India's entire food grain production (wheat, corn, millet, rice, etc.) will total about 273 million bushels. And with these 273 million bushels India must try to feed 400 million persons.

The Missouri Senator was writing in favor of the food-for-peace bill which was prepared and introduced in Congress last year.

In 1954, Congress came up with Public Law 480, under which we have managed to increase our distribution of surplus food in various parts of the world. We have certainly helped India in that direction.

We have managed to get around some of the complex problems involved in the war on hunger, such as problems of international trade, transportation, currency, and politics.

We have gotten rid of some $7 billion worth of surplus food through surplus disposal programs which sell excess food for foreign currencies, barter food or strategic materials and donate food to meet emergency needs. Even so, our surpluses mount. And humanity demands that the program be augmented.

President Eisenhower has asked the world to join in an all-out "war on hunger." There are some objections to the new food-for-peace bill, and these are admitted by Senator HENNINGS. For one thing it sets up a 10-year program "under which the United States would contract to supply surplus foods to hungry nations." Many are not willing to face the prospect of surpluses on a permanent basis in American agriculture.

But surely we will continue to have an abundance, though the cost of that abundance in storage, farm subsidies, etc., to the American taxpayer, in one of the fantastic postwar episodes and awaits courageous approaches.

The cold war has put tangles into the world trade problem. Certainly not the least valid reason for seeking peace in our time is the fact that world trade would be stimulated so that it would be possible to win a world war on hunger.

Real Conservation

EXTENSION OF REMARKS

OF

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, February 18, 1960

Mr. HART. Mr. President, the Adrian Daily Telegram of Adrian, Mich., in its editorial of February 8, 1960, comments on testimony which I submitted to the Senate Interior Committee in support of S. 2549, the Resources and Conservation Act of 1960. The last paragraph of this editorial states the matter far more persuasively and eloquently than I was able to do, and I therefore ask unanimous consent that this fine editorial on Senator MURRAY'S bill be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REAL CONSERVATION

Michigan's junior Senator, PHILIP A. HART, gave eloquent and persuasive testimony for wise management of the Nation's natural resources in a recent appearance before a Senate committee. It was considering a bill, which he supports, calling for a council of resources and conservation advisers in the White House and a parallel joint committee in Congress.

These two bodies, Senator HART pointed out, "will enable all sections of the country to have their developmental needs placed in national focus alongside those of all other sections." The bill, he said, "permits us to look at all resources needs of all parts of the country and formulate programs in the light of this knowledge." As things are now, there is a multiplicity of Federal, State, and local agencies operating in a spasmodic fashion with overlapping and sometimes with conflicting purposes.

Senator HART emphasized particularly the need to preserve recreational resources, declaring that with the Nation's population growing so rapidly, recreational areas are taking on prime importance. Means of controlling stream pollution have been devised and are increasingly being applied; scientists are developing feasible ways to salvage brackish and saline water for drinking and other municipal purposes; there are hints of wondrous new potentials for power. But there are no known or foreseeable substitutes for hiking and camping, hunting and fishing, mountain climbing and skiing and these require lands and waters reasonably close to expanding industrial areas.

"At the very time when there are more and more people, and more of them than ever before wanting to refresh themselves from the strains and fatigues of daily living," said Senator HART, "we are bulldozing miles of trees and meadows for highways and housing developments, we are building factories on our remaining shorelines, we are polluting our streams and our beaches."

We must have sites for new factories and for new towns and more highways essential. But factory lots cannot be used for picnics; polluted water destroys fishing, highway rights of way often spoil spots of natural beauty. Yet we can have all these essentials to a rapidly growing population, including recreational areas as well, by intelligent overall planning. That is conservation at its best. And that is what the resources bill is aimed at getting.

Security Intelligence Leaks Harmful to U.S. Security

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. TABER. Mr. Speaker, I submit the following editorial and resolution:

[From the Ledger Star, Feb. 11, 1960]

MILITARY REPORT—SECURITY INTELLIGENCE LEAKS HARMFUL TO U.S. SECURITY

(By James Elliott)

NORFOLK.—One of the most touchy questions in Washington these days involves the recent leak of testimony before a congressional committee of Central Intelligence Agency head, Allen W. Dulles.

Already Senator EVERETT DIRKSEN of Illinois has suggested that a probe might be in order. And there have been accusations that presidential hopefuls are more interested in making headlines than headway.

The controversy centers around a column written earlier this month by Joseph Alsop in which he related how Dulles had told the committee that Russia would have 35 intercontinental ballistic missiles in launchers by the end of June and between 140 and 200 by mid-1961.

Congressional and military circles in Washington are upset not only by the leak from the committee, but also by the fact that the information was made public.

"This is one of the most serious things to happen here in a long time," emphasized one responsible Pentagon officer.

In the past, there have been a number of leaks from congressional committees. Heretofore, however, there have been few, if any, which have involved facts that clearly are a matter of security intelligence.

Regrettably, a leak of this nature raises the question of trust imposed on a congressional committee. For if the men elected to these responsible positions evade that trust, many feel, they are not upholding the responsibility that goes with the post they are holding.

The press, too, must share a certain responsibility in matters like this, many agree.

The whole question of security leaks very likely will be discussed by President Eisenhower at his press conference today. He is known to be disturbed by the matter.

The real tragedies of this particular leak, many feel, fall into two particular areas. In one, the trust one government agency has in another becomes jeopardized. Central Intelligence quite likely can be expected to be more guarded than ever even in closed-door sessions in the future.

The other is that the information leaked gives an insight into CIA's operations. The enemy always knows what he's doing. But when he finds out what information the United States knows about him, he begins to learn more about where the United States is getting that information.

And the cold recital of CIA's information in a most sensitive area like ICBM capabilities undoubtedly will cast a deep shadow over that agency's operations in the future. It could well be extremely detrimental to the security of the United States.

VFW NATIONAL SECURITY COMMITTEE—DEPLORING THE PRACTICE OF LEAKING CLASSIFIED INFORMATION TO THE PRESS AND PUBLIC WHICH HAS BEEN OBTAINED IN CONGRESSIONAL HEARINGS

Be it resolved by the VFW National Security Committee meeting in Washington, D.C., February 7, 1960, That we recommended to the VFW commander in chief that the Veterans of Foreign Wars deplores the practice of leaking strategic military information obtained in congressional hearings on military matters to the press and the public.

A Plea for Political Integrity

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES

Thursday, February 18, 1960

Mr. GOLDWATER. Mr. President, on January 27 of this year, 84 "dinners with Ike" were held across the Nation. Fourteen of them were given in the State of Arizona, one in each county, an accomplishment of which no other State can boast. In addition to hearing the remarks of our President and Vice President and the other party dignitaries who appeared on the national scene, the participants in each of Arizona's 14 dinners were able to hear the remarks of distinguished members of the Republican Party of that State as they spoke following the closed television portion of the program. One of those speeches, delivered by Mr. Denison Kitchel, at Morenci, Ariz., carried such a challenge to the voters and the candidates that I believe that colleagues of mine will find food for thought in his remarks. Therefore, I ask unanimous consent that the speech entitled "A Plea for Political Integrity" be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A PLEA FOR POLITICAL INTEGRITY

(By Denison Kitchel, "dinner with Ike" program, Morenci, Ariz., January 27, 1960)

Mr. Chairman, ladies, and gentlemen, to have such a fine gathering as this under the auspices of the Greenlee County Republican Committee, is, I hope, an indication of the dawn of a new era in Greenlee County politics. To be frank with you, when I was first asked to come here and address a Republican meeting, I laughed at the idea. I suggested that since I knew both of the Republicans in Greenlee County, I might just call them on the telephone and let it go at that.

When I was told that quite a gathering was anticipated, I began to wonder why I, a political nobobdy, was being asked to go. I said to myself "With Goldwater speaking in Phoenix, Fannin in Tucson, and Rhodes in Yuma, why am I being sent to Morenci?" Then I looked at the Greenlee County registration, almost 19 registered Democrats for each registered Republican, and, harking back to my college days, I thought I saw the answer to my question.

Many, many years ago when I was in Yale, I had a roommate who was on the football squad. Like Hester of earlier times, he was very anxious to win his letter. But for 3 long years he warmed the bench and never got into a game. When we came to the last game of our senior year, the annual tilt with Harvard, it was his last chance. The day was a bad one for dear old Yale from the very start. Harvard scored one touchdown after another. Fred Jones, my roommate, sat on the bench in utter gloom. It was the last minute of play and the score was Harvard 60, Yale 0. The coach suddenly turned to Fred. "Go on in, Jones," he said, "you can't possibly do any harm now."

Looking at that 19 to 1 registration, I thought maybe I had found the reason why I was being sent to Greenlee County.

But seriously, I consider being here both a privilege and a challenge. I am convinced that if this great Republic of ours is to be preserved, it will come about only by overcoming such odds as these, by fighting unremittingly against entrenched irresponsibility and grave political amorality.

In the few minutes I have in which to talk with you tonight, I want to ask you to join with me and with millions of others, Republicans and Democrats alike, in a crusade to restore integrity to American politics. Somewhere along the road that integrity which was the key to the founding of our Nation and which is so essential to its preservation has fallen by the wayside. By integrity I mean adherence to principle and rejection of expediency. In connection with this subject, it can best be described as political "guts"—the political "guts" to fight for a principle and the political "guts" to lose, if necessary, rather than to compromise with what is wrong. I am convinced in my own mind that the American people will choose political integrity as the best means of self-government whenever they are given the opportunity to make that coice—unfortunately, in these days of political amorality, of "me-tooism," they seldom get that chance.

It is my guess that most of you would classify yourselves as conservatives. But it would also be my guess that many of you are not quite sure what a conservative is—except that a conservative is usually against what is going on in government these days. Further, I would guess that some of you are even a bit ashamed of being a conservative.

For some strange reason, the word "conservative" has come, in the minds of many, to have derogatory connotations. (A conservative is said to be a reactionary, a person who resists change unreasonably, a selfish person who has no interest in the welfare of his fellow men. These are utterly false assertions. The true conservative is one who seeks to conserve those institutions and principles which, on the basis of knowledge and experience, he has found to be good. The true conservative is not opposed to change. On the contrary, he welcomes constructive and well-considered change which makes even more effective and more desirable those things which the tests of time have proved to be fundamentally sound. The conservative is not willing to exchange a pig-in-a-poke or a pie-in-the-sky for something of known value. He is not willing to throw away his heritage for the sake of political power.

Of the two words which are nowadays so constantly used as opposites, i.e., the words conservative and liberal, the latter is probably the more misleading of the two. In fact, the word liberal as used today is a complete misnomer. Originally, the word was applied to one who was particularly zealous of individual liberty, one who resisted to the utmost the encroachment of government on personal freedom. Today, it is the conservative who occupies that role—he is convinced that the principle of maximum freedom of the individual and minimum interference by government is one which has stood the test of Time and which must be conserved. The liberal of today stands for just the opposite. He is concerned with the governing of all forms of individual endeavor and conduct by some sort of self-appointed group, of which he is a member, having a special aptitude for determining what is best for everyone else. He is only liberal in the sense that he gives freely of what is not his. This he does

through the media of high taxation and profligate governmental expenditure. Wittingly or unwittingly, socialism in the guise of the welfare state is his goal.

So the first thing of which I would persuade you tonight is that if you have the beliefs of a true conservative, if you feel, as I do, that the things of proven value to this Nation, such as individual freedom, economy in government, self-reliance and human dignity, should be conserved, then be proud of those beliefs and shout them from the housetops. Be an active, effective, affirmative conservative—not one who sits meekly by and criticizes, who does nothing overt to conserve the principles and institutions in which he believes.

There is no doubt that the conservative is constantly placed on the defensive by the so-called liberal. The liberal promises everything in the name of humanity and the general good. This is the trick of his trade. He is careless with the truth. He seeks ever to sway people by appealing to their self-interest. Therefore, to be active, to be effective and to be affirmative, the conservative must, first, know clearly what it is he believes in and cherishes and, secondly, find ways to express those beliefs simply and persuasively. In this connection I suggest to you the necessity for study. I can tell you from my own experience in recent years that you will find great pleasure and interest in going back and learning again what you may have learned as a youngster, but have since forgotten. What will surprise you most of all, I think, will be to find that there is nothing new at all in these schemes of the so-called liberals. Social security, unemployment compensation, Government subsidies, socialized medicine, farm price supports, pump priming—you will find them all, in some form or other, in various stages of the history of civilization and invariably playing an active part in the ultimate downfall of the society which succumbed to them. You can go back to Aristotle, Plato, Gibbons, Hobbes, Locke, Burke, Hamilton, Madison, Adam Smith, and many others for this purpose. Or, if you choose, there are some able contemporary writers in this field, such as Chamberlin, Hazlitt, Von Mises, Kirk, Burnham, and Buckley. In this latter connection, you will be amazed to see how much fine material is being produced today in explanation of the conservative viewpoint. At any rate, I can promise you a fascinating and entertaining experience if you will undertake some study of this sort. And I cannot emphasize enough the thought that if we intend to do something to stem the tide—and God knows we must—we must know what we are talking about and become articulate in the truth.

Well—to all this high-sounding talk you may be saying to yourself "Why should I concern myself with all this? Politics is not my business and, besides, here in Greenlee County the voice of a conservative is about as effective as a drop in the ocean." Don't say that. Don't take that defeatist attitude. Politics is the business of every citizen. Every one of us who loves his country has a duty to himself and to his children to engage in politics. I don't mean by that that each of us must go out and run for public office or run around making speeches. I mean merely that we should talk politics, talk to our friends, talk to our neighbors—put across in every little way we can the ideas in which we believe. We should do party work designed to inform the voters and get out the vote. When possible we should make financial contributions.

I don't care whether the registration shows 19 Democrats for every Republican or 100 Democrats for every Republican. The party labels don't mean anything any more. The two-party system in this country has become a farce. The two major political parties stand for just about the same things. Both have shelved integrity and chosen, in greater or lesser degree, to seek votes at any cost. The result, in effect, is a one-party system under two meaningless labels. This sad situation can never be remedied until there is a return to political integrity by at least one party, by the citizens who support that party, and by the candidates who seek to represent it in public office.

I submit to you that if you are a true conservative, and if you demand political integrity of yourself and of your public officials, the time has come for you to mold a political party in the image of your beliefs and standards. And I submit to you that the Republican Party is the one which offers to you the best chances of success in such a project. At least, here in Arizona we have the makings of a party of which every true conservative, every believer in political integrity, can be justly proud.

Before each one of you is a copy of the 1958 platform of the Arizona Republican Party. When you go home tonight, I urge you to read it. It is a revolutionary platform. It does not attempt to promise everything to everybody, like most platforms do. In fact, it doesn't promise anything to anybody. Instead, in brief and clear language, it states the fundamental principles for which the party and its candidates stand. And it was men like Barry Goldwater, Paul Fannin, and John Rhodes, men with political guts, who, pledged to this revolutionary platform, persuaded the voters of Arizona, predominantly Democrat by registration, to elect them to public office.

I am convinced that what has been accomplished by conservatives in Arizona through this forthright approach can be accomplished with equal success nationally. There is nothing peculiar about the Arizona voter. With the tremendous influx of population from all sections of the country, it is obvious that Arizona voters are perhaps the most accurate cross section of voting America to be found anywhere. And that cross section, faced with a clear-cut choice between the political integrity of conservatism and the appeal to self-interest of so-called liberalism, gave a clear-cut answer. I am convinced that the same answer would be given nationally if the American voter could be offered that same clear-cut choice.

With the retirement of President Eisenhower from the political scene the element of immense personal popularity will be absent from the forthcoming presidential election. The chances of winning an election with conservative overtones through "me-tooism" and general pettifogging of the issues—to be perfectly blunt about it, through modern Republicanism—will thus, in my opinion, be virtually eliminated.

Now has come the time when conservatism in any true sense of the world can only survive by a return of political integrity. Now has come the time when people who have a vital community of interest in less wasteful government, in better schools supported and controlled locally, in economic freedom, in the right to work, in individual liberty, in equality of opportunity, in all of the great principles upon which this Nation was founded and has prospered, must work actively and intelligently for the conservation of those principles.

Our best chance is to make the Republican Party our vehicle in this crusade and to mold the Republican Party in the image of the political integrity for which we stand. To this end we must require of ourselves and of those who seek to represent us in public office faithful adherence to the precept voiced by Shakespeare:

"This above all: to thine own self be true,
And it must follow, as the night the day,
Thou canst not then be false to any man."

Nationwide Interest Is Mounting for the Enactment of an Adequate and Deserving Pension for the Veterans of World War I

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. VAN ZANDT. Mr. Speaker, the veteran of the First World War has been accurately described as the forgotten veteran, because it is nearly 42 years since Armistice Day 1918, heralding the end of what was termed "a war to end all wars," and yet the veteran of that bloody conflict continues to be subjected to inequitable treatment in the field of veterans' pensions.

Instead of being accorded proper treatment, the World War I veteran has been sandwiched in with the veterans of other wars under the veterans' benefits program. The khaki-clad American doughboy of 1917–18 never received so-called fringe benefits awarded to those who served their country in later conflicts. The result is that the World War I veteran has been the victim of gross discrimination.

In order to correct the glaring inequities they have suffered, World War I veterans have begun a drive to garner support for a World War I pension bill, several of which are pending before the House Committee on Veterans' Affairs.

I am proud to be the sponsor of H.R. 10130 which is a revised version of my bill, H.R. 1181, which, despite nationwide support last year, failed to be considered by Congress. H.R. 10130 is a companion to the Lane bill, H.R. 9336, which has been selected this year by World War I veterans in their efforts to secure approval of a World War I pension bill.

It is a pleasure to join in the drive launched by World War I veterans throughout the Nation to develop support for H.R. 9336. Although I have similar bills pending, my sole concern is to aid in securing passage of a World War I pension bill and, therefore, I have no pride of authorship.

It is my sincere hope that World War I veterans will be encouraged in their effort to emphasize to Congress the need for approval of World War I pension legislation.

As an example of the enthusiasm being generated for H.R. 9336, I am pleased to include in my remarks at this point the following resolution adopted February 8, 1960 by American Legion Post No. 281, Tyrone, Pa., one of the large and active posts in the central Pennsylvania area. The resolution follows:

PENSION RESOLUTION

Resolved, That it is the sense of this session that, meeting in regular session as of Monday, February 8, 1960, 8 p.m., we place ourselves on record as favoring the enactment by Congress of H.R. 9336 which, among other things, favors a pension for those of the First World War; and be it further

Resolved, That we direct that copies of this resolution be forwarded to Hon. JAMES E. VAN ZANDT, Member of the House of Representatives, Washington, D.C., and the Honorables JOSEPH CLARK and HUGH SCOTT, Members of the U.S. Senate from the State of Pennsylvania; and be it further

Resolved, That we ask of the three to use their good offices to have H.R. 9336 cleared from the House Veterans Affairs Committee and placed upon the floor of the House so the Members may vote upon it; and be it further

Resolved, That we ask our Congressional Representatives, Messrs. VAN ZANDT, CLARK, and SCOTT to favor, by their vote, enactment of H.R. 9336; and, moreover, be it

Resolved, That copies of this resolution be forwarded to the Department of the American Legion of Pennsylvania and the national commander of the American Legion, the Department located in Harrisburg, Pa., National at Indianapolis, Ind.

WARREN E. GETZ, Sr.,
Commander.

Attest:

FORREST M. LUCAS, Jr.,
Adjutant.

Defense Procurement Expenditures

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. CURTIS of Missouri. Mr. Speaker, Gen. Robert E. Wood, former chairman of the board of Sears, Roebuck & Co., appeared before the Joint Economic Committee during the hearings on "Impact of Defense Procurement on the Economy." Because of his former connections, namely: Director of Panama Railway and chief quartermaster general of the Army in construction of the Panama Canal; acting quartermaster general, U.S. Army, during World War I; consultant, World War II, to Chief of the Air Force, General Arnold, on questions of procurement and supply; member, Task Force on National Security Organization, first Hoover Commission; chairman, Task Force on Use and Disposal of Surplus Property, second Hoover Commission; member, Committee on Business Organization of the Department of Defense, second Hoover Commission, I value his views on the matter of integration of supply systems by the Department of Defense.

The Washington Star on February 14 carried a portion of General Wood's statement and I wish to take this opportunity to call it to the attention of my colleagues:

WATCHDOG REQUIRED

It is evident from the lack of enthusiasm at the Pentagon over proposals for consolidating procurement and supply services that something more than authority to eliminate duplication and other waste is necessary to get results. Recent hearings before a Joint Economic Committee subcommittee revealed that progress has been very slow in carrying out recommendations of Congress and of the Hoover Commission. There is a good deal of merit, therefore, in the suggestion that the joint subcommittee on defense procurement be made a "watchdog" group, ready to prod the armed services if they continue to lag in logistical teamwork.

Retired Gen. Robert E. Wood, board chairman of Sears, Roebuck & Co., was one of several Hoover "task force" members who testified at the hearings in favor of the standby plan. Several subcommittee members have expressed interest in the idea. Here is an opportunity for Congress to follow through on an economy program that promises substantial defense savings without any reduction of military strength.

Interest Ceiling Has Opposite Effect From What Was Desired

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 18, 1960

Mr. WILEY. Mr. President, we recognize that, in recent times, U.S. money policy has been the focal point for discussion—in fact, has become a real issue.

What we need, of course, are the facts, not fiction, on the situation.

Repeatedly, President Eisenhower has urged the lifting of the 4¼-percent interest rate on long-term issues of bonds. The Congress, I believe, should give early, sympathetic consideration to these recommendations of the President.

Why?

Because at the 4¼-percent level, it is difficult to sell the long-term securities—particularly in view of the tremendous competition for the available money on the market.

According to experts, also, the net effect—despite statements, perhaps politically motivated, to the contrary—a 4¼-percent ceiling actually costs Uncle Sam more, rather than less, in borrowing money to meet financially obligations.

Why?

In 1960, it is estimated that the Treasury will need to borrow $80 billion. If forced to purchase the money on short-term securities, at interest rates up to 5¼ percent, the costs to the American taxpayers may be substantially higher—than if there were a moderate increase in the 4¼ ceiling on longer-term borrowing.

Until now, there has been too much heat, and too little light shed, on this vital issue.

Recently, the Milwaukee Journal published a constructive editorial simplifying the factors involved in this interest rate controversy.

Reflecting a situation that needs clarification, I ask unanimous consent to have the article from the Milwaukee Journal printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTEREST CEILING HAS OPPOSITE EFFECT FROM WHAT IS DESIRED

An argument that seems to have got twisted around quite backward is the one between the Eisenhower administration and Congress over the 42-year-old legal ceiling of 4¼ percent on interest rates at which long-term securities, 5 years or more, may be issued.

In refusing, so far, to lift the artificial ceiling, Congress strikes what it hopes is a popular pose, defending the people from soaring interest rates and accusing the administration of wanting to make tight money even tighter. Actually, Congress seems to be effecting just what it professes to oppose.

In such a respected Bible of economic thought as Barron's Financial Weekly, the conclusion is that the ceiling on long-term rates has merely pushed short-term rates through the roof. Since long-term issues won't sell at 4¼ percent today, the Treasury has been forced to borrow an additional $36 billion using short-term securities, at rates up to 5¼ percent, in order to get the money at all. And $80 billion more refinancing must be done this year.

Much of the money thus invested, says Barron's, has been in lieu of corporate bank deposits or has been withdrawn from savings banks and savings and loan associations. What Congress has really achieved, therefore, is to reduce bank liquidity and thus, by its own action, make tight money tighter. It also has hurt housing prospects by reducing the supply of home financing.

To be sure, with the ceiling off, the Treasury would need to be cautious not to get stuck with too much long-term debt paying high rates at some future time when the money market is looser again. But that should be fairly elementary in debt management, and certainly the kind of safeguard Congress imposes is all too amateurish.

Actually, in his repeated, urgent pleas for repeal, the President is not seeking authority to increase the total cost of Federal debt. Rather he is asking for a chance to manage the debt more soundly, perhaps even saving some interest. Excessive borrowing in the short end of the market, as he says, is expensive and inefficient.

He is too polite to say to Congress in so many words that its stubborn stand is a silly affair. But Barron's says it, and it seems to fit.

A Potential Poet Laureate

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. SANTANGELO. Mr. Speaker, on Saturday evening, February 13, 1960, the New York State Democratic Committee tendered a dinner at the Waldorf-Astoria, New York City. Democratic presidential contender, Senator JACK KENNEDY, pleased the gathering with his humor and his message criticizing the present administration in its handling of our defenses and our economy was enthusiastically received. Gov. Robert Meyner, former Gov. Averell Harriman, Mayor Robert Wagner, New York State Comptroller Arthur Levitt, Michael Prendergast, chairman of the New York State Democratic Committee, and Carmine G. DeSapio, national Democratic committeeman and potential poet laureate, contributed to the oratorical evening. The speech of Carmine DeSapio captured the spirit of the crowd and reflected their sentiments. This speech displayed the poetic talents of the remarkable Carmine DeSapio. I suspect that a reading of the speech will give Democrats as much pleasure as it will give Republicans displeasure. In any event, I am sure that impartial readers

will find delight in this parody of a popular Christmas poem, which Carmine DeSapio authored.

His speech and poem follow:

My good friends, my fellow Democrats, this is an inspiring demonstration of our party's strength, our party's unity, and our party's determination to elect a Democratic President next November.

It is a very moving experience for me—as I am sure it must be for all of you—to witness and participate in the friendship and good will which are manifest here tonight.

And, underlying the gaiety and the camaraderie with which we gather, is the strong bond of common dedication which we share.

Governor Meyner and Senator KENNEDY, distinguished and informed, will spell out, I am sure, the issues which confront the people in the forthcoming election. I would, therefore, like to take advantage of the warm spirit prevailing, and satisfy a yearning I have long nurtured. Here is what I mean—with profound apologies to Clement Clarke Moore:

'Twas mid-July and all through Chicago
Not a delegate was stirring; on thought an embargo.
The weather was warm; the Republicans cool,
They had it all set the people to fool.
They had it worked out with effort and care
From the American voters the White House to snare.
With wit and with whimsy and slogans galore,
Everything was settled; Bring DICK to the fore.
They sang of peace and prosperity, too,
And scoffed at the chaos which "brinkism" grew.
Derided the danger of our missiles lag;
With truth and with fact played hilarious tag.
The high cost of living just didn't exist
And the farmers' dilemma lightly dismissed.
An unbalanced budget and taxes sky high?
Let Madison Avenue give it a try.
The moment grew near and a hush filled the hall—
DICK NIXON was ready to heed the great call.
Hear, Thruston, Dirksen, and Dewey so dear,
You scuttled Rocky and the road is all clear;
Delivered the nomination on a platter of gold
And taken me into your hallowed fold.
For this I promise continued control
Of our Nation's resources and our party's soul.
I'll wage a campaign that's hard and tough
As only DICK NIXON can really get rough.
I'll smear and slander; vilify; attack,
For of guts and spirit I sure have no lack.
I'll take them on—whomever they name
And brother you just watch me defame.
Hear, Thruston, Dirksen, and Dewey so strong,
With me at the helm you'll never go wrong.
But, alas, my friends, their plans went astray
'Cause a Democrat won on election day.

Arizona: Thriving Oasis

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES

Thursday, February 18, 1960

Mr. GOLDWATER. Mr. President, it is always a thrilling experience to discover that people, other than one's self and one's neighbors, share the confidence and pride that are ours in the State of Arizona. Just a short while ago it was my pleasure to have inserted in the RECORD an article appearing in Newsweek magazine; and today, only a few days after the 48th birthday of Arizona as a State, which was February 14, I discover that another outstanding periodical is paying tribute to the healthy, rapid, and successful growth of Arizona. I wish it were possible to have the RECORD display the outstanding color pictures that accompany this article; but, in their absence, I am certain that the words will convey the full meaning of the story. So I ask unanimous consent that the article entitled "Arizona: Thriving Oasis," appearing in Time magazine, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARIZONA: THRIVING OASIS—ENERGY FILLS THE OPEN SPACES

"The region is altogether valueless. After entering it, there is nothing to do but leave." (Report to Congress, 1858.)

Heading eastward over the Arizona desert, high-flying transport pilots can pick up the urban glow of Phoenix from 70 miles out, as the city lies like a blue-white solitaire upon limitless black velvet. Though Phoenix expanded its limits from 17.1 square miles in 1950 to its present 110-square-mile area to make room for a tripled population (373,000), it remains no more than a brightly lit patch upon a landscape characterized by vastness.

Today Phoenix is leading Arizona into a boom which, if measured by statistics, skyline and traffic, seems much like the growth pattern that created such major cities as Detroit and sprawling Los Angeles. In fact the boom takes on a difference in quality and character from the backdrop of open land, air and sky that once made up the wildest Old West.

GUNS AND WATER

From the Grand Canyon in the north, where the Colorado River cuts the most spectacular incision anywhere in earth's surface, the Arizona landscape sweeps eastward to the gaudy Painted Desert, takes in the stone trees of Petrified Forest, the cinder mountains piled up by a geological era of active volcanoes. Southward lies the butte-strewn sands where Apache Chief Geronimo waged the last Indian wars upon whites, the rich, old copper mines producing one-half of U.S. needs, such legendary towns as Tombstone, where gunslingers Wyatt Earp & Co. built the legends that feed today's TV. Along the Mexican border, the rambling ranches still raise cattle, which for the first time in 1953 outnumbered the State's people population.

As Phoenix and Tucson (population 182,500) reach out into the open spaces with acres of factories, airports, suburbs, housing devolpments and tourist havens, the open spaces give back an atmosphere that makes this a boom with a difference. Uniquely, the movers and shakers share a sense of self-sufficiency (though they live at the mercy of transcontinental railroads and highways), of well-being (though summer temperatures rise to 120° in the shade), of boundless confidence that if the desert can be turned into a thriving oasis nothing in the world is impossible (though they are still pressed by the desert's ancient problem: water).

COOL MONUMENT

It was mastery of the water problem that first made Arizona a place to live instead of a place to leave. In 1867 an Indian fighter named Jack Swilling began to investigate the ruins of some ancient canals (believed to have been built in the 10th century by the Hohokam people). Swilling decided to set up an irrigation company, succeeded in starting a new town. One literate resident proposed that they call their town Phoenix because, he said, "they would raise a new civilization upon the ruins of the old." The new civilization did not win a real chance of success until after President Theodore Roosevelt pushed through his Reclamation Act of 1902. His first major project: Roosevelt Dam, northeast of Phoenix, which backed up enough water to support a citrus and truck-garden industry in Phoenix' sun-drenched Salt River Valley.

Phoenix cherishes another unique monument to desert progress: the downtown Fox Theater, in 1931 the first building in town to install an air-conditioning system. As mechanical air conditioners became cheaper, they eventually became a necessity for every business, standard equipment in homes. This simple piece of technology, now installed in automobiles, made the desert endurable year round, made the vast reaches of Arizona a promising center for easy living.

RICH AND MANY

Hungry men tend to start most migrations, but the new westward stream, especially to the resort area just east of Phoenix, was started in the thirties by rich men. Among them: Cleveland Inventor John C. Lincoln, who built the now-famous Camelback Inn on the lower slopes of Camelback Mountain; Chicago Chewing Gum Magnate William Wrigley, who founded the fabulous Arizona Biltmore and started a golf course colony nearby; International Harvester Heir Fowler McCormick, who went a little farther east into Paradise Valley to start what is now the richest winter residential area in the State.

It took World War II, with its influx of dispersed war plants and military bases, to give thousands of nonmillionaires an incurable taste for desert living. By some estimates, half of the Army Air Corps pilots trained at Williams and Luke Airbases worked their way back to the Phoenix area after the war. Companies, too, returned. Goodyear Aircraft Corp., which modified patrol bombers htere during the war, migrated back to produce missile components. Hughes Aircraft Co. set up Falcon missile production at Tucson. Word of the easy life spread through family and community grapevines. Chicago's Paul V. Galvin, then president of Motorola, Inc., cagily realized that Phoenix would be a good place for luring the scientists and engineers needed to pioneer the electronic age's transistor production, founded an industry that is still doubling and redoubling production and employment.

Today 16 major firms, engaged mainly in electronics, have built plants in the Phoenix area; the State's total manufacturing income rose 12 percent last year, to $550 million. Attracting still more industry is a basic fact of the labor market—the cheaper, easier living lures some 2,500 migrants into Phoenix each month; keeps pay scales 10 to 25 percent below the average of older industrial areas.

BOOM AND BUILD

The tourist trade grew faster than factories. At least 6 million people now tour Arizona each year, inspire gaudier and gaudier strips of motels and roadside restaurants on roads leading out of Tucson and Phoenix. The unchallenged center of tourist trade has risen just across the irrigation ditch from the Paradise Valley area, where the early-bird millionaires first set the style for desert life and leisure. Its name, Scottsdale, which as recently as 1949 was a sleepy farm town of 1,700. It has now become the

shopping center for a population of about 50,000. Desperately hanging on to its best tourist lure, Scottsdale, billing itself as "The West's Most Western Town," last week held its annual Parada del Sol Rodeo. But money has turned Scottsdale into a form of effete West, a place of fabulously expensive watering spots (suites up to $120 a day) and chichi stores, such as a custom perfume shop, which composes a unique aroma for each lady customer.

The influx of money and people put new strains on Arizona's business and political leadership. First to rise to the challenge were the bankers. In the late forties, Walter Bimson, then president of Valley National Bank, bet more heavily than any other man upon the State's future, extended credit to a handful of ex-carpenters who proposed to build new homes, motels, and office buildings for the new Phoenix. One result: Valley National, which had only 15,000 depositors and $8 million in deposits when Bimson took over in 1933, today has 350,000 depositors (total population: 1.3 million) and $567 million in deposits.

Another result of the openhanded type of leadership was a new crop of young millionaires. Samples:

David Murdock, 36, ex-riveter who arrived from Michigan in a house trailer in 1947, has since built $30 million worth of commercial buildings.

John Long, 39, who teamed with wife Mary to build their first home in 1947, developed methods of year-round construction and prefabrication into the best housing buy (say U.S. building experts) in the United States. Example: a 3-bedroom house with swimming pool for $11,600. Long's Maryvale development in northwest Phoenix now holds 11,000 new homes, a bigger population than Yuma, plus a shopping city, will soon include a hospital and golf course.

Lee Ackerman, 39, Missouri-born ex-pilot, who got a cub reporter's job on the Arizona Republic in 1946, started an advertising agency, then an investment company to take advantage of the fantastic boom in land values across the State, now also owns a savings and loan association. Democrat Ackerman intends to run for Governor this year.

The new Arizonans set a dizzy pace in Phoenix's business life. At a cocktail party 14 months ago, builder Murdock told friends about the 20-story office building he wanted to put up, said idly, "I wish I had a bank in my building." The idea struck some listener's fancy, started serious talk, and 30 minutes later the cocktail-party group had pledged $960,000 toward the new bank. Today, the handsome, blue porcelain Guaranty Bank Building is just about complete, and the new bank, actually capitalized at an unusually high $2,750,000, will open with the building next month.

VOTES AND HOPES

The yeasty growth penetrated Arizona politics, once 3 to 1 registered Democratic (because Arizona's first settlers mostly came from the South). U.S. Senator CARL HAYDEN, 82, has been in Congress since Arizona became a State in 1912. Tucson's STEWART UDALL, 40, an able liberal Democrat, who benefits from a well-respected political name, preserves his party's label in the part-Mormon Second Congressional District, which encompasses all the State outside Phoenix. But the Democratic grip began to slip in Phoenix in 1949.

Ideological leader of the new Republican group was popular department store owner, BARRY GOLDWATER, a 40-year-old in 1949 when he led a good government reform slate to take over a rickety Phoenix city government. Three years later he upset Senate Majority Leader Ernest McFarland in a Senate race, beat him again in 1958. Kansas-born JOHN RHODES, who learned about Phoenix as a World War II pilot, became in 1952 the first Republican to win an Arizona seat in the U.S. House of Representatives. By 1958, Republican Paul Fannin, backed by such businesslike young Republicans as Dave Murdock, took over the governorship.

The hard-driving young leaders have rushed Phoenix and Arizona into a glittering new era, but they well know that they have not licked all its serious problems. For one thing, the sense of unlimited expansion space is deceptive: the United States and the State government own an amazing 86 percent of it. In the limited area left, fast and loose land speculators have driven up prices; some desolate North Arizona acres shot up from $150 to $1,000 in the last year.

Such prices might make sense if the State had water enough to turn its acres of desert into residential lots of sunshine. But the Phoenix area alone is already using more water than its reservoirs collect, has to mine 1,300,000 acre feet of water annually out of its lowered underground water table. Though the new residential areas use only one-third as much water as the crops they replace, the further spread of homes into the desert will leave a water problem that can be solved only by wresting more of the Colorado River away from California (which also has a water problem) or by man's long-term dream of making fresh water out of the sea.

Making no litle plans, Phoenix's movers and shakers count on atomic energy to provide some day the vast power needed to bring salty Pacific seawater fresh into the desert.

The Federal Retiree Health Benefit Program

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks, I wish to have inserted in the CONGRESSIONAL RECORD the following resolution which was adopted by the Detroit Chapter 89, National Association of Retired Civil Employees, on the Federal retiree health benefit program:

FEDERAL RETIREE HEALTH BENEFIT RESOLUTION

Whereas the Congress has voted to establish a system of prepaid health benefits for Federal employees on a payroll deduction basis with a substantial Federal Government contribution to the cost; and

Whereas the new program provides benefits for retirees who retire subsequent to the first effective date of coverage but makes no provision for retirees who retired prior to such first effective date; and

Whereas this omission appears to be discriminatory and should be corrected; and

Whereas the practice among other large employers is increasingly tending toward making available to retirees the same group health benefits at the same group rates charged for active employees; and

Whereas it is in the public interest to provide for the health care of our older citizens through prepayment and at a rate they can afford to pay out of their limited resources: Now, therefore, be it

Resolved, That the NARCE hereby directs its officers and representatives through all appropriate means to promote the passage of Federal legislation which will make available to all eligible Federal retirees the same health benefits which will soon be available to future retirees under S. 2162 and at the same rates.

Can We Do Business With Khrushchev?

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Thursday, February 18, 1960

Mr. JAVITS. Mr. President, the Soviet Union appears anxious to resume trade with the United States, but not without a price. Chairman Khrushchev has forecast that trade between the two countries may rise from $21 million in 1958 to $3 billion, although it would be difficult to find many in the United States to agree with him. A shrewd analysis of what such trade would mean in terms of the Battle Act of 1951, and the Trade Agreements Extension Act, governing the export of strategic materials, in the Reporter magazine for January 7, 1960, reveals what political rather than economic motives are the driving force behind Khrushchev's efforts at restoring United States-Russian trade. Trade may well come in this volume and be very welcome but we must understand clearly all the elements involved so that our public policy may reflect the situation accurately. I ask unanimous consent to have the article printed in the Appendix of the RECORD for the consideration of Members of the Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW MUCH BUSINESS CAN WE DO WITH THE RUSSIANS?

(Howard S. Piquet and Leon M. Herman)

According to Premier Khrushchev, trade between the Soviet Union and the United States "over the next few years" may shoot up from the 1958 figure of $21 million to as much as $3 billion. Most competent American experts, on the other hand, take a dim view of this rosy prospect.

Notwithstanding a substantial increase in U.S. exports to the Soviet Union during the first 9 months of 1959, exceeding somewhat the total for all of 1958, United States-Soviet trade is and always has been very small relative to the total trade of either country. In 1940 the Soviet Union accounted for only 1 percent of the total foreign trade of the United States. By 1947, after the termination of lend-lease, it fell back to the same level. With the introduction of U.S. export controls in March 1948, shipments to the Soviet Union came to an almost complete halt and continued to hover below $1 million annually for 6 years.

Exports have risen slightly since 1956 but still remain small. In 1958 they totaled only $3.5 million whereas our imports from the Soviet Union amounted to $17.5 million. Exports and imports together are infinitesimal compared with the total foreign trade of the United States, which amounts to $29 billion. The United States now exports to the Soviet Union about as much as it exports to Barbados and imports about as much as it imports from Afghanistan.

To the Soviet Union, foreign trade serves primarily as a means of coordinating the

various national economies of the Communist bloc. Three-fourths of its $8 billion annual total of foreign trade—divided about evenly between exports and imports—involves the other Communist countries, headed by East Germany and Red China. Soviet trade with non-Communist countries also virtually balances out, with exports and imports each valued at $1.2 billion. The total volume of Soviet trade with non-Communist nations is roughly comparable to that of Switzerland. From all non-Communist Europe, Soviet imports in 1958 amounted to only $600 million.

POLICY AND FACTS

As Khrushchev sees it, only the artificial barriers erected by the United States since 1948 prevent an almost limitless expansion of Soviet-American trade. The Battle Act, enacted in 1951, prohibited U.S. foreign aid to countries that export strategic materials to Communist nations; and the Trade-Agreements Extension Act of 1951 withdrew unconditional most-favored-nation treatment from all products imported from the Soviet Union. Under the Johnson Act of 1934, private long-term credits may not be extended to countries that are in default to the United States, and the failure of the Soviet Union to settle its lend-lease accounts automatically places it in this category.

But even if all these legislative barriers were eliminated, it is far from likely that Soviet-American trade would thereupon immediately begin to flourish.

At best, trade between a free-enterprise economy and a state-controlled economy is beset by many difficulties. Under a state-controlled system, foreign trade is inevitably tailored to meet the requirements of an all-pervasive economic plan. External purchases are limited mostly to goods necessary to break domestic bottlenecks and to enhance self-sufficiency. Such trade therefore tends to be sporadic and unpredictable.

By the same token, buyers in the United States can have no assurance that there will be a continuous supply of needed imports, or that they will be free from the hazard of periodic flooding in a particular market. If the Soviet planners discover an unforeseen need for foreign exchange to purchase some capital equipment, they may flood the market with, say, tin or crude oil, regardless of cost and price.

To the British market, for example, the Soviets sent only 500 tons of tin in 1956, then suddenly raised it to 8,700 tons in 1957. France received 80,000 tons of diesel oil in 1957 from the Soviet Union; the next year it got 263,000 tons, three times as much.

When the Soviet Union has been faced by the need to score a point in the political arena, it has not always been meticulous in fulfilling its contractual obligations. A recent case in point is the scrapping of a contract to deliver oil to Israel. Trade disputes are usually adjudicated before a Soviet arbitration body in which the state is both defendant and judge. It would be surprising if the decisions of such a court were not heavily influenced by the wishes of the Soviet Government.

To the American businessman the Soviet market is, therefore, not a normal trading area. Although he does not exclude it altogether, he regards it as a market of last resort. He has learned to be wary of the bureaucratic procedures under which it operates and of the slow and tedious "negotiations" that are inevitably involved. The Soviet negotiator, who is frequently replaced, is a firm believer in haggling. He neither knows nor accepts the judgment of the market concerning any commodity, and the American trader soon becomes acutely aware of the hazards he must face should a commercial dispute arise.

The Soviet market has the added disadvantage of not affording U.S. exporters any protection for patent rights to the innovations embodied in exported equipment. The Soviet Union is not a party to the international convention on patents and does not hesitate to pirate the designs of patents issued by other countries. Soviet purchasing agents insist on the latest version of any machine that they procure, and they purchase only one or two models at a time. Their prime interest is in developing the internal self-sufficiency of the Soviet bloc, not in the international exchange of goods.

If he is an importer, the U.S. trader must face the fact that changes in the diplomatic climate can easily damage him financially. Anyone engaged in trading with a ministry of the Soviet Government must work on the assumption that his rating as a customer depends more on the friendliness of the foreign policy pursued by his government than on his own performance. His claim on the Soviet product that he customarily receives can suddenly be erased by the appearance of a more highly valued customer in a country that pursues a friendlier policy toward the Soviet Union.

Of course there is risk in all international trade. And the trader must evaluate the opportunities that a given market seems to offer. By this test the Soviet market can have a strong attraction for a few enterprising U.S. exporters. Although the Soviet Union is an unpredictable customer, it is a large one. It would not be realistic for an entire industry to expand its plant capacity on the basis of a spate of Soviet orders, but a Russian order can be quite attractive to an individual producer, particularly as a means of tiding him over a stagnant period.

TOWARD THE FUTURE

Trade between the United States and the Soviet Union would be both cumbersome and hazardous even if there were no international tension, no record of defaults on indebtedness, and no uncertainty over the aggressive intentions of Russia's restless rulers.

If, however, the intensity of some of the grave and irritating issues now separating the two countries could be reduced by negotiation within the near future, the chances for increased trade between the two countries would obviously brighten. The question is, to what extent?

On this score some recent statements by Under Secretary of State C. Douglas Dillon suggest what we may expect. While careful not to arouse false hopes for a change in the nature of the Russian market, he envisions a gradual expansion in the volume of trade with the Soviet Union. Generally speaking, he expects it to come about through a slow improvement in mutual confidence. More specifically, he implies that the United States might be willing to consider the removal of the barriers against Soviet trade, provided the Russians are willing to enter into a substantial agreement regarding their lend-lease indebtedness.

Such action on their part might be a reason for asking Congress to lift the embargo on furs and to restore unconditional most-favored nation treatment of all goods imported from the Soviet Union. At the same time, it is generally agreed that U.S. control over the exportation of strategic materials will not be abandoned until some of the deeper problems of the East-West conflict have been resolved.

In the meantime, the most important hindrance to trade continues to be the nature of the Russian market, which is not likely to undergo radical change in the foreseeable future. By their own standards, the Soviet trading agencies are now enjoying a high level of trade with Western Europe. They have ready access to the markets and resources of most industrial nations more or less on their own terms. To them the United States is just another Western market. It is the largest, to be sure, and at times it is unique with respect to certain goods. But there is no great need for the Soviet Union to make substantial concessions to obtain freer access to this market.

THE LONG VIEW

The Soviet leaders would like to induce the United States to abandon its official safeguards over strategic exports, because success in this area would constitute a political accomplishment of the first magnitude. But they are not prepared to pay a price for it, certainly not to the extent of altering their state trading system.

Because the United States is only one of several major industrial markets, the scale of future United States-Soviet trade is limited by the need of the Soviet trade monopoly to maintain contact with the group as a whole. For the time being, Soviet trade with the West is expanding slowly. The big percentage upswing, from a low base, came 5 years ago. At present the peak in Soviet purchases from any Western trading partner amounts to $150 million a year, and this figure is reached only in countries that can absorb an equal volume of goods from the Soviet Union.

By comparison, the U.S. demand for typical Soviet export products is limited, although it could in time be raised several notches above the present level. Under more favorable trading conditions, such purchases could conceivably expand to $75 million a year, a fivefold increase over 1958. Given the known Soviet interest in our industrial equipment, it would not take very long to bring up the volume of U.S. exports to that figure. Beyond that, however, any increase could be attained only through the granting of long-term credits to the Soviet Union, a development that must be viewed as improbable until the general climate of relations between the two countries improves markedly.

Milwaukie Needs Its Own Post Office

EXTENSION OF REMARKS

OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include herewith an editorial by Monroe Sweetland in the Milwaukie (Oreg.) Review regarding the need for an independent post office at that city. I agree thoroughly with the editors contention:

[From the Milwaukie Review, Feb. 11, 1960]

MILWAUKIE NEEDS ITS OWN POST OFFICE

What happened at 4:55 one afternoon last week should perhaps be reported as a page 1 news item. Instead we are putting it in the editorial column because its obvious moral makes an argument for a change of policy. We couldn't even report this incident at our post office without adding another to the long list of reasons for a change.

Theron Sedgwick, who had rushed to the post office after returning from work, was burdened with two big packages to be shipped overseas. He arrived at about 4:45, secured his tags for the customs declaration at the counter, and proceeded to fill them out on the nearby tables. At 5 o'clock, straight up, the clerks locked the outside door as they finished the short line of patrons at the counter.

As the clerk on duty finished with the editor's mail, he called to Mr. Sedgwick, who was half through the detail on the tags,

"It's 5 o'clock. The office is closed. You'll have to bring those packages back tomorrow."

It was an outrageous discourtesy, as we observed it, and an inconvenience expensive in time and effort for Mr. Sedgwick. In our opinion it would not happen if the clerks and administration did not treat Milwaukie as a colonial outpost. The interest of the majority of the staff is not in this community, and they know that they will be transferred sooner or later to some other branch of Portland's farflung postal empire.

If we had our own post office, the postmaster and most of his crew would live here. They would have some feeling for Milwaukie. In addition to all the other points being made by the North Clackamas Chamber, we consider the object lesson of the Theron Sedgwick incident last week to be highly pertinent. It is not only the incivility of one tired clerk at 5 p.m., it is the whole policy which must change. 1960 is the year to restore the independent status of Milwaukie Post Office.

Three Latin American Presidents Commended

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, February 18, 1960

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in a recent issue of the Frederick (Md.) News, relating to an address made before the Newman Club of Hood College, Frederick, by the Reverend Father Joseph F. Thorning, Ph. D., D.D., pastor of the St. Joseph's Church, Carrollton Manor, and an expert on Latin American affairs.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THREE LATIN AMERICAN PRESIDENTS COMMENDED

Addressing the Newman Club of Hood College at the invitation of Rev. Herbert R. Jordan, moderator, Rev. Dr. Joseph F. Thorning, pastor of historic St. Joseph's Church, Carrollton Manor, and a specialist on inter-American affairs, declared that three South American presidents, Dr. Jorge Alessandri of Chile, Dr. Alberto Lleras Camargo of Colombia, and Dr. Camilo Ponce Enriquez of Ecuador, were displaying superb leadership, despite gigantic economic and political problems.

Dr. Thorning added:

"Chilean President Alessandri, who has just completed his first term, has succeeded to a marked degree, by frequent trips into the interior.

"Dr. Lleras has familiarized himself with local needs and then provided new clinics, hospitals, roads, and schools. Most Colombians agree that the former dictator, Gen. Gustavo Rojas Pinillas, was accorded a fair trial. In like manner, justice was meted out to the tyrant's former henchmen without any semblance of the lynch law which disgraced the Castro regime in nearby Cuba. Delicate questions of religious peace were also handled in a tactful, equitable style. North American observers have paid tribute to this new approach to an old problem.

"In Ecuador, President Ponce has insisted upon honest public administration. Dr. Ponce may join the ranks of the few Ecuadorean presidents who, in recent years, have completed their full term of office."

The International Labor Organization

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. FOGARTY. Mr. Speaker, on February 2 there was inserted in the CONGRESSIONAL RECORD by Congressman SCHERER, of Ohio, two articles concerning the International Labor Organization. One is by William L. McGrath and the other by Don Knowlton. When these statements are viewed in the light of the record developed by the Congress during the years in which it has studied the activities of the ILO, their lack of objectivity becomes obvious.

The February 2 statements raise general questions concerning first, the monetary contribution of the United States to the ILO; second, alleged socialistic orientation of ILO conventions and recommendations; third, the extent and nature of participation in the work of the ILO by the Soviets and their satellites; and fourth, the objectives of the International Labor Organization.

The International Labor Organization is a specialized agency now associated with the United Nations. It was created in 1919 as a part of the peace settlement. Samuel Gompers, then the president of the American Federation of Labor, played a prominent role in its creation. The International Labor Organization is unique in that representatives of employers and workers as well as governments have a voice in its work. It is truly a democratic organization and the fact that the United States and 79 other nations are members testifies to its worldwide importance.

When the United States became a member of the ILO in 1934, we formally accepted the obligations of its constitution which sets forth, among other things, financial and budgetary arrangements. Thus, article 13, 2(c), of the ILO constitution provides:

The arrangements for the approval, allocation and collection of the budget of the International Labor Organization shall be determined by the Conference by a two-thirds majority of the votes cast by the delegates present, and shall provide for the approval of the budget and of the arrangements for the allocation of expenses among the members of the organization by a committee of government representatives.

The United States is a member of this committee of governments and has always played a decisive role in determining the percentage scale for the allocation of contributions among member nations of the ILO. The contribution of the United States has been fixed at 25 percent since 1951 with our full agreement and the Congress each year has reviewed the activities of the ILO in conjunction with the annual request of the Department of State for an appropriation to meet our contribution of 25 percent of the ILO budget.

The U.S. contribution to the ILO for the calendar year 1959 was $2,132,464; for calendar year 1960 our assessment will be $1,975,364. These amounts appear to the Congress and to many responsible people to be a small price to pay for keeping the voice of this Government and our belief in the free enterprise system, in free collective bargaining and in the basic dignity of the individual before an international forum in which 79 other nations participate.

In 1956 the Subcommittee on International Organizations and Movements of the Committee on Foreign Affairs of the House of Representatives, chaired by the Honorable A. S. J. CARNAHAN, Representative from Missouri, carefully examined the question of U.S. participation in the ILO. This examination included allegations pertaining to Soviet domination and control of the ILO and inherent implications that the objectives of the ILO were inconsistent with continued U.S. participation therein. Mr. William L. McGrath was a principal witness and at that time placed before the committee at great length the substance of all these matters which are the subject of his present article. In rejecting these allegations, the committee concluded in its report of July 1, 1957 that:

(a) The ILO has a history of solid accomplishments in helping to raise labor standards and in assisting in the industrialization of underdeveloped countries. Both are broad objectives of U.S. foreign policy. By and large the ILO program is strengthening the social fabric of newly developing countries along lines designed to protect the freedom and well-being of the worker.

(b) The presence of Communist representatives should not drive the United States out of the ILO, even though it raises serious questions as to the basis of representation in the Organization. In the main, their presence serves to emphasize the importance of the ILO forum for presenting the American viewpoint. It is in this forum that the major Communist arguments on bettering living and working conditions can be fought and revealed for what they are, that is, deceitful inducements toward total tyranny. The Communist practice of forced labor has already been exposed in a study which has had a tremendous impact.

(c) The essential ILO orientation is toward developing free institutions in the field of its special concern. Even among the free nations of the world there may be disagreements over the means of furthering this objective. However, it is the subcommittee's opinion that, taken as a whole, the work of the ILO lessens the opportunity for Communist propaganda to take root in non-Communist member countries.

(d) The subcommittee is convinced that the procedures established under the U.S. Constitution are entirely adequate for the proper consideration and disposition of conventions approved by the ILO. Only 7 of the 104 ILO conventions have been adopted by the United States, and these dealt with matters of lesser importance. Other countries, particularly some of the newly developing countries, however, find the ILO con-

vention method helpful in improving working conditions.

The subcommittee's report is based upon hearings held between February 20 and July 2, 1956, during which it heard a large number of witnesses, representing labor, management, and government, as well as other American interests, and developed a voluminous record of testimony and statistical data. The report pointed out—and this is still the case—that the U.S.S.R. and its satellite nations control 36 out of a total of 320 votes which can be cast in the annual ILO Conference, and only 2 of the 40 votes which can be cast in the governing body. As for the 10 industrial and analogous committees of the ILO which ordinarily meet once each 2 or 3 years to discuss the problems of particular industries—textile, petroleum, chemical and others—and whose opinions are advisory to the governing body, the Soviet Union, and satellites hold only some 17 of the 223 seats distributed among the committees.

The importance of the ILO was emphasized by President Eisenhower in his statement to the most recent International Labor Conference, in June 1959, which reads in part:

The ILO is a vital forum for the exchange of information and opinions by representatives of governments, employers and working men and women. It has adapted itself ably to changing conditions and developed new techniques to meet new problems. It has grown strong in service to the people of the world.

Over the years, from its rich store of experience, the Organization haes shared its wisdom with newly developing countries through technical assistance and educational programs and advisory and information services • • •.

The United States is proud of its membership in the International Labor Organization. We are glad that so many of our citizens have been able to serve the cause of world peace through participation in its work.

I should like at this time to bring to the attention of my colleagues an editorial from the electrical contractors magazine, Qualified Contractor, for December 1959, which clearly establishes the point that not all employers agree with the views expressed by Messrs. McGrath and Knowlton. I also invite your considered attention to a recent speech by the Honorable George C. Lodge, Assistant Secretary of Labor, International Affairs, delivered at Rutgers University on the ILO on January 28, 1960, in which Mr. Lodge highlights some of the constructive work the ILO has done and is doing, and sets forth the vital interests of the United States in the International Labor Organization. Under leave to extend my remarks, Mr. Speaker, I include the speech of the Honorable George C. Lodge. I also include the editorial written by Oliver F. Burnett, president of the National Electrical Contractors Association:

THE VITAL INTEREST OF THE UNITED STATES IN THE INTERNATIONAL LABOR ORGANIZATION

(Address by George C. Lodge, Assistant Secretary of Labor for International Affairs, at the ILO Conference of Rutgers—The State University, New Brunswick, N.J., January 28, 1960)

Few initials have caused more consistent confusion in the United States than ILO. It has been misunderstood and misconstrued by many ever since the United States joined it in 1934. Some think of it as an organization of trade unions, others as a world parliament and still others as a leftist operation with dark and dangerous objectives. It is none of these.

Actually it is an eminently practical, 40-year-old specialized agency of the United Nations, strongly committed to democratic ideals and posing no threat to any nation's sovereignty. Surprisingly unpublicized, it has accomplished some of the most remarkable feats of international diplomacy in recent years. In addition, it has brought help and hope to many millions of people throughout the vitally important less developed areas of Asia, Africa, and Latin America; and it has done so effectively and economically.

I

In 1948 the ILO made a significant contribution toward averting a serious international crisis. The International Transport Workers Federation (ITF), composed of virtually all the transportation unions of the free world, announced that it was going to boycott all ships flying the Panamanian flag, a threat which the ITF was perfectly capable of enforcing. The ITF alleged that many of the ships flying the Panamanian flag had been transferred from other flags so that employers would be able to avoid having to pay decent wages, observe adequate safety standards and to evade taxation. The federation charged that deplorable living and working conditions existed aboard these ships. An ITF boycott would have meant a serious stoppage of much of the world's maritime transportation.

The Government of Panama rejected the allegations of the ITF and requested the ILO governing body to conduct an official inquiry into the charges. The ILO went to work and the threat of international boycott passed. A tripartite—employer, worker, and government—commission of inquiry was appointed and in November of 1949 the ILO noted that Panama has "made an earnest endeavor to improve conditions in its merchant marine," and that many brandnew ships were being registered under the Panamanian flag.

Of course, since that time there has been increasing international attention to the problem of "flags of convenience." The widespread and important implications of the growing use of this device have been considered at length by a number of international bodies, most recently the United Nations Law of the Sea Conference and the ILO Maritime Conference.

Another example of success in ILO solving troublesome situations was its solution of a crippling railroad strike in Peru in July of 1957. The railway of southern Peru, the longest and most important in the country, climbs by a hazardous mountain route from the Pacific coast 14,000 feet to the Andean High Plateau. It is the principal method for transporting food, cattle, sheep and minerals in southern Peru. Work on the line is particularly strenuous owing to the high altitudes, and in April 1957 some 3,500 railway workers struck for wage increases, overtime pay, increased family allowances and a number of improvements in the conditions of their employment. All efforts to solve the strike failed and the situation was getting more serious by the day with hardship and starvation resulting because of the lack of transportation. Finally, on July 16 the Peruvian Minister of Labor transmitted to Mr. MORSE the request of a number of leading citizens of southern Peru for assistance from the ILO in settling the dispute. Six days later Pier Paolo Fano, chief of the ILO's International Organizations Division, was on his way.

Three weeks later, after making a careful study of the situation, Mr. Fano presented a proposed settlement to the mediation committee. The committee adopted them unanimously with the concurrence of representatives of the railroad labor and management and the strike was settled.

II

Created in 1919 at the Versailles Peace Conference as part of the League of Nations, the ILO brings together employer, worker and government representatives from 80 nations in an effort to improve the welfare of workers throughout the world and to assist in the development of those institutions which will ensure the free and just development of societies.

Operating on a current budget of slightly more than $9 million, the ILO holds an annual conference each June in Geneva where its permanent office is located. It has a governing body, composed of 20 governments, 10 employers and 10 workers, which supervises the International Labor Office, determines conference agendas and formulates the budget on the basis of recommendations made to it by the director general of the organization.

Delegations to ILO annual conferences are made up of one employer representative, who in the United States is nominated jointly by the National Association of Manufacturers and the chamber of commerce, and currently is Cola G. Parker, director of Kimberly-Clark Corp.; one worker delegate nominated by the AFL-CIO, currently Rudolph Faupl, international representative of the International Association of Machinists and two government delegates, one from the Department of Labor and one from the Department of State. Last June the conference had nearly 1,000 delegates and advisers in attendance.

The ILO is of very special and unique importance to the United States and to the free world. It is the only organization created to deal with the problems which are so real to most people in the world—problems of work, wages, security and the right of all human beings to freedom and dignity. Even though U.S. objections to the League of Nations prevented our joining the ILO officially until 1934, 15 years after it was founded, this country has always played an important role with respect to the organization. Its first meeting was in Washington in 1919 and among its moving figures was Samuel Gompers, first president of the American Federation of Labor.

III

It was no accident that the ILO was founded when it was. Its founders in addition to reflecting the sharp increase in the social conscience of governments following World War I felt an urgent need to create an international organization which would refute the Marxist theory of the inevitability of class warfare. And the ILO has indeed

shown that workers and employers can meet together peacefully and reconcile their differences for the promotion of the welfare of workers the world over.

Using Lenin's phraseology, the ILO is truly a counterrevolutionary organization. It was created deliberately to give an outlet and a hope to working people whose lives, values, and systems had been shattered by the First World War. For in those days many European workers were being beguiled by the promises of a new and better life which came to them from the Red Revolution in Russia.

At the very moment that title XIII of the Treaty of Versailles was being drafted to include an International Labor Organization, French Premier Clemenceau had 30,000 troops mobilized in Paris to put down a general strike. Defeated Germany was in despair, hopelessly viewing her shattered structure, and the Communists were threatening to gain control in 1919 through their utopian appeals to humiliated war veterans, much as a slightly different sort of dictatorial ideology did take control of Germany 13 years later. All over the world workers were seeking urgent solutions for their postwar problems.

The ILO was launched to offer workers a chance to sit down with employers and governments and attempt solutions to their problems without recourse to revolutionary violence; and in its very conception it offered to working people the promise that employers and governments of the nations of the world were prepared to deal with their problems fairly, democratically, and seriously.

Thus, from the very beginning the ILO has been an important anti-Communist influence. And from the beginning doctrinaire Communists have found the ILO a very uncomfortable place indeed, since they are forced to negotiate problems which their faith decrees are soluble only by warfare and revolution. The Communists do not recognize employers and workers in the same sense as does the rest of the world. A free trade union has no role at all in a totalitarian state; nor does a free employer. Conscious of this, employer and worker delegates at the ILO have never been wholeheartedly willing to accept Communist representatives. Quite rightly, they consider them no different from government representatives. This basic difference between free and totalitarian countries is a point of continuing strife in the ILO, and while efforts have been made to compromise the difference it is doubtful whether the followers of Marx and Lenin can ever feel at home in the ILO.

IV

The ILO was the first international organization ever to seek to make social justice the basis of permanent peace. In 1954, in a special audience with members of the Governing Body in Rome, Pope Pius XII said:

"Over the past 30 years and more you have patiently and untiringly built up an achievement of which you can justly be proud.

"Not only have you contributed to the progress of social legislation in different countries but, above all, you have united governments, employers and workers in courageous and successful collaboration.

"You have led them to master every passion, all bitterness in their demands, and every obstinate refusal to face inevitable developments; they have learned to listen to each other's arguments, calmly weigh the facts of an extremely complex problem and jointly propose the necessary improvements.

"You have thus created a kind of international forum, a clearinghouse where essential information and useful ideas are collected, tested, and published."

The ILO's work covers a wide range of subjects, including: problems of employment, improved living standards, equal opportunity, sound labor-management practices, the development of skills, protection for the life and health of workers and adequate provisions for child welfare.

It seeks to accomplish its tasks in three ways:

First, the ILO brings together labor, management, and government representatives to formulate international standards in the labor field covering such things as wages, hours, working conditions, and social legislation. There are now more than 220 such instruments which cover nearly every conceivable type of labor conditions. These are not binding in any way except to the extent that they may be accepted by individual national governments; so the ILO is in no sense a world parliament. This phase of the organization's work is regarded by many nations, including the United States and many of the less developed countries, as having been largely accomplished for the present. The great need now is for guidance and assistance to the nations of the world, particularly those in early stages of development, to give practical effect to the standards which have been set forth.

A second major activity of the ILO is the collection and analysis of facts and figures about labor throughout the world. The ILO is without doubt the most important single source of such information.

Finally, the ILO's newest and fastest growing activity is its assistance to many nations of Asia, Africa, and Latin America to help their people develop better methods of production, free and peaceful labor relations, more efficient training institutions, and many other necessities for the successful and democratic evolution of an industrially underdeveloped society. Increasingly the ILO is changing its emphasis in order to meet the urgent needs of the more than 20 new nations, containing more than one-third of the world's people, which have achieved independent status since World War II. The primary concern of these nations, David Morse points out, "is not so much with additional legislative standards as with creating the institutions needed to give a practical content and effect to legislation." These "institutions" are in such fields as vocational training, collective bargaining, employment policy, and social security.

V

What does the ILO mean for Americans? Why did President Eisenhower in June call it a "vital forum" and reaffirm U.S. support of it?

First, I think, because it gives all free nations a unique opportunity to prove their devotion to the high ideals of social justice upon which the organization was founded. It gives us an opportunity to heed seriously and act on the admonition contained in the ILO constitution that "conditions of labor exist involving such injustice, hardship, and privation to large numbers of people as to produce unrest so great that the peace and harmony of the world are imperiled." No one can see the ILO at work without being impressed by its capability to improve these conditions.

High in the Andes of Ecuador, Peru, and Bolivia are some 7 million human beings who eke out their short lives at a bare subsistence level, ridden with tuberculosis and other diseases, outside the stream of their nation's life and yet desperately needed to assist in the development of their underpopulated countries. At its field bases in the Andes the ILO in cooperation with other U.N. agencies is raising the living standards of these people, teaching them to increase the yield of their crops and training them in carpentry, mechanics, and other skills so that they will be able to contribute to their country's urgent need for skilled manpower.

In Haiti, ILO experts taught mechanics how to construct simple windmills, increasing many times the irrigation and power available. They have taught artisans how to make cane knives, introduced the wheelwright's trade, and, by improving tanning methods, revolutionized the leather industry in the whole country.

On the great rivers of Asia, Burma's mighty Irawaddy, India's holy Ganges, and the ageold Indus of Pakistan, brown-sailed sampans and picturesque paddlewheelers are being steadily replaced by diesel-driven craft. This is largely due to the work of a handful of ILO technicians who have taught mechanics in this Asian region the skills necessary to maintain and repair diesel engines.

On an island in the Nile, near Cairo, the ILO has helped to establish a workshop and training center for the blind, the first of its kind in the country; and in Ceylon, Brazil, Guatemala, and Indonesia assistance is being given for the rehabilitation of the physically handicapped.

Following the disastrous methane gas explosions in the coal mines of Zonguldak, Turkey, miners and safety engineers visited France, Great Britain, and Germany under ILO worker training programs to find out how to prevent such disasters from recurring.

India's capital city, New Delhi, plagued by breakdowns in the public transportation system called upon the ILO for help. A productivity expert showed the Indians how to expedite repair and maintenance procedures which solved the problem. ILO productivity teams have helped repeatedly to increase productivity in India, Pakistan, and a score of other countries around the world.

These are just a few examples of hundreds of ILO technical assistance projects being carried out around the world under both the United Nations expanded program of technical assistance and the ILO regular program activities. The ILO does not undertake elaborate projects costing a lot of money. Many ILO programs consist of single experts working often under extremely difficult conditions, teaching new skills in isolated communities. Its funds are very limited and it uses them carefully where they will have the greatest impact in supporting, not substituting for, going programs. As quickly as it can, the ILO tries to get out of any given project and leave it to the people themselves to carry it on.

Obviously the importance of such work to the development of free, vigorous economics is beyond measure. It is hard to conceive of any more effective way in which to discourage in a thoroughly constructive fashion the subversion of democracy by dictatorship.

Second, the ILO is important to the United States and the free world because it is implanting in the newly devoloping countries of Asia, Africa, and Latin America the free institutions of collective bargaining and labor relations which are so important for the successful development of these countries within a context of democracy. It also is having an important effect on the development of free trade unions in those areas.

Worker organizations in the newly developing countries are of the utmost political, social, and economic importance. Although they bear little resemblance to the labor unions of Europe and the United States, the trade unions of these areas have a power and a significance which is often misunderstood or unseen. Most of these unions evolved from a basically rural society for political or ideologocal reasons. They have developed largely as rural cooperatives, political parties, independence organizations, semifraternal groups and in a few instances rudimentary industrial unions. And in many of the developing countries the most important influence on the people are these organizations of the workers. One only has to look at such leaders as President Bourguiba in

Tunisia; President Nkrumah, of Ghana; Sekou Toure, President of Guinea; Tom Mboya, of Kenya, and President Lopez Mateos, of Mexico. All of these men and a score of others in Asia, Africa, and Latin America owe their rise to power largely to the support which they received from organizations of workers. Several started themselves as labor leaders.

International communism quickly sought to use these organizations as instruments for subversion and the seizure of power. In a significant number of countries, however, for example, Malaya and India, the strongest anti-Communist elements are the free trade unions. Often they haev been the first organized force to realize that with communism comes not utopia but a more dreadful form of colonial exploitation than the world has even seen.

The ILO through its field offices and its countless contacts with trade unionists throughout the world can have a very important influence on these workers' organizations. Through workers' education programs the ILO teaches the basic elements of collective bargaining, the responsibilities of a trade union, the methods of negotiation, and provides the basic for the development of peaceful understanding between employer and employee. It is plain that nothing could be more important in the establishment of democratic societies than this.

In addition the annual conference of the ILO provides a unique meeting place for the leaders of labor from all over the world. For many it is the only opportunity they have to travel from their country and be posed to government, employer, and worker representatives from other countries. The conference thus provides an extremely important opportunity for the exchange of views and the promotion of understanding between various sections of the world.

The presence of these workers' leaders at the conference is also important because they can see first hand the hyprocrisy of the Communist claims and preachments. For example in 1956 and 1957 the annual conference considered the problem of forced labor and adopted a standard in the form of a convention condemning the practice and calling for the elimination of it wherever it existed. The Soviet Union quite naturally was peculiarily sensitive on this subject, since several years earlier the U.N. and the ILO had found forced labor to exist on a very wide scale in the U.S.S.R. and other Communist bloc countries. This was something which was not particularly harmonious with the Communist claims to a worker's paradise.

The falsity of the Communist claims is effectively exposed in the ILO by workers themselves; not by governmental representatives alone, but by those who are supposed to be the luckiest of all in Moscow's utopia.

For example, during the discussion on forced labor the Soviet delegate referred to the Taft-Hartley Act as "a slave labor act" and denied the existence of forced labor in the U.S.S.R. The then American worker delegate, Mr. George P. Delaney, rose from his seat flushed with anger, and in a way a governmental spokesman could hardly have managed, castigated the Russian. He said American labor objected to certain portions of the Taft-Hartley Act and hoped to get it changed, but he forcefully denied that it had anything to do with "slave labor." He then proceeded to list in great detail the embarrassing evidence of real slave labor which existed behind the Iron Curtain. This struck far deeper in the minds of many at the conference than had the only response to the Soviet Government been governmental.

Similarly, last June, Rudolph Faupl, the present American workers delegate, urged with particular authority, the rejection of the credentials of the Hungarian delegation. Faupl, a native born Hungarian who came to this country as a young boy, is a machinist by trade and is widely respected by his fellow workers around the world. With stirring emotion he spoke of the ruthless suppression of the workers of Hungary and this year as last the entire Hungarian delegation was refused admission.

Last June at the annual meeting in Geneva I had the honor to sponsor a resolution with the Minister of Labor of India, Gulzarilal Nanda, calling upon the ILO to increase its operational and technical assistance activities in a number of fields. The resolution was adopted unanimously with the exception of the Soviet bloc. Their objections to it were difficult to understand but undoubtedly they found it impossible to endorse the expansion of ILO's activities in the promotion of free, democratic institutions of labor relations. It was perplexing for many of those from the newer countries, who have taken seriously the Communist line, to learn that they were opposed to expanding programs which are of such vital and immediate importance to the newly developing countries.

The third reason why the ILO is important to the United States is domestic in nature, and divides itself into several parts:

(a) Increasing the purchasing power of the vast majority of the world's population would increase the potential market for American exports.

(b) Improved standards of living abroad would tend to reduce the disparity of foreign labor costs with those of the United States, thereby improving the competitive position of American goods on world markets.

(c) Unless progress is made in raising standards of labor abroad, particularly in countries with extremely depressed standards, improving those of American workers, who must compete on the world market, will become increasingly difficult.

Mr Morse puts this aspect of the ILO's contribution as follows:

"An implicit purpose of the early ILO was to prevent any country and particularly the less industrialized countries, from entering into international trade competition on the basis of cheap labor standards. * * * Now, by contrast, a very great part of our effort is directed towards enabling countries to develop their industries and particularly toward promoting economic expansion and social growth in the less developed countries. * * * Our main emphasis today is on improving working and living conditions by helping the less advanced countries to develop their economic potential and to raise their productivity and by helping the more advanced countries to lay the social basis for greater economic cooperation."

The ILO after 40 years stands today at the threshold of vast opportunity and represents a bright hope to many millions of people throughout the world. It has come a long way since that day in 1919 when representatives from 40 nations met in Washington at the first conference. It has shown itself adjustable to change and sensitive to the new needs which confront it. "The ILO," as Mr. Morse put it last June, "is an organization of people, a human organization working through and amongst people for the attainment of certain human goals. It is neither the embodiment of an absolute moral law revealed 40 years ago and enshrined in the Constitution, nor is it a supranational judicial authority empowered to enforce certain defined standards. It works in the world as it finds it and it works in the world for the attainment of its purpose. The purpose * * * is the improvement of conditions of men and women throughout the world."

I have pointed out several reasons why the ILO is today important to the United States, and I must say that there is very good cause to believe that it will be even more important in the years ahead.

The outcome of the enormous struggle of hundreds of millions of people in the newly developing areas of the world for economic improvement and freedom from foreign domination will undoubtedly determine the course of the world in years to come. There has probably never been such a huge and important mass emotion as the determined desire of the people of the developing nations for an improvement in their way of life, for a square meal where there has been starvation, for a hospital bed where there have been death and disease, for a decent house where there have been filth and squalor, for freedom and dignity where there have been domination and servility. The International Labor Organization is looked to as a principal contributor to the fulfillment of these needs. If these desires are not going to be frustrated and if the world is going to avoid the terrible consequences of such frustration—the bitter resentment of the poor toward the rich, of the have-nots toward the haves, of the downtrodden toward the exalted—then we must strengthen the ILO in every possible way. If we do, it will continue its admirable efforts to meet today's problems, human dignity will be enhanced, the cause of freedom will prosper and the world will be a little closer to everlasting peace.

THE ILO WEAPON

(By Oliver F. Burnett)

The International Labor Organization offers America a great opportunity to preserve not only our free competitive private enterprise system but also our high standard of living.

This may sound strange to American businessmen, who have been suspicious of the ILO. Organized business has taken part in the ILO with tongue in cheek because they had an uneasy feeling that the Communists and Socialists would use it against us. Some of that feeling comes from a lack of understanding of the ILO and its aims. Some comes from the defeatist attitude that the U.S. businessman is no match for the Communists and Socialists at the conference table.

I had the privilege of representing the United States as an employer delegate to the 6th session of the ILO at Geneva. As a result I believe that the ILO affords America a fine contact with the 79 other participating nations, including the U.S.S.R. I know that the U.S. businessman can handle himself well against the "pros" on the other side, and that his views are respected and eagerly sought by those who can gain the most from them.

The ILO was established under the Treaty of Versailles to promote peace by exchange of information among the nations and give weight to recommendations of these nations in the field of social and economic justice for the workingman. The idea was that harmonious international relations would be advanced by raising the standard of all the people who produce goods and services.

What America has to sell is freedom of the individual. The Communists can produce exceedingly well. But they achieve production by command. Slavery is inherent in that system. In America we produce for profit. The only way we can make a profit is through the workers. We must make sure that we satisfy the needs of our workers if they are to produce so we can make a profit. Our system has greater built-in security for the worker than any socialist scheme. But it depends on the profit motive, and here at home we had better give serious attention to make sure the climate permits profits.

The statement of this American social and economic philosophy, bluntly put by a businessman, startled other delegates, most of

whom had Socialist leanings. They look to government for both opportunity and protection, and they are disillusioned. When they grasped the meaning of our way, they became excited and eager to know more. The ILO gives us an opportunity to tell them more. They are receptive to our ideas so long as we do not try to force our views on them. What we have is nothing more than an extension of the concept of individual freedom that sparked the Renaissance. We have tried it and like it. We think that if others try it they, too, might like it.

The ILO is developing such practical steps to equalize working standards throughout the world such as building skill. They avidly sought information on our apprenticeship and training methods. They want to know how to attract young men into construction. We tell them that they must increase the incentives. Here is a practical answer to the concern of American business with unfair foreign competition based on low wages. If the ILO can cause the wage of a Japanese construction worker to rise from 25 cents an hour to something like the level in the United States, the Japanese manufacturer will lose some of the advantage he has over the U.S. manufacturer because he will not be able to build new facilities so cheaply.

It seems the time has passed when we can build a tariff or protection fence around our high living standard while the rest of the world goes hungry. The ILO points to another and, surely, better way—raise the worker standards of the world to approximate ours so we can have an opportunity to compete for the benefit of all.

Lincoln's Birthday Commentary by Edward P. Morgan

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 18, 1960

Mr. HUMPHREY. Mr. President, one of the most cogent and nourishing Lincoln's Birthday commentaries that I have heard was given by the eminent American Broadcasting Co. commentator, Edward P. Morgan. Mr. Morgan is particularly gifted at relating Lincoln to contemporary times. I want to quote one brief section:

He would have been deeply troubled, surely, at the spectacle of a great country shrinking from adventure, sliding into a secondary place with a misguided if somewhat guilty satisfaction. A century and a quarter ago, at the ripe age of 29—a little younger than the mature years of the current payola witnesses—Lincoln told a Young Men's Lyceum in Springfield, Ill., "towering genius disdains a beaten path. It seeks regions hitherto unexplored."

I ask unanimous consent that the February 12 commentary of Edward P. Morgan over ABC be printed in the Appendix of the RECORD.

There being no objection, the text was ordered to be printed in the RECORD, as follows:

EDWARD P. MORGAN AND THE NEWS,
FEBRUARY 12, 1960

Yesterday, I went over to the Lincoln Memorial to think me some thoughts. They had a formal little program there at noon today in observance of Lincoln's Birthday but I preferred the relative privacy of an unscheduled visit so I went in advance. There was a soft hint of spring in the air. The sky was filled with the fresh petticoats of pearl-gray clouds, showing here and there a flash of blue. The trees were a blur of bare brown branches and on the winter-faded, yellow-green grass beneath them starlings scratched and squawked. The clean white spike of the Washington Monument was a wavering watercolor in the long, breeze-flecked Reflecting Pool. And there, behind, just inland from the left bank of th Potomac, rose in rhythmic Doric columns that harmonious mass of marble, a sort of American Parthenon, the country's tribute to its homely 16th President.

There weren't many visitors. A young man with a camera. Two Government girls. A bespectacled Air Force tech sergeant with a baby in his arms, his wife and two other children, a boy and a girl, bringing up the rear. While his blanketed armful squirmed, the airman stood at the base of Daniel Chester French's statute and stared up into Lincoln's sad, strong face. Then he gazed reverently around the temple. "It's fabulous," he murmured to his wife, in a Carolina drawl. She nodded and took the baby from him as if fearful he might drop it in absent-minded inspiration.

Fabulous was not an adjective that I had associated with Lincoln before. But as I contemplated it I realized it was just the word to describe the impact of his character on the current American scene. Here indeed was a fabled figure, gauntly, grotesquely unbelievable in the easy ooze of the opulent sixties. He was a bumpkin whose awkward dress would be as anachronistic as his honesty. He was only 56 when Booth's bullet killed him but the tragic responsibilities of the war had long since lined his face with the saber scars of pain and sacrifice—burdens which successful men unload nowadays on the analyst's couch and in the steam bath at the club.

Very likely it is easier to rise to greatness in the hoist of historic cataclysm. From the memorial's wall inscriptions carrying the awful weight of Lincoln's days bore down on you with an almost palpable crush. From the "Second Inaugural Address" at the height of the war came the words of heartbreak, determination and hope: "With malice toward none, with charity for all, with firmness in the right as God gives us to see the right let us strive on to finish the work we are in * * *." And from those scribbled comments at Gettysburg "It is for us the living rather to be dedicated here to that unfinished work which they who fought here have thus far so nobly advanced."

The work they died for is still unfinished and other tasks command our dedicated attention too but it is very hard now for us to sense the terms of our emergency with the sacrificial urgency that war can bring. So it was that day before yesterday a disc jockey defined the "wonderful, romantic" American way of life with the motto: "I'll do for you. What will you do for me?" And so it was too that by far the longest dispatch on the news wires today chronicled the crisis between a television comedian and his network over a censored joke about a water closet.

Mr. Lincoln would have chuckled over that; not the joke, the situation. But he would have been deeply troubled, surely, at the spectacle of a great country shrinking from adventure, sliding into a secondary place with a misguided if somewhat guilty satisfaction. A century and a quarter ago, at the ripe old age of 29—a little younger than the mature years of current payola witnesses—Lincoln told a young men's lyceum in Springfield, Ill., "towering genius disdains a beaten path. It seeks regions hitherto unexplored."

I asked the handsome National Park Service guide at the memorial, a Negro and native of Jefferson's Charlottesville, he happened to be, if visitors asked him questions. "Yes," he said, "they keep asking how tall the statue is."

At Your Expense

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. LEVERING. Mr. Speaker, if H.R. 10362, the bill which I and several of my colleagues recently introduced, that we have called the Family Farm Income Act of 1960, accomplishes nothing more than the solution of the government surplus storage problem, which we earnestly believe it will do, it certainly should merit the serious consideration of every member of the House. It is a shocking indictment of the existing farm program under which storage costs alone for a period of 20 months amount to more than the cost of the entire farm program for all commodities during the past 20 years of its existence.

Mr. Speaker, under leave to extend my remarks in the RECORD, I ask unanimous consent to include an editorial from the Mansfield News Journal for February 11, 1960, which poignantly treats the matter of current storage:

AT YOUR EXPENSE

The ordinary citizen cringes a little—and perhaps feels just a touch of envy—when he reads of someone doing well at Federal expense. The House subcommittee investigating grain storage has turned up a number of pertinent cases.

One that makes gloomy reading for taxpayers concerns a Kansas firm which rented a military warehouse for $28,000 over the course of several years, spent $40,000 fixing it up for grain storage, and then collected storage fees from Uncle Sam totaling $1,838,000. This is what is known as a handsome profit. Legal, too.

Two things about it are of particular concern to citizens as taxpayers, however.

The Government's left hand—in this case the Commodity Stabilization Service—apparently didn't know what its right hand—the Army, which rented an old warehouse at a very low figure—was doing. The second point is that the Government's payments for grain storage are unrealistically high and thus permit unconscionable profits, under some circumstances, at the expense of the taxpayers.

Another flaw in the present grain storage system is that the policy of using all "usual and customary" facilities of the commercial grain industry before turning to Government storage is badly stretched. Coal bunkers, tents, an old railroad roundhouse, a brewery, an antiquated bank building—all have been accepted as "usual and customary" facilities, at the same rates paid for top-notch warehousing.

If the idiotic subsidy and price support program is to be continued, at least Federal payments for storage should bear some reasonable relationship to actual storage costs.

Goals for the Future

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, February 18, 1960

Mr. JAVITS. Mr. President, the problem of projecting into our country's future in order to analyze the directions of our development, the needs we must anticipate and the objectives we want to reach has been engaging the best minds in our land. President Eisenhower has wisely recognized the need to appraise, coordinate, and guide the many efforts now underway by universities and organizations to study various aspects of this overall problem. Our leadership of the free world has imposed enormous responsibilities upon us which we can ignore only at our peril.

In the appointment of a Commission on National Goals, made up of some of our leading citizens, the purpose of which is to develop an outline of objectives and programs for the next several decades, the President has taken an important step forward.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on this subject entitled, "Large Minds and Great Issues," from the New York Herald Tribune of February 9, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LARGE MINDS AND GREAT ISSUES

There seems to have been a plethora lately of studies by boards, foundations, committees, and what have you, of where the Nation is or should be headed. One result has been that the President's proposal to establish an extragovernmental Commission on National Goals was greeted with some sketpticism and not a few yawns.

There also, however, has been a widespread sense of uncertainty, of apprehension, as to what the future might hold and of our national readiness to meet it.

Setting up the 11-member Commission was not an empty gesture. Its composition, now announced, is impressive: chairman, Dr. Henry M. Wriston, president of the American Assembly; vice chairman, Frank Pace Jr.; plus Erwin D. Canham, James B. Conant, Colgate W. Darden Jr., Crawford H. Greenewalt, Gen. Alfred M. Gruenther, Learned Hand, Clark Kerr, James R. Killian, Jr., and George Meany. This adds up to a formidable array both of talent and experience, well seasoned both in and out of Government yet unburdened by obstructive political partisanship.

The President has identified the Commission's job as being, in part, to "identify the great issues of our generation and describe our objectives in these various areas," and he has expressed his hope that it would "develop a broad outline of coordinated national programs for the next decade and longer."

This is a tall order. It would be both unrealistic and inappropriate to expect any detailed legislative blueprint. But it would be equally unrealistic not to expect from a group of such caliber, so instructed, a fresh and stimulating appraisal of the challenges posed by a climactic decade ahead.

That we need such appraisal, and constant reappraisal, is inescapably a concomitant of the galloping pace of current history.

The Commission has, in President Eisenhower's words, "the opportunity to sound a call for greatness to a resolute people, in the best tradition of our Founding Fathers." Let's hope it makes the most of that opportunity. For clearly the age we are entering cries out for greatness.

Maintenance of Leadership

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. IRWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address given by my colleague, the Honorable EMILIO Q. DADDARIO, at the 63d annual banquet of the Catholic Club in Darien, Conn., on February 11, 1960, and an address given at the same time and place by the Reverend Thurston N. Davis, editor of America magazine, which was published in the New Republic on February 15, 1960. In both of these addresses we are given a clear picture of dangers which surround us at this time and we are admonished to reexamine our course lest it bear us to the point of no return. The urgency of the situation makes it imperative that we accept such advice. The addresses:

REMARKS OF CONGRESSMAN EMILIO Q. DADDARIO, FIRST DISTRICT, CONNECTICUT, AT THE 63D ANNUAL LINCOLN DAY BANQUET OF THE CATHOLIC CLUB, WEE BURN COUNTRY CLUB, DARIEN, CONN., THURSDAY, FEBRUARY 11, 1960

The number of words filling the air this weekend about Abraham Lincoln must be legion. It is characteristic in the life of a very great man—and there can be no question that Lincoln was one of the greatest of our world—that there is much to be considered edifying in his every action and thought.

Thus I am sure that those who wish to draw on Lincoln as a source of inspiration in remarking upon today's events will be adequately furnished with quotations. If they want to discuss anticolonialism and American attitudes, they have only to remember that Lincoln said in 1854: "No man is good enough to govern another man, without that other's consent." If they would bring his wisdom to bear on the subject of civil rights, they may quote what he said in 1859: "Those who deny freedom to others deserve it not for themselves, and, under a just God, cannot long retain it."

As for myself, I thought it might be interesting to consider what Lincoln might have said about rockets and missiles, or the fields of science and astronautics. This is a little more difficult. Yet, in view of the assertions and denials that have flown in Washington, the charges and countercharges, I think I may have found an apt quotation. It comes from remarks Lincoln made at dinner on the train moving to Gettysburg in 1863, where he was to deliver a few remarks on the dedication of the battlefield. The train ride had been noisy and the use of tunnels and cuts had dimmed the light from time to time.

Lincoln, at table, took occasion to comment: "This situation," he said, "reminds me of a friend of mine in southern Illinois, who, riding over a corduroy road, where the logs were not sufficiently close together, was frightened by a thunderstorm. In the glimpse of light afforded by the lightning, his horse would endeavor to reach another log, but too frequently missed it and fell with his rider. As a result of several such mishaps, the traveler, although not accustomed to prayer, thought that the time had come to address his Maker, and said: 'Oh Lord, if it would suit You equally well, it would suit me better if I had a little more light and a little less noise'."

Those of us who have been closest to the testimony on our missiles and satellites as it unfolds daily in Washington, sometimes wish that there were a little more light and a little less noise.

Research and development has become an important part of both our governmental and industrial activities. In Lincoln's day, however, Robert V. Bruce said, "During the Civil War the nearest thing to a research and development agency was the President himself."

President Lincoln became interested in and is responsible for the introduction of machineguns, rifled cannon and other weapons of war. In the course of these developments we find that he narrowly escaped death when an experimental rocket exploded in its launcher as he stood watching nearby. He also bypassed the War and Navy Departments to set up a secret project to develop a new explosive using chlorate as a base. It is interesting to note that chlorates are now being tested in the field of solid rocket propellents.

In a lecture entitled, "Discoveries and Inventions," Lincoln said: "Just now in civilization and the arts the people of Asia are entirely behind those of Europe; those of the east of Europe behind those of the west of it; while we, here, in America, think we discover, and invent, and improve faster than any of them."

This is a statement which fits exactly into the conflict which now exists as to the technical and productive ability of the United States, the countries of the free world, and the Communist bloc. We can most certainly conclude that no nation or groups of nations has such a superior ability or capacity that it can maintain secrets within itself to the denial of others. We have already seen this myth exploded in the atomic and hydrogen fields. We know, too, that in the missile and space field we can have no monopoly. We have the capacity to set such a stirring pace in the field of space as to be far in front of all others.

We can maintain our position as the leadership nation in the free world forever—provided we have the desire to do so.

It has already been shown that our ability to negotiate with other countries has become more difficult because of the progress now being made in the exploration and use of outer space. There is no question but that the Soviet Union has enhanced its prestige by achieving the first success in space flight. Its continuing achievements in this area after the first sputnik have allowed the Russians to exploit this prestige throughout the world. Unfortunately, many of the peoples of the world have concluded that this progress means that the Russians have also achieved technical superiority in the military area.

As of today, this is not true.

The United States maintains itself as the strongest military power with a tremendous retaliatory capability. Yet, George Allen of the U.S. Information Agency has submitted the results of a poll taken in Europe, and these show that in answer to a question involving whether the United States or the Soviet Union had the greatest total military

strength, the people of West Germany decided against the United States by 1 percent, the people of France by 10 percent, and the people of Great Britain by 15 percent.

The psychological aspects being so important in this complex struggle, it is necessary that we accomplish sufficient achievements so that the results be reversed.

The peoples of these countries would better support us if they are convinced of our ability to protect them and to achieve final victory.

Dr. von Braun has stated before the House Committee on Science and Astronautics that he believes that the Russians had the capacity this year to orbit a vehicle around the moon and to effect a soft landing on it. He believes that we will not have this capacity until 1963.

On the surface this is a frightening situation.

We have, however, taken an important step that is sure to pay great dividends. The President has decreed that the von Braun team will be transferred from the Army to the National Aeronautics and Space Agency. The House has recently passed a resolution supporting this and expediting the progress of this transfer.

There is also being requested, this year, an additional appropriation of $100 million for the SATURN project which falls under Dr. von Braun. This will allow us to develop a space vehicle with a million and a half-pound thrust capacity which will have not only the moon within its range, but also Mars and Venus. This tremendous thrust will have the ability to hurtle 15 tons of payload into outer space.

We are, however, 3 years behind in this particular area.

I am convinced that the difference between us and the Russians is not so large in those fields of knowledge which are less susceptible to propoganda. This is in the ability to overcome the dangers which will affect men in outer space. The final achievement will be the ability to develop a manned-space vehicle which will have maneuverability in outer space together with the ability to return to earth at will. Here we must overcome the problems in radiation, metallurgy and in outer space environment for man—to name just three.

There is no way of keeping a tally sheet in these fields, but it is my own belief that it will be here that our achievements will be outstanding.

Let me close with a paragraph of Lincoln's speech at New Haven in 1860, a paragraph written about another subject, but one that well deserves recalling:

"I think that one of the causes of these repeated failures is that our best and greatest men have greatly under estimated the size of this question. They have constantly brought forward small cures for great sores—plasters too small to cover the wound. That is one reason that all settlements have proved so temporary, so evanescent."

If we apply these sentiments to many of the problems that are so large today, we must recognize the grain of truth. And we must redouble our efforts to secure true national unity while we seek a more powerful position of defense. It would be well if, as we did, we kept in mind these words of Lincoln:

"You cannot fail, if you resolutely determine that you will not."

HAVE WE GONE SOFT?

(By Thurston N. Davis)

Like a strong and vigorous person suddenly stricken in middle life, we appear obsessed with a fateful diagnosis which tells us we are sick and will surely die unless we somehow change the habitual pattern of our lives. And, as diseased people often do, we talk at great length about the latest chance remark dropped by the doctor. The malady is variously described. Columbia President Grayson Kirk's verdict is "spiritual flabbiness." Alan Drury, in "Advise and Consent," writes of our time as the age of the shrug and stresses the "dry rot" every perceptive American senses in the air around him. Prof. Charles A. Siepmann, who heads the New York City branch of the American Civil Liberties Union, declared only the other day: "We're breeding a new type of human being—a guy with a full belly, an empty mind, and a hollow heart. I see them walking about, and I don't like them one bit."

All this gives added point to John Steinbeck's letter to Governor Stevenson. To "dear Adlai," Steinbeck transmits his two first impressions of the United States of America of 1959–60: First, "a creeping, all-pervading nerve gas of immorality"; second, "a nervous restlessness—a hunger, a thirst, a yearning for something unknown, perhaps morality." Then, as afterthoughts, two further impressions: "The violence, cruelty, and hypocrisy symptomatic of a people which has too much"; and "the surly ill temper" that afflicts "humans when they are frightened." "Mainly, Adlai, I am troubled by the cynical immorality of my country. I don't think it can survive on this basis."

Where do we go to gather evidence on our alleged decadence, immorality, and materialism? We might pick up the travel supplement in our Sunday New York Times and glance at the midwinter ads for hotels and motels along the neon-bright strip of Miami Beach. Here, in one concentrated spree of vulgarity, we move from star-studded offers of fun, fun, fun, at low, low rates—with "authentic Polynesian Luaus" thrown in free at one address—all the way to siren assurances that if we reserve now (at $16 daily per person) then Paradise (double occupancy) is so near at hand.

This sort of thing, I suppose, is materialism, though it is somewhat too obvious to be named decadence. But it isn't merely the Miamis of the world that are issue. If Steinbeck, and all the other critics are to be credited, this moral miasma which afflicts us is well-nigh universal. It is the fly-now-pay-later urge. It's the itch for the fast buck, for the irresponsible pleasure, for the short cut to power or payola or prideful status. It's the clever dodge, the inside track, the deal, the gimmick, the angle, the guy we know who'll "fix" it. It is the "filter" mentality: have the fun, but avoid the lung cancer or the pregnancy. It is the omnipresent yen to push somebody else out of the way and become the fellow who's got everything. To quote Professor Siepmann again: "This amorality is endemic. Society is shot through with it. You'd be amazed at how many students said Charles Van Doren was right. Anything for No. 1."

How does one go about computing the moral strength or weakness of an entire society? Crime and delinquency statistics, the divorce rate, the blight of pornography, the rising rate of illegitimate births, the high incidence of broken homes, the surge of mental illness, the percentage of youth rejected by the armed services, phenomena like the current practice of cheating in college examinations— these and other data and studies give some sort of an idex. What else is needed?

Eugene Kinkead, an editor of the New Yorker, has written a book entitled "In Every War But One" (Norton). It attempts to analyze the hundreds of cubic yards of documents that the Department of the Army assembled in its deadly serious effort to find out what went wrong with American prisoners-of-war in Korea. Kinkead reveals, amid much other data, that the 229 Turks who were captured and interned in Korea all managed to survive their imprisonment, and not a single one became a collaborator. One-third of our boys, on the other hand, became collaborators; and 38 percent of them died. The Army found that GI's often abandoned fellow Americans who were wounded; they cursed their officers; the strong took food from the weak; in certain cases Americans sick with dysentery were rolled out into the cold to die; and this was done, not by their Chinese captors, but by fellow GI's. Turks, however, kept a high morale, shared food and nursed their sick back to health.

Heaven knows, the image of America that is refracted through these and other available statistics is enough to shake the most complacent of us. Nevertheless, the picture is incomplete. The big, bold headlines—ah, dear, freedom of the press—tell us about the mad bombers, arsonists, sex maniacs, kidnapers, juvenile murderers, junkies, and extortionists among us. They rarely highlight the millions of hard-working and dedicated people still in the land: surgeons, nurses, nuns, civil servants, artists, social workers, public school teachers, clergymen, firemen, policemen, truckdrivers, scholars—and plain, everyday, indispensable fathers and mothers of growing families.

Then, too, a certain aroma of phoniness creeps at times into these discussions, making it all the more difficult to assess our true moral stature. We could well have done without the tears and congratulatory salvos that greeted young Van Doren's public confession, which to many, by the way, was the most meretricious incident in the entire quiz show mess. John Cogley, in the Commonweal, said Van Doren "did his greatest mischief and was guilty of the most shameful abuse of public confidence, not when he accepted money under false pretenses, but when he made his belated confession," which, he went on, while "humble" in the approved TV and Madison Avenue manner, "reeked with pride."

And, frankly, are we doing any better at genuinely unburdening our consciences than Van Doren did? We feel clean and noble when we excoriate the materialism around us. We manage to pin the blame on some scapegoat—working wives, or the New Deal, or high taxes, or John Dewey and the teachers colleges—leaving very little responsibility at our own doorsteps. Our excoriations would be far more convincing if we were readier with tax dollars for defense and for economic aid to less materialistic peoples; if we fought harder for the Negro; if our consciences were a bit more troubled over irrationalities in our immigration laws; if we worried a little more about the lot of the Puerto Ricans in our cities; if, having done our excoriating, we were prepared to sacrifice a slice of our time or a touch of our comfort to the common good of the free world and the righting of injustices and inequities here at home.

A false note is sounded, too, by the realization that in large part our concern originates in fear that we may soon be overtaken, economically, by the purposeful Soviet Union. Can we honestly say our fear is the trepidation of God-fearing men—fear for ourselves and our souls and our fate, for the harvest of our sins and our wretched confusions? Or is it nothing but a camouflaged lust to cling on to the very possessions we protest are our undoing? There is reason to suspect that it may be the latter, that what we are really worried about is that the whole kit and caboodle of our American way of life—missiles and credit cards, Cadillacs and pop-up toasters, our freedoms, fun, filters and foolishness—is about to go down the drain. If so, then we do have reason to be concerned for ourselves and our future.

Our trouble is not simply that some Americans have air conditioners in their cars, or that an increasing number of our citizens are making downpayments on cabin cruisers. Their number is and will remain limited: even in our affluent society there is still plenty of personal poverty. The obli-

gation of transcending and mastering material possessions presses harder on the few than on the many. The crasser brand of materialism, therefore, can be discounted as a real problem for the vast majority.

There is, however, a subtler problem which does touch us all. It goes by various names and is all the following things at once: a loss of faith, an obfuscation of reason, a failure of nerve, a loss of confidence, an intellectual and moral vacuum, a failure to maintain our grip on the big idea about ourselves and the world we inhabit.

What is really wrong, it seems to me, has to do with our loss of the big idea, by which I mean our loosening grasp on the meaning and purpose of human life in relation to a real order of objective and transcendent being. Our problem is that we no longer know who or what we are. We no longer collectively see ourselves as a people bound together by common affirmations, common assumptions, common loyalties to a commonly shared universe of values. For years we have viewed this American pluralism as a product of our freedom and as a source of immense strength. Now it is slowly dawning upon us that it can become a debilitating disease. This malady, which is now epidemic, affects rich and poor, young and old. It is as though all at once we had lost our identification papers. To make matters worse, we have not only let the big idea slip away, but it is no longer polite or even permissible to raise any of the big questions men have always asked about the big idea.

What are these big questions which, in the contemporary atmosphere of our official agnosticism, may be asked and answered only behind the doors of the home, church and synagogue? To paraphrase a list of such questions prepared by Father John Courtney Murray, S.J., for "Religion and the State University" (University of Michigan Press, 1958): Where does man rank in the order of being, if there is an order of being? What is the nature of man? Is it of a piece with the nature of the cosmic universe? Is it to be understood in terms of the laws of the universe, whatever they may be? Or is there a difference between man and the rest of nature? Is the nature of man spiritual in a unique sense? What is man's destiny? Is it to be found and fulfilled beyond time in another world? What is the sense of history? Does history have some kind of finality? Or is the notion of finality meaningless? What can a man know? What do you mean when you say, "I know"? Are there varying degrees of knowledge and certitude? Can man's knowledge and love reach realities that are transcendent to the world of matter, space and time? Is there a God? What is God? Does God have a care for man? Has God entered the world of human history to accomplish a redemption? What is meant by "salvation"? What is meant by freedom, justice, order, law, authority, power, peace, virtue, sin, morality, religion?

Just now, in the United States and throughout the West, there is obviously no consensus as to how these and similar questions are to be answered. There is not even a shared language of words and concepts with which the separated components of our society might begin to be able to discuss them. Yet, as recently as 75 years ago, in the academic world as well as in the realm of public affairs, the ancient heritage of such words and concepts, products of the scholastic tradition, was still in uneasy but de facto possession. Today, except in some of our colleges, the lines that once bound us to that heritage have been broken.

Once the ancient words and ideas had been widely discredited, a new lexicon of discourse took their place. It was a tongue which had been coming into more and more common usage since the 18th century, the language of modernity—of science, experimentalism and positivism. Until almost yesterday, who would have dreamed of disputing modernity? And yet, though it was so firmly in control just a little while back, today, in Father Murray's phrase, modernity is dissolving in disenchantment. The disenthronement has created a strange new situation, a sort of ideological interregnum. The seals of legitimacy, so to speak, have disappeared from its head and tongue. Though it still exercises a kind of caretaker government in our universities and elsewhere, the modern idiom of positivism is reenacting the old story of the emperor's clothes.

It is this sudden turn of events in the world of ideas, this breakdown of the flimsy consensus of modernity, that has brought us to that condition of moral vacuum which John Steinbeck and others perceive and deplore. More or less clearly we today realize that a postmodern era has commenced and that we are entering it in a state of intellectual nakedness. The pressing need for some sort of revival of the public philosophy of the West has come home to us. This, it would seem, is what these gathering storms of protest and criticism are all about.

Half a dozen years ago, in his essay on "The Public Philosophy," Walter Lippmann insisted that in our "pluralized and fragmenting society a public philosophy with common and binding principles" must somehow be salvaged and reinstated. If we fail to revive and restore the consensus we once possessed, Lippmann warned, "* * * then the free and democratic nations face the totalitarian challenge without a public philosophy which freemen believe in and cherish, with no public faith beyond a mere official agnosticism, neutrality, and indifference. There is not much doubt how the struggle is likely to end if it lies between those who, believing, care very much—and those who, lacking belief, cannot care very much."

We know from the chapter he contributed to "Walter Lippmann and His Times" (Harcourt, Brace), a volume published last year to honor Mr. Lippmann on his 70th birthday, that Prof. Arthur M. Schlesinger, Jr., was more than a little scandalized by the stress the veteran columnist placed on the necessity of shoring up the public philosophy as a condition of the survival of our society. Mr. Lippmann had written: "I do not contend, though I hope, that the decline of Western society will be arrested if the teachers in our schools and universities come back to the great tradition of the public philosophy. But I do contend that the decline, which is already far advanced, cannot be arrested if the prevailing philosophers oppose this restoration and revival * * *."

However, as Schlesinger's reaction demonstrates—and he is not alone in his appraisal of Lippmann's thesis—the academic world is not as yet in the mood to accept responsibility for the difficult but still feasible task of restoring what Lippmann calls a common conception of law and order which possesses a universal validity.

Meantime, each fresh week and month of our now lengthening postmodern experience serves to sharpen the issue and drive home its urgency. If we are really determined to fill the present void, we shall rediscover the words and begin to conceive the ideas with which to ask once again the big questions that every generation must answer. Thus, conceivably, if time is given us, we may even reclaim the big idea. If war is too important to be left to the generals, this present dilemma of ours is too terrible to be entrusted to the professors.

Needed: Reinstatement of Funds for Tornado Research

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, February 18, 1960

Mr. WILEY. Mr. President, the advances in science and technology are enabling mankind to learn more of—and, to an ever larger degree, control—the forces of nature.

We realize, of course, that there are still a great many unknowns in the field.

Nevertheless, the eternal quest of man for ways and means to control the elements is essential—if these forces are to be harnessed to serve humanity, or at least to protect the human race from being unwarrantedly damaged by such forces.

At this time, I refer particularly to the elements of weather.

Over the years, our Nation has suffered tremendous losses in deaths, as well as property damage, from hurricanes, tornadoes, and other types of storms or atmospheric disturbances. During the past 5 years, for example, 3,343 tornadoes occurred, causing 523 fatalities, and an inestimable amount of property damage. During the period 1916–51 there was an average of 222 deaths each year caused by tornadoes.

In Wisconsin alone, the property damage from a single tornado in 1958 resulted in an estimated $17 million.

Although we are still a long way from controlling such forces, we nevertheless are progressing toward learning more of them, as well as establishing forewarning systems to enable people to protect themselves from hurricanes, tornadoes, and other such storms.

Currently, the Congress is considering appropriations for carrying on expanded programs of research for weather control.

During its consideration of funds for projects in this field, the House of Representatives cut—and unwisely, I believe—$775,000 from the President's recommendations for funds to expand weather research and control projects.

Today, the Senate Appropriations Committee is considering the matter.

Fundamentally, I believe, there is a real need for an expanded weather research program.

I would sincerely hope, therefore, that the Appropriations Committee would reinstate the funds cut from the weather research budget by the House of Representatives. In addition, I respectfully urge the Members of this body to approve such funds when it comes up for consideration in the Senate.

At this time, I ask unanimous consent to have a letter which I have written to Chairman HOLLAND of the Department of Commerce and Related Agencies Appropriations Subcommittee, printed in the Appendix of the RECORD—emphasiz-

ing the need for reinstatement of the funds for the weather research programs.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FEBRUARY 18, 1960.

Hon. SPESSARD L. HOLLAND,
Chairman, Commerce Department and Related Agencies Subcommittee, Senate Appropriations Committee, Senate Office Building, Washington, D.C.

DEAR SPESSARD: I am writing to respectfully urge reinstatement of the $775,000 cut from the Weather Bureau research program by the House of Representatives.

During recent years, your committee has made a constructive contribution to improved weather research, aimed at protecting people and property from the ravages of hurricanes, tornadoes, and other atmospheric disturbances.

In view of the tremendous damage, as well as loss of life and loss of property resulting from such storms, I'm sure you agree that there is a real need for carrying on effective research programs.

Recently, I was gratified by the recommendations of the President and the Bureau of the Budget for including in the 1961 budget funds for improving weather research.

As you know, hundreds of tornadoes—the most violent of all atmospheric disturbances—occur each year. In the past 5 years, for example, 3,343 tornadoes occurred, causing 523 fatalities, and an inestimable amount of property damage.

During the period 1916 to 1951 there were an average of 222 deaths each year caused by tornadoes. With the beginning of the modern tornado warning service in 1952 the average number of deaths caused by tornadoes for the period 1952 through 1959 has been reduced to only 163. I am confident, as are prominent meterologists in the Government and in universities, that an expanded program of tornado research such as is proposed by the President, will permit a drastic further reduction in the annual toll of lives brought on by destructive tornadoes striking without warning. Experience has proved that many lives can be saved when advance warnings of a tornado's approach are provided to communities in the path of the storm.

Unfortunately, the House of Representatives made what I believe are some unwise cuts in the budget of the Weather Bureau.

I am well aware—as I know you are—that in these times of great demands for Federal funds, there is a real need for a priority system for appropriation of Federal money.

In view of the fact that such funds were deemed essential by the administration—which, as you well appreciate, has made an effort to keep spending down to essentials—I believe this should be considered, along with the overriding merits of the need for greater research itself.

Consequently, I would hope that your committee would find it possible to reinstate the $775,000 for research relating to tornadoes in the 1961 appropriation.

As you know, the purpose of the funds is to permit an expanded program of hurricane research and the inauguration of a similar program for studying tornadoes.

This is a particularly opportune time to launch a Midwest tornado research project, since—I am informed—within the next month, the Weather Bureau will have available three specially instrumented aircraft. These aircraft—a B-57, for very high altitude investigations, and two DC-6's for middle and low flying—have been undergoing modification and installation of the most complex meteorological research equipment available anywhere in the world.

As I understand it, money—up to this time—has been only provided to fly these planes during the summer months in investigating tropical storms and hurricanes.

With an increase in appropriations, however, the Weather Bureau would be enabled to operate these flying laboratories on tornado research projects during the spring months also before hurricanes normally develop.

The tornado research plans of the Weather Bureau for fiscal year 1961 include, in addition to the use of flying laboratories, the following:

1. Utilization of existing upper-air sounding stations for maximum soundings of upper atmosphere every 2 hours during selected severe tornado outbreaks in order to gather the required data for research on these storms;

2. Extension of the small, intensive surface research observing network to obtain greatly increased density of reports during the spring and summer months;

3. An expansion in the program of research contracts with universities directed toward the study of tornadoes.

In view of the great improvement in hurricane warnings brought about by the intensive hurricane research project, I strongly urge Mr. Chairman, that your committee give full consideration and approval to the Weather Bureau's request for the additional $775,000 to permit inauguration of a similar program of tornado research in the midwestern area.

Sincerely yours,

ALEXANDER WILEY.

Two Hundred and Fifty-six Thousand Dollar Salt Pollution Suit Settled for $25,000

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Lubbock (Tex.) Avalanche-Journal of December 6, 1959:

TWO HUNDRED AND FIFTY-SIX THOUSAND DOLLAR SALT POLLUTION SUIT SETTLED FOR $25,000—AGAINST 11 COMPANIES

DENVER CITY.—Suit for $256,000 filed in January by Gordon Woods, Cisco, against 11 oil companies for alleged pollution of underground water has been settled out of court for $25,000.

Announcement of the settlement was made by Attorney Paul New, Denver City, attorney for Woods.

Woods brought suit against the companies on grounds that they were using open salt water or slush pits for disposal of salt water and failed to reinject the salt water into abandoned wells or through reinjection wells.

Owner of four sections in the Waples Platter area of Yoakum County, Woods contended that the salt water had polluted 14 irrigation wells he has drilled since owning the land. He also contended that the entire four sections, with the exception of a minor portion, is under irrigation and pollution of the water permanently destroyed the usefulness of the land and the irrigation wells.

Of the original 11 defendants named in the suit, Attorney New said, only 7 were named in the settlement reached with Woods. The other four were dismissed from the action several weeks ago.

Defendants against whom the settlement was reached included Shell Oil Co., Davidson Drilling Co., Inc., Great Western Drilling Co., Drilling and Exploration Co., Inc., Plymouth Oil Co. Tidewater Associated Oil Co. and Texaco Seaboard, Inc.

Woods' original suit asked for $100 damages for each of the 2,560 acres in the four sections he alleged had been harmed.

Arms Contracts Found Lagging in Settlements

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 18, 1960

Mr. RANDOLPH. Mr. President, there has been brought to my attention the lag in arms contract settlements in the Defense Establishment.

According to a story published recently in the press, the Navy has issued a report which sets forth the status of its negotiated contracts.

I ask unanimous consent that an article by Allen M. Smythe, reputable financial writer, appearing in the New York Herald Tribune, January 31, 1960, which covers this problem, be inserted at this point in my remarks.

There being no objection, the article was ordered printed in the Appendix of the RECORD, as follows:

ARMS CONTRACTS FOUND LAGGING IN SETTLEMENTS

(By Allen M. Smythe)

Military airframes, aircraft engines, and their avionic equipment take plenty of the taxpayers' dollars. Year-end reports just being released by the Pentagon confirm this. Also, final price determination is not yet completed on defense contracts totaling billions of dollars.

The Navy states that January 1 they had outstanding 277 contracts of the incentive and price redetermination type that had a value of $6,599,351,000, and which were overdue or had not yet reached their target date for final settlement.

Of these, 156, valued at $3,575,051,000, were listed as awaiting settlement. The Bureau of Naval Weapons accepted the responsibility for delay of 23 incentive contracts with an average value of $30 million. Contractors were reported responsible for delayed settlement on 37 incentive contracts with an average value of $48 million.

The Bureau of Naval Weapons was formed December 1, 1959, by the consolidation of the Bureau of Acronautics and the Bureau of Ordnance. The new Bureau contracts for all naval aircraft and their electronic and other airborne equipment.

The total of all Navy contracts awaiting settlement is nearly $2 billion less than the amount 2 years ago. The bulk of the unsettled contracts are with Pratt & Whitney, jet engine builder, and with large airframe firms.

The Navy lists all contracts that have based their target dates for price settlement by more than 3 months under contractor or bureau responsibility. Exact prices or number of contracts are not given for individual contractors.

The Navy lists responsibility for delinquent settlement with Lockheed and Sperry Rand for contracts totaling between $50 million and $100 million. Also in this category are Martin and McDonnell of approximately $150 million each. Douglas is listed around $175 million.

Grumman, builder of supersonic fighters for aircraft carriers, has contracts to the value of approximately $400 million awaiting settlement. These also are termed contractor responsibility.

Chance Vought, which is another builder of supersonic naval aircraft, recently had its submarine air-breathing missile, Regulus, canceled. The company's naval contracts to the value of $500 million are listed under "contractor responsibility" as delinquent.

The Navy accepts responsibility for delayed settlement of contracts between $50 million and $100 million for Goodyear and Philco. Douglas is listed with around $125 million. Westinghouse and Grumman totals are each $150 million. The Lockheed total is under $250 million.

Navy delays are also holding up settlement of $350 million in incentive contracts for North American, which builds the twin-engined attack bomber for aircraft carriers.

Pratt & Whitney has five contracts totaling $600 million awaiting settlement.

Mr. President, I am glad to have this matter clarified by the Navy in a prompt manner. It is assumed that the Air Force will disclose its contractual status in the near future.

A Bill To Correct Certain Inequities in Public Law 68, 84th Congress

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. LESINSKI. Mr. Speaker, I have today introduced a bill to amend the Postal Field Compensation Act of 1955 to correct certain inequities with respect to supervisory and other postal field service employees.

Section 1 of the bill would eliminate the restrictions on the number of employees who can be assigned in levels 17, 18, 19, and 20. At present, although Public Law 68 is designed on the basis of equal pay for equal work or responsibilities, some of the offices have grown so that the postmasters should be in one of the restricted levels. On account of that restriction, they cannot be promoted with the result that supervisors do not receive promotions on the basis of equal pay for equal work or responsibilities.

With respect to section 2, the Post Office Department has interpreted the phrase "supervises approximately 20 or more employees" to mean that the "or more" could be any number more than 20, while on the other hand "approximately 20," when the number of employees supervised is below 20, is interpreted to mean no fewer than about 16. Many supervisors supervise 40, 50, or more employees for more than half their tour of duty, or all of their tour of duty, and still are placed in level 7 since the 40 or 50 employees are considered as "approximately 20 or more." Since the Department has decided that they will go approximately 4 below 20 for "approximately 20" they should not go more than 4 above 20 for the "or more." Those supervising more should be in level 8 by establishing a standard position for that level.

Since an employee can qualify by working 30 days in the beginning of a calendar year in the higher level for higher level pay and, under the law, it is possible for him not to be assigned to higher level pay until December and then receive the higher level pay, it does not seem logical that if he is placed in the higher level position 1 month later—in another calendar year—his value is suddenly lost. After he has once qualified for higher level pay, he should not need a requalifying period merely because it is another calendar year. Also, the qualifying period should be reduced from 30 days to 20 days since 20 working days constitute a working month which was the intent of the originally established period. Section 3 would accomplish these purposes.

Many clerks and carriers who are promoted from level 4 to a supervisory position lose a longevity grade of $100, due to the fact that the grade was established under the alternate method of receiving the longevity or "meritorious" grades by being at the top step of the level for 3, 5, and 7 years instead of the newer standard of 13, 18, and 25 years in the postal service. This means that many level 4 employees who receive only $285 per month upon promotion to level 7 have $100 of that amount taken away and receive only $185 upon such promotion. Section 4 would correct that inequity.

Section 5 would provide a fair increase in salary for a three-level promotion. Supervisors are generally promoted from level 4 employees—clerks and carriers. Most of them have had enough seniority to be working preferred tours of duty—with carriers having steady day work—and when they become supervisors they ordinarily go to the less preferred tours, usually to night work. For making this basic change in their way of living and for assuming additional responsibilities and duties, they are compensated for the first year by the small increase in salary of about $5 per week or possibly only slightly more than $3 per week. Section 5 would give them a salary increase of $625, or about $50 a month, for assuming this additional responsibility. Under the present promotion method, many able clerks and carriers refuse promotion. This section does not entail any retroactive pay, but places those already promoted in the salary step and level they would have been in if this section had been in effect when Public Law 68 was originally enacted.

Section 6 would continue the present appeal procedure.

Excerpts of Testimony of Dr. Thomas Carney

EXTENSION OF REMARKS
OF
HON. JOSEPH W. BARR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. BARR. Mr. Speaker, the Committee on Interstate and Foreign Commerce has been holding interesting hearings on a subject of great importance to farmers and to consumers all across the country. These hearings involve the application of the so-called cancer clause, or Delaney amendment, to the use of chemicals in agriculture, and the use of chemicals, colors, and other additives in processing foods, drugs, and cosmetics.

This is a very complex problem. All of us want to foster public health without unnecessarily crippling technological progress in agriculture or in the other industries upon which we depend for a safe and adequate supply of foods and drugs.

A very informative statement was presented during the committee hearings by an eminent scientist, Dr. Thomas P. Carney of Indianapolis, who has devoted his life to fighting disease and promoting health. Dr. Carney is a vice president and research director of Eli Lilly & Co. and is chairman of the Committee for the Study of Carcinogenic Substances of the Pharmaceutical Manufacturers Association. Following is a summary of his statement, presented on behalf of the association, which I believe Members of the House will find helpful and interesting:

SUMMARY OF A STATEMENT BY THOMAS P. CARNEY ON H.R. 7624 AND S. 2197 BEFORE THE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, FEBRUARY 11, 1960

My statement will be confined to a discussion of the implications of the so-called cancer clause, or Delaney amendment, of H.R. 7624 and the Food Additives Act of 1958. The Senate did not include this clause in similar color additives legislation which passed there (S. 2197).

The Delaney amendment imposes a flat prohibition on the use of any substance which can be made to produce cancer when ingested by animals, even if the dosage is a million times that for intended use in man or if experimental conditions are totally unrelated to actual use. We will demonstrate that such a clause is unscientific and works against the broad public interest. We will show the restrictions it imposes on agricultural progress through limitations of research and will suggest a slight modification in its wording which will protect the public health but permit the public to benefit from technological advances.

The essential purpose of color additives legislation now before this committee is to provide for the use of certain substances known to be safe as colors but which would be banned under the inflexible provisions of the present color laws. Yet in its own field the proposed cancer clause imposes precisely the same absolute or per se doctrine which the legislation before you is designed to correct.

Let me demonstrate the dangers of such a clause using as an example the substance diethylstilbestrol. This chemical has been safely used in both human beings and animals for years. Yet, under the Delaney amendment, its present use cannot be extended and new uses are prohibited.

It is especially significant, then, that the Food and Drug Administration has examined scientific information about stilbestrol on six occasions and declared this chemical safe for six different uses. In 1941, the FDA, after examining clinical results with stilbestrol in 8,000 women, cleared this chemical as safe. It sanctioned the uses of stilbestrol in animals in 1947, 1954, 1955, 1957, and 1959.

Stilbestrol is now administered to an estimated 300,000 women and 50,000 men per year in the United States. In addition, it is fed to some 75 percent of all beef cattle on feed in this country.

Many publications of outstanding authorities in the field of endocrinology have demonstrated that stilbestrol is safe as administered to human beings. Within the past 3 months, articles have appeared in the Western Journal of Surgery and two issues of the Journal of the American Medical Association pointing out that there is no danger of cancer production from estrogen treatment.

With respect to the use of stilbestrol in animal feeds, many scientists have reported on the lack of residue in meats produced. The Secretary of the Department of Health, Eudcation, and Welfare has also stated that no detectable residue remains in beef and sheep fed stilbestrol.

Stilbestrol faces a continuing problem under the Delaney amendment because it can be made to produce cancer under certain conditions in guinea pigs, Syrian hamsters, and in a few strains of mice and rats. Most work has been done with mice specially bred to develop spontaneous cancers.

It is very important to note that no cancers have ever been produced with stilbestrol—even when efforts were made to do so—in most strains of mice and rats, nor in any monkeys, dogs, cats, goats, rabbits, pigs, many breeds of chickens, turkeys, and pheasants. Neither has cancer been reported in the millions of cattle and sheep to which stilbestrol has been fed.

We have here, then, a product known to be safe on the basis of long and widespread experience with both man and animals. And yet this very valuable product could never have been developed if a clause like the Delaney amendment had been in effect; adidtional uses of the product are prohibited even now.

Another example of problems arising when the Delaney amendment is applied can be seen in the case of arsenicals. Several of these chemicals are used in poultry and swine.

Delaney amendment provisions have prevented the further clearances or arsenicals in feeds, even though it has never been demonstrated that the organic forms cause cancer. Like stilbestrol, the arsenicals had received prior sanction by the FDA.

In considering the safe use of substances that cause cancer in animals, a point of disagreement has been whether or not threshold levels exist. A threshold level is one below which an animal does not get cancer but above which an animal does.

Many references in the scientific literature indicate that at low levels many chemicals do not produce cancer, but at higher levels they do. The Department of Health, Education, and Welfare has accepted safe levels for radiation even though higher levels can be harmful or fatal, thus employing scientific judgment in determining safe limits of a known hazard.

The danger in a rigid and sweeping clause such as the Delaney amendment, which permits no scientific judgment as to safety of specific substances, is that it can prohibit the use of very valuable chemicals which are known to be safe. We should recognize that chemicals have had a dramatic impact upon our agricultural economy and its ability to meet the needs of a rapidly growing population.

One hundred years ago a farmer in this country produced enough food for himself and three others. Today he produces enough for 25 besides himself. Farm production has increased 33 percent, with 33 percent fewer farmers, in the past 20 years.

Our record of improvement in agricultural production is due to (1) mechanization, (2) better strains, and (3) chemicals. Representative DIXON, Republican of Utah, estimates that 40 to 50 percent of farm productivity improvement since World War II resulted from agricultural chemicals.

It would be disastrous to remove any one of these methods to boost farm production at the same time that our population is increasing at its present rate. If, for instance, stilbestrol had not been on the market, the farmers of this country would have had to produce 360,000 more beef animals in 1959 to supply the amount of beef possible with stilbestrol. This is enough beef to feed 2½ million people for 1 year.

The Food Protection Board of the National Academy of Sciences-National Research Council said in 1956:

"No one knows exactly what would happen if the use of pesticidal chemicals on the farm should be abandoned, but it is safe to say that we could not commercially produce apples, peaches, potatoes, citrus, and tomatoes, to mention only a few crops; and yields of others would be drastically reduced."

In the same report this board pointed out that in dealing with chemicals the distinction between toxicity and hazard should be recognized. Toxicity is the capacity of a substance to produce injury; hazard is the probability that injury will result from its proper use. A compound might be highly toxic, but used properly it would not be hazardous.

It should be obvious from previous discussion that a restriction such as the cancer clause affects the entire economy. It prevents the use of agricultural chemicals that have been highly important in improving both quantity and quality of food.

To use an example, stilbestrol is estimated to have saved the farmers of Iowa $15 million in 1959. Without stilbestrol, it either would have cost the farmers more to produce the beef or cost the consumer more to buy this beef. Multiply this example by the thousands of useful chemicals involved and you arrive at the billions of dollars saved the economy yearly.

The Delaney amendment also curtails progress in another way. From 2 to 5 years and $750,000 to several million dollars are needed to develop a new product in the pharmaceutical industry today. If there is a possibility that a useful new chemical might be kept off the market because of the inflexible cancer clause, then research on this chemical must be dropped.

We have stopped work on items of this kind in our company. I can tell you, too, that one major industrial company has discontinued operations at its agricultural research farm because of the uncertainty of the future in this field.

We believe that in enacting the Delaney amendment Congress made a sincere effort to write a law to protect the general health and welfare. But we do not feel that it was the intent of Congress to prevent uses of substances safe for their intended purposes.

We have no objection to retaining the Delaney amendment if the right of scientific judgment is returned in its administration. To accomplish this, we propose a change in the wording of this cancer clause to read in part:

"A color additive shall be deemed unsafe * * * if the additive is found in amounts and under conditions reasonably related to the intended use to induce cancer when ingested by man or animal."

We also believe that a similar change should be made in the Food Additives Act.

This leaves some element of scientific judgment in the hands of the FDA—the agency well qualified to exercise its discretion in the best interests of the public.

The Connally Amendment

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article which appeared in the Los Angeles Times, Los Angeles, Calif., on February 17, on the subject of the Connally amendment:

THE TIME IS NOT YET

In 1946 the United States made itself subject to the International Court of Justice by a resolution of the Senate. But the resolution did not pass before Senator Connally added an amendment exempting this country from the court's jurisdiction in cases which we ourselves might regard as essentially domestic. Other nations took the same line, and as a result, according to those who do not like the Connally amendment, the court has not had much business, about two cases a year.

HUMPHREY RESOLUTION

About a year ago Senator HUBERT HUMPHREY, Democrat of Minnesota, introduced a resolution to repeal the Connally amendment and make the United States accept the compulsory jurisdiction of the international court "in relation to any other state accepting the same obligation." The Senate Foreign Relations Committee is now holding hearings on this matter.

This is not a party issue. President Eisenhower, Vice President NIXON, Secretary of State Herter, Attorney General Rogers, all support repeal of the Connally amendment, and so does the American Bar Association.

But we are unabashed before all this eminence; we do not want the Connally amendment repealed—not yet.

Our reasons can be found in a quotation from the late Senator Robert A. Taft, a quotation used, curiously enough, by Vice President NIXON last year in an address advocating repeal of the amendment. Senator Taft said:

"I do not see how we can hope to secure permanent peace in the world except by established law between nations and equal justice under law. It may be a long, hard course, but I believe that the public opinion of the world can be led along that course, so that the time will come when that public opinion will support the decision of any reasonable impartial tribunal based on justice."

SENATOR TAFT'S POSITION

Senator Taft believed "the time will come" and life would hardly seem worth living if we too could not believe this. But there are no shortcuts to the millennium; the United States cannot bring it closer by leaping into the pit like the Roman knight, expecting the chasm to close over us and thus improve the world by our self-destruction.

Most of the advocates of our full submission to the International Court of Justice are lawyers, and this is no accident. For the lawyers, despite the many mischiefs they have done through the ages, have cherished a noble dream of a world ruled by law. The Greeks had it and got so far with it when Rhodes was a merchant power as to enforce a universal commercial law in the eastern Mediterranean—with the aid of the best fleet on the seas. The Romans dreamed, too, and there are passages in Justinian's code books which show he believed the law of his lawyers was the law of the world. Dante wrote about such law and a Dutchman named Grotius (1583–1645) devoted his life to finding a code to which all nations would subscribe.

The difficulty implied in the quotation from Senator Taft has always interposed: public opinion is various, and until there is one public opinion in the world there can be no world law to which everyone will submit.

Who would have the nerve to tell us, the American people, that our system of laws is not the best for us? And who would tell the Russians, or the subjects of any other Communist state, that their laws are not suitable or on the whole are not satisfactory? And what about some of the new African countries whose body of laws is still in its infancy? Or the Moslem countries where "civil" law and religious law are interchangeable, and the people like it that way?

How, out of this welter of law, custom and superstitution can a viable international code, an equity of the world, be formulated and enforced? Where is the universal public opinion upon which it would have to rely for enforcement?

TRIBUNAL OF NATIONS

The World Court has 15 judges under the U.N. constitution. The present 14 (one died in 1958) were appointed from Norway, Pakistan, Uruguay, the United Arab Republic, France, Mexico, the United States, the Soviet Union, the United Kingdom, Argentina, Australia, Greece, Free China, Poland. Of the 14 judges, perhaps 5 of them, consulting their homeland constitutions, might agree on a doctrine of liberty and individual rights roughly approximating the first 10 amendments of the U.S. Constitution. Several could not rise above the religio-legal prejudices of their native lands; others would not dare. In short, this court could not have any common denominator of international law, even a low one.

The advocates of repeal of the Connally amendment assure us that the Court would not really interfere in our "domestic" affairs—in such matters as desegregation, for instance. Perhaps not. But there are matters to which our malicious friends would draw the Court, by bringing actions against us if we submitted, that would seem very domestic to many Americans. Panama undoubtedly would start litigation about the canal, and others would sue with vindictive delight for rulings on our nuclear tests, our tariffs, offshore oil, foreign bases, etc.

SPECIOUS ARGUMENT

Walter Lippmann, an advocate of repeal, writes temptingly that full adherence to the World Court would provide private Americans with some security for their foreign investments. But under what rule of equity and what force of international opinion? What could a World Court do at this moment to abate the economic and other obscenities of the utterly irresponsible and defiant Castro regime in Cuba, particularly when, as Mr. Lippmann said 10 days ago, the public opinion which counts in this case, that of Latin America, is mostly on Castro's side, whatever he does.

The time will come, as Senator Taft said, but the time to repeal the Connally amendment is not yet.

Grain Traders Worry That U.S. Crop Props Are Killing Markets

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wall Street Journal:

FADING FUTURES: GRAIN TRADERS WORRY THAT U.S. CROP PROPS ARE KILLING MARKETS—WHEAT, CORN ACTIVITY DROPS ON BOARD OF TRADE; SOME DEALERS LEAVE THE FIELD—PILLSBURY SEEKS SPECULATORS

(By Richard F. Janssen)

CHICAGO.—In the vaulted amphitheater of the Chicago Board of Trade the gray-coated grain traders still carry on their supercharged daily commerce, a noisy melee from 9:30 to 1:15 that resembles nothing quite so much as a food riot in Calcutta or the final, frenzied moments of an overtime basketball game.

But something has gone out of the game these days—much of the stimulating uncertainty of former years, and with it, much of the money.

In 5 or 10 years this place will be dead, one veteran floor trader remarks dolorously.

Though this prediction probably is overly pessimistic, there's no question but that futures trading—the purchase and sale of commodities for future delivery—has been going down hill steadily, and that in the last couple of years the descent has been especially precipitous. Volume of futures trading for all commodities on 15 major U.S. exchanges last year sagged to the lowest point since World War II. At that time many exchanges were either closed or almost completely inactive. For grain trading alone, the 1959 figures were barely a third of those in the mid-1920's.

SLIMMER TRADE, CHEAPER SEATS

Board of Trade officials estimate that their trade in wheat futures last year was off 27.6 percent from 1958 and that corn trading dropped 11.2 percent from the prior year. Memberships on the exchange, reflecting the diminished activity, have slumped to a seat price of $5,000, close to a record low, compared to $62,500 in the 1920's.

The decline, traders say, can largely be traced back to one source—Uncle Sam and his various farm price support programs. Designed in part to stabilize the prices farmers receive, the U.S. price-propping efforts have succeeded entirely too well in the eyes of the traders. Wheat futures prices, which used to soar and dip like a runaway kite, now ooze up and down in minute fractions of a cent. And corn, which in particularly volatile years has seen prices triple, last year fluctuated within a relatively narrow range, between a high of $1.40 a bushel and a low point of 99 cents.

This relative leveling off of futures prices is a body blow to the speculator. By narrowing the possibilities for big profits, the Government programs naturally lessen his incentive to take a chance. Food processors, too, no longer go into the futures markets as actively as they used to. Commodities they buy for processing into food aren't going to change in value very much during the manufacturing and storage cycle, which may take several months, so there isn't quite the need there used to be for protective futures market "hedging" operations.

It might be asked: "Isn't this all to the good? Certainly it must be a desirable social end to eliminate the peaks and valleys of farm prices, to smooth out farm income so that everybody makes a living. So the speculator gets hurt. Who cares?"

A LOAD FOR TAXPAYERS

The grain traders' reply is that the gradual substitution of artificially high Government prices for prices established by free markets is not only expensive for consumers but is costing taxpayers nearly $1 billion a year in losses that the Government sustains in its price-propping endeavors. In the last 16 months, Uncle Sam's Commodity Credit Corp. has recovered only 70 cents of each dollar it spent on commodities finally moving out of its surplus hoard.

Farmers, who might be expected to benefit from Government guarantees of high prices, eventually will suffer, too, say the grain men, as the buildup of surpluses becomes too huge for even the Government to support. At last count, Uncle Sam had accumulated more than $9 billion worth of commodities in his stockpiles. And the total is growing.

So far, cotton provides the most striking example of how a price support program can wreck a futures market. Last August 1, the Government turned to a new plan to help cotton farmers; if they comply with acreage allotments, it will purchase the cotton they offer at a price well over production costs. Currently, the program is taking about 70 percent of the total U.S. crop. This, of course, makes the Government the biggest cotton dealer and helps stabilize the price.

UNCLE SAM TAKES OVER

The result: "In 1959, only about 1.9 million bales of cotton were traded on the New York Cotton Exchange after August 1, down 69 percent from 1958," reports the exchange's president, William K. Love, Jr. Indignantly he declares the program is "leading the entire cotton industry to complete socialization." Textile mills now can buy their needs from Uncle Sam at an average of $156 a bale, $14 less than the Government pays the farmer for the same bale.

Already two important cotton trading firms have closed their doors: The 69-year-old Cone, Schwarz & Co. and Alvin Wachsman & Co., whose principals were members of a family that has been in the cotton business for four generations. Other firms, more diversified in commodities or securities, are attempting to hold on in hopes that trade will pick up.

But unless the Government program is changed, "I don't see any future for the Cotton Exchange," says Ceaser Cone, president of Cone Mills Corp. of Greensboro, N.C.

Grain traders, obviously frightened by the crisis in cotton, are worried that the same fate is creeping up on them. "Even though my father was in this business, I certainly wouldn't let my son enter it," says one veteran Board of Trade member. "The way things are going we'd better get out completely and let the politicians run the food business."

A survey last October 1 showed the Government's Commodity Credit Corporation owned 96 percent of all corn in off-farm storage. On the same date, about 75 percent of the 1.7 billion bushels of wheat in elevators and other nonfarm storage places was either owned directly by the U.S. or held as security for price support loans.

CLAMPING ON A CEILING

The Government's domination of supplies "tends to set a ceiling as well as a floor on prices," says an official of a big Minneapolis-based grain firm. This means the "extreme risk" of price changes no longer exists, so firms such as his find much less reason to enter the futures market and "hedge" against price variations.

"Hedging" is the main raison d'etre of a commodity market. To understand its importance take a highly simplified look at how it works:

A flour mill buys a carload of grain at $2 a bushel. Since it won't make all the grain into flour right away, it might be able to buy the grain later at a lower price. To offset this risk, it contracts to sell an identical quantity on the futures market at $2.05 for delivery next March.

In a month or so, when the company is selling its flour, the "cash"—immediate delivery—price of grain may have fallen to $1.95. The company thus has "lost" five cents by buying at the earlier $2 price. But the March futures price also has dropped, to $2, so the firm buys back its futures contract for that amount, five cents less than it had sold it for. Thus, by balancing a loss with a gain, it has protected its inventory investment.

To work, the system requires that a speculator buy any contract that a hedger wishes to sell. The speculator, in fact, is an indispensable part of the market mechanism. Now, both parties are drifting away.

"You know wheat is never going to be much above or much below the Government support price," says one large miller. For example, the July 1959 wheat contract never got outside a $1.79 to $1.90 range; in contrast the July contract in 1953 went from a low of $1.87 to $2.48 a bushel. Because of this greater price assurance, "there are many more instances now where we buy grain for cash and don't bother to hedge in the futures market," the miller says.

SMALLER INVENTORIES

Some millers, moreover, are carrying smaller inventories of grain now that they can rely on the Government stockpile at any time. This, in turn, further cuts the need to hedge on the futures market.

Nowadays, some food processors that want to hedge almost have to go out on a search to find a speculator to handle their business. A. C. Owens, director of mill grain procurement for Pillsbury Co., says in prewar days the Minneapolis Grain Exchange was swarming with speculators. "But now, there's only one speculator left there who will buy the futures contracts we sell. When he goes to Florida on his three-week vacation, we have to trade on the Chicago market."

This thinness in the market has brought some changes in the way a big company like Pillsbury must operate. A trade of 200,000 bushels of wheat some 25 years ago would probably have provoked only a one-eighth-cent-a-bushel movement in the price; "now it could mean running the market up or down one-half cent," says Mr. Owens. While seemingly a small faction to worry about, it means that a trade could now cause four times as great a price movement as previously. For a company such as Pillsbury, buying 58 million bushels of wheat a year, a difference of half a cent a bushel means $290,000, Mr. Owens comments.

To adjust to this condition, companies now frequently place a "limit order" to the broker so that the trade is made only within certain price limits. This in itself tends to minimize market movements.

Several brokerage firms which maintained commodity departments along with their securities business have dropped out. One such is Hornblower & Weeks, which about 6 years ago set up a commodities trading department in Chicago. "We started in small and we stayed small," complains Charles Perrigo, the firm's senior partner in Chicago.

Mr. Perrigo says his firm thought some of its "more speculative" stock customers might be interested in a crack at such things as wheat or soybeans. "Almost the reverse was true," he says. "We found brokers on the Board of Trade speculating in stocks." Hornblower & Weeks dropped out of cotton about a year ago and brought the remainder of its commodity activities to a close last September 30. Declares Mr. Perrigo: "Government supports don't permit a free market in which there can be a speculative interest."

TWO CARLOADS OF BUTTER

Grain men shudder when they take a look at trading in foodstuffs more severely affected by price supports. At Chicago's Mercantile Exchange, an official has no trouble at all computing the butter futures volume for 1959: Only two carloads. In 1958 three carloads were traded. This compares with 35,000 carloads a year before World War II.

"We could trade butter futures, but there is no incentive any more," says Glenn Andersen, butter merchandiser and broker for Berkshire Foods, Inc., Chicago. Now, the Government stabilizes the price by buying all that is offered to it at the support rate, revised only once a year. The Government currently buys butter in Chicago at about 58 cents a pound and sells it to distributors at slightly more.

"During a few weeks in the year when supply is short and the price is a few cents above the support, we'd dearly like to hedge," says one distributor, "but there aren't any speculators left to take the opposite position." Most of the time, however, his firm has no need to hedge, he says, "since butter rarely goes more than 5 cents above the support any more."

The decline in futures trading has been on a broad front. The Commodity Exchange Authority, the Government's regulatory agency, says that such trading in the fiscal year ended June 30 declined in 15 commodities, disappeared in four and rose only in five. In calendar 1959, of the Nation's 15 major exchanges, only the New York Coffee & Sugar Exchange and the Commodity Exchange showed gains over 1958.

The outlook is not completely without cheer, of course. Even a price supported crop like soybeans can become the object of keen speculative activity, as happened last fall when supply appeared in very close balance with demand. Prices ranged over a comparatively wide spread, well above the support price. Soybean trading on the Board of Trade in 1959 increased 42.7 percent from 1958 and soybean meal futures gained 87 percent. Practically the only other major commodities to score substantial futures trading gains last year were copper, lead, hides, and sugar, all in worldwide production and thus not subject to price controls by any single nation.

Other factors than Government controls, such as a marked overproduction of a commodity in relation to consumer's demand for it, can temporarily depress activity on a futures market. With falling prices, speculators are less apt to purchase contracts for future delivery, when prices may be lower yet. Cocoa futures trading, for example, dropped last year after vigorous trading sessions in 1958, largely because worldwide production increased sharply. But, unlike their counterparts on the Board of Trade, traders on the New York Cocoa Exchange show little apprehension about future volume and seats on the exchange are now close to a record high.

The Old Guard of the City of New York Speaks Out Against Hatemongers

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, February 18, 1960

Mr. KEATING. Mr. President, at a recent meeting in New York City of the Old Guard of the City of New York, which is not what what we ordinarily think is meant by this term, a resolution dealing with the recent outbreaks of hatemongering was adopted. It was prepared and read by Col. William H. McIntyre.

At the request of this organization, I ask unanimous consent to have this statement printed in the Appendix of the RECORD.

It seems to me that this is as emphatic and eloquent a condemnation of some of the things we have seen happening, and as eloquent a statement of true Americanism as has come to my attention recently.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

We have read in the press of the diabolical actions of vicious persons who have marred or destroyed houses of worship.

In the Gospel of St. John, it is written, "In my Father's house are many mansions, if it were not so, I would have told you."

There is anger and shame all over our great land, when we read of such happenings. Who is responsible? Do these attacks on persons and property emanate from abroad?

Life, at best, is but a short time, therefore, we should spend these precious years with a high purpose in mind to do good works.

Let us remember, that the spiritual values mean most, reach highest, last longest, and in the end, make life most memorable.

Where did the Unknown Soldier worship?

Water Resources Called Vital to All

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Dallas (Tex.) Times-Herald of October 13, 1959:

WATER RESOURCES CALLED VITAL TO ALL

Industry and the public have a vital stake in the Nation's water resources, say three experts attending the annual meeting of the Federation of Sewage and Industrial Wastes Associations in Dallas.

The experts who addressed the federation's Monday afternoon session at Dallas Memorial Auditorium are Mark D. Hollis, assistant U.S. Surgeon General and newly elected federation president; N. D. Griswold, assistant general manager of the Dow Chemical Co., Texas division; and Milton P. Adams, executive secretary of the Michigan Water Resources Commission.

Each speaker stressed the importance of sound future planning in the handling of U.S. water resources.

STREAM POLLUTION

Mr. Hollis warned that rivers, streams, and lakes can no longer be treated as freeways to transport all the industrial and municipal pollution that will be dumped into them.

"Ways must be found," he said, "to keep pollution out of the waterways and to purify the waste matter that may have to be thrown into the water."

"Such a nationwide program will cost at the start about $10 million a year," he said.

CONSERVATION

Mr. Griswold said that conservation of the Nation's supply of water is vitally important to industry and agriculture and to the Nation as a whole.

He said it is estimated that the United States already has invested nearly $179 billion in water development. He added that "an expenditure on the order of $171 billion over the next 15 years must be paid out of taxes, and industry's share of the tax bill is and will be substantial."

"Industry," he said, "has a vital stake in the efficient use of the water resources to minimize future expenditures as much as possible."

GOVERNMENTAL VIEWS

Mr. Adams said that the Federal Government, State governments, and industry must each have a different viewpoint toward water resources.

He said that sewage and waste treatment as it is now known will not be sufficient in some locations to recreate an adequate water resources reserve. And presently known treatment methods will have to give way to superior methods when they are devised, he said.

"More and better water conservation by all, particularly by industry, will aid in solving water resources problems of the future," he said.

More than 1,500 persons—a record in the 32-year history of the federation—are attending the Dallas meeting. It will continue through Thursday.

Freedom Versus Coercion

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. MICHEL. Mr. Speaker, an editorial entitled "Freedom Versus Coercion" from the December 17, 1959, Chicago Daily News just crossed my desk, and, under unanimous consent, I include it in the Appendix of the RECORD:

FREEDOM VERSUS COERCION—FARM GROUP BUCKS SUBSIDIES

The constitutional provision that each State should have two Senators stacked the congressional cards in favor of farmers. It gave sparse rural populations far more voting strength per capita than the populous cities.

Congress continues to pander to agriculture above all other pursuits. It erects several screens around its purpose. One of them is that the small farm must be preserved because it is the ideal way of life. It is ideal not only because it is healthful, but because it presumably develops the qualities of self-reliance and independence.

This article of faith has suffered somewhat in recent years with the clamor for Federal subsidies, when dependence on the taxpayers did not seem to square with the cultivation of self-reliance.

There is one great farm organization, we are happy to say, that fully appreciates this irony. The American Farm Bureau Federation, now holding its 41st annual session in Chicago, stands squarely for junking these Government farm programs.

It recognizes them for what they are: political schemes with power as their real objective.

We particularly admire the insight of Roger Fleming, secretary-treasurer of the AFBF, who said: "We will never have the opportunity to vote on the simple issue of capitalism versus socialism—or, stated more simply, freedom versus coercion.

"Instead, the citizens of our Republic will continue to decide each day whether we want to move little step by little step in one direction or the other."

It would be foolish to predict the trend from a single straw, but it is worth noting that the voters of Iowa's 4th Congressional District elected Republican JOHN KYL over an opponent who campaigned on an anti-Benson platform.

Agriculture Secretary Benson, of course, is only a symbol. Congress, not Benson, has written the farm laws.

But Mr. Benson symbolizes the principle of nondependence on the Government, which is what the glorifiers of the ideal farm life profess to admire.

Professor Richardson Discusses Trujillo and Castro After Personal Visit to the Dominican Republic

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. CRAMER. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the RECORD an article which appeared in the Lakeland (Fla.) Ledger, Sunday, January 31, 1960. Prof. Gilbert P. Richardson is professor of history and political science at Florida Southern College, and is a specialist on Latin American affairs. He recently visited the Dominican Republic where he studied governmental affairs, and this report of his trip will be of interest to Members of the House, I am sure. The article follows:

(By Ed McNeely)

The assassination plot against Gen. Rafael L. Trujillo, strongman leader of the Dominican Republic, Thursday involved the wealthy class and did not have the sympathy of the workingman, according to Gilbert P. Richardson, professor of history and political science at Florida Southern College.

"It was a revolt against the personal rule of the Trujillo family rather than a mass revolution against the Dominican's system of government," Richardson said.

STUDIED AFFAIRS OF GOVERNMENT

The Florida Southern professor, a specialist on Latin American affairs, recently returned from the Dominican Republic, where he studied governmental affairs.

Richardson termed the uprising as the work of the wealthy—a forerunner to the "desertion of the intellectuals. It lacked the social aspects of a revolution," he added.

Trujillo, who has imposed a tightfisted reign over the island republic for 30 years, is still the champion of the working class, the professor said.

"The Dominicans do not always agree with Trujillo or his younger brother, President Hector Trujillo, but they do respect him for what he has done for them," Richardson observed.

ASSUMED POWER 30 YEARS AGO

Rafael Trujillo came to power 30 years ago at the end of the United States' occupation of the island, the historian pointed out, and since then has led the country to a fairly stable economy—a contrast to the past history of the republic.

The older Trujillo was trained by the U.S. Marines during the occupation from 1916 until 1924, Richardson said, and was commander of Dominican forces when the Marines left.

During his 30-year administration, Trujillo has made the Dominican Republic one of the more progressive Latin countries, the professor stated.

"He has built hospitals, housing developments, roads, and communication systems, as well as attracting new industry to the island," Richardson said.

Also, Trujillo has made education compulsory for everyone under 60 years of age, in a determined effort to stamp out illiteracy, Richardson said. Strides have been made toward stamping out tropical diseases which menace many of the Caribbean Islands, he added.

"When the Salk antipolio vaccine was introduced, Trujillo immediately renamed a Ciudad Trujillo (the capital city) thoroughfare Avenida Jonas Salk," the historian said.

Without the support of the masses, a revolt stands little chance of being successful, Richardson said, because the Trujillo brothers enjoy total control of the Government "and have no compunction over getting rid of opposition."

Rafael Trujillo commands an apparently loyal army of 12,000, an air force of 2,400 and a navy of 2,000. He also surrounds the capital with a 6,800-man national constabulary or secret policy which can be mobilized on a moment's notice, Richardson pointed out.

CITIZENS RALLY BEHIND BROTHERS

Since the attempted invasion by 200 Cubans, under a Panamanian flag last July the small island republic's population has rallied quite strongly behind the Trujillo brothers, the Florida southern political scientist said.

"The Dominicans also are studying with interest Cuban Premier Fidel Castro's anti-American campaign, and are taking advantage of it to make a bid for a larger sugar quota for Dominican Republic," Richardson said.

Richardson predicts that Dominican Republic, Cuba's island neighbor, may attempt to lure American sugar interests from Cuba if Castro tries to nationalize them as it has been rumored.

"But," he added, "there is a general fear among the Caribbean islands that Castro will flood the world market with Cuban sugar if the United States cuts Cuba's sugar quota."

Richardson said that such an act by Cuba would "knock the bottom out of the world sugar market, dropping the price from 5 to 5½ cents to, possibly, 2 to 2½ cents."

To the average American, the professor added, this does not seem too grave a problem, but to the Caribbean countries it is. "It's a bread and butter problem with them," Richardson said, "because the price of sugar determines their national prosperity."

DOMINICANS TO EXPAND

Richardson said the Dominicans are eager to expand their sugar production, but are nervously watching Castro's anti-American campaign.

"The average Dominican hates Castro and actually lives in fear of a Cuban invasion," Richardson said, adding that friction between Dominican Republic and Cuba is based on a multitude of reasons, ranging from politics and today's economic battle to the burial place of Christopher Columbus.

Columbus Day is a big holiday in both Cuba and Dominican Republic, Richardson said, and both countries claim to have the remains of Columbus. A big part of the Columbus Day celebration in the Dominican Republic is centered around the Cathedral in Ciudad Trujillo, the capital, when the bishop, mayor, and secretary of interior open Columbus' tomb for public viewing.

Speaking on the possible effects of Castro's anti-American campaign, Richardson said, "The Dominicans feel it is Castro's way of taking his own failures out of the spotlight. He is taking advantage of the Latin countries' general attitude toward the United States.

"Most of the Latin Americans call us Gringos, meaning 'stuck up,' and 'haughty,' " the historian said, explaining, "It is a picture they get from tourists who show little or no respect for the Latins and their problems."

Richardson noted that if Cuba does nationalize the 39 American sugar companies he does not see any military action by the United States, because, "The whole world is watching and remembering Hungary."

He pointed out several economic measures which could be taken by this country, including freezing of Cuban assets here to cover the losses of American investors in Cuba.

Other possibilities, according to Richardson, are restrictions on tourist travel to Cuba—"The $50 million tourist trade has already dwindled to less than $25 million each year, an embargo on spare parts for Cuba's industrial machines and autos, granting political asylum to all Cubans who wish to flee because of the absence of free elections."

Displaced Cubans here already are proposing the establishment of a Radio Free Cuba in south Florida, Richardson said.

Richardson, a specialist on Latin American affairs, recently returned from the Dominican Republic where he studied the sugar situation, because, he said, "It is feared Castro will quietly nationalize the American sugar companies just after cane harvest time.

"At the present time," he said, "only 3,700 square miles of the Dominican Republic's 9,900 square miles of tillable soil are under cultivation.

"The Republic in the midst of an economic expansion campaign and possibly may attempt to attract these 39 companies through favorable land leases," Richardson observed.

"There are now 15 sugar mills operating in Dominican Republic, 6 of which are American controlled," the historian said, "pointing out that two of these mills produce four-fifths of the Republic's sugar."

Tailored in Four Countries

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which was featured in the Wilkes-Barre Sunday Independent of February 14, 1960, written by Mr. Lou Rauscher, a staff writer of the Independent. The subject of the article is Mr. Felix Olszewski, a well-known Wilkes-Barre tailor for many years.

The article follows:

TAILORED IN FOUR COUNTRIES—FELIX THE TAILOR ONCE OUTFITTED KAISER WILHELM

(By Lou Rauscher)

Felix the Tailor's story is made to order. He fits the pattern of a modestly successful man, with experiences ranging from an early apprenticeship in Europe where he once had occasion to work on a uniform for Kaiser Wilhelm to proprietorship of his own shop, located in the same block on East Northampton Street, city, for the last 52 years.

"Suits me," was his reaction to our request for an interview. "I've been in this business since the turn of the century and this is the first time anyone's made a fuss about it."

Felix Olszewski, whose pleasant disposition belies his 74 years, was born in Suwalki, Poland, one of eight children (he still has a sister living there).

His early life was interwoven with the usual vagaries of childhood before he took apprentice flings at carpentry and several other native trades.

None suited him and he felt stagnate until his introduction to tailoring. This, he recalls without hesitation, measured up to what he was looking for.

KAISER REGULAR CUSTOMER

Felix ironed out the kinks during an apprentice period in shops in Poland, Lithuania, and Germany. It was during an attachment to a shop in Berlin that he helped turn out some military duds for Kaiser Wilhelm. Felix notes that the Kaiser was a regular customer at the establishment.

Mr. Olszewski landed in the Heights section of the city in 1904. Not too long thereafter he took a fancy to a Georgetown belle by the name of Jennie Simoncavage.

They got their marriage license at the old Courthouse on the Square and subsequently became the parents of eight children. His Jennie died 2 years ago shortly after they observed their 51st wedding anniversary.

Felix today still puts in a full day's work in surroundings that have been bypassed by the march of new methods in tailoring. A potbellied stove replete with the old trademark, the goose iron, occupies a place of prominence in his shop as it has for the last half-century.

STILL USES GOOSE IRONS

His goose irons are among the few left locally in the trade today. He still uses them for pressing work, and there's a horseshoe used for underlaying the irons that has been in his shop since it was given him by a Stegmaier Brewery employee in 1909. The shoe came from one of the brewery's delivery horses.

Felix, who once pressed 48 suits by hand in a single day for what he considers some sort of record, estimates that he's worked on enough garments during his time to stretch to Europe and back.

Prior to opening his own business Felix worked for Simon Long as a coatmaker. He set out on his own in July of 1907 in a shop on Lincoln Street, where he stayed for 1 year before moving to his present location.

He still has the first entry he ever made in his ledger and to this day has never gone in for the modern stamp method of cutting cloth.

Although he's tapered off from his earlier pace, he still designs his own patterns on occasion and prides himself on his custom work.

"I don't know if I'd be as lucky these days as I was shortly after World War I," he mused in obvious reference to the slackening demand for tailormade clothes.

A GRATEFUL MAN

"At one time it was the thing to have your suit made to order. They've gotten away from that now. I only thank the Lord I was able to do as well as I did."

Felix, who now has 16 grandchildren, earned enough to send 3 of his 8 children through college. Two of his sons are engineers today, while a daughter is a teacher. A son, Anthony, is the only child living locally.

HE'S OWNED SHOP ON THE HEIGHTS FOR LAST 52 YEARS

Our subject is one man who hasn't fallen prey to the pushbutton era. He loves to hike and during good weather thinks nothing of walking to the Polish cemetery in Wyoming, where his wife is buried, and back in a single afternoon. He makes this trip once a week in the summer.

Last year he took several jaunts to points such as Five-Mile Mountain, the Triangle at Mountaintop, Stink Pond in the Glen Summit area, and in his younger years has walked to White Haven and back in the same day.

He recalls that it was on one of his White Haven safaris that his oldest son, Walter, tired out on him.

LOVES TO WALK

Nary a day goes by that Felix doesn't take his constitutional. He politely turns down a lift when he's out walking and a friend happens by in a mechanized chariot.

"I don't believe in riding," he says, "and as long as I have two good legs I'll use them."

The tailor shop is located directly across from Hose House No. 4. Felix vividly recalls the days of the horse-drawn fire trucks, the barn, and how the firemen maneuvered over the cobblestones on Northampton Street in response to a call.

Felix the tailor remains one of the few Heights residents to speak, read, and write five languages fluently—Polish, Lithuanian, German, Russian, and English.

He is content now to fill out his days with a slower pace, having reared his family, earned his friends, and served as a useful citizen of the community.

In the light of how tailoring has so completely dominated Felix's life, it probably wouldn't be pressing a point to add here that clothes really made this man.

Inflation and When It Occurred

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 17, 1960

Mr. BUDGE. Mr. Speaker, the following article from the February 16, 1960, edition of the Washington Post constitutes an interesting analysis of inflation. The rate of increase by individual years since the close of World War II is particularly significant:

THE TOPIC THAT VIES WITH SEX—LIVING COST AND HOW IT'S MEASURED

Cost of living's gone so high
That it's cheaper now to die;
Absolutely, Mr. Gallagher?
Positively, Mr. Shean.

(By Frank C. Porter)

Mr. Gallagher and Mr. Shean could probably draw as hearty a laugh today with this fragment from their famed vaudeville act as they did in the early 1920's. For although the upward march of prices has slowed noticeably in the past few years, cost of living still vies with sex as topic A in most urban conversations.

David L. Babson & Co. devotes its current staff letter to the subject, shows that the 1947-49 dollar has shrunk to 80 cents and observes that Bureau of Labor Statistics' Consumer Price Index "is not only the most widely known of the Nation's statistical series but probably has the greatest impact on the economy."

This index, the Babson letter points out, governs pay increases for millions of workers through cost-of-living escalator clauses. It sways the purchase decisions of millions of consumers. The Federal Reserve Board

watches it like a hawk. And it influences the policies of investors and business planners.

Many newspaper readers now follow the month-to-month changes in the BLS index as conscientiously as they do the adventures of Little Orphan Annie, the misadventures of the Washington Senators, and the stock prices of Ampex or Thiokol. But if most everyone talks about the index, very few really know what it is. So the Babson firm obliges with a brief description.

Its complete title, "Index of Change in Prices of Goods and Services Purchased by City Wage Earner and Clerical Worker Families" indicates it is based mainly on middle-income buying habits. Changes are measured in percentages from the 1947–49 average. Thus the December 1959 reading of 125.5 percent means a 25.5 percent increase from the base period.

Some 298 items, each weighted according to its importance in a typical family budget, are priced monthly in 46 localities. The major component groups are given the following weights: Food, 30.1 percent; housing and household operation, 20; transportation, 11; apparel, 9.7; medical care, 4.7; personal care, 2.1; reading and recreation, 5.4; other goods and services, 5.

Babson notes that the service categories have been responsible for the largest portion of the increase in living costs the past 5 years (medical care rose 22 percent, more than any other group).

But it also finds that living cost increases have been much more moderate of late. Translating the index into terms of the shrinking dollar, Babson puts the decline in purchasing power at an average 1.2 cents over the past 5 years. This compares to drops of 10 cents in 1946, 15 in 1947, 8 in 1948, and 7 in 1951. The record of purchasing power in terms of 1947–49 dollars since World War II:

Year	Purchase power	Percent change
1946	$1.20	−7.7
1947	1.05	−12.5
1948	.97	−7.6
1949	.98	+1.5
1950	.97	−1.0
1951	.90	−7.2
1952	.88	−2.2
1953	.87	−1.1
1954	.87	----------
1955	.87	----------
1956	.86	−1.1
1957	.83	−3.5
1958	.81	−2.4
1959	.80	−1.2

Tips and Cash Gratuities To Be Included for Social Security Benefits

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. SANTANGELO. Mr. Speaker, I have introduced today a bill which will provide that tips and gratuities shall be included as wages under the old-age, survivors', and disability program. This bill will correct an injustice, produce additional revenues, and will make realistic the social security benefits for service workers.

This bill will consider tips as wages for the purposes of social security. Service workers pay income taxes on their tips but their tips are not considered in computing their social security benefits. The provisions of my bill will increase social security revenues by collections on income which has never been subject to the payment of social security taxes. It will result in a reporting of realistic wages, thus increasing the social security benefits for service workers when they become eligible.

I introduced a similar bill in the 85th Congress and in the early part of the 86th Congress. During the consideration of the omnibus social security bill in 1958, the chairman of the Ways and Means Committee indicated that while the committee favored the principle of my bill, the subject required further study. Two years have passed and further study has been made. This bill which I am introducing today improves upon the previous bill and seeks to meet the objections which have been raised. The features in this bill which were not present in the previous bill are as follows:

First. This bill requires the employer instead of the employee to report where the employee has not declared the amount of tips which he has earned during the month and file such information with his employer within 10 days from the close of the month.

Second. This bill grants the employer the right to review the amount which the employee has reported to him as his actual tips.

Third. This bill in one of the alternative computations of mandatory reporting by the employer estimates the tips to be the difference between $1.25 an hour and the base hourly wage where the salary of the service employee is less than $1.25 per hour.

Fourth. This bill authorizes the Secretary of the Treasury to prescribe rules to carry out the provisions of the bill and to review the amounts reported.

The only reason that tips were excluded originally in computing social security benefits is that it was thought that to include them would be impracticable and there was a desire not to encumber the social security system with difficult administrative problems. Experience and time have demonstrated that those deficiencies and difficulties no longer obtain. Experience shows that a workable plan of computing tips is not only possible, but also administratively practicable. My bill offers that plan.

Eight States and the District of Columbia require that tips and gratuities be treated as wages received from the employing unit. Unemployment compensation regulations in 14 other States under certain conditions recognize tips as wages, such as where an employee gives an accounting to his employer of his tips or where tips contribute more than 50 percent of the employee's base earnings. In the State of New York, in an analogous situations, namely, the computation of taxes on board and lodging, tips and gratuities for unemployment insurance purposes, the New York State Industrial Commission has issued rules which solve the problem inherent in the situation.

Under the provisions of my bill, the employee will inform his employer of the amount of tips received during a given month within 10 days after the close of the month and turn over to the employer the amount necessary to pay the employee's share of the social security tax on the tips. The employer also has the right to withhold the estimated social security taxes from the base wage of the employee. Where the employee fails to inform his employer of the amount of tips or other cash gratuities, the employer must report in either of two ways. The first alternative method which the employer may use in the reporting of tips is the reporting of an amount equal to the difference between the employee's average hourly pay for employment performed for such employer during such month and $1.25 multiplied by the total number of hours of employment performed by such employee for such employer during such month. In other words, the employer reports as total wages for the month an amount equal to $1.25 multiplied by the number of hours worked by the employee during such month. If the employee does not file his report to his employer within 10 days of the close of the month, the employer may use a second alternative. This alternative provides that the employer must file as employee's wages the employee's base salary plus tips which are set forth in a schedule. The employer shall collect from the employee or deduct from the employee's base wages 2½ percent of the employee's wages or such percentage as is provided for by the Internal Revenue Code.

In any event, where the employee fails to report his tips to the employer within 10 days of the close of the month, the employer must report as tips the sum provided for in either of the two alternative methods.

My bill is divided into four sections. Section 1 of the bill adds a new paragraph to section 209 of the social security law and provides that tips and other cash gratuities received by an employee in the course of employment from persons other than his employer shall be considered remuneration for purposes of payment of social security taxes as provided for under chapter 21 of the Internal Revenue Code of 1954.

Section 2 of the bill adds another paragraph to section 3121(a) of the Internal Revenue Code of 1954 and provides that tips and cash gratuities customarily received by an employee in the course of employment from other than the employer shall be considered remuneration for purposes of social security.

Section 3 adds a subsection (p) to section 3121 of the Internal Revenue Code of 1954 and this subsection (p) is divided into six parts. Each of the first three parts sets forth a method of computation of tips and cash gratuities for purposes of social security. The amount of tips is either the actual amount received by the employee, or an estimated amount representing the difference between $1.25 per hour and the actual hourly base wage, or an estimated amount based on experience and set forth in a schedule.

The fourth part of section 3 sets forth the conditions which must exist in order for tips not to be included as remuneration for purposes of social security. The fifth part of this section provides for the withholding by the employer of the social security tax on tips and cash gratuities from the base wage. The sixth part of this section 3 requires the Secretary of the Treasury or his delegate to promulgate rules and regulations to carry out the provisions of the subsection and requires the Secretary of the Treasury to prescribe rules for the review of the amount reported.

Subsection (p), subdivision (1) of section 3 of the bill provides that where an employee within 10 days after the close of any month reports to his employer the amount of tips which he received during the month and pays to his employer the required rate of social security taxes, then the total amount which the employee reported shall be considered remuneration paid to him by the employer and the sum so paid shall be treated by the employer as though it had been deducted from wages.

Subsection (p), subdivision 2 of section 3 provides for mandatory reporting by the employer where the employee does not report actual tips and his hourly wage is less than $1.25 per hour. Under such conditions the employer must report as tips the difference between $1.25 per hour and actual base wage per hour multiplied by the number of hours which the employee worked during a month for such employer, or the employer, at his election, must report as tips the amounts provided for in a schedule set forth in section 3, subsection (p), subdivision (3).

Subdivision (2) of this subsection provides that the employer shall collect from the employee or deduct from the employee's wages the 2½ percent or the appropriate percentage of tax which the employee must pay.

Subsection (p)(3) provides for alternative computation for mandatory reporting by the employer. This method computes tips as wages for each designated group of employees. This part of the bill provides that where the employee has not reported his actual tips and where the employer does not elect to report as tips the difference between $1.25 per hour and hourly base wage where the employee's base wage is less than $1.25 per hour, the employer shall report an amount which experience shows service groups on the average receive. The nine service groups and the amounts which they have deemed to have received from the point of view of experience as tips and cash gratuities are as follows:

(a) Beauty parlor operators: The amount of the tips and other cash gratuities received by a beauty parlor operator during any month shall be deemed to be equal to 10 percent of the wages (determined without regard to this subsection or the last sentence of subsection (a)) paid to such operator by his or her employer.

(b) Service employees in restaurants: The amount of the tips and other cash gratuities received by a service employee in a restaurant during any month shall be deemed to be equal to 7½ percent of the amount charged for food and beverages served by (or attributable to service by) such employee during such month, except that the amount of such tips and other cash gratuities shall be 5 percent of the amount charged for food and beverages served by (or attributable to service by) such employee during such month if he is employed at a counter or in a drugstore.

(c) Dining room employees in American plan hotels and in eating clubs: The amount of the tips and other cash gratuities received by a dining room employee in an American plan hotel or an eating club shall be deemed to be $2 per day of full-time employment for waiters and waitresses and $1 per day of full-time employment for busboys.

(d) Hotel service employees: The amount of the tips and other cash gratuities received by a bellhop, porter, baggage porter, or doorman employed by a hotel shall be deemed to be $2 per day of full-time employment.

(e) Taxicab drivers: The amount of the tips and other cash gratuities received by a taxicab driver shall be deemed to be equal to 12½ percent of his total bookings if he operates his cab in a city having a population of 100,000 or more, or $9 per week in any other case.

(f) Employees in barbershops: The amount of the tips and other cash gratuities received by an employee of a barbershop during any month shall be deemed to be equal to (i) 15 percent of the wages (determined without regard to this subsection or the last sentence of subsection (a)) received during such month in the case of a barber, (ii) 25 percent of the wages (as so determined) received during such month in the case of a manicurist, or (iii) 5 cents for each customer of the barbershop in the case of an employee shining shoes or brushing and otherwise attending to customers' clothes.

(g) Baggage porters in bus and airline terminals: The amount of the tips and other cash gratuities received by a baggage porter at a bus or airline terminal shall be deemed to be $2 on any day on which he worked at least 7 hours, and 30 cents per hour of employment actually performed on any day on which he did not work for at least 7 hours.

(h) Pinboys at bowling alleys: The amount of the tips and other cash gratuities received by a pinboy at a bowling alley shall be deemed to be equal to 2 cents for each game for which he sets up pins.

(i) Maritime service employees: The amount of the tips and other cash gratuities received by a maritime service employee shall be deemed to be equal to whichever of the following amounts per day is applicable for each day of full-time employment: bartender, $1.70; bellboy, $1.80; deck steward, $2; headwaiter, $3.35; night steward, $1; room steward, $2.90; salon steward, $1.75; stewardess, $1.65; waiter, $2.50."

Subsection (p) subdivision (4) provides that under certain conditions, no tips shall be included as remuneration for social security purposes. Tips or cash gratuities shall not be included where (a) acceptance of tips or gratuities is not allowed; (b) notice is displayed that tips are not allowed; (c) employer adopts reasonable means to insure that tips or cash gratuities are not received; (d) employer submits to the Secretary a statement setting forth that tips are not allowed and methods to obtain compliance by customers and employees.

Subsection (p) subdivision (5) provides that an employer at his own option or upon the request by the employee may withhold from the employee's base wages the social security taxes due on the actual tips reported or on the estimated tips collected during the month.

Subsection (p) subdivision (6) provides that the Secretary of the Treasury shall prescribe regulations to carry out the provisions of the bill and to prescribe rules for the review of the amount reported.

Section 4 of the bill deals with the effective date of the law and provides that the amendments shall apply only to tips received on and after the first day of the second month which begins more than 10 days after the enactment into law.

The custom of rewarding a person for satisfactory services rendered is an ancient one. This custom has become highly formalized with the development of our social habits. Considerable discussion is devoted to it in our best etiquette books. It has also become a fixed part of our economic system and, as a result, millions, of our workers today depend upon the receipt of gratuities or tips in order to earn a living.

We are all aware of this. Each time we eat in a restaurant, get a shoeshine, have our luggage handled, we know that the person serving us must depend upon our tipping him for a substantial portion of his or her daily wages. It is now part of the system governing the relations of these persons with their employers.

As I understand, a great many of these personal service personnel would like to see the system changed. They would prefer to have an assured weekly wage and have the cost of their services taken up in the bill presented by the employer to the customer. This, of course, is a subject which is beyond the power of a legislature to handle.

During my travels throughout Europe, I noted that the employer includes the amount of the employee's tips as part of the bill. The practice is to allocate a percentage of the total bill as tips. The percentage which was most frequently used was 13 percent.

Service employees, however, have another problem, one for which the Congress, and the Committee on Ways and Means in particular, should take responsibility. They are denied the benefit of social security coverage of that portion of their income which comes directly from the customers they serve. Only the low basic wage, which they receive from their employer, may be credited as wages under the present law, except in a small percentage of cases where the employer requires the employee to account to him the amount of tips. The injustice of this treatment is manifest. When these people become eligible to receive their social security benefits, they find themselves entitled to payments which fail to reflect their true earnings histories. This is because the wages which have been credited to them in many cases make up as little as one-half or one-third of their total earnings, counting their tips.

My proposals and proposals similar to mine have met with opposition from only one quarter—the associations of employers of personal service personnel, the restaurant and hotel operators. The reason they have advanced for their position is difficulty of administration—although, one cannot help but recognize that if the proposal were adopted their employer's taxes would be increased.

The difficulty, they claim, arises in ascertaining the sums involved in the tips received by their employees.

If difficulty of administration were allowed to prevent the adoption of worthwhile legislation, most of the activities of the Federal Government would never have been undertaken. In this instance, the administration of the bill, while intricate, is not impracticable. The people affected by my bill are entitled to consistent treatment by the Government. We have found ways to collect income taxes based upon their tips. There is no reason why we should deny them social security protection on an equal basis. Simple justice requires that Congress treat service employees fairly and grant these worthy citizens the protection intended for all workers by the Social Security Act.

Who Would Really Benefit From Federally Controlled Elections?

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. ROBERTS. Mr. Speaker, what would happen if the Federal Government were to take over the ballot box? Would it really be to the benefit of southern colored citizens?

These are valid questions. They are raised in an interesting editorial which appeared recently in the Talladega Daily Home, a daily newspaper published in the Fourth Alabama District.

Under leave to extend my remarks, I would like to include the following editorial, at the same time commending it to the reading of Members.

The editorial follows:

A DIRE FUTURE FOR MILLIONS IN THE SOUTH

If the Federal Government is allowed to take charge of the southern ballot box, will this give any assurance to the Negro in the South that his future will be improved?

This is a question, which when applied to the masses of southern colored population, deserves some real study by the ardent race fanatics in Washington.

If it is the southern Negro who is being considered, then there must be one answer.

If the vote of northern Negroes is the only consideration than there is entirely a different answer.

Is the overeager Attorney General Rogers at this time thinking about the vote in the northern Negro ghettos, or is he thinking about assistance for the millions of colored people throughout Dixie?

From all the loud sounding action in Washington, there is pretty clear evidence that Mr. Rogers and his ilk care little or nothing for the best interest of the southern Negro.

They appear to be actors on a stage. They do not seem to understand the roles they play. And apparently they care not one tiny mite about the ones they propose to bring a strange new way of life.

The southern population is approximately one-third colored. In all but a very few densely Negro populated areas, the issues when drawn on racial lines will solidify the anti-Negro vote.

As it is many whites exert great effort to aid his colored neighbors. The rapid advances of the ex-slave population proves this. This can come to a fatal end.

If the restrictions are all discarded, there will be heavy increases in Negro voters, but also heavy increases in white voting strength. The increased white voting strength will be largely in a group easily swayed to be anti-colored. The Negro will again gain little or nothing.

In the heavily colored population areas like some of Alabama's black belt counties, most if not all economic power is held closely in white hands. These whites will be forced to close down securely the economic barriers. This they will do, or they will move away like the white inhabitants of the Nation's Capital.

We do not believe the whites will choose to move. Therefore the masses of Negroes will be forced to seek residence elsewhere. The flood tide into Chicago, Philadelphia and other northern areas will really begin to flow. It could become a giant exodus of great import to national affairs.

The great masses of colored people who have a home and a place in these deep South areas, will be forced by the racists, like Rogers, to seek strange and foreign abode. They will be forced by these into northern areas where they are bitterly unwanted.

Who will gain by all this forced civil rights and forced legal action on the South, its registrars, its schools, its courts and its way of life? We can see no one except the selfish politicians, and their gains must be for a fleeting moment.

The great loser and deep sufferer will be the masses of fine colored people who have a place in Dixie and are a vital part of this southern empire.

There can be no other results, not in the lifetime of most of us who are now living and have some close association with the ill-fated controversy.

The Mississippi Valley Association Resolutions Chart a Course of Real Progress

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. BENNETT of Florida. Mr. Speaker, the Mississippi Valley Association has just completed its annual convention in St. Louis, Mo., and has endorsed a comprehensive program for waterways development that can mean a great deal to America if it is carried out. Among other important projects endorsed by this association is the Cross Florida Barge Canal concerning which its resolutions state is "for the best interest of not only the midcontinent area and the State of Florida, but for the entire country." They urge that the construction be started at the earliest possible date. I sincerely hope that this session of Congress may make funds available for this project, which will not only be a great economic asset to the country but will provide a safe route for war materials—not vulnerable to submarine attack—and thus greatly contribute to the security of our country. The resolutions of this association are as follows:

RESOLUTIONS COMMITTEE REPORT

ALABAMA-COOSA RIVER SYSTEM COMPREHENSIVE PLAN

We recommend appropriations for the resumption of advanced planning of Millers Ferry multiple-purpose dam; the initial project in the plan of development of the Alabama River for navigation, flood control, and limited hydroelectric power. The comprehensive plan of development of the Alabama-Coosa River system was authorized in 1945.

We call the attention of Congress to the development of the Coosa River and tributaries for the generation of hydroelectric power by private capital; six dams having been constructed prior to 1929 and in continuous operation since that date. Also, that the 83d Congress suspended authorization of the Coosa River for development of hydroelectric power to permit development by a private utility under a license later issued for the construction of four additional dams and the modification of one existing dam. The license required that all construction be accomplished within a 10-year period from date of start of construction of the first dam which began in July 1958.

We also call the attention of Congress to appropriations heretofore made for planning of the initial project, Millers Ferry Dam, Alabama River; the plans are approximately 38 percent complete. The development of the Alabama River section of the waterway is of such size and complexity that the construction of the three dams on this section of the river will have to be accomplished by the Corps of Engineers. A recent report by the engineers continues to indicate the economic feasibility of both the Alabama and Coosa Rivers for navigation for a distance of approximately 525 river-miles.

We urge Congress to appropriate sufficient funds to resume planning of the initial project in order that the entire plan of development and of the Alabama-Coosa River System can be accomplished without further delay.

ARKANSAS RIVER BASIN

We commend the 86th Congress for appropriating funds to continue construction of major features of this important comprehensive project in Arkansas, Kansas, and Oklahoma.

1. We commend the Corps of Engineers of the U.S. Army for its success in maintaining the prescribed schedule of work which sometimes was carried on in the face of many difficulties.

2. We commend the Bureau of the Budget for recommending funds for fiscal year 1961 to continue the authorized program in the Arkansas River Basin for flood control, bank stabilization, navigation, water supply, and incidental hydroelectric power.

3. We call to the attention of Congress the importance of starting the final planning of main-stem dams in Oklahoma at Webbers Falls and Short Mountain, and at Ozark in Arkansas, and the need for early construction of these projects.

4. We urge that new construction starts include the Elk City (Table Mound) Dam on the Elk River in Kansas, and that sufficient construction funds be appropriated to get this project under way. Floods in 1959 clearly demonstrated the serious deficiency of flood control storage on this stream.

5. We urge early authorization of the Cheney Division (Ninnescah River) of the Wichita multiple-purpose project. This development is badly needed and the city of Wichita has already voted bonds for the pipeline and agreed to pay its share of the reservoir construction.

6. We urge study of a canal which will provide a connection between the Arkansas-Verdigris navigation channel and the Eufaula Reservoir. It should be less expen-

sive to build this canal now rather than after the locks are built on the Arkansas and after the Eufaula Reservoir has been filled. This could open low cost water transportation to the high quality coal reserves in this area and to its pioneer glass industries.

7. We also urge that funds for bank stabilization be removed from the emergency category and put on a permanent basis, so that the river can help clear the navigation channel of sediment before the upstream reservoirs are closed, thereby reducing the cost of the work materially.

8. It is essential that work on the bank stabilization and navigation features from Fort Smith, Ark., downstream, beginning at the mouth of the Arkansas River, be prosecuted simultaneously with work on the upper reaches as rapidly as possible, to secure the earliest possible return of benefits. It is highly desirable that all bank stabilization work be completed by 1964.

9. We emphasize that the Arkansas River is the only major river in the Nation undeveloped for navigation. We therefore urge Congress to provide adequate funds to continue planning of badly needed authorized projects in Kansas, Oklahoma, and Arkansas so that the benefits may be made available at the earliest possible time.

SOUTHEAST OKLAHOMA WATER SUPPLY

We urge that the Corps of Engineers continue to expedite the survey now under way, on the engineering and economic feasibility of combining the movement of large volumes of surplus water for municipal, industrial, and agricultural uses from southeastern Oklahoma into central Oklahoma with an extension of the authorized navigation project on the Arkansas River.

CROSS FLORIDA BARGE CANAL

We believe that the early completion of the Cross Florida Barge Canal is for the best interest of not only the midcontinent area and the State of Florida, but for the entire country. Planning funds should be immediately appropriated for this project, so that construction can be started at the earliest possible date.

Lithuania's Fortitude

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD I include an editorial appearing in the Evening Herald, of Shenandoah, Pa., on February 16, as follows:

LITHUANIA'S FORTITUDE

Today, as a good many millions of Americans of Lithuanian extraction know, marks the 42d anniversary of the establishment of the Republic of Lithuania. It is a national holiday comparable to America's Independence Day.

Tragically, what should be a day of unrestained joy in Lithuania, is totally impossible because of the cruel and ruthless heel of the Russian oppressor. Lithuania like her Baltic neighbors, Latvia and Estonia, has been in a state of subjugation since 1940.

That year marked the beginning of the modern-day ensiavement of the gallant Lithuanians when the Russians literally confiscated the whole country. Through the medium of military force, the Kremlin heartlessly wiped out Lithuania's independent political status, brazenly announcing to the rest of the world that the people had "voted" to become the Lithuanian Soviet Socialistic State.

The Soviet Union's action, a foul stab in the back, made a worthless scrap of paper out of the treaty of 1926, which guaranteed Lithuania's sovereignty.

Then and there ended, for the time being, the freedom and liberty enjoyed since February 16, 1918, when Lithuania was recognized by the world as Free State.

The callous Soviet domination was interrupted during World War II when Hitler's murderous Nazis occupied the stricken land. But when the tides of war reversed, the Red tyrants returned. They remain in power today. This is why Lithuanians are unable to celebrate their independence day; to do so would mean instant punitive measures.

In contrast to the most harsh measures endured during Josef Stalin's regime, conditions these days have eased to a considerable degree in Lithuania. Certain types of mail are now processed although the ban remains on religious articles of any description. Packages of food and clothing may be sent into the country. However, the wily Communists impose near-prohibitive duty costs. Imposts on such packages sent to those in need are almost twice the actual value of the contents.

Garrisons throughout Lithuania are maintained at full strength by the Soviet military. Any open display of patriotism brings immediate punishment. Even the brave underground resistance no longer can strike back because the patriots lack access to arms and ammunition.

The puppet government officials, mostly Russian-born, do exactly what they are told by the Kremlin. And the substitution of Lithuanian family groups by Russian citizens has not ceased. The loyal Lithuanians are sent to Siberia; the Russian substitutes move into the empty homes and assume legitimate Lithuanian identities.

Many of the numerous and historic churches have long since been confiscated by the Reds and turned into theatres of warehouses. Where once there were 15 churches in Kaunas, there now remains one. Worship is permitted but the Reds intensify brainwashing of the younger Lithuanians.

There is no formal religious training or instruction whatsoever. Under its national government, Lithuania had three seminaries with close to 1,000 studying for the priesthood. Today, there is only one; enrollment dare not exceed 170 at any given time.

The evil inconsistency of all this is readily apparent in the Soviet Union's international policies. Freedom for colonies in Asia and Africa, shoults the Kremlin. But not a word about the slave status of Lithuania and her neighbors.

So Lithuania's 42d independence day necessarily must be celebrated in such freedom-blessed nations as these United States. Here at home and in communities adjacent to Shenandoah, those of Lithuanian descent are joined by fellow citizens in extending a heartfelt salute to the people of Lithuania for their remarkable fortitude.

That history shall again repeat by confirming the reality of Lithuania's independence through restoration of the Republic of Lithuania is the wish of those who cherish liberty across the face of the globe.

Missile Gap Controversy—I

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 9, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD two articles from a series by Ray Cromley which appeared in the issues of February 8 and 9, 1960, of the New York World-Telegram and Sun.

These articles are most timely, since they deal with the current controversy over the missile gap in our defenses. They are written by a veteran Pentagon reporter in an unbiased manner and in the national interest. I commend them to the attention of all my colleagues:

[From the New York World Telegram & Sun, Feb. 8, 1960]

COULD REDS DEFEAT UNITED STATES?

(By Ray Cromley)

WASHINGTON, February 8.—This is how not to be confused as we go into month of political battling over U.S. defense:

First, tell yourself the United States does not have the small war deterrent power to prevent Nikita Khrushchev from expanding in such areas as the Middle East.

Then admit that U.S. strategists haven't figured out how to keep Russia from devastating a great portion of the United States if she wants to try a sneak first blow.

Note that in overall strategic kill power the United States overshadows Soviet Russia in 1960.

Finally, concede that in 2 to 4 years there will be a disparity between our strength and Russia's which may or may not be critical, depending upon how fast Russia manufactures intercontinental ballistic missiles and how fast America's countermeasures come along.

TWENTY-ONE INTERVIEWS

These statements are made on the basis of discussion with 21 men in Washington who are in positions to know the state of U.S. defense.

Some of these men vote Democratic, some Republican. None is a politician. None wants to be quoted. Most are key military research or technical men in the Department of Defense and key foreign affairs agencies. Some are in key defense companies.

They differ on details of what should be done—and on what the Russians might do next. But on the key questions of balance of power there is very little disagreement.

They agree that the Soviet Union cannot knock out the United States, nor destroy our power to devastate the U.S.S.R. in a retaliatory blow.

They agree that speeding production on current U.S. missiles is not the answer to the possible serious danger in the missile gap period of 1962–64.

RUSSIANS AHEAD

They agree that the Russians are furthest ahead of the United States in their numbers of modernly equipped and mobile ground forces.

"Khrushchev keeps talking big about ICBM's," says one Pentagon planner, "but he keeps putting huge amounts of funds into modernizing his ground armies."

The United States is woefully weak on land.

U.S. armies are also limping along for want of air transport.

If United States and Soviet troops had to race for a trouble zone, the battle might be lost before American troops arrived.

On the seas, the United States far outclasses the Soviet in aircraft carriers, cruisers, destroyers, and troop transports. But there's reason to fear that 300 Soviet subs, capable of operating on the high seas, could devastate U.S. troop and cargo convoys and raise havoc with carrier task forces.

But for combined air-missile strategic power it's a different story.

ONE THOUSAND SIX HUNDRED BOMBERS

The United States has 1,600 intercontinental jet bombers scattered on 70 bases. It's believed over half could survive a sneak

Russian attack in 1960. Around 500 are on permanent 15-minute alert. U.S. defense men estimate three-fourths of those left could get through Soviet aid defense and bomb Russia.

The Soviet Union has 250 to 500 usable intercontinental bombers, but with no overseas refueling basis. U.S. defense men think the bulk would be lost in a sneak attack on the United States, unless U.S. fighter and missile defenses were asleep.

The United States could mount a carrier bomber force of 125 planes capable of hitting Russia with nuclear bombs.

There are about 60 Thor intermediate range missiles in England and something over 150 Air Force fighter bombers on bases close enough to bomb Red-held territory.

NO DEFENSE

The Soviet now has about 10 intercontinental ballistic missiles. They could probably knock out three major U.S. targets, four if the Reds were lucky. There is no defense against them in 1960.

Russia also has a few submarines with short-range missiles—capable of hitting U.S. coasts.

The United States has seven or eight ICBM's, no operating missile subs yet.

The military estimate based on this strength picture is that:

Russia will keep attempting in the immediate future to whittle way at the frontiers. Khrushchev will not attempt world war III.

The United States will continue trying to convince Russia that whittling might lead to world war III. Therefore Russia had better not take chances.

EXPERTS ON DEFENSE OUTLINE THE FACTS

Ray Cromley talked to 21 men in key civilian and military jobs in Washington to gather the facts for this series. Here are some of the questions he asked them, and the almost unanimous answers they gave him.

"Question. Can the Soviet Union knock out the United States?

"Answer. No, but the Reds could do a terrifying amount of damage.

"Question. Could the Reds knock out our power to retaliate and devastate the Soviet Union in return?

"Answer. No.

"Question. Is there a possible serious danger in the much talked about missile gap period of 1962–64?

"Answer. Yes.

"Question. Should we speed production and close the missile gap now?

"Answer. No, that would be even more dangerous. Today's missiles are too vulnerable to sneak attack.

"Question. Is the United States strong enough to deter the Soviet from deliberately starting World War III?

"Answer. Yes.

"Question. Are the Reds ahead of the United States in intercontinental ballistic missiles in quality and numbers?

"Answer. Yes, in both.

"Question. Are the Russians ahead of the United States in overall strategic military strength?

"Answer. No.

"Question. Where are the Russians furthest ahead of the United States?

"Answer. In superbly equipped and mobile ground armies.

"Question. Is the Soviet Union moving ahead in military strength faster than the United States?

"Answer. Probably.

"Question. Is this because they're spending more money?

"Answer. No, the best estimate is that the Soviet Union and the United States are spending approximately the same amount on arms.

"Question. Is the United States spending enough money on national security?

"Answer. Probably.

"Question. Is the United States spending its defense dollars wisely?

"Answer. No.

"Question. Where is the Soviet Union spending more of its funds?

"Answer. On research.

"Question. Where is the United States overspending?

"Answer. First, on producing obsolescent missiles; second, on fixed maginot-line type defenses against bombers."

[From the New York World-Telegram and Sun, Feb. 9, 1960]

UNITED STATES BETTING ON SUPER BOMBERS, POLARIS-FIRING SUBS FOR DEFENSE

(By Ray Cromley)

WASHINGTON, February 9.—The United States is staking its future on the gamble that in the crucial years 1962–64 the supersonic bomber and the Polaris-firing submarine are more vital to national defense than the international ballistic missile.

By 1963, the midpoint of this period, the United States will have:

Two hundred and forty Polaris 1,500-mile-range ballistic missiles aboard 15 atomic-powered submarines.

About 500 B–52 bombers, many able to stand 500 miles off Russian targets and lob in Hound Dog missiles.

One hundred and sixteen 1,500-mile-an-hour B–58 bombers. Eight hundred B–47's.

About 250 Titan and Atlas intercontinental ballistic missiles, most on hard and semihard sites. (A "hard" site is one which could only be knocked out by a direct hit. It's difficult to "harden" a site for liquid fueled rockets.)

Twelve aircraft carriers—each with atom-carrying bombers.

Against this, the Russians in 1963 presumably will have:

Some 650 ICBM's.

Less than 175 operational intercontinental bombers. Some may carry Hound Dog-type missiles.

Probably a half-dozen or less Polaris-type nuclear submarines. But several dozen or more submarines capable of firing 300-mile missiles.

Since Russia would hit first in any future war, all Red planes and missiles would be available for the first attack.

As for the United States, a fourth of the intercontinental bombers will be kept in the air at all times in periods of extreme emergency. These should escape destruction in a sneak attack. A fourth of those on 15-minute alert might escape destruction if U.S. defenses are not caught napping.

A third to a fourth of the U.S. ICBMs should escape destruction.

Presumably three-fourths of the Polaris-firing submarines will be hidden and therefore could come through the first blow unscathed.

This Soviet first blow destruction would leave the United States a combined striking force of ICBMs, Polaris-firing submarines and missile-firing intercontinental bombers able to wreak terrible destruction on the Soviet Union.

ONE SHOT DEALS

If the American strategic planners, whose consensus I am reporting, have things figured right, the United States—even after absorbing the initial blow—should be able to hit the Soviet with more destruction than was thrown at us.

Further, most of the Russian attack force would be one-shot deals—ICBM's shoot just once.

But missile-firing Polaris submarines and long-range missile-firing planes would be able to reload and go back for repeated attacks upon a partially disarmed enemy.

Now for the nonstrategic forces.

By 1962–64 the U.S. surface Navy will be in pretty bad shape. There will be a small nucleus of modern and modernized ships. But many of the carriers and other vessels will be overage.

IN BETTER SHAPE

The U.S. Army will be in better shape than it is now. But it will be worse off compared to the Russian Army. The Army modernization plan was to have begun in 1959 and be completed by 1963 or 1964.

But the plan hasn't gone through. Instead there's a stretch-out modernization plan which at present rates will mean a modernized American Army sometime around 1972.

Meanwhile, the Russians continue to pour modern equipment into their armies.

Invoke the Monroe Doctrine

EXTENSION OF REMARKS

OF

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. MUMMA. Mr. Speaker, here in Washington there are many viewpoints on whether we should do this or that and of course, conservative Americans have this viewpoint expressed in the editorial that appeared in the Lebanon Daily News for February 15, 1960.

It also brings to my mind the old adage—lend a friend money and make an enemy.

Mr. Speaker, the editorial referred to is as follows, together with a copy of a letter I received from Mr. Sheldon John Shale of Cornwall, Pa., praising the Lebanon Daily News for their forthright presentation:

FEBRUARY 16, 1960.

Mr. HENRY L. WILDER,
Publisher,
Lebanon Daily News,
Lebanon, Pa.

DEAR MR. WILDER: The editorial "Invoke the Monroe Doctrine" printed in your last night's issue of the Lebanon Daily News is an excellent presentation. I trust that everyone of your readers took the time to read it and that they will want to express their convictions about the serious Cuban situation.

Too often local newspapers tend to portray a narrow or bigoted point of view, as well as involving personalities. In this instance your editorial staff is to be commended for reminding us of the Monroe Doctrine and its ramifications. I am taking the liberty of forwarding a copy of the editorial to Congressman MUMMA with a copy of this letter in the hope that he, too, will begin to encourage the State Department to stiffen its attitude. What better definition for "colonization" is there than the constant influx of Communist agents and their increasing activities?

Sincerely,

SHELDON J. SHALE.

INVOKE THE MONROE DOCTRINE

In 1823, the young United States of America could hardly be considered as strong as a third-rate power. But the American Government in those days had guts. It stood up for its rights as a Nation and for the rights of its citizens.

Russia, Austria and Prussia formed into what they termed the "Holy Alliance," the main objective of which was to end the system of representative government in the former provinces of Spain in the Western Hemisphere.

All three were powerful countries. But that didn't deter the United States. Our President then was James Monroe. He issued a proclamation warning foreign countries that the Western Hemisphere was "henceforth not to be considered as subject for colonization." By colonization, internal penetration and subversion was also meant.

That pronouncement by President Monroe became the cornerstone of American foreign policy. And so it has remained—that is, until Fidel Castro took over in Cuba.

Castro is an agent of Russia, one of the three nations at which the original Monroe Doctrine was aimed. The Castro regime is nothing but an extension of Russian communism, a mere 90 miles from Miami, Fla.

But do we hear our State Department talking about the Monroe doctrine now? For some reason, known only to themselves, the men directing our foreign policy have conveniently forgotten that the Monroe Doctrine exists.

So what do we find? We find Cuba crawling with agents representing the Russian and the Chinese versions of world communism.

And do we invoke the Monroe Doctrine and give Fidel Castro and his Communist agents 24 hours to get out.

Up until now we haven't. We have followed a pink-laced, pantywaist policy of appeasing Castro with a few weak protests which Fidel probably looks at for his daily laugh.

And we continue to subsidize sugar exports from Cuba.

Meanwhile weak-kneed Uncle Sam is becoming the laughing stock of Latin America.

It is time for the United States to stop this nonsense.

It is time we invoke the Monroe Doctrine, just like we did in 1823.

It is time we issue an ultimatum to Castro.

And if Castro ignores it, then we must embargo all Cuban exports to this country. If that doesn't force him into line, we must declare a naval blockade and starve him into submission.

To land the Marines will hardly be necessary. Cuba needs exports and imports for survival.

Americans with the red blood of patriotism running through their veins are asking, "When will the United States begin acting like the United States and remove this cancerous growth of Castro communism, which is now entrenched 90 miles from our shores?"

The New Sugar Daddy From Moscow

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. DADDARIO. Mr. Speaker, traditional and longstanding friendship of the American and Cuban peoples requires that we take under serious consideration any step that might change those relationships. The recent contract concluded at a favorable price for the Soviet Union, in contrast to existing market obligations in contracts with this country, raise an issue. How long should we go on turning the other cheek?

The attached article, written in Havana by James Reston, appeared in the New York Times of February 14, 1960. It merits attention and reflection. Cuba's new sugar market in Russia of a million tons a year raises serious questions for both the Department of State and the Congress. How much longer can we continue, for instance, to deny friendly countries such as Brazil, Mexico, and Peru a reasonable share of our sugar market?

I respect the troubled considerations expressed by the Secretary of State in discussing these issues. I believe they should be posed, however, for the reflection of all.

The article follows:

HAVANA—THE NEW "SUGAR DADDY" FROM MOSCOW

(By James Reston)

HAVANA, February 13.—Cuba has a new "sugar daddy" today, the Soviet Union's top traveling salesman, Mr. Anastas I. Mikoyan, and the question now is whether she can also keep old Uncle Sam on the string.

If she can, she'll be doing fine, but as every woman knows, two "sugar daddies" at once are an extremely complicated operation.

Mr. Mikoyan has made clear here that there is a limit to Moscow's generosity. This is no grant-in-aid or nest egg he is making to Cuba: it is a $100 million loan at 2½ percent interest: it is very largely a buy-Russian loan, which would make Cuba at least partly dependent on Soviet machinery parts and technicians, and that is not all.

Mainly, Cuba would sell her sugar to the Soviet Union at the world price of around 3 cents a pound. Earlier in the week, Mikoyan bought 345,000 tons here at 2.78 cents a pound. This is not only less than the world price, but is less than the 4 cents a pound it costs Cuba to produce the sugar, and is almost half of the subsidized price of 5.25 cents a pound paid by old Uncle Sugar.

So Cuba is taking quite a gamble. She is betting that she can play footsie with Mikoyan, expropriate U.S. property in Cuba, and still retain a U.S. sugar subsidy of more than $100 million a year above the world price.

WHO'LL PERSUADE CONGRESS?

This raises an interesting political question in Washington. How, for example, would you like to go to Capitol Hill and argue on behalf of an economy-minded administration that the Appropriations Committee should vote to continue paying $100 million-a-year subsidy to Cuba, whose officials and press are vilifying the United States and moving closer economically and politically to the Soviet Union?

Fidel Castro, whose experience with any Congress is strictly limited, has started more political hares running with this deal than he apparently realizes. Washington is full of lobbyists arguing against the Cuban subsidy, demanding more sugar production in the United States, and urging a larger share of the U.S. sugar market for Mexico, Peru, the Dominican Republic, Brazil, and Nicaragua.

Even before today's Soviet-Cuban deal was made, U.S. officials here were having trouble holding the line against those in Washington who thought the U.S. subsidy to Castro's government should be cut or eliminated.

The argument of U.S. Ambassador Philip Bonsal was that the Cuban people should not be punished for the follies of their government.

It was also part of his argument that if the United States continued the sugar subsidy in spite of the anti-American attitude of the Castro regime, the other Latin American governments would take this as final proof that the United States would not use its economic power against them, even when provoked.

SPHERES OF INFLUENCE

Now, however, even those officials here who were making these arguments to the State Department are on the defensive. For they now have to explain what will happen in the rest of Latin America if Cuba can benefit from Soviet trade, expropriate U.S. property, and still be subsidized by the United States to the tune of over $100 million a year.

Finally there is the Soviet aspect of the deal. U.S. officials here frankly felt that Moscow would not risk a deterioration of relations with the United States just before a summit meeting in order to improve Soviet relations with Cuba.

The Russians have now done so, however, and there was considerable spectulation here tonight that they were trying to demonstrate that, if Washington refused to recognize Moscow's sphere of influence in Eastern Europe and on the southern borders of the Soviet Union, or Peking's sphere of influence in the Formosa Straits, the Soviet Union would not continue to recognize our sphere of influence even in the islands off our shores.

Where Marx Went Wrong

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 15, 1960

Mr. LINDSAY. Mr. Speaker, recently an outstanding member of the administration, Mr. George C. Lodge, Assistant Secretary of Labor for International Affairs, gave an address under the following title: "Where Marx Went Wrong—An Analysis of the Economic System of the United States." It is an excellent presentation. Mr. Lodge wrote it in order to provide a brief interpretation of our system for the use of others abroad and to dispel some of the misunderstanding that people abroad have about our economic life. Such misunderstanding particularly exists among peoples in less developed countries.

Mr. Lodge has been a fine representative of the United States in a series of international conferences. He has the high respect of management and labor alike and is one of the ablest public servants that we have in Washington. Space does not permit me to insert in the RECORD the full text of Mr. Lodge's paper but, with unanimous consent, I am appending hereto a much edited version:

WHERE MARX WENT WRONG—AN ANALYSIS OF THE ECONOMIC SYSTEM OF THE UNITED STATES

(By George C. Lodge, Assistant Secretary of Labor for International Affairs)

While we ourselves use the word capitalism in describing our economic order, it bears little or no resemblance to the monopoly-capitalism of the 18th and 19th centuries. Contrary to the teachings of Marx, our economic system has in fact proven to be a spectacularly effective means for the creation and just distribution of wealth. Aris-

ing from free business competition, among people enjoying political democracy, the American way has been and is more revolutionary than the state capitalism practiced today by the followers of Marxism-Leninism. In fact, it renders the Marxian view of capitalism, socialism and communism obsolete. Soviet Communists today are fighting a ghost. The monopoly-capitalism that Mr. Khrushchev boasts he will bury has long since died in the United States—if it ever existed. It has been converted into the most effective and egalitarian social system the world has yet known.

But we have difficulty communicating our experience to others. As Jacques Maritain has told us:

"You are advancing in the night, bearing torches toward which mankind would be glad to turn; but you leave them enveloped in the fog of a merely experiential approach and mere practical conceptualization, with no universal idea to communicate. For back of adequate ideology, your lights cannot be seen."

THE PROBLEM

Our wealth does not dazzle the foreigner with the virtues of America. The people of less developed countries are not particularly affected by statistics on how many cars are in American garages or television sets in American living rooms or bathrooms in American homes. After all, dictatorships are often efficient producers of goods. They see little relationship between our horn of plenty and their problems. The system by which our horn has been filled is simply known to them as capitalism, without qualification, and this word arouses almost unanimous animosity because it embodies attitudes and images of Dickensian exploitation which have been overcome in the United States for some years. In many foreign countries a capitalist is thought of as the economic descendant of the feudal lords who once were their rulers; as the representative of monopoly business, depositing his profits in foreign countries, with little sense of social justice or community responsibility. Capitalism is also a word associated with colonialism and exploitative land tenure, with the man who takes everything and gives nothing.

There is little understanding abroad of the role the U.S. Government plays in protecting the public aganist abuses of economic power and thus leaders of developing countries often find it difficult to see why our economic system should not follow the course laid down by Marx, the rich getting richer, the poor, poorer and the robber baron increasingly rapacious.

To the average man in most of the developing countries of the world, whose chief economic concern is keeping body and soul together, a capitalist is the curse of the poor, the villain in the Communist morality play, the local money lender, the black marketeer. Unfortunately, most entrepreneurs in these countries do little to change the image. Many of them look upon a 40 percent profit from investments and 60 percent from the yield of rented land as being a normal annual reward, while wages in these same countries are often below the subsistence level.

Often leaders of less developed countries have turned to socialism and socialist practices not so much to place the means of production in the hands of government as to assure that production facilities will be used with some measure of social justice. Very often these leaders fail to see that we have produced in our free, competitive system forms of social justice not generally associated with capitalism.

It is not realistic to expect other countries, particularly those of Asia, Africa, and Latin America, to adopt our system as it is. The most we can hope for is that through a proper understanding of our economic order the peoples of foreign countries may know and understand us better and may possibly find portions of our experience which may be helpful.

The American system is evolving fast. There has been no time to articulate for it a proper classical philosophical base. Its essential characteristic is efficient, competitive production causing economic progress through social justice by democratic means. It is a creature of our political system—pragmatic, responsive to the will of the people and subject to countless checks and balances imposed internally by labor, management and competition, and externally by government In contrast to Marxian socialism, communism or exploitative capitalism, economic decisions in our system are the sum of countless individual decisions rather than edicts handed down either by a handful of robber barons or by the State. The public consensus is the final arbiter of power in the American economy. If the public consensus is not recognized, the State intervenes. Basic to the success of the American businessman is his own realization that he must serve before he gets.

THREE NEW ELEMENTS

Laissez-faire capitalism was, as Adolph Berle has noted, transformed in America by three elements, all of which are revolutionary in character, but none of which ever contemplated blowing up the whole system.

1. The first was the development of the professionally managed American corporation which replaced individual or family owners and tycoons and moguls, interested only in building personal fortunes. Two-thirds of American industry is today carried on by about 500 corporations. Were these the possession of 500 families or individuals we would probably be suffering from exploitative capitalism. But they are not. The economic power of the corporations is widely distributed and becoming steadily more the possession of the many rather than the few. Actually our corporations have about 12,500,000 direct stockholders. Even more important a large and growing amount of their stock is held by institutions, pension trusts, insurance companies, mutual funds, etc. Probably 50 million Americans receive a share of the profits of the 500 corporations through investment in these institutions

Thus corporations have become in a very real sense public, rather than private, enterprises, serving a large and growing body of stockholders, offering jobs to millions, as well as supplying an enormous consumer population. They are public and yet they are not of the State.

The managers of these corporations are not owners; they have been called nonstatist civil servants. The corporate system at present is thus operating to "socialize" or "peopleize" American industry but without the intervention of the political state.

2. Secondly, organized labor has become a permanent and powerful element in the American economic system. The American worker has never thought of himself as a member of the oppressed proletariat. Through his union he has become an equal partner in the labor-management relationship and bargains collectively normally without the intervention of Government to secure a just share of the fruits of his labor. Instead of the American worker in a capitalist society becoming progressively poorer, he has become progressively richer. During the past 30 years real wages of workers have risen about 3 percent annually, or 30 percent in each decade, helping the American worker to achieve the highest living standards of any worker in the world. A coal miner, for example, gets between $25 and $28 a day. Real family income, adjusted for change in the value of the dollar, has risen 50 percent in 10 years.

3. Perhaps most important, public concensus has persistently refused to permit the American Government to become an expression of the ownership class as Marx predicted.

We live under what in fact many would describe as a welfare state which seeks to put a floor below which no one can sink but builds no ceiling to prevent a man from rising.

In the less developed areas of the world and even in Western Europe there is little awareness that Government expenditures for various social insurance programs in the United States are around $12.5 billion annually; that another $25 billion or more is expended each year by Federal, State and local governments under various other social welfare programs, such as public welfare, public health and medical care, child welfare, aid to veterans, public housing and education; that in addition, contributions to private health and welfare funds are currently being made at a rate of $8 billion a year; and that the total of $46 billion amounts to roughly a tenth of the current gross national product.

Few Asians and Africans have any idea that the United States has an elaborate unemployment compensation system and few realize the extent of our agricultural programs and Federal power establishments. It has been estimated that in the United States 20 percent of the gross national product is disposed of by the various levels of Government; in India the figure is only 10 percent. Such figures point to the difficulty of using the words capitalism and socialism with respect to the United States and countries like India today.

In our country, all corporations except the smallest must pay 52 percent of their profit to the Federal Government, in addition to many other taxes. We have a steeply graduated income tax which at the upper levels rises above 80 percent. Eleven percent of the American taxpayers that is, those earning over $8,000 a year—pay 51 percent of the personal income taxes.

The Government regularly invades what might be regarded as the normal sphere of private enterprise to do what it cannot do or do so well, whether it be build a Tennessee Valley Authority, provide electric service to rural communities or advise, regulate and assist the farmer. It is important to note that this sort of governmental activity is not a matter of doctrine or ideology. It is rather the pragmatic voice of the people speaking through the State to get some particular thing accomplished that needs doing.

In the last century when free competition was threatened by abuses, concentrating too much power in the hands of a few to the detriment of the many, Congress passed the Sherman Antitrust Act, curbing monopolies and establishing the principle in law that everyone has a right to become a capitalist.

When unscrupulous businessmen sought to palm off on the public dangerous medicine and adulterated foods, Congress passed the Pure Food and Drug Act of 1905, regulating producers. Times have changed since then and today the majority of goods and services are guaranteed to satisfy the customer, the trademark has become a valued and trusted mark of confidence.

ROLE OF SMALL BUSINESS AND COOPERATIVES

While there is, to be sure, great concentration of power in the corporations of America, the role of small business should not be underestimated. Despite the giant corporations, there is room and need for the small family enterprises similar to those which exist throughout the world.

Of all retail establishments in the United States, over one-third are run by the proprietor, with no paid employees. Over an-

other third have five or fewer employees. Together their sales volume is over one-third of all retail sales, including those of the large retail chainstores.

Raymond W. Miller has estimated that there are more than 100,000 manufacturing enterprises in the United States—nearly 40 percent of all manufacturers—with fewer than five workers. Some 240,000, or over 80 percent of all manufacturers, employ fewer than 50.

Mr. Miller writes:

"The nonprofit cooperative enterprise is a fundamental part of the American business scene, recognized and respected throughout the Nation.

"To quote the National Association of Manufacturers:

" 'A "cooperative" is a form of business enterprise that enables a group of individuals, partnerships, or corporations to combine together for the purpose of producing or buying or selling a commodity or service. City consumers have gotten together to buy goods and sell them. Businessmen have formed mutual fire insurance companies. Individuals join together to buy life insurance through a mutual insurance company or merchandise through a mutual wholesale purchasing association. People who save money put their funds in a mutual savings bank. Farmers join together to buy goods they use in production or to sell the things they grow. All of these are "cooperatives." They are also legitimate forms of private enterprise.' "

Grapefruit-Sized "Brain" Beats Computers in Outer Space

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story written by Mr. Roger Stuart which appeared in the New York World-Telegram on February 1, 1960; a press release by the Republic Aviation Corp. dated Saturday, January 30, 1960; and a statement by Mr. Mundy I. Peale, president of Republic Aviation Corp., at an American Legion panel on manned aircraft held on Saturday, January 30, 1960, at American Legion headquarters in Washington:

GRAPEFRUIT BRAIN BEATS COMPUTERS IN OUTER SPACE

(By Roger Stuart)

WASHINGTON, February 1.—An American Legion panel on manned aircraft here was told today about a small, grapefruit-sized computer of marvelous achievements, which requires only a tenth of a volt of electricity, yet can digest incoming data and transmit answers in fractions of a second.

Information concerning the computer, it was explained, had been given to Mundy I. Peale, president of Republic Aviation Corp., in a memorandum prepared by a member of the company's engineering department.

Mr. Peale, scheduled to address the meeting, was ill. So Kenneth Ellington, Republic vice president, was assigned to read the text of his speech, including details of the memorandum—which Mr. Peale had planned to give at the outset of his remarks.

The computer's repaid digestion of incoming data and transmission of answers, it was noted, is done by some 15 million tiny, individual message relay centers all linked together. This marvelous little machine is reported to have 10,000 times the memory storage capacity of the best of today's giant brain, and they estimate it can store information for as long as 60 to 90 years.

The memo concluded that, from the point of view of development and production costs * * * the basic unit can be built for well under $100 and by reasonably unskilled labor.

Suggesting that a device like this could some day obsolete the human brain, the Peale speech text added:

"But have no fear of this, for what I have been describing—as I'm sure some of you have already guessed—is the human brain!"

The aviation executive said he hoped you will pardon my deception, but in my opinion this little homemade story puts a finger on what is really the nub of this question about the future of manned aircraft.

For the "simple facts of the matter," according to Mr. Peale, "are, we haven't yet learned how to make or build any black box that can outperform or outthink the human brain—or, more specifically, possess the vison, the judgment, or the reasoning power of a skilled pilot."

A truly effective weapons system, he declared, must have the flexibility and capability which only a skilled man can give it.

Suggesting that he qualified as something of an expert concerning missiles as well as manned aircraft, since his company has manufactured both for years, Mr. Peale gave it as his conviction that aircraft and missiles "complement one another"—and that both will continue in use.

As wars are fought nowadays, whether of the brush type or general warfare, he said, "low-level-flying supersonic aircraft are a means of supporting ground forces and will continue to play a critical role."

And when, he continued, the state of missile art reaches the degree of development now enjoyed by manned aircraft, "they will still not fully take over our defensive burdens because in that time—or perhaps even before then—we will have new generations of aircraft tailored to a number of missions. * * *"

Beyond the vertical-takeoff aircraft, according to Mr. Peale, will be "still other variations—and generations—of aircraft. * * * Some, obviously, will take us into the outer space regions, and they will be different in design and appearance from aircraft as we know them today.

"But, and this is a key to the situation, they will be manned."

AF PILOT'S ROLE SECURE, EXPERT SAYS

WASHINGTON, D.C., January 30.—The day of the manned aircraft in military combat is far from over, an aircraft industry expert declared here today.

"We haven't yet learned how to make or build any black box that can outperform or outthink the human brain, or which possesses the vision or the judgment of a skilled pilot," said Mundy I. Peale, president of Republic Aviation Corp.

Peale told an American Legion panel studying the question of the future of manned aircraft as a weapon system that "manned aircraft have the ability to evade radar detection by treetop approach or electronic countermeasure" they are capable of defending themselves en route; they can change course without previous planning and, at the business end of the mission, are still the most accurate and reliable means for delivering bombs."

He pointed out that the same electronic devices that have made missiles possible have also increased the usefulness and extended the life of manned aircraft.

"The nuclear weapons, which give military meaning to missiles, have also augmented the striking power of any given manned aircraft. A single fighter with this capability has a thousand times more the striking power than that of a World War II B-17. In fact, a manned aircraft can today carry a greater load than any known ballistic missile, he added.

Peale, whose Long Island aircraft firm has built some $4 billion worth of military aircraft, said that in either a limited war or in a general war situation the tactical role served by manned aircraft is critical and will continue in importance for years to come.

As examples of jobs still performed best by a plane with a pilot, Peale cited such missions as the support of ground troops, the attacks on "targets or opportunity," those that arise suddenly, and the destruction of relatively small targets such as a bridge or missile launching site.

At the same time, he said, manned aircraft have the dual capability of handling general war missions where either long-range targets are involved or the requirements are fro massive retaliation.

Beyond those generations of military aircraft now flying, Peale said he saw families of vertical takeoff aircraft (VTOL) such as supersonic fighter-bombers. These, he said, would have the capability of rising or landing vertically so that historic dependence upon formal bases, facilities and runways would be eliminated.

"A VTOL weapons system," he added, "capable of operating from unprepared fields or roads, adds tremendous flexibility to our deterrent forces—flexibility and capability difficult, if not impossible, to match with anything but a manned weapons system."

REMARKS OF MUNDY I. PEALE, PRESIDENT OF REPUBLIC AVIATION CORP., AT AMERICAN LEGION PANEL ON MANNED AIRCRAFT, WASHINGTON, D.C., SATURDAY, JANUARY 30, 1960

Dr. Danforth, Congressman Brooks, Mr. Newlon, Mr. Abbott, gentlemen, before I begin my formal comments, I'd like to take a moment to tell you about a memorandum I received the other day from one of the people in our engineering department. It has a bearing on our discussion this morning.

Actually, this memo tells about a small, grapefruit-sized computer. It requires only a tenth of a volt of electricity—as you probably know even a flashlight needs 20 to 40 times that much—yet it can digest incoming data and transmit the answers in fractions of a second. The memo goes on to point out that this is done by some 15 million tiny, individual message relay centers all linked together. This marvelous little machine is reported to have 10,000 times the memory storage capacity of the best of today's giant "brain," and they estimate it can store information for as long as 60 to 90 years.

From the point of view of development and production costs—and this caught my eye—the basic unit can be built for well under $100 and by reasonably unskilled labor.

Now, if what they claim here is true, a device like this could someday obsolete the human brain—and we'd have no need of discussions such as today's.

But have no fear of this, for what I have been describing—as I'm sure some of you have already guessed—is the human brain.

Now, I hope you will pardon my deception, but in my opinion this little homemade story puts a finger on what is really the nub of this question about the future of manned aircraft.

The simple facts of the matter are, we haven't yet learned how to make or build any black box that can outperform or outthink the human brain * * * or, more specifically, possess the vision, the judgment, or the reasoning power of a skilled pilot.

Nor do I anticipate that we will learn how to design such units within our lifetimes.

A truly effective weapons system must have the flexibility and capability which only a skilled trained man can give it.

I am in both the airplane and the missile business. Our firm has built some $4 billion worth of military aircraft during its nearly 30 years of aircraft production. Through 2 major wars and in 17 limited wars I've seen what aircraft and men can do as a team.

At the same time, I'm no stranger to missiles either. Few people realize it, but Republic held the first missile production contract ever let—that was back in 1944 when the Government asked us to analyze and duplicate the V–1 rockets * * * and we produced nearly 1,400 of them. Today, we have a missiles systems division which just marked one of its best years since it was formed in 1952.

This may not qualify me as an expert, but at least I belong to both lodges.

But let's get back to the subject at hand.

I believe I know my field—and as far as missiles are concerned—I am willing to accept the claims of their most ardent supporters. There is no point in getting sidetracked by technical arguments over the respective capabilities of hardware. In my opinion, the entire picture can be brought into proper focus by looking directly at some of the broader noncontroversial areas. Some of these are so obvious that they are almost always overlooked.

First, let me say this: No responsible military authority that I've ever talked to thinks solely in terms of missiles replacing aircraft. They think entirely in terms of the job to be done and the most effective way to do it. In many instances missiles of a variety of sizes and complexities constitute the best tool for the job, so they are selected.

In still other areas—perhaps fewer, it is true, than in previous years—manned aircraft will be required. As weapons systems, aircraft and missiles complement one another.

Air supremacy, according to every Air Force report I've ever read, depends upon the ability to penetrate all targets no matter how well they are defended. Manned aircraft possess the ability to evade radar detection by tree-top approach or electronic countermeasures; they are capable of defending themselves en route; they can change or alter course without previous planning and, at the business end of the mission, they still are the most accurate reliable means for delivering bombs.

Manned weapons systems also provide the most positive means of identifying other manned bombers so that the latter can be stopped before they penetrate the defense zone, or before they can drop their bombs or launch air-to-surface missiles.

Reconnaissance satellites or missiles with automatic equipment will not be accurate enough or reliable enough to be considered for this vital mission for at least another 10 years, most experts say.

These then, are the general qualifications for the continued importance upon manned aircraft or weapons systems. They are clear-cut and I think logical to anyone who looks at the picture clearly.

And, as it is with anything in the defense picture, cost enters the discussion.

Initially, if you but compare unit costs, missiles would seem to have the edge. A recent report I read priced a squadron of Thors—that is about 15 missiles—at $15 million, whereas an equal number of high-speed interceptors or fighterbombers would probably cost about $20 million, give and take a few million, depending upon what figures you use (and there are enough of them around these days, I might add).

But, we must remember that a missile is a one-shot affair—a manned aircraft can be used hundreds of times.

In a very real sense a modern, all-automatic aircraft like our own F–105D is a missile with return capability.

We must not lose sight of the fact that the very electronic devices that have made missiles possible have also increased the usefulness and extended the life of manned aircraft.

The nuclear weapons—which give the military meaning to missiles—have augmented the striking power of any given manned aircraft. A single fighter with this capability has a thousand times more striking power than that of a B–17 in World War II. In fact, a manned aircraft can today carry a greater load than any known ballistic missile.

And, finally, you get down to the mission to be performed. Will it be an all-out nuclear war? We all certainly pray that it won't come to this. What is more likely to happen—most experts agree—is that we will continue to have the series of cold or limited war situations like those we've experienced since 1945.

If you accept this, we should then look at the role of a weapons system in light of both the very special needs of a regional or limited-area war, as well as, the requirements demanded by a general war.

Manned aircraft can alone offer this dual capability. Let's consider the first situation—limited war.

Here, the targets will be relatively small—targets like airfields and towns instead of huge industrial complexes and large cities. Pinpoint, precision bombing is demanded. It would be very difficult to destroy a long bridge without destroying the town, with anything but a manned aircraft. They are also the only safe way of limiting destruction to strictly military targets.

Basic military strategy in coping with a limited war situation is first to have a mobile force ready for a show of strength at any point in the world to prevent the outbreak of a shooting war and, failing that, to swiftly perform armed missions to aid friendly forces.

In a general war, as well as local conflicts, low-level flying supersonic aircraft are a means of supporting ground forces which in any war situation will continue to play a critical role.

And when the state of missile art reaches the degree of development we now enjoy with manned aircraft, they still will not fully take over our defensive burdens because in that time—or perhaps, even before then—we will have new generations of aircraft tailored to a number of missions in either a general or a limited war.

I'm referring to vertical take-off (VTOL) aircraft. * * * Supersonic fighterbomber capable of rising or landing vertically so that the historic dependence upon formal bases, facilities and runways is eliminated.

A VTOL weapons system, capable of operating from unprepared fields or roads, adds tremendous flexibility to our deterrent forces—flexibility and capability difficult, if not impossible, to match with anything but a manned aircraft.

And beyond this there are still other variations—and generations—of aircraft, many on our own drawing boards back at Republic. Some, obviously, will take us into the outer space regions, and they'll be different in design and appearance from aircraft as we know them today.

But, and this is a key to the situation, they will be manned:

You don't have to take my word for it—there are any number of experts who have said this time and time again.

Early this month, for instance, General Schriever's assistant, Col. Norman Appold said he saw "the moving of man into space as only a continuation of existing Air Force missions." He pointed out that there is no clear-cut line of demarcation between air and space.

Some of you perhaps heard the talk by Gen. Tommy White, Chief of Staff of the Air Force, when he addressed the National Press Club here early in January.

During the discussion period he was asked if he saw any mission for manned combat aircraft during the next 5 years.

General White repeated what he has said on many occasions * * * that in every field of aeronautical combat he saw a requirement for manned aircraft for another 10 years and maybe more.

The predominant requirement for the indefinite future, according to General White, will be in the tactical field where the Air Force works closely with the Army, where the targets are ones of opportunity, not fixed targets.

He also pointed out that there isn't as yet an antiaircraft or an antiairspace weapon which is effective against both missiles and manned aircraft, nor do we have missiles with the range and accuracy of a missile launched from a long-range aircraft.

And, finally, he commented on the psychological implications which have all but been ignored.

General White said:

"I simply can't imagine resting our entire or the preponderant part of our offensive capability on a static system such as a missile stuck in the ground or sitting on a railroad, or even in a submarine.

"The enemy, and your friends, can't see this thing. It is not good enough to say, 'Oh, you should see the submarines we have under the sea and the missiles we have in these holes all over the United States.' They are going to have to see something flying at very high speeds over great distances."

And that, gentlemen, sums up my views, too.

I thank you.

Drop Politics

EXTENSION OF REMARKS

OF

HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. MOORE. Mr. Speaker, much has been said and written concerning what we are to do in the Congress with respect to interest rates on Government bonds. Initially, without a complete study of this problem, I was not sure what my attitude would be; however, I have now had a full and complete opportunity to study the legislation which has been proposed by the administration to raise the interest ceiling on long-term Government bonds. I have come to the conclusion that this is "must" legislation in order that the Secretary of the Treasury be permitted to handle the huge debt of the country in a more orderly fashion. I am convinced that failure to do this will result in a great penalty being assessed against "Mr. Average American" who pays the greater percentage of the taxes that are collected today, for the reason that failure to adopt this legislation will mean more of his tax dollars being channeled into payment of higher rates of interest for short-term obligations of our Government.

Mr. Speaker, I was pleased to read an editorial in the Wheeling News Register, an independent Democratic news-

paper in my district, for which editorial I want to congratulate the author and to respectfully call it to the attention of my colleagues and under unanimous consent I include it as a part of my remarks.

On this grave issue of handling the finances of our Nation, I concur with this editorial that this is no time and no place to play politics—Democratic or Republican.

DROP POLITICS

For the sake of public peace of mind it is to be hoped Congress arrives at an early decision on what to do about interest rates on Government bonds.

The administration wants Congress to remove the ceiling of 4¼ percent on long-term bonds. The argument is that because money commands more in private financing there is little market for such obligations, so the Government has been forced to resort more and more to short term issues, where the ceiling does not apply, in managing the big public debt. Removal of the ceiling, it is represented, would make long-term Governments more attractive, thus actually lowering the overall interest burden while exerting an anti-inflationary influence.

Opponents of the proposal, chiefly Democrats, argue that the effect would be precisely the opposite, not merely increasing the interest rate on long-term bonds but encouraging private financing to follow suit. Nobody but bankers, it is held by some, would benefit.

Yesterday the House Ways and Means Committee went into closed-door conferences with Treasury Secretary Anderson with the hope in mind of working out agreement on a modification of the administration plan advanced by Democratic leaders. Other Democrats, however, who have taken an uncompromising stand on the issue, hope to get a majority of Democratic Senators on record against any change at a caucus today.

In a situation such as this the ordinary citizen is peculiarly at the mercy of his elected representatives. He lacks sufficient knowledge of the subject to form an independent opinion and advise those who speak for him. To his way of thinking, men skilled in the intricacies of money management should be in the best position to make an intelligent decision. In any event, he feels that on a matter such as this he has the right to demand of everybody in position of authority that in resolving the controversy consideration of partisan advantage be discarded altogether. This is no time and no place to place politics, Democrats or Republicans.

Sparks of Freedom Undying in Poland

EXTENSION OF REMARKS

OF

HON. WILLIAM H. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. BATES. Mr. Speaker, for over 20 years, the people of Poland have lived in bondage, and, yet, the spark for freedom has not been extinguished in the minds and hearts of her people. Both behind the Iron Curtain and in the free world, her sons and daughters are still resolute in their determination that Poland shall again be free and be a symbol of liberty for the world to witness.

I am incorporating below a memorial by the Z.P.W.P. Inc., an anti-Communist confederation of Polish freedom fighters headed by Jozef Mlot-Mroz, president, and Rt. Rev. Msgr. L. A. Sikora, honorary president:

MEMORIAL

The members of the anticommunistic confederation, also known as the Freedom Fighters for the Independence of Poland, and the representatives of many enslaved nations behind the Iron Curtain, met on January 16, 1960 at the International Institute in Boston, and agreed that all the results of and resolutions adopted at the meeting be written in the form of a memorial and sent to the Members of the Senate and the House of Representatives in Washington.

As political emigrants from behind the Iron Curtain and as victims of Hitler's tyranny and later on of communistic tyranny, we appeal to the highest governing body in the United States to support our anticommunistic action and our struggle for the freedom and independence of the enslaved nations.

From past experience we know communism with its horrible means and methods of terror through which communistic dictatorship plans to rule the world and so, we hereby declare that:

1. Communistic dictatorship and nihilism is based on the rule of bayonets and abounds in the blood of subdued and captive peoples. These terrible Red prodigies are a disgrace to the 20th century.

2. Communism is a sworn enemy of God and the church. One who does not believe in God and disobeys His commandments is also our enemy.

3. Godless communism undermines Christian civilization and under the pretext of world peace, with an abjectness equal to Hitler's, penetrates everywhere, becoming the greatest hindrance to western civilization today.

4. Communism is a festering abscess on the healthy body of the world today.

5. Between communism and democracy there lies a great abyss, at the bottom of which, in torture and convulsive agony lie enslaved nations who have faith in the United States and look hopefully to her for deliverance.

6. The world today is deluded by the opinion that political coexistence with communism is possible through appeasement. If this opinion is permitted to continue, the spirit of resistance among the enslaved nations will die out and America will lose her real allies and friends.

7. Stalin's successor, Khrushchev, in a cynical manner, mockingly stated many times that "he will bury America", and "that our children and grandchildren will live in a communistic atmosphere". Is this not enough evidence of Khrushchev's arrogance and a testimony that the Red incendiary has made his plans to conquer our country?

8. Moscow wants to lull to sleep the vigilance of the Western World. She is now using a psychological approach and at the present time she seems to be successful. The West sleeps on, silently resting on the laurels of 1945.

9. Khrushchev is endeavoring to force communism on the free world, promising paradise here on earth. All those who think or feel that the visits, travels, and speeches of Khrushchev foretell peace are gravely mistaken. In the Kremlin there is a hearth which spews sparks, ready to bring a new conflagration to the entire world. The only way to save the world from this dangerous devourment is to extinguish the source of the flames.

Although we, the most wronged political emigrants, do not call upon the West to begin a political struggle, we hereby propose that:

(a) It is necessary to work out a constructive program for the West in regard to the political action. The forgotten Hungarian tragedy forces the free world to act, by stressing the means by which the Communists would be turned back. Action must take place of words.

(b) Communism today is like a volcano, which at any moment may erupt, destroying communistic Pompei. We must act intelligently so that the lava of this volcano will not reach the West, but rather destroy the Kremlin itself.

(c) It is not permissible for the West to sell the independence of other countries in exchange for material advantages. Defending its own independence, the West must demand a specific day on which enslaved nations will be granted their freedom. It is impossible to separate the peace and security of the free world from the freedom and independence of the enslaved nations under communism.

(d) We strongly protest against the economic exploitation of enslaved countries by communism. We strongly protest against enslaved labor and the violation of human social principles under communism.

In conclusion, the members of the protesting committee, all representatives of the enslaved countries from behind the Iron Curtain, salute Poland as she observes the anniversary of her entrance into the family of Christian nations 1,000 years ago. Under the motto "One Thousand Years of Poland" we state that:

Poland in the course of her history passed through many a transition period. She was once at the height of her power, becoming the bulwark of Christianity, shielding Europe against the onslaughts of the Tartars, Turks, and Communists. During World War II she floated in a stream of her own blood. Lost 6 millions of her citizens. Today she suffers under the despotic rule of communism which deprived her and other countries of their freedom and independence. Communism hideously deprives these nations of their faith in God. Tomorrow this same treacherous communistic strength may likewise engulf America. That is why today America, stretching out a helping hand to the enslaved nations and trying to obtain for them the most cherished freedom she enjoys, is protecting her own freedom and existence.

The Polish emigrants, living outside the borders of their nation manifest their strong ties to the thousand-year culture of Poland, and live in the hope that the day of freedom will soon come, as it must.

Thus, appealing to the leaders of the United States and begging their intercession for us on our way back to freedom, we hereby declare that: Whoever fights for freedom, fights in defense of America, peace, and justice.

H.R. 7015

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. FOGARTY. Mr. Speaker, I do not need to remind my honored colleagues that the more than 2,000 colleges and universities of the United States are struggling with a multitude of problems of increasing severity and ex-

treme complexity. More than ever in the past, our Nation needs larger and larger numbers of educated citizens trained both to meet the demands of specialized professional and scientific endeavor and to provide the solid leadership core of an enlightened citizenry. The problems of this age call for effort on behalf of education on a greater and wider scale than at any time in the past. Thus, many of us have been trying to find ways to aid and assist the colleges and universities. These institutions need help, and help for them is forthcoming; not only through the Federal Government's provision for relief at strategic points through the National Defense Education Act and the college housing loan program, but through a growing disposition on the part of the States to expand their programs of higher education, and through increased private and corporate gifts for higher education. Business and industry, private organizations, church groups, public officials at the local, State, and national level—all have engaged in the study of the needs and problems of the Nation's colleges, and all are contributing to efforts to meet them.

The cost of attending college is increasing rapidly, and all signs point to continuation of this increase. A U.S. Office of Education study of tuition and fees in 196 representative institutions of higher education, accounting for 55 percent of the Nation's total undergraduate enrollment, indicates that these charges increased 32.6 percent between 1954 and 1958 in public institutions and 39 percent in private institutions. In the same period the cost of living index, which has a direct bearing on room, board, and other costs borne by college students and their families, increased by some 8 percent. The average cost of sending a student to college has now risen to $1,500 annually in our public institutions of higher education and $2,000 in private institutions. Since increases in college enrollments are coming more and more in families of modest means this increase in costs constitutes a serious burden for many of our citizens.

It is with this thought in mind that I have taken this time to again urge support for my bill, H.R. 7015. This proposed legislation, which I first introduced early in 1953, would permit a taxpayer to deduct from his gross income expenditures for tuition and other educational expenses. There is a limit set in the bill that such deduction shall not exceed $1,500 for any one individual in any one taxable year. The taxpayer could make the deduction for his own expenses for education or for those of his spouse or any of his dependents. In addition to tuition charges, other deductible expenses could be for books, fees and charges, uniforms, board, lodging, and other expenses necessarily incurred in or incident to the effective pursuit of an education.

My bill will undoubtedly benefit the colleges and universities. Its primary objective, however, it to provide assistance at the point of most critical importance, that of the individual family that is endeavoring to provide higher education for its members. What is needed most in this day is Federal action that will encourage more parents to make it possible for their children to attend college, that will make it easier to go to college. Higher education has become a necessity, not a luxury, and the simplest, most effective way to give it a boost is to lighten the tax burden on money spent for higher education. Our Government encourages religion, without favoring any one religion, by lightening the tax load on contributions to religious organizations. My bill would encourage higher education in the same way—by lightening the tax load on the man who wants to give his children the advantages of higher education. It provides help for those who are willing to help themselves.

In accord with the American tradition of equal opportunity, we should encourage opportunity for every individual who has a reasonable chance of succeeding, and let his success speak for itself. Recent studies have shown that a high percentage of persons completing the Ph. D. degree in certain scientific fields have IQ's below 120. All the ability tests there are will not suffice to predict accurately the performance of an individual who is actually willing to do his very best. My bill does not require that a boy or girl have an IQ of 130 in order to qualify for assistance; it rewards the effort of all in a way that is psychologically sound, simple to administer, and direct in application.

At almost every point the Government's efforts to provide assistance to higher education have encountered the complicated problem of the relationship of church and state. My bill would avoid this problem entirely by supplying assistance to every American family, without any requirement as to eligibility beyond the willingness to invest its own resources in the education of its members.

Most efforts made thus far to provide assistance to the families and individuals most directly concerned with the cost of higher education can be applied on a large scale only by the setting up of complicated policies and procedures for administration. May I point out that my bill requires no complicated set of provisions for regulation and control, no costly process of administration, no haggling over questions of eligibility. Most of the educational expenses reported for deduction can be checked for reasonableness with published data on estimated costs of attendance at specific institutions, and can be verified in detail, when necessary, by references to institutional records.

Do not overlook the indirect benefits my bill will bring to the institutions themselves, which face a long period of extreme financial difficulty occasioned by rising costs of operation and the necessity to expand. By increasing the ability of students and their families to continue to pay a reasonable share of the increasing cost of education, this bill will help the institutions maintain a desirable balance of tuition and fee income with income from other sources. This is particularly important to the private and church-related colleges, which enroll about 42 percent of all students in the United States, because they derive about half their total operating income from tuition and fees. Unless these institutions can expand their enrollments as rapidly as do the public institutions, our dual system of higher education, which we believe essential to the Nation's interests, will be threatened. My bill will help these institutions substantially but, because the assistance is supplied indirectly, will avoid the complications attending most proposals to extend assistance to private colleges.

May I summarize briefly. My bill first, provides help at the point of most critical importance, second, is psychologically sound because it lightens the tax load of those who are willing to make a worthy effort, third, is democratic in that it plays no favorites, fourth, creates no complications regarding church and State relations or public versus private institutions, fifth, is uncomplicated and easy to administer, and sixth, will benefit both public and private institutions. I solicit for it your careful attention and thoughtful support.

Mike Coll of Hazleton, Pa., Retiring After Nearly Half Century on Newspaper Staffs

---

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story that was featured in the Plain Speaker of Hazleton on Saturday, February 13, 1960, announcing the retirement of Michael V. Coll after nearly 50 years' service with the Plain Speaker—Standard-Sentinel. I would like to take this opportunity, Mr. Speaker, to warmly congratulate Mike Coll for his many outstanding contributions to the betterment of Hazleton and the Greater Hazleton area in his capacity as a columnist, editorialist, and sportswriter as well as in his present position as Hazleton's city controller. I wish Mike Coll a long and happy retirement.

The story follows:

"MIKE" COLL IS RETIRING AFTER NEARLY HALF CENTURY ON NEWSPAPER STAFFS

After almost 49 years service with the Plain Speaker—Standard-Sentinel, Michael V. Coll, 219 East Beech Street, has retired due to illness.

Mr. Coll, who is Hazleton city controller, resides with his son-in-law and daughter, Attorney and Mrs. Frank Gormley.

He was born in Jeanesville on March 18, 1887, a son of the late Dominic and Bridget Coll.

As a youth he entered the employ of the J. C. Hayden Store and within a few years became manager.

REPORTER SINCE 1911

He began his newspaper service as the Hazleton Sentinel south side correspondent in 1911, joining the city news staff in August

1913. He served as reporter and sports editor, continuing in this dual capacity when the Sentinel merged with the Daily Standard to become the morning Standard-Sentinel.

For many years he wrote a popular daily column, "Wise and Otherwise," for the Standard-Sentinel.

Coll transferred in 1946 to the staff of the Plain Speaker as a reporter and editorial writer. Until stricken ill several years ago he had continued to write the "Wise and Otherwise" feature for the Standard-Sentinel.

A list of major news events Coll covered during his period of service would read like a history of this region, among these being the Tomhicken mine disaster in 1926 and the Kelayres political shootings of 1934.

MANAGED THEATER

During the early years of his newspaper service, he was manager of the Campbell Theater, West Broad Street, when motion pictures were coming into their full popularity.

His bookings brought to Hazleton the outstanding film features of those days and the theater ranked with the leading motion picture houses of the East.

FOUR TERMS AS CONTROLLER

Coll is serving his fourth term as city controller, a post to which he was first elected in 1945.

He has been active in politics for many years and on numerous occasions was asked to be a candidate for mayor or council but declined, preferring to retain the controller post.

In 1951 he served on the board of governors of the Pennsylvania League of Third Class Cities.

PROMINENT IN KIWANIS CLUB

A charter member of the Hazleton Kiwanis Club, he was its secretary for 25 years until 1951 when he was named president. After completion of his term as president he was made an honorary life member.

OTHER AFFILIATIONS

He is a member of St. Gabriel's Church and the parish Holy Name Society and of the Knights of Columbus Council 442.

He served three terms on the Catholic Charities board of directors and three times on the Salvation Army Advisory Board.

In recognition of many years' service in publicizing its affairs, he was made a privileged life member of the Men's League of the First Presbyterian Church.

In 1957 he was honored by the Friendly Sons of St. Patrick by being named Hazleton's leading citizen of Irish descent.

For many years he was one of the leaders of the Old Timers Association which sponsored annual Memorial Day ceremonies in Jeanesville.

PROMINENT IN SPORTS WORLD

Of his many activities, sports was the field in which he became most widely known.

His engaging personality won him an ever-widening circule of friends which includes many of the Nation's most prominent sports figures.

Numerous young athletes had his help in securing athletic scholarships in leading universities of the Nation and his list of house guests read like a "who's who" in sports.

Those who came here to visit him included such outstanding personalities as Coach Ralph Sasse of West Point and Coach Rip Miller of the U.S. Naval Academy.

HIGH SCHOOL BOOSTER

High school sports were practically on an intramural basis in this area until Coll turned the spotlight of publicity on Hazleton High School's activities in the late 1920's.

His coverage was not only largely responsible for the tremendous interest generated here but other cities followed his example as high school sports won new stature throughout the State.

Coll followed the path of Hazleton High School to its State basketball championships in 1928 and 1929 and again a decade later.

He supported the moves which brought Hazleton High its present gymnasium and its spacious football stadium, even today one of the State's finest.

HEADED PROFESSIONAL LEAGUES

His interest covered not only scholastic sports but professional as well.

Prior to World War I he was secretary of the Penn State Basketball League, at that time probably the Nation's fastest circuit.

He served many years as president of the Tri-County and Anthracite baseball leagues when these regional circuits operated on a scale equal to the fastest minor leagues. He was president of the Twin-County Football League in the early 1930's and president of the Eastern Professional Football League which brought bigtime football to this area in 1939.

He played an important role in bringing the New York-Pennsylvania League franchise to Hazleton and helped this league to advance in stature to become the Class A Eastern League later on.

Address by Martin B. McKneally, National Commander, the American Legion, at Dinner Honoring Members of Congress

---

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mrs. ST. GEORGE. Mr. Speaker, last evening the American Legion held its annual dinner in honor of Members of the Congress.

On this occasion my very distinguished friend and constituent, the national commander, Martin M. McKneally, made the following address.

This excellent speech, short, sincere, and constructive, certainly belongs in the CONGRESSIONAL RECORD, and it is a very great pleasure and honor for me to be able to ask that it be included in the Appendix.

We are fortunate indeed to have one of our great patriotic organizations, in these troubled times, select as national commander a man of such vision and courage.

The speech follows:

Members of Congress, I am delighted to bid you welcome to this dinner of the American Legion honoring the Congress of the United States. These annual festivities are a means by which we can express gratitude to you for the support given by you to the legislative objectives of our organization. And they do more. They grant to us the opportunity to pay tribute to the system of representation by which our Nation is governed. It is proper that this be done by a group of war veterans who are joined together to promote the ideals of our country. This Congress of the United States is the perfect embodiment of men's will to enjoy, to maintain and control his freedom. By your legislative enactments, you keep freedom broad and at the same time protect it from deteriorating into license.

Ladies and gentlemen of the Congress, you better than anyone, know and must know that it is in our day that freedom is suffering the hour of its darkest peril. Shall we here lose it in a great power struggle in which our country is vanquished? Or shall we lose it because we really don't understand the nature of it? Shall its loss be the result of an adoption of a false set of values that places the emphasis on material comfort and prosperity instead of moral and spiritual fiber? Have we not a tendency to measure the success of our policies by whether or not they work to our advantage in a material way rather than to measure the success of them by the test of rightness and wrongness? No one will argue against material comfort or security except insofar as a reliance upon them is destructive of personal liberty. Americans have come to believe that communism thrives on human misery, poverty, and degradation, and that democracy grows with an expanding production of motor cars, television, and refrigerators. And because they believe this, they sometimes follow policies, both abroad and at home, that ignore the fact that man does not live by bread alone. The greatest men our country can boast of were men of profound spiritual conviction, who suffered immensely within themselves for spiritual ideals. The two men whose birthdays we honor in February conducted the affairs of this Nation in time of war and in time of peace toward one end—the preservation of human freedom. The times in which each lived were different, but the challenge the same and the challenge is the same today. Evil forces and evil men would rest in the name of comfort—freedom from mankind. This mistake was made once in our generation by the German people who gambled away their freedom to gain security and they woke amidst rubble and ruin to find they had lost both. Freedom is the most easily lost of men's possessions and it will be lost here unless it is rooted in a deeply spiritual belief in God and the divinely created nature of man. It is to promote this doctrine of belief that the American Legion was called into being. It is in exaltation to the concept of God and country that the American Legion will work without wavering and it shall not be dissuaded by unrealistic arguments by vile cartoons or by mendatious reporting. It shall proceed to promote its doctrine of belief, with high regard for all constitutional legalities and amenities. It shall never be un-American. It shall not play the role of either naiveté or of friend to men whose avowed purpose it is to destroy what the soldiers of three wars fought to preserve.

For your kind attention, we express our great gratitude. For the cooperation extended to the American Legion in the area of veterans affairs in the House of Representatives, we give our thanks—for the creation of a Committee on Veterans' Affairs in the Senate, we express our most ardent hope.

And now to conclude. There is an interesting definition given by a recently naturalized citizen, a man who has known as you and I have not known, the tortures of the concentration camp. He proclaims:

"I am an American citizen—a member of the greatest fraternity on earth—the brotherhood of free men because a million American citizens had died and millions have suffered in the wars of our Republic. I have greater freedom than any other citizen of any other nation in any other period of mankind. I have greater freedom to work, to worship, to love, to learn, and to play. Mine is the freedom to compete, to invent, to save, to invest, to create, to promote, to own. I have freedom to choose, to join, to vote, to speak, to travel, and to walk erect with head high. I am free to be my own self as an individual human soul. I am free to glorify God."

NAACP's Thurgood Marshall Meddling in British Affairs

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. WILLIAMS. Mr. Speaker, it is astounding to learn that one of the NAACP's professional agitators, Thurgood Marshall, is meddling in the relationship between Great Britain and its colony, Kenya.

Robert C. Ruark, a nationally syndicated columnist, has focused attention on the manner Marshall is injecting himself into the internal affairs of a sovereign nation. Ruark also points out the nefarious scheme of Mboya, and other African dictators, to capture political control of Africa and thus enslave a great majority of its inhabitants.

The State Department should look into the connection between this representative of the National Association for the Advancement of Colored People, and Mau Mau terrorists, who are supporting Mboya's and Marshall's position at the London Conference.

Mr. Ruark's article follows:

THURGOOD MARSHALL NOW "SPOKESMAN FOR AFRICA"

(By Robert C. Ruark)

NAIROBI.—The intrusion of Dr. Thurgood Marshall, the chief counsel for our National Association for the Advancement of Colored People, into the muddled mess between Great Britain and its colony, Kenya, seems to me to be meddling of the highest order.

What happens between Kenya and England at the current constitutional conferences in London is none of America's official business, and it certainly is none of Dr. Marshall's business. But, nevertheless, he is an official adviser to the African group, thus lumping himself with Peter Koinange, an avowed pro-Mau Mau and outcast from his own country.

The situation is ridiculous. Marshall was out here for only a couple of days. He is not an African. He is an American, and a mostly white one, at that. If he knows anything about Africa or Africans he read it somewhere.

SOUNDS FUNNY

But here is this American Negro saying out loud that somebody else's government may be subject to revolt if his pressure group of irresponsibles doesn't get what it wants in the way of complete control of the country. I can understand the bellwether, Tom Mboya, saying that in one of his usual threatening moods, but it sounds funny coming from a sophisticated American lawyer who wouldn't know a Galla herdsman from a whistling thorn.

"The new group in Africa know exactly what they want," Marshall is quoted as saying in London. "They want independence now—tomorrow is too late."

This "new group" Marshall mentions is composed of Marshall, Mboya, and a handful of other self-seeking politicians, plus their captive voters in a few cities. They compose a fraction of the 6 million African population. A good two-thirds of this population never heard of Tom Mboya or "uhuru"—freedom—let alone Marshall or the NAACP.

I have just finished a back breaking 2,500-mile round trip by jeep to Mogadishu in Somalia, up via Garissa in the northern frontier of Kenya, and I daresay I saw more actual Africans on that one trip than the glib Mr. Mboya has seen since he became a politician instead of a sewerage inspector.

It is almost laughable, if it weren't so pathetic. Here we have this semiwhite American, Marshall, saying for publication that the Europeans "had made little effort to learn the Swahili language or otherwise adapt themselves to the culture of their adopted country."

I would point out the African himself, outside of the cities, has made little or no effort to learn Swahili, which is not really a language anyhow, but a kind of "me Tarzan-you Jane" trade language compounded of Arabic, pidgin English, and some native dialects.

BLOODY CULTURE

There is no broad culture in this country. A Boran herdsman is as different from a Masai as a Suk differs from a coastal Swahili, who is more Arab than Negro. The Nilotics do not agree among their varying tribes on God, diet, or ceremony, and any Wakamba will eat a Kikuyu raw.

The only common culture of Africa before the white man and the Arab came to bring it alive and make it politically conscious was one thing—blood. In some ways that is still the common culture—blood, or the threat of blood to spill.

I do not quarrel with the right of the African to try to overthrow the vested interests of the European, to quarrel and fight and kill and steal among themselves, or to attempt to enslave a majority by a political minority. It's their property.

But it jolly well is not Dr. Thurgood Marshall's land, and, in effect, he is breaching a law which says that Americans are not supposed to get mixed up in other people's revolutions as an active participant. This is one time when I would like to see Mboya's "scram out of Africa" slogan apply to one meddlesome American whose name is Marshall and whose career has been founded on color.

Education Gap

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 18, 1960

Mr. WOLF. Mr. Speaker, today, I received a well-thought-out and well-written letter from a schoolteacher in Cedar Rapids, Iowa, which I wish to share with all my colleagues.

This letter, which Mr. John A. Scott wrote, expresses very well the reasons which every Congressman must consider if he is to help our great Nation overcome our educational gap, and if he is to help it prepare for our future educational needs.

The letter follows:

FEBRUARY 16, 1960.

Hon. LEONARD G. WOLF,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN WOLF: I am writing to urge you above all else to vote for and work for the passage of the Federal school aid bill that is now before the House.

From the bottom of my heart I am asking that you and all other representatives rise above the political shenanigans as reported in the Kiplinger Washington letter dated February 13, 1960, and do something for the sake of aiding the people, and that alone. I again urge passing of the above-mentioned bill for the following reasons, along with many others that need not be listed.

1. There is a trend in the tax pattern which is operating against our obsolete method of school support. Not too many years ago State and local government took about 75 percent of our tax dollar; the Federal Government took about 25 percent. The situation now is just the reverse.

2. The coming shortage of teachers confronts us with a grim prospect indeed. One million five hundred thousand new teachers, more than the total number now in service, must be recruited in the next 10 years if the present ratio of teachers to pupils is to be maintained. Our needs, let us not forget, are not only quantitative, but qualitative.

3. It is authoritatively estimated that in order to maintain the present student-teacher ratio, between one-third and one-half of all 4-year-college graduates would have to enter schoolteaching in the next decade. Now only one in five enter teaching, and the reasons most often given is that the pay is just not good enough or will it ever be.

4. Business, industry, and government are outbidding the teaching profession for talents of many of its best qualified and most able men and women.

5. The teacher shortage at the beginning of this year, according to Commissioner of Education Lawrence Derthick, was 195,000. This is up from 182,000 the year before.

6. Teacher's salaries are on the bottom rung of the pay ladder of virtually all professions. It is an indictment of our society when we oblige the teachers of our children to go around in shiny clothes, their minds preoccupied with bills rather than ideas and ideals.

7. Much of the wealth produced in Iowa is not taxable by the local or State authorities, but the profits of corporations are distributed to stockholders of other States. Furthermore, the profits of these companies are taxed by the Federal Government, and it is the Federal Government which should contribute a fair share of this wealth back to the States.

8. The assessed valuation of property no longer reflects an accurate measure of the taxpaying ability.

9. Between 1940 and 1956 the national income increased 321 percent. Between the same years the assessed valuation subject to the property tax has increased in value by only 88 percent. Hence, it is quite apparent that the assessed valuation failed to grow at the rate needed to support the services dependent on it.

10. There is something drastically wrong with our sense of values in this country when people spend more money on tobacco, alcohol, and cosmetics, than they do on education.

11. When thousands of communities have taxed themselves as high as they can in the form of sales taxes, real estate taxes, and personal property taxes, and are still able to pay their teachers only about half of what others are earning in other positions which require less training, we cannot hope to attract the bright, inquisitive, inquiring top people into the teaching profession.

12. Reports indicate that the Soviet Union is channeling between 10 and 15 percent of its national income into education, as compared to 5 percent in the United States.

13. It is admitted that there is a present classroom shortage of 132,000 classrooms. Think what it will be in 10 years. The local taxing authority cannot in any manner or means take care of it.
